The Argentine government auctioned off in June its controlling stakes in the Entel telephone company and Aerolineas Argentinas airline, netting more than $1 billion.

He said the government also plans sell the iron and steel mill Somisa and petrochemical giant Bahia Blanca.

Japanese Interest Seen

"We believe the coming privatizations of Somisa, which uses Japanese equipment, and Bahia Blanca, in which Japanese firms have a minority interest . . . can be of interest to Japanese investors," the Argentine central banker said.

In completing the privatization process, Argentina plans to use a debt-for-equity swap and this causes problems because waivers must be obtained from creditor banks.

"Privatizations are necessary for our economic programs and are our major tool in the process of debt reduction."

Javier Gonzalez Fraga
Central bank of Argentina

Under a debt-equity swap, investors buy part of Argentina's debt from creditor banks at a discount; redeem it at Argentina's central bank for almost its total value in local currency, and then invest the money in Argentina's state companies.

Waivers Slow in Coming

Mr. Gonzalez said the Argentine government auctioned Entel and Aerolineas without obtaining waivers but must get them before it sells. So when it hopes to complete the transfer of both companies to private-sector investors.

"We believe the waivers should be provided by the banks. . . . And we believe they will finally be awarded," he said.

Behind the delay in obtaining waivers is the hard fact that creditor banks are still unhappy about the way Argentina is servicing its debt, banking sources here said.

Argentina resumed servicing its $40 billion commercial bank debt in early June after a 26-month holdout, but banks have complained that the country's $40 million-a-month repayment plan is too small.

"I agree with the fact that the [interest_payment]_amount_is not sufficiently high, but I believe the payments are consistent with the limited fiscal possibilities," Mr. Gonzalez said.

He said if Argentina makes interest payments of more than $40 million a month, it could risk new hyperinflation.

Move Is Supported

"That could only create problems for both parties. Having decided to pay $40 million and being able to maintain this for three months already has proven the right decision," he noted.

Argentina's monthly inflation was down to an average of 7 to 8% recently, from about 100% in March, an Argentine central bank official said separately.

He said Argentina has now succeeded in improving its relations with international financial organizations such as the World Bank and the International Monetary Fund.

He also expressed hope Argentina would be granted a new multibillion-dollar credit from the IMF towards the end of this year or at the beginning of next year. The IMF extended a $1.4 billion standby loan to Argentina last November. □

Bigger Stake in Intermex Holdings for BankAmerica

By JOHN EVANS

LONDON — BankAmerica Corp. has stepped up its stake in Intermex Holding Luxembourg, parent company of a specialist Latin American investment bank, after three other banking stockholders decided to pull out.

The London-based bank, International Mexican Bank Ltd., announced here Wednesday that Deutsche Bank AG, Union Bank of Switzerland and Japan's Dai-Ichi Kangyo Bank Ltd., with a combined ownership of 59%, have withdrawn. International Mexican Bank said the reason was "general policy."

As a result, three Mexican stockholders, Banco Nacional de Mexico, Banco Nacional de Comercio Exterior and Nacional Financiera increased their holding to 72% from 51%.

A spokesman for Bank of America, whose stake goes up to 28% from 20%, observed that his bank has strong ties with Mexico. "We support Mexico's economic reforms and intend to strengthen our relationships there."

Intermex, London's last Latin American consortium bank, specializes in investment banking, including asset trading and corporate finance, rather than syndicated lending. Assets stood $445 million, down from $530 million in 1989. □

Analyst Tells House Panel Banks Need 'Breathing Room'

Continued from page 1

road."

Mr. Cranmer appeared before the House Banking Committee, whose members are increasingly worried about bank lending practices.

Members are concerned that the banking system is exposed to huge losses because it lent too liberally in the past. But lawmakers are also worried that banks have overreacted now abruptly, and are now denying their communities credit needed for economic growth.

Focus Was to Be on Trump

Thursday's hearing was initially intended to focus on the money-center banks that made hundreds of millions of dollars in unsecured loans to Donald Trump's real-estate empire, a case that some lawmakers believe illustrates the industry's worst lending patterns.

Mr. Trump, however, declined to testify, as did four New York banks: Citibank, Manufacturers Hanover Trust Co., Bankers Trust Co. and Chase Manhattan Bank. In addition, Comptroller of the Currency Robert L. Clarke, Federal Reserve Board Governor John P. LaWare, and deputy New York bank superintendent Peter M. Philbin also refused to discuss the Trump loans.

"We have a long-standing practice of treating information given to us by loan customers as confidential," wrote Chase chairman Willard C. Butcher to the committee. "We believe that our customers rely on this practice."

Blast from Gonzalez

Rep. Henry B. Gonzalez, D-Tex., the panel's chairman, told the regulators that their reluctance to discuss the Trump loans recalled the early days of the savings and loan crisis, which he said "grew up in the dark basements of official government secrecy."

"The regulators are thrown into near convulsions by the thought that they would be required to discuss the broad outlines of how they approached the Trump-bank problems," said Mr. Gonzalez.

Rep. Henry B. Gonzalez told the regulators that their reluctance to discuss the Trump loans recalled the early days of the S&L crisis.

Mr. Gonzalez said he was determined not to permit a repeat of the thrift industry experience, where problems were not dealt with until they had grown unmanageable.

Although the regulators would not discuss Mr. Trump specifically, Mr. LaWare did concede in response to a "hypothetical" question from Rep. Charles Schumer, D-N.Y., that there were signs of trouble in the Trump portfolio.

Describing a "certain individual with several billion dollars outstanding," Mr. Schumer asked if it would be "a bad practice to lend another $400 million unsecured."

Mr. LaWare first said it was not necessarily a bad decision to advance more funds. But when Mr. Schumer asked if it could be inferred that the borrower was in trouble "when all these dollars are being lent in an unsecured way," Mr. LaWare said his evaluation was "fair."

Mr. LaWare also told the panel that banks continued to lend even after the real estate market began to soften because they had outstanding commitments.

"For a bank to renege on a commitment one year into a project would be a breach of contract," he said.

In his testimony, Mr. Cranmer told the panel that the buildup in real estate portfolios is a worrisome sign for a banking industry that is probably going into recession. Heading into the last recession, he said, "the country had already endured its real estate washout."

Then, vacancy rates were 10% and declining, he said. Today, a "15% vacancy rate is considered laudable." □

Analysts, he said, "are pretty much flying blind," in efforts to evaluate potential losses from real estate loans.

"If New England is any precedent, 75 cents of reserve seems necessary to cover every dollar of nonperforming loans," he said. While most analysts were optimistic that the true number would end up closer to 25 cents, "now, with the crisis and other indicators arguing recession, we cannot say that with as much conviction."

Mr. LaWare told the panel that banks emphasized real estate lending as their commercial and industrial borrowers turned to other sources of credit. Banks were also attracted by the prospect of earning substantial fee income, he added.

As a result, real estate loans at commercial banks tripled over the course of the decade and now account for 23% of total bank assets, compared with 15% in 1980. Commercial property and construction loans account for about half the $778 billion in total real estate loans held by commercial banks. □

OTS Seeks $40.9 Million in Restitution from Keating

Continued from page 1

OTS assistant general counsel, told reporters at a Bar Association luncheon, "We simply don't believe that, and we want this accounting."

I, John G. MacDonald, Senior VP & Comptroller of the above-named bank do hereby declare that this Report of Condition is true and correct to the best of my knowledge and belief.

JOHN G. MacDONALD
July 26, 1990

We, the undersigned directors, attest to the correctness of this statement of resources and liabilities. We declare that it has been examined by us, and to the best of our knowledge and belief has been prepared in conformance with the instructions and is true and correct.

JOHN R. WHITMORE
ODDEN ALLEN, Jr.
R. DANIEL SAXE, JR.

Directors

If Mr. Keating fails to comply with the OTS order, the agency will attempt to enforce it in district court, she added.

Along with the restitution request, the thrift regulator gave Mr. Keating five days to deliver an audited accounting of his assets, blocked him from transferring his wealth outside the country, and sought to prohibit the former Lincoln officials from ever serving again in a federally insured thrift.

The charges, to be aired at an administrative hearing on Oct. 4, represent the most significant enforcement action the OTS has ever taken, Mr. Ryan said.

It follows by several weeks the filing of a $19 million restitution claim against Thomas Spiegel, the former chairman of Columbia Savings and Loan Association, Beverly Hills, Calif. The OTS is also seeking $5 million in civil penalties for alleged misappropriation of thrift funds.

Taking a Hard Line

As in the Spiegel case, the government is sending a signal that it will press its claims aggressively.

Obtaining a full accounting of Mr. Keating's assets would help the OTS maximize the recovery of funds by limiting further dissipation of holdings, said Stuart Gerson, assistant U.S. attorney general for civil matters. Any action by the OTS can help the government squeeze the most money out of the limited amounts that can be recovered through civil actions, he said.

"We anticipate our action would result in some type of settlement before the [racketeering] case is resolved," Mr. Ryan said.

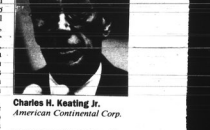
The OTS said it discovered violations of rules and regulations, unsafe and unsound practices, and breach of fiduciary duty in each of three transactions that form the basis of the charges. The OTS claims that the American Continental officials engaged in improper transactions that bled funds from Irvine, Calif.-based Lincoln, which the government seized in April 1989.

American Continental officials were not available for comment on the charges Thursday afternoon.

According to OTS, Lincoln's losses include $24.2 million through a tax shelter partnership that purchased Detroit's Hotel Pontchartrain. The partnership, in which the American Continental officials held a 25% stake, funded the hotel purchase with a credit facility set up by a Lincoln subsidiary. Mr. Keating and his associates received more than $8.7 million in tax benefits from 1985 to 1987.

The OTS charged that misuse of an employee stock ownership plan operated by Lincoln and its parent caused $12.3 million in losses. This transaction is also under investigation by the Department of Labor, Mr. Ryan said.

Another $4.4 million was lost through a tax-sharing payment by Lincoln to its parent, American Continental, Robert J. Kelly, director, senior vice president, secretary, and general counsel. Mr. Keating's son, Charles H. Keating 3d, director and executive vice president, and his son-in-law, Robert J. Hubbard, director and vice president, and Robert M. Wurzelbacher Jr., director and senior vice president. □



Charles H. Keating Jr.
American Continental Corp.

Dramatic FDIC Increase

Continued from page 1

they will stop at 18 or go to the limit," he said. "If at the end of the year we are in a recession and the BDC has lost money, I think they would be inclined to go the limit."

But Mr. Litan said a number of variables, such as the extent of the oil crisis or the severity of a recession, could change the outlook.

Ceiling Called Too Low

R. Dan Brumbaugh, senior research scholar at the Center for Economic Policy Research at Stanford University, said the 19.5-cent maximum was not nearly enough.

"There is no way that 7.5 basis points is going to make a dent in closing all of the insolvent banks," said Mr. Brumbaugh, who has accused the FDIC of overestimating the health of many of the largest banks in the country.

Mr. Brumbaugh said it would take a drastic, 30-basis-point assessment to stabilize the fund.

"I think they are going to need a bundle," he added.

Information Called Lacking

William C. Ferguson, chairman and chief executive of Ferguson & Co., an Irving, Tex.-based bank consultant, said not enough information was available to determine the adequacy of the insurance fund and how much the agency would need.

According to OTS, Lincoln's losses include $24.2 million through a tax shelter partnership that purchased Detroit's Hotel Pontchartrain. The partnership, in which the American Continental officials held a 25% stake, funded the hotel purchase with a credit facility set up by a Lincoln subsidiary. Mr. Keating and his associates received more than $8.7 million in tax benefits from 1985 to 1987.

The OTS charged that misuse of an employee stock ownership plan operated by Lincoln and its parent caused $12.3 million in losses. This transaction is also under investigation by the Department of Labor, Mr. Ryan said.

Another $4.4 million was lost through a tax-sharing payment by Lincoln to its parent, American Continental, Robert J. Kelly, director, senior vice president, secretary, and general counsel. Mr. Keating's son, Charles H. Keating 3d, director and executive vice president, and his son-in-law, Robert J. Hubbard, director and vice president, and Robert M. Wurzelbacher Jr., director and senior vice president. □

"I would think they would need to raise assessments to a level that would insure that within reasonable limits, the fund would increase up to 1.25% of total deposits," he said. The bank fund had $13 billion at year-end 1989, equal to 0.25% of insured deposits, and Mr. Seidman has said an expected $2 billion net loss this year would push the reserve ratio between 0.50% and 0.60%.

Mr. Ferguson said it was even hard to determine whether the premium increases mandated by the 1989 financial reform law would be adequate. □

Colorado Piques Acquirers' Interest

Continued from page 2

cently told Reuters.

The three remaining big financial companies available for sale are Colorado National Bankshares Inc., Affiliated Bankshares of Colorado Inc., and a thrift, Western Capital Investment Corp., all with about $3 billion in assets.

"I wouldn't speculate on what may or may not happen in the future," said Colorado National chairman Will Nicholson.

"We will do whatever is in the best interests of our shareholders, and if that means a sale, fine," said Affiliated Bankshares president Kent Olin.

Western Capital chairman Robert Malone said he was not trying to find a buyer but would not stand in the way of someone wanting to merge at a fair price.

Executive Help Wanted

Be a major player in the age of information.

Instant access to information is the winning edge in today's business. To help companies compete in world markets, we operate sophisticated information networks that cover more than 85 countries and span the globe with a single keystroke.

We need professionals who can make the rules instead of following them in providing fresh solutions to today's technical problems — and tomorrow's. If you're comfortable with decision makers in the financial community, consider one of these excellent opportunities.

EASTERN REGION MANAGER, BANKING
New York, NY

We need a take-charge managerial professional who can maintain high level client relationships in key accounts while directing the overall sales and service efforts in the region. You'll be responsible for the development, implementation and measurement of the region's geographic plans, sales plans, and account selling strategies. You'll need sound knowledge of the financial community with a proven track record (seven to ten years) of conceptual sales in the information services/software solutions industry. Superior interpersonal and sales development skills are essential.

NEW BUSINESS DEVELOPMENT MANAGER, BANKING
Atlanta, GA

If you can truly understand a business's needs and successfully outline a partnership between senior executives and GE Information Services, you're on target for this position. To manage our new business effort, you'll need extensive knowledge of banking/financial institutions in the Southeast and demonstrated ability in high technology conceptual sales. A minimum of five to seven years direct experience is required.

APPLICATIONS DEVELOPER
New York, NY

Business savvy and excellent communication skills are essential to provide pre- and post-technical sales support to clients. A B.S./B.A. as well as five plus years of banking applications development with IBM, MVS, COBOL, CICS, and FORTRAN are also required. Mainframe and PC development are preferable.

If your future is in information services, your company should be GE. Generous compensation and extensive benefits are just the beginning. Send your resume with salary requirements to: GE Information Services, Dept. RCAB-8/7, 401 North Washington Street, Rockville, MD 20850.

Join One of the Country's Premier Consumer Banking Teams

Do you want to work closely with a team of enthusiastic marketing professionals and senior management? Put your talents to work as part of the country's premier consumer banking teams?.

If you have consumer banking experience in product development and product management, you may be the one we're looking for. Central Bank of the South has a rare opening in its marketing department for a Manager of Product Development. We're looking for someone with the proven ability to generate growth in deposits, loans, and fee income through existing consumer products and the development of new ones... someone who is comfortable in a high-visibility position and works effectively with senior management.

If you possess these qualities, as well as a graduate degree in business and excellent communication skills— both written and oral — we want to hear from you. As our Manager of Product Development, you would report directly to the Marketing Director and serve as a catalyst between our team of product managers and senior management.

Central is a strong regional bank with offices throughout Alabama and Texas. And we're financially sound, with over $4.8 billion in assets. For the right candidate, we offer a generous compensation package, including excellent salary and relocation expenses. If you're interested in joining one of the country's premier consumer bank marketing teams, contact Jo Lynne Wilson, Employment Officer, at the following address:

Employment Services Division
Central Bank of the South
Post Office Box 10566
Birmingham, Alabama 35296

Be sure to include your salary history along with your resume. All responses will be received in strictest confidence.

CENTRAL BANK OF THE SOUTH Member FDIC

Deputy Comptroller for Economic Analysis and Strategic Planning
The Office of the Comptroller of the Currency, Washington, D.C.

The OCC is seeking to fill this executive position. The Deputy Comptroller is responsible for directing the analysis of major policy issues affecting the commercial banking system; presenting recommendations via studies, briefings and the preparation of congressional testimony; and coordinating the strategic planning activities of the OCC. Applicants must have the following.

- **Experience managing multiple projects and activities simultaneously.**
- **Demonstrated ability to establish and achieve program objectives and performance goals.**
- **Demonstrated ability to promote program goals effectively and persuasively.**
- **Comprehensive knowledge of economics and finance and the impact of financial and banking developments on local, regional and national economies.**
- **Comprehensive knowledge of trends and current developments in the financial services industry and of regulatory issues and policies.**

Salary is $92,600 per annum (negotiable upwards if warranted). Applicants should submit a brief description of how they meet each of the above criteria and a current "Personal Qualifications Statement" (SF-171) to:

Office of the Comptroller of the Currency
Washington Personnel Office
490 L'Enfant Plaza
Washington, D.C. 20219

Interested candidates may obtain a copy of the Job Announcement (#EN4-90-03) and an SF-171 by calling 202-447-1617. Completed applications must be received in our office by August 24, 1990.

SAS Taps Morgan for Buyout of Lorenzo's Stake in Continental Airlines

By JED HOROWITZ

Morgan Guaranty Trust Co. is advising Scandinavian Airlines System on its buyout of Frank Lorenzo's stake in Continental Airlines Holdings Inc., according to spokesmen for the bank and the buyer.

SAS will invest $50 million, about $27 million of which will go to the controversial Mr. Lorenzo in return for his stepping down as head of the airline.

The SAS mandate, while relatively small, represents something of a coup for the J.P. Morgan & Co. unit in a climate not too conducive to dealmaking.

Role in IBM Transaction

Just last week the bank emerged as an adviser to IBM Corp., which plans to sell most of its low-technology businesses to Clayton & Dubilier for a price believed to exceed $2 billion. Morgan does not have the sole advisory mandate in the IBM transaction, but is expected to be one of three lead banks financing the IBM buyout.

The SAS transaction is not expected to require bank financing, said Charles Dumas, a managing director in the bank's mergers and acquisitions division.

Morgan, which has been working on the airline deal for more than a year, previously advised SAS on its unsuccessful bids for a portion of Aerolineas Argentinas and British Caledonian Airways, Mr. Dumas said.

Lorenzo's Contract a Factor

SAS will buy Jet Capital Corp., a company that holds 2% of Continental Airlines' capital and is 48% owned by Frank Lorenzo. The European airline – which is 50% controlled by the governments of Sweden, Denmark, and Norway – is paying about $20 million for Jet and $20 million to buy out Mr. Lorenzo's five-year contract.

Mr. Lorenzo – whose empire once included Eastern Airlines, now in Chapter 11 bankruptcy proceedings – will receive about $27 million from the transaction, Mr. Dumas said.

SAS also is injecting about $10 million into Continental, a company formerly known as Texas Air Corp. SAS, which already owns 9.9% of Continental, will emerge with 16.8% of stock and 18.4% of voting control if the purchase wins approval from the U.S. Department of Transportation and from Mr. Lorenzo's approximately 90 partners in Jet Capital.

The purchase price of about $15.30 per share is well above the $4.50 at which Continental's common stock was trading before the deal was revealed in Thursday's edition of *The Wall Street Journal*. SAS, a long-term client of Morgan, probably will find the purchase out of its current treasury, Mr. Dumas said. SAS officials did not return calls for comment. □

The SAS bid is not expected to require bank financing.

Day of Reckoning Nears for Interest on High-Yield Debt

Continued from *page 1*

creasing through 1995, billions of dollars of these PIKs and zeros have to begin paying interest in cash. In addition, billions of dollars worth of junk bonds carrying reestable coupons will get new rates in 1991 and 1992.

All these factors will significantly increase the cash interest costs of many companies that were already highly leveraged in the 1980s. When the interest payments kick in, some companies' coverage ratios will fail to potentially troubling levels that could put them in violation of loan covenants, or worse, bankers and analysts warn.

The silver lining for banks is that many of these securities trade at a discount, and many companies in solid financial shape will be looking to banks for refinancing, since the new-issue market for high-yield bonds is nonexistent.

Opportunities for Borrowers

Any company that can buy its bonds back at a discount increases its equity – while reducing overall indebtedness – by booking the value of the difference between the retirement price and par, noted Kingman Penniman, senior vice president at McCarthy, Cristanti & Maffei, a junk bond research firm.

Creditwise companies will likely find banks willing to refinance, given the lenders' need to put funds to work in high-yielding assets, bankers say. RJR Nabisco Inc., for instance, is solving its PIK problem through a combination of financings that include a new $2.25 billion bank loan. And Santa Fe Pacific Corp. is speaking with its banks about a major refinancing.

Bankers, in fact, say they have targeted companies with junk bonds as potential lending opportunities, noting that any debt retired at a discount can greatly improve a company's cash flow. Companies that have paid down senior bank debt will have the easiest time arranging new bank loans, lenders said.

"If banks can see that it will enhance the credit, you'll see more of that," Mr. Penniman said.

Lenders Are Receptive

"Some companies are taking constructive steps to make them viable customers. And banks are saying: 'If a company has a good track record and has made a significant effort to reduce bank debt, it behooves us to lend,'" he added.

"The willingness of banks to refinance is a function of how well a company has done," said Mark Gold, a vice president at Chancellor Senior Secured Management Inc. for a fund that also invests in bank loans. "If a company has paid off a lot of debt, risk" embedded in its balance sheet.

The Chicago-based company recently announced that it was exchanging $200 million of its $780 million PIK that becomes cash pay in 1993 for cash and common stock, and will call the rest of the tranche in October. The cramdown PIKs were issued as part of a recapitalization two years ago.

The idea behind noncash high-yield securities seems dubious in retrospect. The deals assumed that operating income would grow, and that asset sales would be successful.

Analysts expect the company to arrange a new $400 million bank facility to call the bulk of the outstanding bonds.

Bank Debt Replaces 'Junk'

"Some of the new financing will be a bank facility," confirmed Robert Gehrt, a spokesman for the company. "We're in the process of negotiating that. . . We've met with them and they know what they're going to do." The company's agent banks are the banking units of Chase Manhattan Corp., Chemical Banking Corp., J.P. Morgan & Co., and Security Pacific Corp.

"Companies are going to move before it becomes a problem," Mr. Penniman said.

For many companies, though, it will not be quite so easy. Even the marginal deals that banks will not refinance, they may nevertheless have senior loans outstanding from the original transaction that could provide much worse off with a PIK paying cash.

"For banks, it's a problem for weaker deals," said one lender to leveraged transactions. "There will be some opportunities, based on the whole I think it's a problem."

Timetable for Cash Payments

In 1991, about $1 billion in PIKs and $4.5 billion in zeros start paying cash. interest, according to data from Salomon Brothers Inc. In 1992, a bit less than $1 billion in PIKs and around $3.6 billion of zeros become cash pay.

In 1993, the PIK figure jumps to $2.2 billion, while the amount of zeros skyrockets to just over $6 billion. In 1994, $1.485 billion in PIKs become cash pay, while a whopping $7.3 billion in zeros kick in. The figures assume that RJR Nabisco leaves outstanding $330 million of its 17% PIKs due in 2009 and $2.3 billion of its 17% PIKs due in 2007.

For resets, $3.2 billion of public and private-junk bonds will be reset next year, $7.2 billion in 1992, then falling to $706 million in '93, according to Salomon Brothers.

Leveraged Roll Call

Leveraged companies with debt that becomes cash pay include: Jack Eckert Corp. – $345 million in zero-coupon bonds, May 1991; Owens Corning Fiberglas – $1 billion in zeros, December 1991; National Gypsum Co. – $847 million in zeros with 15.5% coupon, June 1991; and Viacom – $449 million in PIKs at 15.5% interest, June 1991.

Most of these companies will likely be able to refinance or meet their cash interest obligations, bankers suggest. Maryland Corp. – with $402 million in zero-coupon bonds that pay in cash next year – clearly will not.

And the increased risk of a recession stemming from the Middle East crisis could put pressure on cyclical companies, further tipping the marginal deals into potentially distressed situations, bankers warned.

Tarnished in Hindsight

The idea behind noncash high-yield securities seems dubious in retrospect. The deals were structured on the assumptions that operating income would grow, and that asset sales would be successful.

In the case of Interco Inc., which has $213 million in bonds that become cash pay in 1993, neither would; it's clear that the company and its investment bankers were using a rose-colored calculator.

Banks began to target junk bond buybacks as a potential opportunity after Campeau Corp.'s failure sent the junk bond prices of many leveraged deals plunging. It's an opportunity to lend at leveraged pricing and with fees in the range of 300 to 400 basis points. □

CREDIT CARD PORTFOLIOS.

We are Rocky Mountain BankCard System, a sizeable issuer and processor of Visa and MasterCard cardholder and merchant services, seeking *to purchase large and small credit card portfolios* from any financial organization in the country.

Delaware Bank Proves Resilient In Down Market

By GORDON MATTHEWS

Bank stocks have sunk to new lows lately, and East Coast banks have been among the worst performers. But Delaware's Wilmington Trust Co. is an exception, with its strong capital base, low risk exposure, and annuity-like earnings growth.

Although its share price has weakened a bit recently with the profit-taking in well-regarded banks, Wilmington Trust is still several laps ahead of the rest of the industry. This stock sells at over two times book value and is 45% above its 52-week low.

The chief underlying factors in the company's performance are its high level of noninterest income – 38.9% of net revenues in the second quarter – and its sterling asset quality. Nonperforming loans were a slight 0.29% of all loans on June 30.

"The company has been able to maintain its track record during this difficult period," said Norman Jaffe, a banking analyst at Fox-Pitt Kelton Inc., who is telling clients to take advantage of the stock's retreat in the past two weeks.

The stock traded Thursday afternoon at $38.50, off 8.5% since July 27 but still above its $37.75 price at yearend. More telling, it has fallen just 8% since the peak in bank stock prices 10 months ago, while the *American Banker* index of the 225 largest publicly traded banks has fallen 30%.

The Home Advantage

Wilmington Trust is the only major independent bank remaining in Delaware, and it has used that position to its advantage by touting to clients its homegrown expertise in the state's trust and banking laws.

In particular, this has enabled it to take advantage of the trend by banks to securitize assets for sale. Special-purpose trust vehicles are utilized to acquire higher investment ratings for the packaged assets, and Wilmington Trust has become a leader in this sector.

"They have geared up to handle it, and so the securitization trend has been a bonanza for them," said Richard X. Bove, banking industry analyst at Dean Witter Reynolds Inc.

With $3.6 billion in assets, Wilmington Trust has for several years been one of the largest banks in the country that is not under a holding company. But this is expected to change soon.

The bank recently acquired Sussex Trust Co., Georgetown, Del., a $420 million-asset banking firm with 20 offices. Operating the smaller bank as a separate subsidiary, as Wilmington Trust wants, will require establishment of a holding company.

* * *

THURSDAY'S MARKET

Major bank and thrift stocks tallied their third straight day of advances on Thursday as the stock market overall moved higher on investor confidence that the current Middle East crisis will not push energy prices high enough to cripple the economy.

A pair of New York money-center institutions were the biggest gainers. Bankers Trust New York Corp. was up $1.125 to $37.75, and Bank of New York Co. rose $1.125 to $24.625.

California banks also made progress. Security Pacific Corp., Los Angeles, was up 50 cents to $31.25; BankAmerica Corp., San Francisco, was up 37.5 cents to $23.125; and Wells Fargo & Co., San Francisco, rose 25 cents to $64.125.

Analysts said bank stocks were due for an upward move since many reached lows recently. Developments in the energy sector have also helped.

"There are many positive aspects for banks in a scenario involving a modest increase in oil prices," said Mr. Bove of Dean Witter.

Not all banks joined in the upward trend on Thursday. Republic New York Corp. was off 12.5 cents to $45.125, while Signet Banking Corp., Richmond, Va., fell 12.5 cents to $16.50 on fears of local real estate problems. □

CAPITAL:

Equity Swap Seen as Key for Boston Bank

Continued from *page 1*

holders say one deal is on the table with regulators: an exchange for about $300 million of Bank of New England's subordinated debt for a combination of cash and equities.

Comptroller Must Approve

Under a cease-and-desist consent order imposed on the company, the Office of the Comptroller of the Currency, which regulates the company's subsidiaries, must approve any interest payments and any exchange offer with bondholders by the subsidiaries. The Federal Reserve Board must approve such exchanges and interest payments by the parent company.

The Comptroller's office had no comment on an exchange offer.

Lazard Freres & Co. and Goldman Sachs & Co. are the investment bankers reported to be working on the deal, the source said.

One source close to bondholders said he had heard that the deal called for Bank of New England to offer 25 cents on the dollar, or about $50 million, in cash, and the rest in common stock and other securities.

James Dorsey, a spokesman for the company, declined to comment.

The key question, analysts said, is whether Bank of New England can raise cash for an exchange offer.

Cash Need Estimated

A hypothetical exchange offer for all $703 million of the company's bonds that offered 50 cents on the dollar would require about $350 million. To raise this amount of cash, they said, the company would have to sell the only remaining asset it has up for sale – the Bank of New England-Old Colony, its subsidiary bank in Rhode Island.

The bank has been able to make recent interest payments partly because of income from a fire sale of more than $5 billion in "nonstrategic" assets since January. The latest sale – of its leasing subsidiary and other units – resulted in a $91 million gain.

But excluding those extraordinary gains and one-time expenses, the company's operating losses were an estimated $54 million in the second quarter, according to Mr. Cassidy of Tucker, Anthony.

Asset Sales Almost Done

Company officials said last week in an interview that the asset sales are virtually finished.

After the company's capital and cash-flow problems come in $2.2 billion in nonperforming loans, amounting to 13% of all loans. Loss provisions for bad real estate loans led to a $1.2 billion net loss last year.

In the second quarter, the company's nonperforming loans actually decreased by about $20 million. A senior management official recently cautioned "not to read too much into that," because some of the loans had been "migrated" over to the category on "other real estate owned" on the company's books.

Bank of New England's chairman, Lawrence K. Fish, has stressed repeatedly that the bank's recovery depended on the economic outlook of New England, and has said that the nonperforming loans are perhaps the toughest problem the company faces.

Debt Deadlines for Bank of New England

Interest payments coming due on bank's bonds

Due date	Issue	Interest
August 15	8.75% subordinated debt	$7.1 million
September 15	9.875% senior debt	$12.3 million
October 1	8.75% subordinated debt	$8.7 million

Source: Balfour MacLaine Capital Markets

"The situation is very tenuous," said Carole Berger, an analyst with C.J. Lawrence Inc. in New York. "When nonperformers get to this level, the real issue is: can they keep their funding together."

The company has avoided liquidity problems recently by aggressively marketing retail deposits nationwide. But the high rates on the CDs, nearly 9%, squeezed its margin to 2.31% in second quarter, down 0.23 percentage point. Bank officials said at a recent meeting that they are looking for new ways to ease the cost of deposits, and plan to announce a new approach sometime after Labor Day.

Nonperforming Loans High

The company's nonperforming loans equal about 150% of shareholder capital and reserves, according to Mr. Cassidy of Tucker, Anthony.

This comparison is used as a yardstick to measure the depth of trouble into the which the company has fallen. First Republic Bank, the Texas institution seized by regulators in 1988, had nonperforming loans that were about 162% of capital plus reserves.

Meanwhile, Bank of New England is barely scraping by. "The holding company is living hand to mouth," said Mary Quinn, an analyst for Keefe, Bruyette, Crisanti, & Mattei in New York.

"We believe that Bank of New England's fate will be known by the end of the third quarter 1990," said Mr. Randall of Balfour Maclainé. □

Hanover to Arrange Mortgage on Macy's Warehouse

By STEPHEN KLEGGE

In R.H. Macy & Co.'s latest step to calm lenders and suppliers, the debt-burdened retailing giant has selected Manufacturers Hanover Real Estate Inc. to arrange a mortgage on its warehouse and distribution buildings.

The proceeds, expected to be around $75 million, will be used to reduce bank debt, a source said. Including bonds, Macy's has $5.5 billion in debt.

"We wanted longer maturities and flexible terms," said Diane Baker, Macy's chief financial officer. She described the financing as a "very plain-vanilla mortgage."

John A. Blumberg, a director of Manufacturers Hanover Real Estate, said it remains to be determined who will provide the loan or what the terms will be.

Analysts said the company wants to convince lenders and bondholders that it is not a distressed situation. "They're restructuring their cash flows and sending a message to the outside world that they're doing what's needed to alleviate a crisis," said Nicholas A. Galoppo, retailing partner for Arthur Andersen & Co., New York.

Thomas P. Razukas, an analyst for Finch Investors Service, said the proceeds will be applied to a $175 million payment that is due in December 1991.

Mr. Razukas said about $205 million of bank debt owed by Macy's and its subsidiary finance units matures in the fiscal year that started Aug.1, and about $647 million will be due in the following fiscal year.

Macy's has projected that its earnings before interest and taxes will jump by 35% for the calendar year to $980.1 million. But in light of the weakening national economy – and earnings for the fiscal year just ended expected to be off 20% – retail analysts are still skeptical.

Allaying Creditors' Fears

"If you can pay off some of that debt ahead of time, that will hopefully offset any fears about a weak Christmas," said Evan Mann, an analyst at Dillon, Read & Co.

He said Macy's vendors and the vendors' short-term creditors are wary of overextending themselves to retailers. Macy's problems stem from what most concede was a horrible 1989 Christmas season.

The mortgage financing comes on the heels of other moves by Macy's to ease uncertainties in the marketplace: a $15 million equity sale, with proceeds going to buy back subordinated debentures.

Macy's recently announced that its bank group would allow it more leeway in using the proceeds of possible real estate sales, which could include the sale of an office building in Los Angeles for $40 million.

Encumbrances Traded for Cash

As was apparently the case in earlier financings backed by Macy's real estate, Macy's banks, led by the banking units of Manufacturers Hanover Corp. and Bankers Trust New York Corp., are expected to release encumbrances on the collateral properties in order to receive cash payments for the existing debt.

The bank debt includes a $438 million term loan and a $400 million purchase note, a Macy's spokesperson said. □

AMERICAN BANKER CONFERENCES *presents*

A SEMINAR SERIES ON

BANK PROFITABILITY

IMPLEMENTING A WINNING STRATEGY IN A RADICALLY CHANGING BANKING ENVIRONMENT

Gain The Insight & Experience Necessary To Stay Ahead Of Your Competition, Revitalize Your Bank...Learn How To Position Yourself & Survive In An Industry Facing Increasing Consolidation & Competition

ATTEND ANY ONE DAY SEMINAR INDIVIDUALLY OR THE ENTIRE SERIES

SEMINAR TOPICS INCLUDE:

DAY ONE:
Innovative Customer Service And Sales Techniques For The Nineties

DAY TWO:
The Nuts And Bolts Of Commercial Lending & Loan Pricing

DAY THREE:
Effective Strategies For Cost Management And Expense Control

DAY FOUR:
Bank And Cross-Industry Acquisitions Of Thrift Institutions & Should Thrifts Be Converting To Banks

DAY FIVE:
Asset/Liability Management

THIS WEEK-LONG SEMINAR SERIES WILL BE PRESENTED THREE SEPERATE TIMES IN TWO SEPERATE VENUES

NEW YORK CITY
THE VISTA HOTEL
MONDAY, JULY 16, 1990 — FRIDAY, JULY 20, 1990

NEW YORK CITY
THE VISTA HOTEL
MONDAY, SEPTEMBER 10, 1990 — FRIDAY, SEPTEMBER 14, 1990

SEMINAR 1

INNOVATIVE CUSTOMER SERVICE AND SALES TECHNIQUES FOR THE NINETIES

July 16, 1990 • The Vista Hotel • New York City
September 10, 1990 • The Vista Hotel • New York City
September 17, 1990 • Century Plaza Hotel • Los Angeles

As the banking environment becomes more competetive, industry leaders view improved customer service as a sollution to retaining market share. But how can your bank achieve such improved service? And as importantly, can quality service be translated into sales? The seminar will address the pressing need for improved customer service and how to implement a service program in your bank. It will also focus on the next step....profiting from quality service through innovative sales techniques, state-of-the-art technology and sales incentives. The industry leaders will address the issue of the nineties...achieving competitive advantage by making your company customer and sales-oriented.

9:00 KEYNOTE SPEECH: EFFECTIVE CUSTOMER SERVICE...THE KEY TO PROFITIBILITY IN THE 90'S

- Profiting from customer service in an age of transition
- A banker's perspective on past successes and failures... and innovations for the future
- A case study in improving service and sales

Thomas Jacob, *Senior Vice President,* Chemical Bank (NY)
Thomas Jacob, *Senior Vice President,* Chemical Bank (NY)
Joan Miszak, *Senior Vice President,* California Federal Bank (LA)

9:45 TURNING SERVICE INTO SALES...ACHIEVING BOTTOM LINE RESULTS FROM QUALITY SERVICE AND SALES TECHNIQUES

- Creating a competitive advantage through customer service
- Improving service...and controlling costs

John A. Goodman, *President, Teeno,* Assistance Research Program (NY)
John A. Goodman, *President,* TARP (NY)
Marty Wikoff, *President,* Management Performance Systems (LA)

- The need for effective salesmanship
- Sales techniques for the 90's

5:00 THE ROLE OF SALES INCENTIVES...WHAT WORKS AND WHAT DOESN'T

- How to use worker compensation to increase sales
- Improving service without increasing costs

William Casey, *Principal,* Paris, Casey Inc. (NY)
William Casey, *Principal,* Paris, Casey Inc. (NY)
Matt Waligon, *Senior Consultant,* Sibson and Co. (LA)

6:00 END OF SEMINAR

SEMINAR 2

THE NUTS & BOLTS OF COMMERCIAL LENDING & LOAN PRICING

July 17, 1990 • The Vista Hotel • New York City
September 11, 1990 • The Vista Hotel • New York City
September 18, 1990 • Century Plaza Hotel • Los Angeles

The battle for commercial loan profitability promises trying times for large corporate and middle market lenders. Over the past two decades, the risk in banks lending portfolios has steadily increased. This is not a function of uncontrolled risk-taking, but rather of the banks' necessary response to the need to find assets which will provide acceptable levels of risk-adjusted return. The events of the past few years have shown that many banks, however, have been unable to effectively control the level of risk that they have taken. Unacceptably high levels of loss have taken place in many banks due to a combination of poor pricing, excessive concentration and the failure to understand the level of risk in a specific loan. Furthermore, new competitors are entering the marketplace scrambling for territory and sparking intense new battles for turf. This seminar reviews how leading-edge banks are beginning to develop new sets of techniques that, will give them a competitive edge in the marketplace for controlling their level of loss, and achieving low-risk diversified portfolios.

8:45 CHAIRMAN'S OPENING REMARKS
William T. Gregor, *Partner,* The MAC Group (NY,LA)

RE-ENGINEERING FROM A CUSTOMER POINT OF VIEW

9:00 KEYNOTE ADDRESS: WHAT RECIPE SHOULD YOU USE TO TURN AROUND YOUR COMMERCIAL LENDING BUSINESS?...A CONSULTANT'S & A BANKER'S VIEWPOINT
William T. Gregor, *Partner,* The MAC Group (NY,LA)
Peter Offerman, *Managing Director,* Banker's Trust (NY)

9:45 CUSTOMER PROFITABILITY & OPPORTUNITIES FOR REFOCUSING ON THE PROFITABLE BUSINESS...NATIONAL WESTMINISTER'S & SECURITY PACIFIC'S MIDDLE MARKET STRATEGY
Vijay C. Popat, *Principle,* Booz Allen & Hamilton (NY,LA)
Edward A. McNally, *Senior V.P.,* National Westminister, USA (NY,LA)

11:00 COFFEE BREAK

11:15 PRESTO CHANGO...CONVERTING UNPROFITABLE CUSTOMERS INTO PROFITBLE ONES...USING THE EMERGING SECONDARY MARKET TO YOUR ADVANTAGE

- Where Will The Secondary Market Work & For What Kind Of Loans?
- How Will The Secondary Market Affect Your Ability To Price?
- Secondary For Buckets & Loan Sales...What Are The Elements Necessary For Success?

David E. Fisher, *Vice President,* Loan Pricing Corp. (NY,LA)

12:15 LUNCH BREAK

RE-ENGINEERING THE PRICING PROCESS

1:30 ARE YOU GETTING THE BANG FOR YOUR BUCK?...DEVELOPING A TARGETED PRICING STRATEGY TO ADEQUATELY PRICE FOR RISK

- What Are The Key Components Of Pricing?
- What Prices Are Banks Actually Getting On Commercial Loans?
- How To Set Strategic Pricing Goals For Your Portfolio
- Do Banks Price Adequately For Risk?

Christopher L. Snyder, *President,* Loan Pricing Corp. (NY,LA)

2:15 A CREDIT BASED APPOACH TO ALIGNING RISK & RETURN IN A C&I LOAN PORTFOLIO

- How To Analyze The Relationship Between Credit Risk & Pricing
- Testing The Adequacy Of The Existing Credit Risk Assessment System
- Refining The Existing Credit Risk System To Serve As A Basis For Commercial Loan Pricing Scenarios

Constance Kennealy, *Partner,* Zeta Services Inc. (NY,LA)

3:00 COFFEE BREAK

RE-ENGINEERING THE CREDIT PROCESS

3:15 EMERGING NEW TECHNIQUES FOR CONTROLING LOSSES & MANAGING THE PORTFOLIO

- Buttoned-up Credit Procedures...Ensuring Repayment After The Loan Is Made
- Pricing To Recapture Expected Losses
- Diversification As A Tool In Portfolio Management
- Giving Your Problem Loans A Workout...Security Pacific's Workout & Recovery Strategy

Jonathan P. Moynihan, *Managing VP,* First Mannattan Consulting Group (NY,LA)
Jerry J. Coelho, *First VP,* Security Pacific National Bank (LA)

4:00 ARE BANKS LENDING TO LBO's TO CHEAPLY?...THE FUTURE OF HIGHLY LEVERAGED TRANSACTIONS
Mark G. Sotow, *Sr. Managing Director,* Manufacturers Hanover Trust (NY)
Hugh T. Kemper, *Marlaging Director,* Morgan Guaranty (NY)
Leland S. Prasela, *Vice Chairman,* Capitalcorp., Inc. (LA)

4:45 COMMERCIAL LOAN SECURITIZATION...A STEP BY STEP APPROACH TO SECURITIZING PERFORMING LOANS
Marshall V. Davidson, *Managing Director,* Kidder Peabody (NY,LA)
Robert M. Okabe, *Vice President,* Kidder Peabody (NY,LA)
Clifford Grieg, *Managing Director,* Standard & Poors (NY,LA)

5:30 END OF SEMINAR

SEMINAR 3

EFFECTIVE COST MANAGEMENT

July 18, 1990 • The Vista Hotel • New York City
September 12, 1990 • The Vista Hotel • New York City
September 19, 1990 • Century Plaza Hotel • Los Angeles

9:00 CHAIRMAN'S OPENING REMARKS
Patrick J. Leemputte, *Partner,* Price Waterhouse (NY, LA)

9:15 ACHIEVING COMPETITIVE ADVANTAGE THROUGH COST LEADERSHIP
The 1980's showed that cost leadership is a critical success element in all restructured industries. As the pace of restructuring in banking accelerates, winners will emerge based on competitive cost position and related strategic focus. Global finance will come to be dominated by firms obsessed with the twin pursuits of profitability and productivity.
This session concentrates on managing the key noninterest cost drivers of bank performance: 1) business scope and geographic reach; 2) size of workforce and compensation practices, 3) technology spending and investment, and 4) corporate real estate portfolio management.
Charles H. Nobs, *Senior VP,* Bankers Trust Company (NY)
Charles H. Nobs, *Senior VP,* Bankers Trust Company (NY)
Eleni Iatsvidis, *Senior VP,* Bankers Trust Company (LA)

10:00 KEYS TO WINNING THE PRODUCTIVITY RACE
If superior expense control is essential to surviving the merger decade, then how is it accomplished?
This session addresses three key issues for banks concerned about expense control: 1) How good is the bank now and where is the potential for greater frustration? Analysis based on business mix can identify bloated budgets and problem areas; 2) What kind of programs work to bring expense control? Experience shows what are the do's and dont's of crafting a program to reduce staff areas, lines of business, branches, operations and systems; 3) What does it take to stay on top? A "coherent organization" and quantitative performance measures can be keys to sustaining a cost effective culture.
James M. McCormick, *President*
First Manhattan Consulting Group (NY)
James M. McCormick, *President*
First Manhattan Consulting Group (NY)
James M. McCormick, *President*
First Manhattan Consulting Group (LA)

11:00 STORIES FROM THE FRONT: HOW MELLON BANK'S COST CONTROLS HAVE LED TO NEW BUSINESS OPPORTUNITIES AND LOWER EXPENSES
Mellon Bank has experienced a great deal of cost cutting in the past decade. Mellon's expertise in this area has shown that you can actually turn a cost center into a profit with the appropriate resources and strategy.
In this session, you will learn how Mellon effectively downsized into a better performing bank. This dedication to cost leadership has helped Mellon develop it's technologies and data processing to the point where these strengths have led to new business opportunities.
Janet Hartung, *Senior Vice President,* Mellon Bank (NY)
Janet Hartung, *Senior Vice President,* Mellon Bank (NY)
Janet Hartung, *Senior Vice President,* Mellon Bank (LA)

12:00 LUNCH BREAK

1:15 HOW TECHNOLOGY CAN HELP YOUR BANK CUT COSTS WHILE IMPROVING PERFORMANCE
Commercial banks and financial institutions are wholeheartedly embracing information technology (IT) as a way to achieve competitive advantage. But, while bank IT costs have skyrocketed, banks are cautious to crow about their success. Instead, they suffer from exponential growth in computer spending with almost no impact on their bottom line or market share.
In this session, you will learn how to begin to think about, structure and approach the IT problem in your organization. Learn what technology can do to help control costs and what it cannot do. Analyze how to cut the rising costs of your own IT infrastructure. Most important, begin to understand how you can approach IT complexity without being overwhelmed..
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (NY)
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (LA)
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (LA)

2:15 ELIMINATING EXPENSE THROUGH ACQUISITIONS
If banks merge to achieve economies of scale then why do most mergers fail to meet their expectations? As bank mergers continue to increase, minimizing costs during the integration process has become essential.
While banks of different sizes and market niches will have different merger goals, there is a proper rationale to mergers that will minimize the uncertainty. This session will look at past mergers to critique successful mergers as well as failures. In particular, where can the economies be achieved? - in back office operations/overhead, retail or wholesale operations, data processing and technology or duplication of staff responsibilities. This session provides a framework to minimize the costs of the merger.
Harry H. Tatonis, *Principal,* Booz, Allen & Hamilton Inc. (NY)
Harry H. Tatonis, *Principal,* Booz, Allen & Hamilton Inc. (NY)
James Bemowski, *Principal,* McKinsey & Co. (LA)

3:15 MONITORING THE DOWNSIZING EFFORT THROUGH EFFECTIVE HUMAN RESOURCES MANAGEMENT
- How to retain top performers and employee commitment
- What to cut?...What to keep?...How to do it?

Peter J. Doris, *Senior VP,* Right Associates (NY)
Peter J. Doris, *Senior VP,* Right Associates (NY)
Peter J. Doris, *Senior VP,* Right Associates (LA)

4:15 MEASURING THE IMPACT OF COST ON PROFIT PERFORMANCE AND SHAREHOLDER VALUE...THE ANALYST'S PERSPECTIVE
How does a bank's cost performance effect stock price? In this session, learn how analysts objectively view cost cutting practices and how profit performance is related to effective expense practices and how it effects stock price. What banks have made the right moves and what strategies were responsible for improved profit performance.
Gary Gordon, *Vice President,* PaineWebber (NY)
Gary Gordon, *Vice President,* PaineWebber (NY)
Michael Conover, *President,* Ryan Beck & Co. Pacific (LA)

5:00 END OF SEMINAR

SEMINAR 4

BANK AND CROSS-INDUSTRY ACQUISITIONS OF THRIFT INSTITUTIONS & SHOULD THRIFTS BE CONVERTING TO BANKS?

July 19, 1990 • The Vista Hotel • New York City
September 13, 1990 • The Vista Hotel • New York City
September 20, 1990 • The Century Plaza Hotel • Los Angeles
September 25, 1990 • The Ritz Carlton • Atlanta
~~October 9, 1990 • The Ritz Carlton • Chicago~~

FIRREA has opened the doors to bank acquisitions of thrift institutions and thrift institution conversions to banks. However, it is not altogether clear what this new regulatory flexibility means and whether banks and thrifts should take advantage of these new options. This one day intensive program for bank, thrift, and other business executives, attorneys and consultants focuses on the mechanics and regulatory procedures involved in bank and non-bank acquisitions of thrifts, as well as how and whether thrifts should convert to banks.

9:15 CHAIRMAN'S OPENING REMARKS
Eric Luse, *Partner,* Brownstein Zeldman and Schomer

9:30 SHOULD A THRIFT CONVERT TO A BANK?
- What Are The Advantages And Disadvantages
- A Review Of The Bank And Thrift Charters

Eric Luse, *Partner,* Brownstein Zeldman and Schomer (NY,AT,LA,CH)
Trent Feldman, *Partner,* Kaplan Smith & Associates (AT,LA)
Edward T. Lotz, *Principal,* Lyons Zombeck & Ostrowski (NY,CH)

10:00 REGULATORY HURDLES AND CONSIDERATIONS INVOLVED IN CONVERTING A THRIFT TO A BANK...HOW CAN IT BE DONE & WHAT IS PERMISSIBLE?
V. Gerard Comizio, *Director, Corporate and Securities Division,* Office of Thrift Supervision (NY,AT,LA,CH)
Eric Luse, *Partner,* Brownstein Zeldman and Schomer (NY,AT,LA,CH)
Vernon E. Fasbender, *Director for Analysis,* Comptroller of the Currency (Southeastern District) (AT)
Roy Stovall, *Director for Analysis,* Comptroller of the Currency (Northeastern District) (NY)
Donelle Ward, *Director for Analysis,* Comptroller of the Currency (Central District) (CH)
Daniel Pearson, *Director for Bank Supervision & Analysis,* Comptroller of the Currency (Western District) (LA)

10:45 COFFEE BREAK

11:00 CONVERTING A SAVINGS ASSOCIATION TO A BANK... A CASE STUDY
Samuel J. Maisza, *Partner,* Brownstein Zeldman & Schomer (NY,CH)
James S. Fleischer, *Partner,* Silver Freedman & Taff (LA)
Robert Friedman, *Partner,* Silver Freedman & Taff (AT)

11:30 WHY SHOULD A BANK OR NON-BANK ACQUIRE A THRIFT... A STEP BY STEP REVIEW
- What Are The Economic Advantages And Disadvantages?
- Market/Geographic Expansion And Pricing Considerations

Christopher Quakenbush, *Principal,* Sandler O'Neil & Partners (NY,AT)
Fred D. Price, *Principal,* Sandler O'Neil & Partners (LA,CH)
T. Stephen Johnson, *President,* T. Stephen Johnson & Associates (AT)
John Mingo, *Principal,* BEI Golembe Inc. (NY,CH)
Richard Reibman, *Managing Director,* Dean Witter Reynolds, Inc. (NY,LA)

12:00 EVALUATING A THRIFT ACQUISITION...AN ACQUIRER'S PERSPECTIVE
- Regulatory, Operational & Financial Differences With Banks

12:30 LUNCH BREAK

2:00 A REVIEW OF THE REGULATORY PARAMETERS & ROADBLOCKS TO BANK ACQUISITIONS OF THRIFTS
- Interstate/Intrastate Banking Issues
- Obstacles Of State Branching Laws & How To Circumvent Them
- Healthy Thrift vs. Failing Thrift Acquisitions

V. Gerard Comizio, *Director Corporate & Securities Division,* OTS (NY,AT,LA,CH)
Eric Luse, *Partner,* Brownstein Zeldman and Schomer (NY,AT,LA,CH)
John Buchman, *Assistant Deputy Director,* OTS (NY,AT,LA,CH)

3:00 COFFEE BREAK

3:15 WHAT ARE THE STRUCTURAL OPTIONS AND CONSIDERATIONS WHEN ACQUIRING A THRIFT?
- How Should The Resulting Or Target Institution Be Chartered And Insured?
- Holding Company vs. Direct Acquisitions

Eric Luse, *Partner,* Brownstein Zeldman and Schomer (NY,AT,LA,CH)
Peter Barnett, *Partner,* Arnold & Porter (AT,LA)
William J. Sweet, *Partner,* Skadden Arps Slate Meagher & Flom (NY,CH)

4:15 A BANK ACQUISITION OF A THRIFT...A CASE STUDY
Donald Kaplan, *Managing Director,* Kaplan Smith & Associates (NY,LA,CH)
William Moore, *President,* Trident Financial Corporation (NY,AT)

4:45 TAX AND ACCOUNTING CONSIDERATIONS
- Recapture Of Bad Debt Reserve
- Pooling vs. Purchase
- Use Of Net Operating Loss Carryovers

Roger Teurfs, *Partner,* KPMG Peat Marwick (NY)
James L. Spreng, *Partner,* KPMG Peat Marwick (NY)
Douglas McEachern, *Partner,* Deloitte & Touche (LA)
Vincent Lanuza, *Partner,* KPMG Peat Marwick (CH)
Gerald F. Hunter, *Partner,* KPMG Peat Marwick (AT)

5:30 END OF SEMINAR

SEMINAR 5

ASSET/LIABILITY MANAGEMENT

July 20, 1990 • The Vista Hotel • New York City
September 14, 1990 • The Vista Hotel • New York City
September 21, 1990 • Century Plaza Hotel • Los Angeles

9:00 CHAIRMAN'S OPENING REMARKS
Sanford Rose, *Editor,* Journal of Retail Banking
Senior Columnist, American Banker

9:15 INTEREST RATE RISK MANAGEMENT
The management of interest rate risk is fundamental to sound banking practice. Banks can experience earnings, liquidity, and capital adequacy problems, if management is poorly run.
This session will deal with a number of fundamental rules in managing interest rate risk as well as develop an integrated risk management project. You will understand how risk is measured, as well as, what tools are used to measure risk. Learn how to incorporate these tools to increase bank profitability.
Ronald D. Reading, *Vice President,* First Manhattan Consulting Group

10:30 COFFEE BREAK FOR SPEAKERS AND GUESTS

10:45 LIQUIDITY
This session learn to understand what liquidity is. Where you can get it. How much it costs, and how much it is worth. Finally, learn to understand how to measure and manage liquidity.
Peter G. Mantilla, *Vice President,* Bank of New York (NY)
Richard Laiderman, *Vice President,* Bank of America (LA)

11:45 THE USES OF DURATION IN ASSET LIABILITY MANAGEMENT
Technological and analytical developments in the 1990's will significantly enhance the ability to deal with risk. The methodology, tools, and implementation approach provide a more rigorous assessment of market risk.
The specific focus will be to contrast the duration approach with a new approach called risk measurement unit approach. The risk measurement unit approach captures both volatility and non-parallel shifts in the yield curve.
Sanford Rose, *Editor,* Journal of Retail Banking
Senior Columnist, American Banker
Robert M. Mark, *Managing Director,* Manufacturers Hanover Trust

12:30 LUNCH BREAK FOR SPEAKERS AND GUESTS

1:30 OFFICE OF THE COMPTROLLER OF THE CURRENCY AND THE NEW EXAMINATION GUIDELINES
The OCC has alerted all bankers that they must prudently manage, measure and limit risk, and that enough capital be available to support exposure to such risk.
This session will discuss the OCC's policy on interest rate risk and how active the Office of Thrift Supervision is. The different topics which will be discussed include: risk matrix, gap reports, simulation, and duration.
Jennifer Johnson, *Developer and Administrator,* OCC

2:30 SECURITIZATION...WHEN AND HOW TO USE IT.
- Being able to securitize your own product
- Opening a secondary market
- The 144 Rule with regards to Private Placement

To Be Announced

3:30 LOWER COST OF MARKET AND THE INVESTMENT PORTFOLIO
1990 will be a year when your accounting department must be able to deal effectively with the new AICPA requirements on accounting for debt securities held as assets. A new standard expected to be issued by the AICPA with the support of the SEC and the FASB will require market value determination. The new standard will require allocating security investments among investment portfolio, held for sale, and trading account.
This session will help you understand the new requirements and the techniques required to successfully implement them.
Raymond Perry, *Partner,* Deloitte & Touche

4:30 ASSET LIABILITY MANAGEMENT INTO THE 1990'S.
This session will outline recent advances in the 1) measuring of embedded option risks. 2) measuring volatility risk exposure, 3) measureing index and credit spread risks, 4) integrating value decisions into the management process, 5) integrating risk-based capital guidelines into the risk management process.
Alden Toevs, *Principal,* Morgan Stanley & Co.

5:30 END OF SEMINAR

AMERICAN BANKER

VOL. CLV NO. 157 | Monday, August 13, 1990 | 155th year

Lame Economy, Audits Hobble Southwest Banks

By STEVE KLINKERMAN

The Southwest banking rebound dissolved into a slobby mess during the second quarter as portfolio problems and tough federal examinations crunched a number of institutions.

The limping regional economy is growing ever so slightly. And aftershocks from a severe real estate downturn still rock a number of institutions.

Moreover, the recent sharp rise in energy prices offers little immediate benefit to banks in the energy-rich Southwest. Fresh energy lending opportunities will not unfold until spring at the earliest, experts said, and may never materialize if the Iraq-Kuwait conflict is soon resolved.

ANALYSIS: *Follow-up on the news*

Meanwhile, the uptick in energy prices has further weakened a shaky national economy, upon whose fortunes the Southwest increasingly depends. For the rest of this year, it appears, banks in the energy patch generally are facing a continued tightrope walk.

What has emerged is a picture of an industry that still has many lending capacity than the struggling Southwest economy needs and that still has not shed a dangerous overhang of problem assets.

Stepping Carefully

Any misstep – be it overly rapid growth, an underestimation of portfolio deterioration, or a failure to contain or cut overhead – could mean the difference between profit and loss in this environment.

Indeed, not even federally assisted institutions have proven immune to the problems besetting the region.

"Southwest bankers are continuing to discover just how little room for error there is in this economy," said Frank Anderson, a senior analyst with Stephens Inc., a brokerage in Little Rock, Ark.

Big Jolt at First City

One of the biggest second-quarter jolts came at First City Bancorporation of Texas, whose earnings fell 29.5% from the same 1989 period. The Houston-based company got a $1.5 billion rescue in 1988 but steered itself into fresh trouble by participating in risky loans made far outside Texas.

Though proceeds from the sale of its credit card portfolio more than offset recent loan deterioration, First City now is bereft of those high-yielding credit

First Fidelity, EDS Seen Near A Megadeal for Processing

By KAREN GULLO

NEW YORK — First Fidelity Bancorp. is close to signing a contract to turn over management of its $100 million technology operations to a third party, according to industry sources.

Sources expect the contract, which would be the largest ever for a banking company, to go to EDS Corp.

Deal Could Be Worth $1 Billion

The business could be worth up to $1 billion dollars over 10 years, these sources say, and would mark the first such move by a superregional. So far, only small and midsize banks have chosen outside companies to handle their data-center operations, a step that some credit with reducing technology expenses by 10% to 30%.

Analysts say such a move would further reduce noninterest expenses for the $29.8 million-asset First Fidelity, which has been in a cost-cutting mode since Anthony P. Terracciano arrived as chairman on Feb. 1.

"They've been doing fairly well, but they haven't gotten down to the fine points of cost cutting and improving productivity," said Nancy Bush, an analyst at Brown Brothers Harriman, New York.

"This would be a strong move, depending on the length of the contract and the degree to which the outside vendor becomes a part of the planning process," Ms. Bush said. "Are they saying 'Come in and give us the quick fix?' or asking the vendor to take a longer-term role in planning?"

It is not clear whether the bank will outsource the entire technology operation or keep some processing tasks in-house. In some outsourcing arrangements, an outside firm will bring in its own staff to run a bank's data center. In other cases, the firm hires the bank's data-processing and programming staff.

Officials of First Fidelity, Newark, N.J., would not comment on reports of its outsourcing move. "It's something we've been working on, but no decision has been made yet," said a bank spokesman.

A spokesperson for EDS said the company does not comment on prospective customers.

However, industry sources

Shawmut Signs Pacts To Tighten Standards

By TOM LEANDER

Shawmut National Corp. said Friday it has agreed with federal regulators to improve its lending practices, credit review, liquidity planning, and management information systems.

The agreements are not as stringent as the cease-and-desist orders regulators use in enforcement actions but indicate that problems at the banking company, with joint headquarters in Hartford, Conn., and Boston, could be deeper than was publicly known.

3d Regulatory Agreement

Shawmut is the third major New England banking company to announce such an agreement with regulators, and some analysts believe that many more banks in the economically troubled region have signed similar accords without disclosing them.

"I wouldn't be surprised if 40% to 50% of the banks in the region have entered into some kind of agreement with regulators," said James Moynihan, an analyst in Boston for Hartford-based Advest Group Inc.

Stock Price Dips

Shawmut's stock closed Friday at $9 a share, down 12.5

Loss Causes Rude Awakening at MNC

Van Howell

TENUOUS HOLD: Alan P. Hoblitzell is struggling to keep control of the banking empire he built at MNC Financial.

By BILL ATKINSON

WASHINGTON — At the start of this year, Alan P. Hoblitzell Jr. was riding high as chairman and chief executive officer of MNC Financial Inc. in Baltimore. MNC's profit record was among the best for companies its size during the 1980s, and its pending merger with another large company in its home market had analysts making gleeful predictions about the benefits of consolidation and expense cuts.

Now, in the wake of a stunning $74.4 million loss for the second quarter, Mr. Hoblitzell's job is on the line, say sources close to MNC, and the future of the $27 billion-asset superregional banking empire he built is suddenly clouded.

William H. Daiger Jr., a vice chairman of MNC and president of its principal subsidiary, Maryland National Bank, has reportedly been

See **MNC** *page 5*

"Sound Off"

The Iraqi invasion of Kuwait sent world financial markets into a tail-spin last week, fired by higher oil prices, rumors of continued unrest, and a deepening recession in regions of the United States. The *American Banker*'s Atlanta bureau chief, Kenneth Cline, asked the following question:

Q ***What will be the long-term impact of higher oil prices on U.S. banks?***

■ Arnold A. Dill
Chief economist
Citizens and Southern *Corp.*
Atlanta

It depends to some extent on the regional location of the bank. Generally speaking, the higher oil prices would be associated with higher inflation and interest rates and lower output and profits. And anything that's a negative for the economy as a whole clearly is a negative for the credit picture in banking.

Banks in the oil patch, of course, are going to receive a possibly tremendous windfall depending on what happens here. Oil in the ground and above ground has suddenly become much more valuable. To the extent that that positive impacts the economy of the southwest, it would benefit banks in the area, but at the expense of other banks and the industry as a whole.

■ C. Richard Vermillion Jr.
Chairman, Houston region
Bank One Texas
Houston

The impact is going to depend on where the banks are located because some parts of the country are going to be negatively impacted by higher oil prices.

Those in the oil segment of the country may not benefit initially because nobody is going to rush out and borrow a bunch of money for exploration and development because of increased oil prices.

But if there were – over time – an opinion prices were going to stay higher, I'd think you'd see a lot more development activity and therefore more borrowing and more business expansion at those banks that are major lenders to the oil services and the oil industry.

■ John M. Godfrey
Senior vice president and chief economist
Barnett Banks *Inc.*
Jacksonville, Fla.

As conditions now stand, the banking industry should escape this oil crisis with only minimal problems, unlike 1973 and 1979. The price adjustments are expected to be far less abrupt, and, so far, the oil is still flowing. The oil producing countries have a lot of spare capacity.

The greatest repercussions will develop as the economy slows, perhaps even slipping into a recession. This will definitely cut loan growth and increase the prospects of additional credit problems. Borrowers – all the way from those highly leveraged situations to commercial credits to consumer installment loans – will find it just that much more difficult to keep payments current.

To the extent that the pick up in inflation gets incorporated into higher interest rates, those loans that adjust to rate changes will require increased payments each month. Corporate customers and households with mortgages and home equity lines will feel the pinch.

■ Ralph M. Caretto
Corporate executive vice president
NCNB *Texas*
Dallas

The situation bodes well for those of us who are energy lenders. It would tend to strengthen the underlying collateral of credit we already have and it will have some impact on domestic production in a positive way.

But I think what we're talking about is [oil prices] settling in at a point just higher than they had been.

The impact that has for the direct lending of energy banks is positive but not great. Of course, if we get to a point where we're looking at $28-a-barrel oil or $30 at a sustainable level, that would obviously increase domestic production and bode very well for the state of Texas, more so than any other place. But we don't believe that's going to happen. □

Second-Quarter Earnings Roundup

Southwest Banks Still Struggling

Continued from *page 1*

card assets. And collections on a pool of troubled assets have slowed, further choking the income flow.

Team Bank, which contains the failed banks of Texas American Bancshares Inc., reported $6.8 million in profits. Its return on assets will improve as it deploys more assets into loans, said Terry Kelly, president, but the Texas lending market is soft, and Team Bank expects only modest loan growth the rest of this year.

This is the second in a series of articles analyzing second-quarter regional bank earnings.

Problems were unmasked elsewhere in the Southwest as federal regulators completed examinations.

Loss Follows Audit

In Albuquerque, Sunwest Financial Services reported a $12.3 million second-quarter loss after a lengthy audit by the Comptroller of the Currency. The company cited real estate problems and predicted profits for the rest of the year.

In other instances, Southwest banks reorganized additional real estate lending losses without direct help from regulators.

In Denver, United Banks of Colorado reported a whopping $89.7 million loss as it cleaned house in preparation for a takeover by Norwest Corp. Blaming soft real estate market, the company made a loan-loss provision of $81.1 million – more than 10 times as much as in the second quarter of 1989.

Bad News at 1st Commerce

In New Orleans, First Commerce Corp. reported a 27.9% earnings decline that it said stemmed from portfolio deterioration in a stagnant economy. The company suffered a 19% increase in problem assets during the second quarter.

A number of other Southwest banks took small but positive steps in the second quarter in their long climb out of portfolio problems.

For example, the Texas subsidiary of First Interstate Bancorp, Los Angeles, earned $14 million, and Texas Commerce Bancshares Inc., a unit of Chemical Banking Corp., New York, earned $24.1 million. Both were year-to-year improvements.

Large Bad-Loan Ratios

But First Interstate Bank of Texas ended the period with nearly 9% of its gross loans in some stage of default, and Texas Commerce reported nonperforming assets at more than 10% of total assets. The high concentrations of problem assets will limit profits at the Houston-based units for some time, experts said.

On a somewhat weaker note, San Antonio-based Cullen/Frost Bankers eked out $622,000 of net income – a 0.08% return on average assets – and finished the second quarter with a 9.9% nonperforming assets ratio.

The cycle of weak earnings and high levels of problem assets also was evident in Oklahoma, where Banks of Mid-America earned $611,000 and finished the second quarter with a 16.4% nonperforming assets ratio.

Similarly, in Baton Rouge, La., Premier Bancorp earned a comparatively slim $2.1 million on a $4.1 billion asset base and finished the period with a 10.5% nonperforming assets ratio. □

Correction

An Aug. 9 article about Chemical Banking Corp. ("Younger Executives Gain in a Shake-Up at Chemical," page 1) overstated the amount of repossessed real estate held by the company. At the end of the second quarter, Chemical had $556 million of assets classified as "other real estate owned," or $470 million after deducting its reserve.

Technology/Operations News

First Fidelity, EDS Seen Near A Megadeal for Processing

Continued from *page 1*

say that EDS, a Dallas-based unit of General Motors Corp., has edged International Business Machines Corp. and Perot Systems Corp. for the First Fidelity business and that the deal could be consummated by the end of the month.

"It's a first look – they're just nailing down the details," said one source. But other suppliers say they are still in the running, citing the fact that a contract has yet to be signed.

If First Fidelity outsources, it would have a dramatic impact on the industry, bankers and analysts say. Other banking companies would be encouraged to follow suit, they contend, even though many could realize the same savings by keeping technology operations in-house and making judicious trims.

"You will see more and more large banks outsourcing," said Raymond Tamayo, senior vice president for information systems at Republic New York. The $29 billion-asset bank has outsourced its retail banking data-processing operations to Systematics Inc. for several years. Its contract, thought to be in the $100 million range, is one of the largest bank outsourcing deals to date.

"It's very difficult for banks to keep up with current technology," Mr. Tamayo said. An outside firm that specializes in data-center operations has the staff, equipped to supply cost-efficient computer systems, he said.

Sweeping Changes

Mr. Terracciano embarked on an aggressive cost-cutting program when he joined First Fidelity. The former president of Mellon Bank dismissed 1,400 employees in his first month. The staff reductions are expected to save the banking company $95 million this year.

The abrupt departure of the bank's chief technology executive in May was attributed in part to a dispute over an outsourcing proposal, sources said. Gary A. Provo, the former executive vice president in charge of technology, disagreed with the proposal, which was backed by top managers, including Mr. Terracciano, sources said.

In June, the company restructured its technology and operations units, forming a corporate-level department to handle retail, wholesale, securities operations, technology, and staff services. Executives were appointed for each division except technology. Observers speculated that the company did not need a technology executive because it planned to turn that operation over to a third party.

How Much Can Be Saved?

A company spokesman said a consolidation of back-office operations and computer systems is expected to cut expenses by $50 million over the next 12 to 18 months. But it is not clear whether savings from outsourcing are included in that figure.

Sources say the outsourcing arrangment with EDS could well include a provision for consolidating data centers in Philadelphia and New Brunswick, N.J., and developing common software for all bank operations.

Some industry observers question the wisdom of turning over technology to a third party, saying that a bank could lose control of one of its most valuable assets and end up paying more for technology.

But bankers who have signed outsourcing contracts contend that the practice gives management more control over costs and productivity.

"The firm is accountable for their actions, and we manage what they do," said Mr. Tamayo at Republic Bank. □

Banks Expand Cash Management

Mainframe Link to Clients Is New Competitive Tool

By RICHARD LAYNE

NEW YORK — Big banks are expanding the cash management services available through mainframe-to-mainframe links with corporate customers, a step they consider necessary to surviving consolidation in the business.

These forward-looking banks believe the sophisticated links will enable them to gain market share by providing a fast, reliable way for companies to transfer all types of funds – whether through Fed Wire, Swift for international payments, the automated clearing house system, or checks. In essence, corporate

"If you are one of the banks that will stay in the game, you have to have this."

Frank Blanco
Morgan Stanley

treasurers will use not the bank but its computers to monitor their cash positions.

"If you are one of the banks that will stay in the game and be competitive going forward, you have to have this," said Frank Bianco, vice president at Morgan Stanley & Co., which has a computer-to-computer connection with its cash-manager banks.

No Pull Slate Yet

So far, no corporation is sending a full slate of payment instructions to a cash manager by way of these electronic links, bankers say. But many companies are taking steps in that direction.

Chase Manhattan Corp. said that next month, one of its customers will begin sending by computer a single file of instructions to make both wire transfers and ACH payments. The banking company declined to name the client.

Citicorp is among the few banks that say they already have customers sending a mixed bag of funds-transfer instructions. Big cash managers such as Chemical Banking Corp. and Manufacturers Hanover Trust Co. plan to build the communications capability into their computers, corporate treasurers say.

"I don't think there is any client that I can point to who has all payables electronically," said Robert Ford, vice president at Citibank. "But they are moving there."

Manager Lists Shrink

The electronic advance is intended to help banks remain competitive as corporations trim their list of cash management providers. According to a study of 1,000 corporations by Greenwich Associates, the average number of cash management providers per company fell to 7.8 in 1989 from 8.6 in 1985.

Corporate customers typically progress up the technology ladder in their communications with banks. They start by phoning in instructions and inquiries and advance to using a terminal connected to the bank's computers and eventually to using a personal computer.

By linking mainframe computers to mainframe computers, the corporations get a fully automated, reliable, and flexible method of communicating payment instructions.

Trend Toward a Single File

Over a mainframe computer, a corporation can send one file to cover all payables. "The trend is the single file to the bank for multiple transactions," said Stuart Levine, a vice president at Chase Manhattan.

Denise McLaughlin, vice president at Citicorp, predicts, "Mainframe-to-mainframe links will grow greatly over the next several years."

Some of that growth will come from Wall Street firms. Mr. Bianco expects the volume over Morgan Stanley's electronic highway to increase as the investment bank steps up cash monitoring worldwide. The improved monitoring is in response to Federal Reserve regulations that will make borrowing

"I don't think there is any client that I can point to who has all payables electronically."

Robert Ford
Citibank

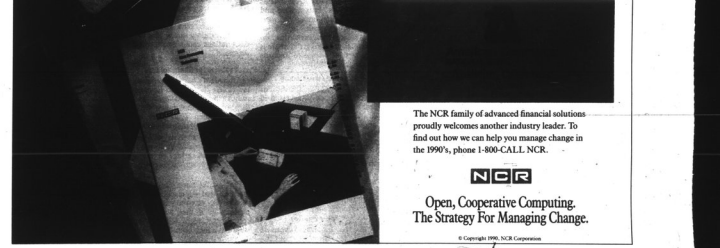
fed funds more costly.

But most of the growth is expected to come from the use of such links by Main Street companies. Driving that growth in is increase in global business and the need to increase the control over funds transfer, bankers say.

"Our control comes from bypassing the internal personnel at the bank," said Mr. Bianco of Morgan Stanley. The communications link gives him direct access to the bank's computer, through which he can instantaneously learn his cash position.

"We don't have to call for a phone call from them to verify transactions," he said.

Bankers see a race developing to provide the service. □



COMMENT / *By Paul S. Nadler*

Too Many Dead Thrifts Got Accountants' Life Support

"What I can't figure out," said my companion, a retired trust officer, "is how an unprofitable savings and loan in the Northeast could take over an unprofitable savings and loan in the Southeast and all of a sudden they are profitable."

Combining two geographically separate thrifts is not going to bring immediate economies of scale. So my answer had to be: "That's what creative accounting can do."

I then explained how so-called mark-to-market accounting had brought a writedown of mortgage assets to market value, an equivalent writeup of so-called goodwill capital, followed by an eight-year writeup of the mortgages back to par, coupled with a 40-year writedown of the goodwill capital.

How It Works

The result, I explained, was that for eight years the thrift has 5% annual appreciation in value of its mortgages and 1% decline in value of the goodwill for a net 4% profit on the entire mortgage portfolio.

After eight years, of course, the writeups end and write-downs last another 32 years. But in the 1980s, who cared about what would happen eight years from now? Especially if the thrift's CEO was 57 years old.

The conclusion: Profits are what the accountants and the regulators who determine accounting policy say they are.

One can see why so many executives of thrifts that have failed due to inadequate capital feel the government went back on its word when it first allowed mark-to-market accounting and its accompanying goodwill capital, then disallowed goodwill as part of thrift capital.

Executives Feel Betrayed

These executives feel they made decisions based on the assumption that goodwill acquired in mergers and acquisitions would be considered capital for the time it took to write it off - 40 years – only to find that the accounting rules were changed overnight. That left them without enough capital to stay alive.

"We will never trust the government's words again," a thrift leader said in discussing the question at a recent savings and loan convention.

Thrifts that counted on goodwill capital and the now discredited regulatory accounting procedures as a beautiful substitute for the far harsher generally accepted accounting principles have every reason to feel aggrieved. A stroke of the accountants' pens changed their industry, but look at what accounting did to all of us as it was applied to banks and thrifts.

Real Culprit: Rate Mismatch

We all read with disgust about the waste, fraud, and stupidity in the thrift industry that helped pile up $130 billion in losses to the Federal Deposit Insurance Corp. and Federal Savings and Loan Insurance Corp. (These losses are estimated at $500 billion if financed over 20 years.)

But as thrift consultant Bert Ely pointed out in a recent study, only a small part of the $130 billion loss came from these highly publicized drains of thrift funds. Most of the loss, he explained, came from thrifts' being paid higher interest rates to attract and keep deposits while holding fixed-rate mortgages that earned far less.

How does accounting fit into this picture?

Basically, if a thrift borrowed short, lent long, and then lost money as short-term interest rates rose, FSLIC wasn't concerned so long as the thrift had enough capital to cover its losses. Losses became solely the concern of thrift stockholders.

Insolvency Hidden, on Paper

But accounting techniques kept many thrifts alive during the 1980s long after shareholder equity and reserves were gone.

Thrifts that kept assets on the books at cost did not have to report or write off those flat rising interest rates caused in the market value of fixed-rate mortgages. And phony profits from mark-to-market accounting made it look as though more reserves existed to cover losses than actually were available.

In sum, many thrifts ran out of capital but continued to operate. They lost more money daily, money that the taxpayers would eventually have to replace. Proper accounting would have led to these thrifts' being closed far earlier.

Tougher Rules Due

The use of goodwill as capital has ended. But one wonders how many other institutions are out of real capital, since their assets' value would tumble if listed at market value instead of book.

No wonder so many observers now expect regulations requiring all financial institutions to report assets and liabilities at market value instead of book.

Banks and thrifts should earn their way through profitable operations in the real world, not through the quirks of an accountant's pen or computer. And we are likely to see more efforts to bring this about, no matter how drastic the impact may be.

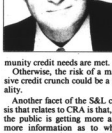
COMMENT / *By James Thomas Valliere*

CRA Marks Basic Change In Nation's Social Values



As the banking community awaits the release of the new Community Reinvestment Act ratings, the focus is on how the public and the press will react to those banks that receive low evaluations.

My experience in talking with bankers, community leaders, and regulators is that very often many of the real CRA issues are being obscured as we await the reaction to the release of the ratings.

In particular, upper-level bank managers are particularly resentful about this whole process, as they expect to be dragged by waves of negative publicity.

Why Issues Won't Fade

What is needed at this point is to keep a proper focus on what the real CRA issues are. Such a focus also will enable us to see clearly why these issues will not simply evaporate or slowly fade into the woodwork as many bankers are wishfully hoping.

The main reason CRA issues are becoming a permanent part of bank regulatory procedure is because CRA enforcement is coincident with a fundamental change of values in American society.

Just as bank deregulation in the early 1980s was coincident with an anti-tax, anti-federal regulation movement, so too we now find that CRA enforcement meshes with a broad trend in which society sees a need to have pressing social issues addressed by banks.

Change in Demands

Themes such as affordable housing, lending to minority-owned businesses, and simply providing credit to the communities that banks serve, are now viewed as elemental demands on banks.

We must also not forget that CRA enforcement is intimately linked to our ongoing S&L bailout crisis. It is imperative that, as our thrift industry shrinks, the markets that they were supposed to serve, such as housing and community credit, are not overlooked when banking institutions reap a deposit windfall as S&L's contract.

Essential Needs

As our banking system is undergoing this massive change, it is essential to make sure community credit needs are met.

Otherwise, the risk of a massive credit crunch could be a reality.

Another facet of the S&L crisis that relates to CRA is that, as the public is getting more and more information as to what went wrong with the failed S&L's, what is becoming increasingly evident is that there is a pattern of misuse of deposits by the failed institutions.

Problems in Common

Most of these institutions bought junk bonds, invested in real estate far from their communities, or lent excessive amounts to a few borrowers who ultimately did not repay their loans.

All of this points to the fact that these banks were not engaged in the fundamental business for which they were chartered: making home mortgages and providing credit for the communities they serve.

Going Public

The final point to keep in mind is the reason why the CRA ratings are being released to the public. Focusing on this issue is important because it is the first time that the results of bank examinations are being made public.

Why do this?

The answer is a simple one. Until now, all efforts to get banks to comply with CRA regulations have been met by stonewalling on the part of the banks.

Regulators Dismayed

Regulators I have spoken with expressed dismay that banks have not taken CRA seriously. When this happens, the government turns to the press.

This exposure to the press and the public is telling banks that they have to take CRA seriously. If CRA is not going to go away, then what does this mean for bank management and directors? It certainly means that low CRA ratings could lead to their dismissal.

Problem for Shareholders

After all, if a bank's reputation is severely damaged in its community because managers and directors have not taken CRA seriously, then what other recourse do shareholders have?

Also, bank analysts will undoubtedly be watching to see if negative CRA ratings have any noticeable impact on bank stock prices.

Finally, the most important question that managers and directors may have to ask themselves publicly is: If they are not in compliance with CRA, then what have they been doing with depositors' funds? □

Mr. Valliere is president of Social Banking Programs Inc. of Brattleboro, Vt. The company arranges deposit-gathering programs whose funds are earmarked for socially oriented lending.

MNC Financial Must Pick Up Pieces After Stunning Loss

Continued from *page 1*

asked to leave. And Alfred Lerner, an MNC director and its largest shareholder, seems to be making a grab for control through a preferred-stock purchase that would raise his equity stake to 23% from about 9%.

"It's a pretty good bet that there is going to be some shakeup," according to a source who closely follows the banking company. "The percentage bet is that one or both guys [Mr. Hobizell and Mr. Daiger] are gone."

Mr. Lerner, who was chairman of Equitable Bancorp., Baltimore, before its acquisition early this year by MNC, denied in an interview last week that the company is seeking a replacement for Mr. Hobizell. When asked if Mr. Daiger is on the way out, Mr. Lerner said, "Mr. Hobizell is MNC's CEO, as far as I'm concerned, all of the management judgments are in his ballpark."

Such disclaimers may or may not put the questions to rest, but the fact that they are being raised reinforces the impression that MNC is looking very different from its former self.

Its stock was trading at $8.625 a share at midafternoon on Friday, well below its 52-week high of $29.375. The company is trying to shed some assets by seeking a buyer for MNC Credit Corp., a commercial finance, venture capital, and leasing subsidiary.

The company is seeking a buyer for MNC Credit Corp.

Real Estate Sours

The holding company's rosy outlook began to change toward the end of last year as real estate problems began to surface in the Washington-Baltimore corridor. In the first quarter they noticeably cut into the returns on MNC's innovative credit card marketing and loan securitization strategies.

Last month, the depth of the problems became evident as MNC – now combined with its former rival, Equitable – reported a $74.4 million second-quarter loss. Its negative returns on assets and equity — 1.19% and 21% – reflected a 111% increase in nonperforming assets during the quarter to $757 million, and a $233 million loan-loss provision.

About-Face from Last Year

The performance marked a 180-degree reversal from positive returns of 1.15% and 18.92% in the second quarter of 1989, and 1.14% ROA and 17.71% ROE for the full year.

Sources close to the Baltimore-based holding company say it is interviewing candidates who will either take Mr. Hobizell's job or assume a high-ranking position, possibly Mr. Daiger's, if Mr. Hobizell stays.

One name that has been circulated widely is Harold Pote, the former chief executive officer of First Fidelity Bancorp., Lawrenceville, N.J.

Daniel G. Finney, a spokesman for MNC, said, "That rumor [about Mr. Pote] has been floating around for a couple of months. We won't comment on it."

When asked if he had been contacted by MNC, Mr. Pote said, "I think it is better that I don't comment, one way or another."

Mr. Lerner, who is chairman of the Progressive Corp., a profitable Cleveland-based insurance company, is raising his profile after taking paper losses of almost $100 million as MNC's stock price fell from around $21 since the merger was consummated in January.

On Aug. 6, Mr. Lerner entered into an agreement with MNC to improve its capital position in a $180 million private placement of cumulative convertible preferred stock. Mr. Lerner said he would buy at least 50% of the issue, and would assume the remainder if it were not taken by other directors.

Mr. Lerner is raising his profile after taking paper losses of almost $100 million as MNC's stock price fell.

While the move could increase his MNC stake to 23%, Mr. Lerner retains a $45,000-a-month consulting contract running over the next 10 years.

"He was the dominant shareholder before," analyst Nancy A. Bush of Brown Brothers Harriman & Co. told the *American Banker* when the preferred-stock offering was announced. "This makes him the 800-pound gorilla."

"I think Lerner's presence will be felt," said a source close to MNC, who also worked for Equitable. "He has the most to lose of anybody. If it comes down to a [board] vote it could get interesting. Never underestimate the power of Lerner."

In the interview, Mr. Lerner said he was "certainly disappointed" with the company's recent performance.

"I didn't expect it to turn out this way," he said. "But I'm in business, and every day is not as good as some other days. It is an outstanding franchise, and it has a sensational credit card business. It is fixable, so we've got to fix it."

A Consulting Role

Mr. Lerner, known for being quick to the point and a tough manager, said he would not exert control over MNC's day-to-day operations, but he will make suggestions.

"I'm not a manager at all," he

IN THE 1990s, OUR CUSTOMERS HAVE A NEW KIND OF COMPETITION. WE'RE HELPING THEM MEASURE UP.

Our customers are Main Street financial institutions. Independent. Locally owned. Often with assets under $1 billion. They used to compete just against each other. But now, they're up against the vast resources of financial center megabanks and brokerages.

Until this year, we were the Financial Services Group of First Financial Management Corporation, pioneers in EFT and ATM products. Custom data processing and management solutions. Electronic delivery platforms.

In January, we changed our name to Basis, because we're building the foundation of a new way for our customers to compete – a financial services information network for Main Street financial institutions. A network that eventually will link them to resources that are better than the big guys have. Custom products. Databases. Marketing information.

We're giving our customers the capabilities to compete, the leadership to win. So they can stand taller than anybody.

That's the basis of Basis.

BASIS.

Victorian Homes Restored To House Poor in Seattle

By SAM ZUCKERMAN

Like other cities across the country, Seattle has an acute shortage of low-cost housing. As the hub of a vast logging empire, it is also filled with turn-of-the-century frame houses, many of them badly rundown.

Some of these Victorian structures have been turned into shelter for those who need it most, through a restoration project largely financed by the state's biggest financial institutions.

The nonprofit Historic Seattle Preservation and Development Authority last month completed the conversion of six houses that had been boarded up and rotting into 47 units of housing for low-income people. The contractor painstakingly restored the houses to recreate original details, including the paint – rust colored and peagreen – that covered them when they were built almost a century ago.

The $2.4 million effort, called the Belmont-Boylston Historic Houses project, is located in the First Hill district on the edge of downtown Seattle.

Most of the project's funding came from three commercial lenders: Security Pacific Bank Washington provided $917,000 in equity as a limited partner; Seattle-First National Bank lent $2.04 million in construction financing; and Pacific First Federal Savings Bank extended a takeout loan of $1.02 million.

> **"It goes beyond the CRA."**
>
> *Jennifer Blake*
> *National Trust for Historic Preservation*

The National Trust for Historic Preservation and other agencies kicked in $627,000 in additional financing. The total lending is greater than the total project cost, because the takeout loan replaced some previous financing.

Belmont-Boylston exemplifies what bankers and preservation experts say is a growing enthusiasm of financial institutions for investing in the architectural heritage of their communities.

"If we are interested in the community, then we are interested in preservation," said Judy Russell, community affairs manager for Barnett Bank of Jacksonville, Fla.

Usually such support is combined with programs to channel credit to low- and moderate-income communities, as required by the Community Reinvestment Act. Thus, Barnett has contributed $1 million to a $3.5 million loan pool for restoring old homes in Jacksonville's historic Springfield district.

Bankers and preservation specialists say that when support for affordable housing is combined with historic preservation, the bank and the community reap the greatest rewards.

"It goes beyond the CRA," said Jennifer Blake, a finance specialist with the National Trust for Historic Preservation. "What historic preservation has to offer banks is more attractive projects that they can have some pride in."

Regulators Will Take Note of Efforts

Though banks rack up no CRA points for preservation in and of itself, they can still impress federal regulators.

"We have no formal policy," said Kyle Walsh, community affairs officer with the Federal Reserve Bank of San Francisco. "But it's something we would encourage."

Security Pacific community reinvestment officer Judy Reed, the bank's point person on Belmont-Boylston, described the project's preservation features as "frosting on the cake."

Nevertheless, bank support for preservation is good business, Ms. Reed maintained. It helps identify the bank with the community, something important for an institution whose parent is headquartered in faraway Los Angeles.

Security Reaped an Immediate Gain

In Security Pacific's case, there was also an immediate economic benefit. As an equity partner, Security Pacific received $1.7 million in low-income housing tax credits for its $917,000 stake. Those credits, not available for making loans, made Belmont-Boylston "a good investment opportunity" that provides a reasonable rate of return, Ms. Reed said.

Where lending is concerned, the often difficult economics of preservation makes many bank credit officials leery.

"Preservation projects are almost always a little more difficult to sell," said Cathy Galbraith, Historic Seattle's executive director. "They involve concepts that financial institutions are not used to dealing with."

In particular, normal calculations of the useful life of a property may have to go out the window when dealing with a restored century-old building. "Age is nothing to be afraid of," Ms. Galbraith says.

Making sure a preservation project pays off is particularly difficult when low-income housing is the goal.

To ensure that Belmont-Boylston was self-sustaining, the architect and contractor were kept on a tight budget. But the key to making project economical was the financing package that spread the risk among lenders and allowed Security Pacific to use the tax credits, Ms. Galbraith said. □

New Heights for Credit Card Debt

Industry Expert Foresees a Doubling by Year 2000

By YVETTE D. KANTROW

NEW YORK — Credit card debt will continue to outpace other forms of consumer debt this year, according to H. Spencer Nilson, a prominent industry observer.

Consumers will take out $225.4 billion in debt on their credit cards in 1990, Mr. Nilson predicted.

> **"Consumers will take out $225.4 billion in debt on their credit cards in 1990."**
>
> **H. Spencer Nilson**
> *The Nilson Report*

He also expects credit card debt to nearly double by the year 2000, when it will hit $435.7 billion.

Credit Boom Predicted

The predictions come at a time when many economists are expecting consumer spending growth to slow.

But Mr. Nilson, who publishes the *The Nilson Report* in Los Angeles, said credit card use will boom as consumers increasingly choose to use credit cards over cash, checks, and other types of loans.

According to Mr. Nilson, credit card debt will account for 29.8% of all consumer debt by the year 2000, up from 22.9% in 1980.

Credit Debt Up $29.7 Billion

Credit card debt totaled $206.7 billion in 1989, up from $177.0 billion in 1988 – the first year Mr. Nilson tracked these figures.

He used economic indicators from the Department of Commerce, the Federal Reserve Board, the Department of Labor, and the Census Bureau to arrive at estimates for 1980 and the future.

More than 110 million Americans now have at least one credit card, Mr. Nilson said, and together own more than 1 billion cards, for an average of 9.1 per cardholder.

The combined unpaid balances on these cards averages $2,042 per cardholder – up from $931 in 1980. The average adult American has $4,402 in all debt outstanding, excluding mortgages, but including credit cards.

> **"Credit card debt will account for 29.8% of all consumer debt by the year 2000."**

The Future Bill of Payment

Mr. Nilson predicted that by the year 2000, the average unpaid card balance will reach $3,683.

Nearly 1.2 billion cards will be outstanding, averaging 11.7 cards per cardholder. Debt for the average American, excluding mortgages, will reach $7,214.

Credit card debt includes bank-issued MasterCard and Visa cards, retail store cards, travel and entertainment cards such as American Express and Carte Blanche, and the Discover card. □

Mail-Order Checks a Processing Problem

By YVETTE D. KANTROW

NEW YORK – A recent American Bankers Association survey validates a long-held belief that mail-order checks cause processing problems for banks.

Two out of three community and midsize banks surveyed by the trade association said they were having trouble processing the personal checks that consumers bought through the mail rather than through their banks. About half of the large banks also reported difficulties.

The American Bankers Association surveyed a total of 448 commercial banks nationwide for its study on retail deposit services.

Banks that complained about inferior checks most often cited the poor quality of their MICR lines – the machine-readable coding that contains account numbers and other routing information. More than 80% of the midsize and large banks in the survey complained of MICR quality.

"Some banks say you can only use checks supplied by the bank," an ABA spokesman said. "They are not doing that to make money. They are doing that so they don't jam up their equipment."

Checks In the Mail, Irwindale, Calif., and other companies sell checks directly -to consumers, marketing their wares via flyers in local newspapers and direct-mail campaigns.

"Consumers think they are getting a good deal, and in a sense, they are," the spokesman said. But the very factors that make the checks cheaper – inferior ink and paper – also make them more difficult for check-processing machinery to handle.

The largest banks in the survey also complained of losing noninterest income to mail-order check suppliers, with 75% of those with more than $1 billion in assets citing this problem. Only a third of the banks with less than $50 million in assets said loss of noninterest revenue was a concern. □

Big Loss Sets Stage for Power Struggle at MNC Financial

Continued from page 5

said. "I try to be as helpful as possible. I just want to have a good relationship with the CEO and the top people."

A fall from stardom like MNC's is becoming an increasingly familiar story in the banking industry, particularly as real estate loans and investments lose their luster. Throughout the 1980s, many institutions bolstered their bottom lines with profits from real estate, but they lacked diversity, and are now taking big losses.

Of MNC's $757 million in nonperforming assets on June 30, $522 million were related to commercial real estate problems, which are overshadowing MNC's recent growth into one of the nation's largest credit card and consumer lenders.

The commercial real estate portfolio has grown at a blistering 49% pace since 1984. Former executives of the bank said the groundwork for the problems was laid in the mid-1980s when Jeffrey R. Springer, the bank's senior lending officer, resigned after being passed over for the presidency. Other executives, including the head of real estate lending and senior credit officer, left subsequently.

Ahead Full Throttle

Despite the departures, the bank opened the throttle on real estate and staffed the division with lenders whose expertise lay in commercial banking, not real estate lending, sources said. A former MNC lender said the organization lost its focus when Mr. Springer left the bank.

"We did not try to do every deal coming down the tube. We were not pushing the volume machine," he recalled. The new management "became volume driven," he said.

"I think the problem is that they have been exceedingly aggressive in construction lending when prudent lenders have pulled back," said Lacy Shockley, a bank analyst at Smith Barney, Harris Upham & Co. "It is my understanding that 18 months ago these people were aggressive and became even more aggressive."

From January to March 1990, MNC's real estate construction portfolio alone grew 25% to $3.4 billion.

"It shows you that despite earlier success something underneath was going on that was much more dangerous," said an analyst who demanded anonymity. "You can't grow a real estate construction book as fast as they did and not suffer the consequences."

> **Under Mr. Hoblitzell, MNC was noted as a leader in packaging and selling credit card receivables, a business that remains strong.**

Assets Will Have to Be Shed

Although analysts contend MNC remains an unlikely candidate for a takeover, it will be forced to shed assets to meet upcoming payments on short-term and long-term borrowings.

MNC Credit, which is on the selling block, employs about 300 people, has $1.5 billion in assets, and contributed $15 million in earnings after taxes at yearend.

"They have to secure the balance sheet and look at expenses," said Felice M. Gelman, a bank analyst at Dillon Read & Co. "They have to see if they can throw a few things overboard and lighten the ship."

Ms. Gelman and other analysts contend that MNC will not sell the credit card business, which through a Delaware subsidiary last year contributed about 40% of the company's $212.6 million net income, Ms. Gelman said.

"Selling the credit card portfolio is tantamount to liquidation. That is the earnings business that will have to largely sustain them through this period," Ms. Gelman said.

Under Mr. Hoblitzell, its chief executive since 1983, MNC also was noted as a leader in packaging and selling credit card receivables, a business that continues to remain strong. The innovation, and the resulting profits, left a strong impression among followers of the company. □

DC Bank Declared Insolvent by U.S.

WASHINGTON — The Office of the Comptroller of the Currency on Friday declared the National Bank of Washington insolvent and appointed the Federal Deposit Insurance Corp. as receiver.

The FDIC said Riggs National Bank, the largest in Washington, agreed to assume $1 billion of deposits and acquire $1.1 billion of assets of NBW, the city's fourth-largest bank.

The comptroller's office said the declaration of insolvency was precipitated by a default in May by Washington Bancorp. on $25.8 million of commercial paper and the subsequent report of a $69 million loss in the first half.

The bank's conservator was William S. Ogden, a former chairman of Continental Bank, who said he viewed National BNW as potentially valuable to another bank in the region. □

Let Us Now Praise Bank Runs, Conservative Economists Say

By ROBERT M. GARSSON

WASHINGTON — What's so bad about bank runs? That question is on the mind of Catherine England, the Cato Institute's director of regulatory studies.

At least since 1933, when panics led to bank holidays in state after state, it has been all but gospel that runs on banks were disasters, to be avoided at all costs.

A year after the sweeping thrift bailout law, some fundamental assumptions about the banking system are under review. Speaking out on the law's anniversary, Ms. England and a small band of fellow conservatives last week said worse things than bank runs exist for policymakers to consider as they weigh a potential overhaul of the deposit insurance system.

The Thrift Bailout Law

Costs Exceed Benefits

"There are costs associated with deposit insurance, and they were simply too large in the 1980s," said James Barth, professor of finance at Auburn University. Mr. Barth, a former chief economist at the Office of Thrift Supervision, was referring to the huge thrift-industry losses that built up over the decade and will now be covered by the $125 billion bailout.

"By the end of the day, the cost of deposit insurance will be greater than the losses from small banks" would have been if they had failed in runs uninsured, said James D. Davidson, chairman of the National Taxpayers Union Foundation.

But without deposit insurance, National Bank of Washington – which the government took over last month and intends to sell – almost surely would have suffered huge losses as nervous depositors fled.

"So what?" responded Ms. England.

Run as Market Regulator

A run would have removed funds from a weak institution, she said. By contrast, the deposit insurance system, which kept the bank open, has had the perverse effect of permitting flows of funds to the weakest institutions. These, in turn, lent to the least creditworthy borrowers, she suggested.

The loser, Ms. England said, was the economy as a whole. Funds were diverted to less-productive enterprises. "The economy lost on that," she said. "Jobs were not created."

Others said runs are useful. "Bank runs are an extremely crude device to force regulators to close a bank," said Bert Ely, an Alexandria, Va.-based analyst, who is best known for detailing the extent of losses embedded in the thrift industry.

Is there nothing good about federal deposit insurance?

Not much, apparently.

Catherine England
Cato Institute

James D. Davidson
Taxpayers Union Foundation

Here's some of what was said at the Cato Institute briefing on the first anniversary of the Financial Institutions Reform, Recovery, and Enforcement Act:

● "The idea that deposit insurance was designed to protect widows and orphans is a fraud," said the taxpayer group's Mr. Davidson. "It was set up to protect the franchise value of small, local banks that could not be sustained in free competition."

Small banks, Mr. Davidson added, are inherently unstable. But they can be controlled by local people, who in turn have close ties to their local member of Congress, a vicious circle that perpetuates the current system.

● The primary cause of the S&L crisis, said Mr. Ely, was federal deposit insurance. "Without deposit insurance, thrifts would not have been borrowing short to lend long. Deposit insurance was a disaster waiting to happen."

But what to do?

Private Insurance Urged

Mr. Ely said he believes the federal insurance system has been hopelessly corrupted and the only solution is to scrap it for a system of private insurance.

"It is imperative to get government out of deposit insurance," he said. "Bank solvency is a very insurable risk. You can see a failure coming. Look at National Bank of Washington. We saw it coming for years."

Ms. England said she believes regulators should have less latitude to bail out troubled institutions. Bailouts may be cheaper in the short run, she said, but regulators faced by shaky banks are like addicts in need of drugs.

"A fix may be the most efficient short-run solution, but you know it's no good for you in the long run," she said.

Instead, regulators must begin preparing for worst-case scenarios, including the possible failure of a money-center bank.

"You have to sit the Fed and the Treasury and the FDIC down and say, 'How do we deal with a Citi or Manufacturers Hanover failure?' " Ms. England said. "You have to have a plan in place."

A contingency plan for a Citicorp failure would resolve the too-big-to-fail dilemma, she said. But any serious solution, she added, must also deal with the central bank's Fed Wire system of electronic payments.

Immunizing the Sophisticated

"Given current practices," Ms. England said, "the Fed can facilitate the clean getaway of the most sophisticated depositors in the hours before an insolvent institution is closed." This problem will become more serious if "haircuts" or coinsurance is the chosen reform route.

The haircut idea originated with the American Bankers Association; it is intended to insure that, in a federal rescue, every depositor loses a fixed percentage of his savings, say 10%.

But because sophisticated investors will likely learn in advance when regulators are about to close a large bank, they can move funds out and avoid the pain of a haircut. The Fed Wire just makes the process more efficient, Ms. England said. □

THE WEEK *ahead*

MONDAY, AUGUST 13

The Federal Reserve Board ends public comment on proposed amendments to rules on dividend payments by state-chartered member banks and bank holding companies. The changes, which parallel those proposed by the Office of the Comptroller of the Currency, would effectively limit payouts by earnings-strapped institutions. 202-452-3000

The House and Senate are in recess and won't reconvene until after Labor Day.

TUESDAY, AUGUST 14

The Federal Deposit Insurance Corp. board meets to consider a staff analysis on whether to raise the premium banks pay for insurance. By year end, the fund could lose as much as $2 billion, according to senior officials at the agency. 202-898-8400

The Resolution Trust Corp. also meets to to consider changes to its policy statement on representations and warrants offered in mortgage loan and servicing agreements. 202-416-7566

The Treasury's conduct of international financial policy is the subject of a House Banking Committee hearing. 202-225-4247

Retail sales figures for July released by Commerce Department.

WEDNESDAY, AUGUST 15

The Fed meets to consider issuing for comment proposals to change the price structure of its interdistrict transportation system. 202-452-3000

Industrial production figures for July are announced by the Fed.

Business inventories and sales figures for June released by Commerce Department.

Capacity utilization figures for July are announced by the Fed.

THURSDAY, AUGUST 16

Consumer price figures for July released by Labor Department.

Housing starts and building permits figures for July are announced by the Commerce Department.

Real earnings figures for July released by Labor Department.

FRIDAY, AUGUST 17

Merchandise trade figures for June announced by Commerce.

PEOPLE

Senate Panel Heats Grill for Bank Nominee

The Senate Banking Committee turned what might have been a routine midsummer confirmation hearing into a hot-seat session for a former official of the Office of Management and Budget regarding her role in refusing more bank examiners for the Federal Home Loan Bank Board while thrift losses mounted.

Committee Chairman **Donald W. Riegle,** D-Mich., and Sens. **Bob Graham,** D-Fla., and **Timothy E. Wirth,** D-Colo., grilled **Constance J. Horner,** a nominee for the board of the National Cooperative Bank, on her tenure as OMB associate director of economics and governments from August 1983 to August 1985.

The committee cited testimony by former top officials close to the thrift industry while Ms. Horner was at OMB and, later, director of the Office of Personnel Management. She is now undersecretary of the Department of Health and Human Services.

Statements from former Federal Reserve Board Chairman **Paul Volcker,** former Federal Savings and Loan Insurance Corp. Deputy Director **William Black,** and former FHLBB chairmen **M. Danny Wall** and **Edwin Gray** suggested that Ms. Horner played a key role in a bureaucratic bottleneck that escalated the savings and loan bailout cost by billions of dollars.

Donald Regan
Scheduled to testify

"You had an opportunity to say 'yes' or 'no'" to clear the way for more thrift examiners, "and you said 'no,'" Mr. Riegle told Ms. Horner. She responded: "It struck me that there was simply no justification for the increase."

Ms. Horner's less-than-friendly treatment by the committee suggested that former Treasury and regulatory officials from the Carter and Reagan administrations may face similar receptions when the House Banking Committee convenes hearings Sept. 12 to investigate S&L policy decisions during the late 1970s and early 1980s.

The list of scheduled witnesses includes former Treasury secretaries **G. William Miller** and **Donald Regan;** a group of former FHLBB chairmen, including **Jay Janis, John Dalton, Richard Pratt,** Mr. Gray, and Mr. Wall; and all members of the FHLBB from 1979 to 1989.

Laurie S. Schaffer, 36, is joining the banking section of the Treasury Department general counsel's office, in part to help write the chapter on financial services reform in the department's deposit insurance study.

She starts today, reporting to Treasury assistant general counsel for banking and finance **Mary Ann Gadziala.**

Ms. Schaffer, 36, worked on the regulatory task force led by then-Vice President Bush in the early 1980s while a lawyer at the Securities and Exchange Commission. She later went to the American Bankers Association's trust and securities division.

From 1988 to a couple of weeks ago, Ms. Schaffer was an associate in Kirkpatrick & Lockhart law firm in Washington.

— **Louis Gerhardstein** and **Barbara A. Rehm**

Bank of Tokyo and Citicorp Continue to Pressure Brazil

By RENE VILLEGAS

BRASILIA — Executives of Citicorp and Bank of Tokyo said Brazil should pay its arrears of $6 billion on commercial bank debt to pave the way for negotiations.

"The priority of Brazil should be to look for investments for economic growth and not to quit paying interest on its foreign debt," John S. Reed, chairman and chief executive officer of Citicorp, said following a seminar on Brazil's foreign debt.

Mr. Reed has been especially outspoken in recent weeks in demanding that Brazil pay arrears on its private medium- and long-term foreign bank debt of $56.7 billion. He has been in Brazil three times within the last month pressing his case.

Citicorp's principal subsidiary Citibank, is Brazil's largest foreign creditor, with about $3.4 billion in loans.

Bank Reaction Held Costly

Early last week in Sao Paulo, Mr. Reed said Brazil had lost $3 billion in vital trade and interbank lines because of its failure to honor its debt agreements. "This is a normal reaction of bankers" to cut back these lines, Mr. Reed said last week.

Brazil has continued paying interest on these short-term credits, which are essential for financing exports and imports.

"To quit paying interest could be an unfortunate precedent. It would be in Brazil's interest to regularize its arrears as a demonstration of its seriousness in seeking an agreement with private banks," Eiichi Matsumoto, vice chairman of the Bank of Tokyo, told the seminar on foreign debt sponsored by the Brazilian Senate.

Brazilian officials participating in the seminar rejected the suggestions of the visiting bankers.

Brazil owes $23 billion this year on its foreign debt, including the short-term as well as the longer-term credits, Antonio Claudio Sochaczewski, director for the foreign area for the Brazilian Central Bank, told the seminar. "Brazil does not have the capacity to pay this sum."

Matching Sacrifice Urged

Mr. Sochaczewski said the economic program of President Fernando Collor de Mello was a "tough internal sacrifice which has to be matched by creditors."

He did not give a detailed breakdown of the $23 billion figure. Brazil's total annual interest payments are almost $10 billion.

In addition, Brazil owes $2 billion arrears on debt to official creditors such as the Paris Club and $6 billion arrears to private banks.

"It is necessary to keep to the rules of the game," Mr. Reed said. "From abroad, we see that Brazil has more capacity to pay than other indebted countries, but here it is said that it cannot grow because of foreign debt commitments," Mr. Reed said.

Brazil's total foreign debt is $115 billion.

"A pact with banks could permit that Brazil grow with a negative current account, such as is the case of Mexico, which is growing and has access to foreign investments," Mr. Reed said.

... by country

SWITZERLAND

Switzerland said it may allow exceptions to the freeze it imposed on Kuwaiti assets after Iraq's invasion of the emirate.

But the Swiss government, which has used economic pressure to underscore its foreign policy for the first time in modern history, announced no exceptions to the freeze it also imposed on Iraqi assets.

The Finance Ministry said the general rule for Kuwaiti state-owned assets, whether in Switzerland or controlled from Switzerland, was that they must not be transferred to others, nor may they pass to Iraq or Kuwait.

But it added that, on request, the ministry could authorize the transfer of such assets to others, if there were no reason to suppose that Iraq or a Kuwaiti regime controlled by Iraq could dispose of the assets.

There must also be no reason in such a situation to suppose that assets belonging to Kuwait might pass illegally into private hands, it added.

The ministry said assets belonging to Kuwaiti individuals or private companies not under state control, were not affected by the freeze. — **Reuters**

UNITED KINGDOM

A special meeting of finance ministers of the Group of Seven to discuss Iraq's invasion of Kuwait would be premature, a U.K. official said.

He was responding to a call by Jacques Delors, president of the European Community's Commission, for a Group of Seven meeting to coordinate the industrial nations' response and help calm nervous financial markets.

There may be little the finance ministers could do now that is not already being done in national capitals or could not be dealt with at the Group of Seven meeting in September, he said.

The official said that to his knowledge, the United Kingdom had not consulted any other Group of Seven members about an early meeting. — **Reuters**

Banks Cut Business in Gulf Region

Japanese Lead Move; Arab Institutions Also Wary

By JOHN EVANS

LONDON — Led by the Japanese, the industrial world's banking institutions are rapidly reducing their Persian Gulf business, including important interbank credit lines, in the wake of the Kuwait crisis.

The spreading withdrawal by foreign banks, which are owed nearly $32 billion by Arab nations, is helping to bring normal commercial lending in the region to a standstill.

A $30 million international loan facility for Commercial Facility Corp., a Kuwait company specializing in auto loans and other consumer finance, was canceled Friday.

No Explanation Offered

The arranging banks, Gulf International Bank, Arab Banking Corp., and the Bank of Tokyo Ltd., gave no explanation for abandoning the transaction. But London bankers say it was because of the Gulf crisis.

Arab banks are themselves curtailing activity and instead giving priority to preserving their liquidity levels amid a general collapse of business confidence in the region, say senior bankers and analysts.

In a reversing flight to quality, the Gulf region's government-owned or controlled banks are proving the most stable institutions, they add.

These include the National Bank of Abu Dhabi, National Bank of Dubai, National Bank of Bahrain and the Qatar National Bank.

A Quarantine in Effect

The big foreign pullout from the Gulf is by Japanese banks, Arab bankers say. Tokyo's banks have largely halted interbank lending to Gulf banks and have even stopped taking deposits from Arab counterparts, in an apparent "quarantine" of the region, according to bankers.

Among Western banks, the position is not so clear-cut. Some Arab bankers say that several American banks are cutting off business, such as the handling of letters of credit used in international trade and commerce.

Mark West, an executive at London Forfaiting Co., a specialist British broker in international trade finance, comments: "Our position is really pretty much the same as the banks in the interbank deposit market. We wouldn't take up new credits from countries involved in the crisis."

Reason for Reluctance

Mr. West said that, in turn, this reflects the reluctance of his banking customers to write new trade business with nations like Saudi Arabia.

Arab banks are curtailing activity and giving priority to preserving liquidity amid a general collapse of confidence.

Among U.S. banks, Manufacturers Hanover Trust Co. and Chase Manhattan Bank declined to discuss specific policies on Gulf business, although a Chase spokesman noted, "Our risks with respect to Iraq and Kuwait are very small."

Britain's Midland Bank Ltd. says that while it is monitoring developments closely and is observing the international freeze on Kuwaiti and Iraqi assets, it is not pulling out of the Gulf. The bank "is continuing to provide support for our Middle East customers" as well as its non-Arab customers' banking requirements in the region, a spokesman says.

Meantime, Western banks such as J.P. Morgan & Co. that historically have had close ties to Saudi Arabia, helping to invest and disburse its billions of dollars in oil revenues, will remain committed to the kingdom, bankers expect. A Morgan spokesman declined to comment.

Arab bankers stress that such loyalties will prove important. They warn that any foreign bank that pulls out of the Gulf abruptly, unilaterally cutting business lines with the region, will have great difficulties in returning once tensions ease.

"We expect the big banks like Citicorp, Deutsche Bank and National Westminster Bank to maintain their traditional links in the Gulf," one Arab banker said. "Banks which just flee will not be welcome if they try to come back and seek new business once things return to normal."

Investment Appeal Seen

These bankers say that an international oil price remaining in the region of $25 a barrel long-term will help swell the Gulf's revenues and lead to a new burst of development and investment in the region, presenting attractive opportunities for foreign banks once the Gulf situation normalizes.

According to data from the Bank for International Settlements in Basel, banks in the major industrial nations lent a total of $31.8 billion to Middle East states as of the end of 1989. □

Bahrain: Working Normally

BAHRAIN — The financial situation in Bahrain is stable and liquidity is sufficient to cover requirements of the government and the public, Bahrain's Monetary Agency said.

"All banking and financial institutions in Bahrain continue to work normally and provide normal services," according to an agency statement carried by Bahrain newspapers Friday.

The statement followed reports that turmoil in Gulf banking had deepened and that some banks were in trouble after big cash withdrawals.

"The banking system in the country is well, and all banks have enough liquidity to cover their customers' requirements for both personal and trading purposes," the agency said.

Exchange of the Bahrain dinar to other currencies is also unaffected, it added.

If you don't know
who your market is,
how can you
show you're meeting
its credit needs?

You will be examined for CRA compliance, no question about it. And the first thing the regulators will look for is a map delineating your local community — just check item #4 of the OCC's January 12, 1990 Banking Bulletin.

It's one of the few things about the CRA that you can act on with certainty.

If you don't take this first step, you're going to have a tough time convincing your regulator that you're trying to comply with the CRA requirements. We can help make sure you do it right.

The *Sheshunoff™ CRA Market Definition Service* will give you maps that meet CRA standards. And we'll supply demographic information designed to show you who your market is — by age, income, and ethnic background. There's even data on home ownership, deposits and investments, and growth trends. So you can establish and evaluate credit and community development programs for your local markets that make sense.

Best of all, as CRA compliance becomes more standardized and specific, we'll continue to help you conform.

We've been helping banks stay profitable and in compliance since 1971. So we know how to help you start meeting the minimum standards without spending a penny more than you have to.

Take step one. To get your maps and reports today, call us. 1-800-456-2340.

Executive Help Wanted

Be a major player in the age of information.

Instant access to information is the winning edge in today's business arena. To help companies compete in world markets, we operate sophisticated information networks that cover more than 85 countries and span the globe with a single keystroke.

We need professionals who can make the rules instead of following them by providing fresh solutions to today's technical problems — and tomorrow's. If you're comfortable with decision makers in the financial community, consider one of these excellent opportunities.

EASTERN REGION MANAGER, BANKING
New York, NY

We need a take-charge managerial professional who can maintain high level client relationships in key accounts while directing the overall sales and service efforts in the region. You'll be responsible for the development, implementation and measurement of the region's geographic analysis, sales plans, and account selling strategies. You'll need sound knowledge of the financial community with a proven track record (seven to ten years) of conceptual sales in the information services/software solutions industry. Superior interpersonal and sales development skills are essential.

NEW BUSINESS DEVELOPMENT MANAGER, BANKING
Atlanta, GA

If you can truly understand a business's needs and successfully outline a partnership between senior executives and GE Information Services, you're on target for this position. To manage our new business effort, you'll need extensive knowledge of banking/financial institutions in the Southeast and demonstrated ability in high technology conceptual sales. A minimum of five to seven years direct experience is required.

APPLICATIONS DEVELOPER
New York, NY

Business savvy and excellent communication skills are essential to provide pre- and post-technical sales support to clients. A B.S./B.A. as well as five plus years of banking applications development with IBM, MVS, COBOL, CICS, and FORTRAN are also required. Mainframe and PC development are preferable.

If your future is in information services, your company should be GE. Generous compensation and extensive benefits are just the beginning. Send your resume with salary requirements to: GE Information Services, Dept. RCAB-8/7, 401 North Washington Street, Rockville, MD 20850.

Join One of the Country's Premier Consumer Banking Teams

Do you want to work closely with a team of enthusiastic marketing professionals and senior management? Put your talents to work as part of the country's premier consumer banking teams?

If you have consumer banking experience in product development and product management, you may be the one we're looking for. Central Bank of the South has a rare opening in its marketing department for a Manager of Product Development. We're looking for someone with the proven ability to generate growth in deposits, loans, and fee income through existing consumer products and the development of new ones. . . someone who is comfortable in a high-visibility position and works effectively with senior management.

If you possess these qualities, as well as a graduate degree in business and excellent communication skills— both written and oral — we want to hear from you. As our Manager of Product Development, you would report directly to the Marketing Director and serve as a catalyst between our team of product managers and senior management.

Central is a strong regional bank with offices throughout Alabama and Texas. And we're financially sound, with over $4.8 billion in assets. For the right candidate, we offer a generous compensation package, including excellent salary and relocation expenses. If you're interested in joining one of the country's premier consumer bank marketing teams, contact Jo Lynne Wilson, Employment Officer, at the following address:

Employment Services Division
Central Bank of the South
Post Office Box 10566
Birmingham, Alabama 35296

Be sure to include your salary history along with your resume. All responses will be received in strictest confidence.

S&L Crime Cases Seen Rising in Northeast

By BILL ATKINSON

WASHINGTON — James G. Richmond, director of the Justice Department's investigations of bank and thrift crimes, said New England could be the next regional hot spot for fraud and management-abuse cases.

While most observers do not expect New England to be as crime-ridden as Texas, many say it could become a focus of law-enforcement activity as the slowing economy leads to exposure of questionable management practices by some executives.

"I think you are going to see a bigger need in the Northeast," Mr. Richmond, the special counsel for financial institution crimes, said at a briefing last week.

Congressional Prodding

The Justice Department has been criticized by Congress for not catching and prosecuting wayward bankers more quickly.

In June, President Bush appointed Mr. Richmond, an Indiana-based U.S. attorney, to lead a special task force to coordinate federal investigations and prosecutions of bank and S&L cases.

Economy a Factor

John K. Villa, an expert on white-collar crime, agreed with Mr. Richmond that New England could see sharp rise in fraud in response to general economic and financial pressures.

"It is a logical progression," said Mr. Villa, a lawyer with Williams & Connolly in Washington. "Historically, fraud problems emerge a year or more after a real estate market sours. The fact that we haven't seen any major problems is not unusual. I wouldn't be surprised to see a substantial number."

"There seems to be an avenue opening that seems to say any time we start seeing [economic problems] there is bad management and fraud," said Warren Heller, research director of Veribanc Inc., a Wakefield, Mass., bank rating firm.

Mr. Villa said that with the experience it gained in Texas, the Justice Department now has a seasoned team of investigators that can get to the bottom of any New England crimes relatively quickly.

John J. Byrne, senior federal legislative counsel for the American Bankers Association, said so far he had not seen signs of an increase in fraudulent banking activity in New England.

Mr. Richmond said the agency would also try to speed up convictions by homing in on several major violations, rather than getting bogged down in complex conspiracy charges. This way, a jury has a better chance of understanding a case and will not become mired in confusing details. □

GAF Refinancing Package Faces Difficult Sell in Secondary Market

By STEVEN LIPIN

Underwriters of GAF Corp.'s $800 million refinancing package were unable to resell the bulk of the loan in the primary syndicate, even after after a one-week extension, bank sources said. The four agent banks now face a difficult secondary market for the highly leveraged loans.

The commitment deadline for the package, which refinances bank debt incurred for GAF's 1989 leveraged buyout, was extended from July 31 to Aug. 3, bankers said, but agent banks were unable to find significant interest from lenders.

Bankers say that despite the successful operations of the company, the problems facing the agent banks stem from the conviction of both GAF and its vice chairman, James Sherwin, for stock manipulation last year.

GAF is competing with other HLT credits that are offering more attractive terms.

Borrower's Image Is a Factor

"It's less of a business risk than the taint around GAF," said one banker. "Lending money to a company that's been convicted of a felony is tough."

While the criminal cases, brought by the Justice Department, are now being appealed, "the company has been convicted of a felony, and a lot of banks don't like that," said one lender who did not invest in the deal. Both the company and Mr. Sherwin agreed to settle a related suit with the Securities and Exchange Commission.

While the company is pleased because its new facility carries lower interest rates than the original buyout credit, lenders are now holding much more of the loans than anticipated as the deal moves into the secondary market.

The four agent banks – banking units of Chase Manhattan Corp., Bank of New York Corp., Banque Paribas, and Bank of Nova Scotia – have reportedly begun a pooled selldown for the secondary syndication. Officials at the four banks did not return calls for comment.

The banks pooled up $800 million at better terms for the Wayne, N.J.-based company to refinance the existing bank facility used for its LBO.

The new loans are priced at the London interbank offered rate plus 250 basis points, or prime plus 150 basis points, versus the old rates of Libor plus 300 and prime plus 200.

In addition, while the existing agreement was a term loan with an 18-month maturity, the new facility consists of an eight-year $600 million term loan, a $150 million five-year revolver, and a $75 million five-year letter of credit facility.

Not only is the supply of capital for highly leveraged transactions limited, bankers note, but GAF is competing with other HLT credits that are offering more attractive terms.

"Prices have been jumping in the market, but GAF rates have come down," said one lender. "They're now competing for capital with deals like RJR Nabisco" that carry generous fees and higher interest rates, the banker said. □

Hanover Closes Buyout Loan to Forstmann

By WILLIAM GOODWIN

After a few snags, Manufacturers Hanover Corp. completed the syndication of bank loans backing Forstmann Little & Co.'s $1.6 billion buyout of General Instrument Corp., raising $750 million for the $1.165 billion bank financing.

The deadline for commitments was Aug. 8.

The remainder of the $1.165 billion loan package will be held by the five underwriting banks – units of Manufacturers Hanover and coagents Continental Bank Corp., Chemical Banking Corp., Nippon Credit Bank, and Bank of Nova Scotia.

Forstmann's Contribution

Forstmann Little is contributing $200 million in equity and $600 million in subordinated debt to the transaction, which includes the assumption of General Instrument debt.

Michael Zarrilli, a managing director in Hanover's syndications department, said the commitment level exceeded the bank's target. "We anticipate an active secondary market as well," he said. There will be no pooled selldown.

Though the Manufacturers Hanover official said he was pleased with the market response to the credit, the syndication process hit a few bumps.

Background of Mideast Turmoil

First, the bank meeting for prospective syndicate members, originally set for July 30, was postponed at the last minute because the presentation needed to be refined.

The meeting was finally held July 31, just days before Iraq invaded Kuwait.

Despite the turmoil it created in the financial markets, the Mideast crisis had only a minor effect on the syndication effort, Mr. Zarrilli said.

"I think we were confident enough in the basics of the transaction that we were not overly concerned with world events in terms of their impact" on the transaction, he added.

The general syndicate comprises U.S., European, and Japanese institutions, including an insurance company, a bank-loan fund, and a leasing company.

Syndicate members include Deutsche Bank, Dai-ichi Kangyo Bank, National Westminster Bank, Mitsubishi Bank, Bank of Tokyo, Wells Fargo Bank, and Sumitomo Trust and Banking Co.

Nonbank Members

The group also includes Sun Life Insurance, Pilgrim Prime Rate Trust, and Mitsui Nevitt.

Commitments ranged from $25 million to $75 million on the package, which was priced at prime plus 150 basis points.

Syndicate members were offered up-front fees of 62.5 basis points for commitments of $25 million, 87.5 basis points for commitments of $50 million or more. There was also an incentive fee for commitments of $75 million or more. □

Japan's Finance Ministry Likely To Stall Issues of Bonds Overseas

Reuters

TOKYO — Faced with opposition from long-term credit banks, the Ministry of Finance is unlikely to approve further overseas issues of subordinated bonds by Japanese commercial banks, ministry and banking industry officials said.

The $12 billion in subordinated bonds issued in June by Curacao-based Sumitomo Bank Finance International, a wholly owned subsidiary of Sumitomo Bank Ltd., may prove to be the last issue for some time.

Subordinated loans and bonds are debt instruments that give creditors lower priority claims to repayment in the event of the issuer's bankruptcy.

The 10-year Sumitomo bonds too closely resemble the five-year debentures only long-term credit banks are permitted to issue under Japan's rigidly stratified system, bankers said.

Tougher Application Process

Finance Ministry officials have not said that new issues of subordinated bonds would be barred. But they have indicated the application process might be prohibitively difficult. □

Thirty Resign from Bankers Trust

By JED HOROWITZ

NEW YORK — About 30 employees of Bankers Trust New York Corp.'s leveraged leasing, project finance, and equity investment groups resigned last Thursday, provoking a feisty letter to senior managers from Charles Sanford, chairman of the banking company.

"While we never like to see defections of this kind, I think that it's been obvious to us that this group of people were never going to fully think of themselves as collaborative partners," Mr. Sanford wrote.

"This is the last of the groups from the old corporate finance department that maintained an attitude that the needs of their 'credit' took precedence over the efforts of the firm as a whole."

The group included almost

"We will examine each plan one by one, and decisions will be made considering the urgency and other factors," a Finance Ministry official said.

This week's slump in the local stock market is a reminder that straight equity financing could remain difficult here for some time to come.

A Blow to Commercial Banks

The apparent turnabout in the Finance Ministry's regulatory stance could prove a stiff blow to commercial banks, which were looking to subordinated bonds as a new means of raising funds to meet new capital adequacy requirements set by the Bank for International Settlements.

Under the BIS standards, funds raised through subordinated instruments may be counted as Tier II capital.

The Finance Ministry first allowed subordinated loans in June to help commercial banks meet capital requirements.

The ministry still prohibits banks from issuing subordinated bonds domestically.

Other banks must rely on deposits and other instruments with maturities of three years or less. □

STOCKS

Shares of Sovran And C&S Down As Merger Nears

By GORDON MATTHEWS

NEW YORK — Shares of Sovran Financial Corp. and Citizens and Southern Corp. have weakened recently despite an imminent merger of the two Southeastern superregionals that is viewed by analysts as a strong strategic move.

Shares of the two banks have fallen about 8.5% since the Federal Reserve Board approved their consolidation in late July. The *American Banker* index of the 225 largest publicly traded bank stocks has declined 12% over the period.

"The whole bank group is still under pressure and they're no exception," said Katherine Hart Bissette, a banking analyst in Atlanta for Interstate/Johnson Lane.

More specifically, Sovran, with headquarters in Norfolk, Va., may be hurt by investor worries about the health of real estate markets in the Washington metropolitan area, especially northern Virginia.

And that is likely hurting both stocks, which have basically moved in tandem since they announced the merger last September. In Friday afternoon trading, Sovran fell 12.5 cents, to $27, while C&S, based in Atlanta, was off 12.5 cents, to $22.125.

No Clear Picture Yet

Ms. Bissette said investors may be fearful of the impact of merger-related costs on third-quarter earnings and about uncertainties in general. "Some time will be needed before we can get a clear picture of the combined banks' earning power in the current business environment," she said.

Another analyst, Lacy M. Shockley of Smith Barney, Harris Upham & Co., agreed that merger-related worries are probably surfacing in the market, but said such coolness was probably a normal reaction once the actual timetable of the deal is set.

"It's just been so long since we've actually seen a major bank merger in progress that we may have forgotten some things about the process," she said.

Fundamentals Appealing

The merger is now expected to be completed on or about Aug. 31, and Ms. Shockley believes the new company's fundamentals will probably look "unusually attractive" when compared with those of many other large banking firms.

Both banks underwent examinations by the Comptroller of the Currency before the Fed approval was granted, she noted. The Comptroller's examiners are thought to conduct the most stringent probes of any bank regulatory agency.

When the two banks are combined, they will form the 10th-largest bank in the United States, with $50 billion in assets.

* * *

FRIDAY'S MARKET

Despite several strong days, major bank stocks still managed to lose ground last week for the ninth straight week. The *American Banker* index of the 225 largest publicly traded bank stocks fell 0.21% from the level a week earlier.

A selloff in the stock market overall on Friday prompted the banks to resume their downturn.

As it has been for six weeks, the weakness in the bank stocks was spread across all categories – ranging from large money-center institutions to medium-size regional banks. Only a few of the top 50 banks managed to register gains on Friday.

Among the money-centers, Citicorp was the lone gainer near the close of trading, rising 12.5 cents, to $19.75.

Among superregional banks, Banc One Corp., Columbus, Ohio, was off 50 cents to $28.50 and PNC Financial Corp. eased 50 cents, to $24.75.

But in the Southeast, a pair of superregionals managed small gains. Wachovia Corp., Winston-Salem, N.C., edged up 12.5 cents, to $38.75, and SunTrust Banks Inc., Atlanta, was unchanged at $20.125. □

CAPITAL

Banks Moving from Short-Term Funding

By KELLEY HOLLAND

Citicorp and Chemical Banking Corp. recently filed registrations for bond offerings that will let the two money-center banks reduce their reliance on the volatile short-term funding market, capital markets officials say.

As investor concern about credit quality has risen, markets for short-term funding have become increasingly hard for banks to use. Tapping the short-term markets has become more costly for banks with less than top ratings. And a number of banks with ratings below the second tier are virtually unable to issue commercial paper.

Seeking Up To Issue Debt

Bank	Amount	Type
Citicorp	$2 billion	Senior or subordinated
Chemical Banking Corp.	$750 million	Senior or subordinated

Source: American Banker

$2.75 Billion in Registrations

Citicorp filed for a $2 billion shelf registration with the Securities and Exchange Commission; Chemical filed for $750 million. The registrations would allow the companies to issue either senior or subordinated debt.

"Spreads have definitely widened," said a senior treasury official at a money-center bank. "Customers are tightening up the types of names they are willing to buy."

Both banking companies have already taken steps to reduce their reliance on short-term funding. Citicorp began issuing medium-term notes in the second quarter in lieu of several years. Market sources estimated Citicorp has issued several hundred million dollars worth of medium-term notes.

Chemical's Libor Notes

And Chemical has issued nearly $300 million in floating-rate notes based on the London interbank offered rate, with maturities of two to three years, market sources said.

"It's a great way for them to enter the market," one trader said. "It's unlikely they'd want to issue fixed-rate and advertise how wide their spreads are."

Both Citicorp and Chemical have had their commercial paper ratings cut in the past year. Moody's Investors Service reduced Citicorp's commercial paper rating May 22 to Prime-2, and Chemical's rating was cut to Prime-3 last October. Standard & Poor's Corp. affirmed Citicorp's commercial paper rating April 26 at A1-plus but cut Chemical's commercial paper to A2 last September.

Shying from Paper

Both banks have reduced their reliance on commercial paper. When Moody's cut Citicorp's rating, a spokesman for the company said it relied on commercial paper for less than 2.5% of its funding.

Citicorp has an additional reason to increase the amount of debt it can issue. The bank has $350 million in debt with a 12.5% coupon that becomes callable in January 1991, according to William J. Downes, a vice president at Keefe, Bruyette & Woods Inc.

* * *

MARKET MONITOR

The number of banks with "junior" ratings for senior or subordinated debt has increased this year as credit-quality concerns added to the need for capital.

This year, Moody's Investors Service has downgraded five banks from investment-grade to high-yield, and Standard & Poor's has given seven banks junk ratings. Five of those downgradings overlap. Ratings on the subordinated debt of 21 bank holding companies are now below investment grade, analysts said.

Unprecedented Scale

"It's never happened" on so broad a scale, said Michael DeStefano, an analyst at Standard & Poor's Corp. "The only other time you saw [so many below-investment-grade ratings] was with the Texas banks" in the early 1980s. "Now, there are quite a number."

Banks with debt ratings that do not make the investment-grade cutoff are increasingly having trouble raising funds.

Appetite for Capital

Subordinated debt is an integral part of banks' capital bases. Banks forced to curtail activities in the subordinated debt market must find other ways to keep their capital bases at mandated levels.

A few of those on the list are small institutions like Baltimore Bancorp, which have never had high ratings and therefore didn't have far to fall to be rated speculative. Standard & Poor's downgraded the company's subordinated debt to BB-plus from BBB-minus at the end of March.

MNC's Senior Debt

Most recent downgradings, however, have been of larger institutions like MNC Financial Corp., the largest bank in the Baltimore-Washington area and one which until this year boasted solid ratings. Moody's downgraded MNC's senior debt from Baa3 to Ba1 in July.

Other banking companies – like Chase Manhattan Corp. and Continental Bank Corp. – are a notch away from having their subordinated debt rated junk.

Shawmut Agrees to Regulatory Measures

Continued from *page 1*

cents.

The $23 billion-asset company said it signed a memorandum of understanding with the Federal Reserve Bank of Boston and the Federal Deposit Insurance Corp. to strengthen operations at its seven state-chartered bank subsidiaries.

A memorandum of understanding is the lightest form of regulatory control and involves a written declaration that a banking company intends to improve its business practices.

OCC More Stringent

Shawmut also disclosed that it would sign a more stringent letter of agreement with the Office of the Comptroller of the Currency, which regulates its two main subsidiaries, Shawmut Bank in Boston and Connecticut National Bank in Hartford. The OCC agreement could be signed as early as this week, according to Shawmut spokesman Anthony Zehnder.

A letter of agreement is similar to a memorandum of understanding but imposes stricter guidelines and ground rules.

Analyst Surprised

"I was a little surprised they told me that there will be letters of agreement with the two main subsidiaries, Shawmut Bank in Boston and Connecticut National Bank in Hartford. The OCC agreement could be signed

> **"I was a little surprised they told me that there will be letters of agreement with the two main banks," suggesting deeper troubles at Shawmut than had been expected.**
>
> **Nancy Bush**
> *Brown Brothers Harriman & Co.*

man & Co. in New York. This suggests deeper troubles at Shawmut than had been expected, she added.

"We believe that the provisions of these agreements will serve to assure our long-term strength," said Shawmut chairman and chief executive officer Joel B. Alvord in a prepared statement.

Mr. Zehnder said the company disclosed the regulatory agreements to head off speculation, but he declined to disclose details of the provisions.

Nonperformers Growing

Shawmut has been hard hit by the same real estate woes experienced by many New England institutions. Though it reported a second-quarter profit of $30 million, its nonperforming loans rose to $1.3 billion, or 7.7% of total loans, from $1.2 billion in first quarter, or 6.8% of total loans.

Bank of Boston Corp., with $37 billion in assets, entered into a memorandum of understanding with regulators regarding its lending practices last October. Bank of New England Corp.'s subsidiary banks have been operating under cease-and-desist consent orders since early this year. □

Rivals, Law Hit Banks that Try Realty Advising

ANDREW REINBACH

With commercial real estate lending all but dead, some banks are moving lending officers to real estate investment banking services. Fee income and comparatively low risks have convinced many large banks to relocate resources to advisory work.

But it won't be easy.

Competition with Wall Street and traditional real estate brokerage firms is getting fierce as the advisory business slows in a recessionary market. And the regulatory environment has made some banks step back out of concern that some real estate activity might be impermissible under federal and state law.

In the view of some lawyers and real estate professionals, banks engaged in real estate investment banking may really be acting as real estate brokers, an impermissible bank activity, according to the Office of the Comptroller of the Currency.

Distinguishing between real estate brokerage and advisory work is difficult at best.

Blurry Distinction

Technically, such advisers advise corporations how to deploy real estate assets rather than arranging financing. Brokering is helping in the sale of a building. But banks often say the distinction is often blurred.

"It's a question you have to be aware of," said a lawyer for a bank offering real estate investment banking services. "We're providing an advisory service that in part might involve selling a property for them, otherwise is an equity financing business.

"We tell our people not to get involved in negotiations, but it's a problem. There's an area between the two that is an overlap."

States Require Licensing

Most state laws define virtually any involvement in real estate deals, including advisory work on real estate sales negotiations, as brokerage. Unlicensed real estate brokerage is a misdemeanor in most states, punishable by fines and even jail.

If they engage in what states define as unlicensed real estate brokerage, bankers violate state law; but if they become licensed real estate brokers, they violate federal bank rules. Federally chartered banks are barred from activities unrelated to banking, including real estate brokerage.

California and Illinois laws, however, allow real estate bro-

U.S. League Bypasses Exec In Line To Be Chairman

By DEBRA COPE

WASHINGTON — In an unprecedented leadership shuffle, the U.S. League of Savings Institutions has bypassed Robert B. O'Brien Jr., who was in line to become chairman in November, in favor of Ohio thrift executive Donald B. Shackelford.

While Mr. O'Brien denied that he is the victim of political infighting, industry observers said Mr. Shackleford is seen as a better spokesman for the troubled industry because his own institution is more profitable than Mr. O'Brien's.

Renomination Expected

Mr. O'Brien, chairman and chief executive of Carteret Savings Bank, Morristown, N.J., said he will remain U.S. League vice chairman for another year. He is stepping aside from the line of succession while Carteret's parent company, Ambase Corp., completes a restructuring.

Robert B. O'Brien Jr.
Carteret Savings Bank

Mr. O'Brien added in a telephone interview that he "absolutely" expects to be renominated next year to be U.S. League chairman and intends to serve in the top post beginning in November 1991.

But some industry officials said Mr. O'Brien was steered out of the chairmanship by a faction

Wall St. Power Failure Disrupts Some Bank Computer Operations

By JEANNE IIDA

NEW YORK — A major power outage in the Wall Street area on Monday afternoon disrupted funds transactions and forced major banks to shut off computer operations and send thousands of employees home early.

The power failure, which was caused by a midday fire at a utility company substation, affected a narrow strip across the tip of Manhattan and caused the American Stock Exchange to close for the rest of the day.

The Bank of New York, Bankers Trust, Citibank, Manufacturers Hanover Trust, Marine Midland, and J.P. Morgan & Co. switched to emergency backup power for essential computer operations and closed down other units.

Backup Power Used

The Bank of New York employed all 32 floors of its Wall Street headquarters, but other buildings on the same street were unaffected in an outage that seemed to hit at random. American Express Co. was forced to evacuate its offices.

Both Chase Manhattan Bank and Chemical Bank said their

FDIC Plans Boston Office With Staff Of Over 400

By BILL ATKINSON

WASHINGTON — In a move signaling a likely increase in bank failures in New England, the Federal Deposit Insurance Corp. is planning to open a liquidation office in the Boston area and will staff it with as many as 460 employees.

It will be the FDIC's first such consolidated field office in New England. Like 16 other offices around the country, it will specialize in liquidating and marketing the assets of failed banks and thrifts.

In the past, the insurance agency's field offices in New York and South Brunswick, N.J., have handled liquidations in New England, but the FDIC has decided that mounting problems in the Northeast merit closer involvement.

Large Failure Rumored

The decision, confirmed Monday by an FDIC official in response to an inquiry from the *American Banker*, comes in the midst of a pronounced economic downturn that has hit many of the region's banks.

The FDIC's move – it has already hired 40 people for the Boston operation – led an analyst to speculate that bank failures in New England could pick up, and that the failure of a large institution may be in the offing.

"There has got to be something big if they are staffing up to that level," said Warren Heller, research director of Veribanc Inc., a Wakefield, Mass., bank rating firm. "I think you have got to consider BNE is a possibility, without a doubt."

He was referring to Bank of

Path Leads to Washington For Banker with a Mission

By DEBRA COPE

WASHINGTON — A 35-year banking career has taken R. Duane Lillibridge Jr. all over the state of Ohio. But he never imagined a frustrating, costly experience with hazardous waste would bring him to Washington to testify before Congress.

The 61-year-old president and chief executive officer of Farmers Savings Bank, Northwood, Ohio, has emerged as a forceful, credible voice for the view that court rulings obliging banks to pay for toxic-waste cleanups on properties they repossess after loan defaults are misguided.

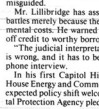
Mr. Lillibridge has asserted that banks have lost some of these battles merely because they are viewed as able to afford the environmental costs: He warned that such a policy would ultimately close off credit to worthy borrowers.

"The judicial interpretation to make the deep pocket pay for this is wrong, and it has to be changed," Mr. Lillibridge said in a telephone interview.

In his first Capitol Hill outing, Aug. 2, he testified before the House Energy and Commerce Committee. At that hearing, in an unexpected policy shift welcomed by bankers, the federal Environmental Protection Agency pledged to clarify lender liability under its Superfund rules. But the vow came too late for Mr. Lillibridge.

Early this year, his bank paid $14,560 to remove contaminants from three acres occupied by a boat repair business. Farmers State had foreclosed on a 1978 loan secured by the property, valued at $60,000. An appraisal found a gasoline station had used the land in the 1920s and that, of two buried storage tanks, one had leaked.

Mr. Lillibridge was irate. "Not only did we not contribute to the contamination – neither did our customer," he said.



R.D. Lillibridge Jr.

Yet court readings of the EPA's Superfund rules left the bank holding the tab. "We didn't fight it, but sometimes you do things because you've got a gun at your head," he said. He reluctantly tightened lending policy to avoid a repetition.

John F. Gayton, the Ohio banking superintendent, said he remembers Mr. Lillibridge raising the matter at a seminar in July. "He was saying, 'We shouldn't be required to pay recovery costs if there has to be a cleanup,' " the regulator recalled.

Picking a Spokesman to Go Before Congress

The comments also struck Ralph Bolen, executive vice president of the Ohio Bankers Association. When the trade group was searching for a spokesman to testify in Washington, Mr. Bolen said, "we wanted someone who had an actual case experience. So when the hearing came up, we went to" Mr. Lillibridge.

"Obviously, it was intimidating," Mr. Lillibridge said of his appearance. "But I wouldn't trade it. It gave me a better view of our Congress. It's easy to believe they're a bunch of idiots. But the questions they asked showed they understood."

Mr. Lillibridge began his banking career in 1955 after a four-year Air Force stint. He started at First National Bank, Coshocton, Ohio, by "going to the post office for the mail," then rose through the ranks to assistant cashier.

Specialty in Turnarounds Brought Him to Farmers Savings

Moving around the BancOhio Corp. network, he eventually became regional executive for its southern group, but the post was phased out after a 1984 takeover. His reputation as a turnaround specialist brought him to the $64 million-asset Farmers Savings Bank in December 1986. A commercial bank despite its name, Farmers had a 0.71% return on assets last year.

Mr. Lillibridge and his wife, Betty, will celebrate their 40th anniversary in December. They have three sons and three grandsons. He keeps fit with bicycling, tennis, and yard work and enjoys visiting his Air Force buddies. □

Hanover Applies to Pool Farm Real Estate Loans

WASHINGTON — Manufacturers Hanover Securities Corp. is the first applicant to seek certification as a pooler for the Federal Agricultural Mortgage Corp. secondary market for farm real estate loans, the agency said on Monday.

All potential poolers must be certified before they can solicit farm loans from originating institutions, form loan pools, and issue securities backed by those pools.

AT&T Says 4.6 Million Hold Its Universal Card

NEW YORK – AT&T said 4.6 million consumers with 2.7 million accounts have received its Universal MasterCard and Visa cards since their introduction in March.

Universal Bank, the subsidiary of Synovus Financial Corp., Columbus, Ga., which is issuing the AT&T cards, is now the country's eighth-largest bank card issuer. □

SECOND-QUARTER EARNINGS ROUNDUP

Slight Decline for Midwest Banks

By NANINE ALEXANDER

CHICAGO — Beset with higher loan-loss provisions and slow loan growth, Midwest bank earnings were generally lower in the second quarter than the corresponding period a year earlier. But banks in America's heartland still fared better than many of their counterparts elsewhere in the country.

Mid-western banks experienced a median earnings decline of about 1% according to preliminary calculations of Keefe Bruyette & Woods Inc.'s mid-western BankScan of 34 regional banks. Nevertheless, Keefe analyst Kenneth F. Puglisi said Midwest banks were ahead of most banks in profitability.

"The median return on assets in the Midwest is 1%. I don't think you'll find a region in the country that did better than 90 basis points," Mr. Puglisi said.

Midwestern banks were hurt in comparison with the year-ago quarter when net interest margins were wider, he said. And although credit quality showed signs of wear, better expense control helped offset the drag on profits.

'Boring Is Good'

"Overall, a pretty boring quarter, but boring is good these days," said Mr. Puglisi. "Excitement is usually bad news."

Sluggish loan growth plaguing banks in other regions of the country also hurt midwestern banks, said Felice M. Gelman, managing director of Dillon Read & Co.

"The volume wasn't as good as I had expected," but she said the quarter "is not that the economy may be picking up.

DC Bank Fined for Money Laundering

By LINDA CORMAN

WASHINGTON — The Treasury Department slapped a $368,000 fine on the National Bank of Washington for money-laundering violations just before the bank was put into receivership last Friday and sold to Riggs National Bank.

The fine, the maximum allowable for the violations, was imposed for misdeeds in 1988 and 1989. The bank was not fined until last week because the Treasury had to wait until criminal charges against the bank were resolved. The Treasury says the criminal investigation was concluded last month. The U.S. Attorney's office has not confirmed this.

IRS Uncovered Violations

Most of the bank's violations were discovered through an Internal Revenue Service undercover operation between 1987 and 1988. As a result of that investigation, a former senior vice president of the bank, Roger C. Schultz, pleaded guilty in 1988 to violations of the Bank Secrecy Act. The bank was also found to have violated the act by improperly exempting customers from currency transaction reporting requirements.

Under the Bank Secrecy Act, banks and other financial institutions must file reports to Treasury on currency transactions of

Wall St. Power Failure Disrupts Some Bank Computer Operations

Continued from *page* **1**

internal operations were unaffected.

Payment Systems Hold Up

The major payments systems, the Clearing House Interbank Payments System (Chips) and the Fed Wire, continued operations, although many of their members lost power. Fed Wire switched to backup facilities, but the New York Clearing House Association, which runs Chips, was unaffected. Twenty-five members of Chips could not send or receive transactions and had to switch to alternative payments methods, according to John F. Lee, president of the clearing house.

The Federal Reserve Bank of New York said systems at most member banks were operating but some of the banks' securities customers were not.

Bankers said they expected the utility, Consolidated Edison, to restore power to the area by 10 a.m. today.

Personnel Transferred

Manufacturers Hanover said it was transferring downtown personnel to its backup facilities in New Jersey and midtown to work today.

"We still don't know when they're restoring power, or how that power will come up," said Edward Stone, head of the bank's corporate data center. "Sometimes you get dirty power," meaning the power comes on sporadically. "We have emergency power turned on until we know that Con Ed has been completely stabilized."

Bankers Trust, which switched to emergency lighting and elevators at a downtown building, said cash management, funds transfer, and trading operations were functioning, but activity was limited because counterparties were not operating. A spokesman for the bank said it was not generating funds transfers until payments were received.

Payment volume was down dramatically on both Fed Wire and Chips as banks sought ways to complete their transactions. Both were expected to stay open well past normal business hours to settle for the day.

Many Chips members either relocated to a Clearing House emergency facility or had a third-party bank complete the transaction.

Some of these banks may not be able to transfer certain customers' funds, causing them to pay the customers for a day's use of the money.

"Banks may have to eat some funds," said Mr. Lee of the New York Clearing House.

At Chips, "our problem will be getting enough payments through to settle," Mr. Lee said. Some banks were sending teams to the clearing house's data center, where a battery of terminals simulates a connection into Chips.

We simulate that to be the control room of the bank," Mr. Lee said. Banks send transactions as if they were sending from their own center, and the clearing house can simulate the security devices the bank has on its own network.

How difficult settling would be "will depend partly on how Con Ed reacts, if they can reroute and give us some power," Mr. Lee said.

Cathy Minehan of the Federal Reserve Bank of New York said the Participants Trust Co., a member institution, had gone to its back-up site in New Jersey.

A spokesman for Nyce, New York's largest ATM network, said the network did not experience problems, "but any bank that has ATMs in the area of the power outage – those ATMs will be down."

Check Imaging on Small Computers

IBM Working to Match Fleet's Decentralized Mode

By KAREN GULLO

NEW YORK — International Business Machines Corp. is working with Fleet/Norstar Financial Group to modify its ImagePlus check-processing system for use at several of Fleet's regional check operations centers, according to industry sources.

The system will run on small, less expensive computers than existing versions and is designed to fit Fleet's decentralized approach to check operations.

"Many banks have strong decentralization cultures that they don't want to discard."

Chuck McDonough
Andersen Consulting

ImagePlus currently runs on mainframes and costs millions of dollars. Though a handful of large banks have invested in these centralized systems, many others are holding out for a lower-cost system that will be compatible with their decentralized format.

PC Control Unit

Sources said the system being tailored for Fleet/Norstar uses a control unit, such as a personal computer, instead of a large mainframe to capture, process, and store check images. For further processing, the images would be transmitted to Fleet's main data center in Albany, N.Y.

Fleet wanted to process images of checks at several regional operations centers, sources said, but did not want to invest in mainframe computers for each site. IBM agreed to modify its ImagePlus system to meet those requirements and will offer the product to other banks, the sources said.

IBM will make a product announcement within weeks, the industry sources said.

IBM and TRW Inc. have been jointly developing a check-imaging system for remote processing using the IBM Personal System/2 computer, but it is unclear whether results of that project will be part of IBM and Fleet's announcement.

Leighton Carmichael, director of document and check-image systems at IBM, said Fleet is one of IBM's development partners for image technology, "with a drive in the remote processing area." "But IBM is not ready to reveal its plans, he said.

"Remote processing is developing rapidly," said Mr. Carmichael. "You might have remote locations equipped with a control unit without all the operators. As prices come down for the control unit, the solution becomes more viable."

Fleet acknowledged that it is working with IBM on the system but declined to give details before IBM made an announcement.

Shift to Smaller Systems

The leading suppliers of check-imaging systems, such as IBM, Unisys Corp., and Banc-Tec, initially focused on developing 'big-ticket, mainframe-based systems. They now are turning their attention to smaller systems. NCR Corp. is also developing a microprocessor-based imaging system that is due out next year.

Bankers and analysts said that a low-cost imaging system designed to handle check processing at regional operation centers or branches would be in great demand in coming years.

"We've been talking about doing something in a remote environment, but I haven't seen anything on the market," said Gilbert Arbuckle, senior vice president in the information management and research department at Mellon Bank Corp., Pittsburgh. Mellon is one of six banks developing software for and testing IBM's check-imaging system.

Mr. Arbuckle said that capturing images at regional centers would help speed the check-settlement process. Images could be sent electronically to a bank's main processing center, used for balancing and accounting, and encoded later when the paper check arrived, he said.

"Though many banks are consolidating technology and operations units to a central site, some prefer the decentralized approach to check processing.

"Many banks have strong decentralization cultures that they don't want to discard," said Chuck McDonough, an imaging consultant with Andersen Consulting. "They are starting to place pressure on the suppliers.

"Companies like IBM are very heavily influenced by the banks they supply in terms of imaging, and those banks have very centralized technology operations." □

"As prices come down for the control unit, the solution becomes more viable."

Leighton Carmichael

COMMENT / By Sanford Rose

The Abortive Search For Higher Margins

As the profitability of funding plain-vanilla mortgages and mortgage securities has declined, many thrifts have gravitated to nonmortgage and nontraditional loan assets in an effort to buttress both net interest margins and the return on assets. Has this strategy worked? Preliminary evidence suggests that it hasn't. Although asset diversification may have boosted margins, it has also raised costs. And the cost consequences seem to have overwhelmed the margin gains.

The evidence comes from an analysis of 1988 cost data for GAAP-solvent thrifts made by professors James Verbrugge, James McNulty, and David Rochester and published in the summer issue of the *Journal of Retail Banking*. The analysis provides tentative answers to such questions as: Is there any real cost advantage for larger thrift institutions? How much do costs vary within given thrift asset-size groups? Are differences in efficiency associated with particular operating strategies? And is there a close correlation between efficiency levels and bottom-line profitability?

The analysis, admittedly a rather rudimentary one, suggests that there are some efficiency gains from bigness. But they aren't terribly significant. The ratio of noninterest expenses to assets does indeed fall as thrift asset size increases, but not by much—at least for those thrifts with less than $5 billion in assets.

In fact, the most efficient 25% of thrifts in asset-size groups of anywhere from $25 million to $1 billion were all able to post expense ratios of close to 1.40% – an excellent showing. Those superefficient thrifts (top quartile of cost performers) with between $1 billion and $5 billion had a somewhat lower cost ratio, 1.26%. But only among thrifts with assets of over $5 billion were the superefficient able to record cost ratios that were substantially lower than 1.40%.

Focusing on Intragroup Gaps

However, far more significant than the cost savings achieved from bigness are those obtainable from more efficient operation at any given asset size. Otherwise put, the cost gap between the least and most efficient thrifts within selected size categories is substantially greater than that across the size spectrum.

Thus, the expense gap between the average top-quartile thrift (most efficient) in the $25-million-to-$50-million size class and the average top-quartile thrift in the $500-million-to-$1-billion class was a mere 14 basis points. But the gap between the average least and most efficient $25-million-to-$50-million firms was a yawning 246 basis points. And that between the least efficient and the next-to-least efficient (third-quartile) cost controllers in the $25-million-to-$50-million asset group was almost as wide – 162 basis points.

So efficiency seems to depend more on will and skill than on scale, although in highly competitive markets even the 14-basis-point deficiency that can be reasonably attributed to inferior scale may prove crucial. It should also be pointed out that, unlike banks, thrifts are not deeply involved in the business of processing transactions accounts – an activity that has been found to be highly scale sensitive.

A Case of Nonfeasance

The authors of the *Journal of Retail Banking* article suggest three possible reasons for the huge variation in operating costs within size classes. The first is pure nonfeasance. Some associations may have simply failed to control costs regardless of their asset size and operating strategy.

A second explanation is redundant branches and operating locations. But while it is true that the high-cost associations in each size group have more physical outlets than the low-cost thrifts, the differences in operating costs on a percentage basis far exceed the differences in the number of offices. Although operating costs are always at least two or three times higher at the bottom-quartile than at the most efficient associations, the number of offices is generally less than 50% greater.

The third explanation for intragroup cost differences is asset mix. As is well known, it costs substantially more to originate and administer nonresidential-mortgage and commercial mortgages than it does to handle traditional residential mortgages. Therefore, those associations with higher ratios of nontraditional thrift loans to assets can be expected to have higher cost structures. And, indeed, the data show that the ratio of nontraditional loans to assets is more than twice as high at bottom-quartile cost controllers as it is at the most efficient thrifts.

The key question is whether the play is worth the candle. Although nontraditional lending promises higher nominal margins, are these margins sufficiently high to offset the concomitant increase in the operating and nonoperating costs of loan administration? Based on 1988 results, the answer seems to be no.

The most efficient cost controllers in seven out of nine asset-size categories enjoyed higher 1988 net interest margins than did the most efficient. On average, however, this margin advantage was only 15 basis points.

But measured on a bottom-line basis – that is, in terms of the return on assets – the results were decidedly different. The ROAs of the best cost controllers in eight of the nine asset-size groups were higher than those of the bottom-quartile performers. On average, the most efficient thrifts made 70 basis points on assets, while the least efficient registered a minus-19-basis-point return.

Thus the modestly higher interest margins generated by the high-cost firms did not translate into improved bottom lines. The margin gains were apparently offset by both higher operating costs and the presumed higher level of loan losses associated with higher-margin and therefore riskier lending. It would appear that the attraction of higher-margin asset categories is largely meretricious.

An Unstable Return

Although, as noted, the most efficient among the GAAP-solvent thrifts made a 1988 ROA of 70 basis points, it must not be concluded that this is a stable return. A substantial portion of the net interest margin of these thrifts was no doubt attributable to maturity mismatching.

A mismatching or short-funded strategy will work when interest rates are low and the yield curve is upward sloping. But it will backfire in periods of rising rates and/or inverted yield curves.

In point of fact, the sustainable net interest margin of the average thrift, which is the margin earned from matched rather than mismatched maturities, probably amounts to no more than 100 basis points. (Those thrifts that made 70 basis points on assets in 1988 averaged 233 basis points of margin.)

Subsisting on Low Margins

Still, if the typical thrift can reduce its expenses to around 140 basis points of assets (the average 1988 expense ratio of the top-quartile cost controllers was 138 basis points), it may be able to earn enough origination, servicing, and deposit fees to manage a positive return on assets with only 100 basis points of margin earnings.

And, as has been indicated in previous columns, given the leverage that is consonant with a risk-minimizing strategy, a thrift can translate even a barely positive return on assets into a competitively viable return on equity. However, as has also been indicated, it may not be possible to earn even a barely positive asset return if the basic mortgage-funding spread continues to deteriorate, further eroding that 100 basis points of sustainable net interest margin. □

LETTERS *to the editor*

Congress Ignored Gray's Warning

To the Editor:

I took note of your mention of Bert Ely in the Aug. 2 edition ["The Vindication of Bert Ely," page 1], and I can't abide the impression that the Federal Savings and Loan Insurance Corp. and the Bank Board were stalled by incredible "boobs."

The regulatory staff was predicting in 1981 that the FSLIC fund was heading toward failure, and in 1982 the career staff knew that the Garn-St Germain Act made failure a virtual certainty.

Just for the record, in 1986 Edwin Gray, then Bank Board chairman, asked me, the regional director for the Dallas District, to estimate what it would cost the FSLIC to clean up Texas alone. Mr. Gray wanted this to support his request for recapitalizing the deposit insurance fund.

The number I gave him in 1986 was $42 billion for Texas and at least $80 billion for the entire country. I presume that political circumstances wouldn't allow Mr. Gray to use it. After all, he had Jim Wright to contend with and was hoping to get merely $10 billion to $15 billion to buy some time.

So, if Mr. Ely was able to come up with a fairly good estimate of losses based on faulty estimates leaked to him by Bank Board employees Dan Brambaugh and Jim Barth, that's fine. But none of those gentlemen could predict from the economic data the real level of losses that examination and supervisory data were disclosing at the time.

Ed Gray tried to warn everyone, but key lawmakers wouldn't let the story be told.

Joseph M. Arendes
Dowell, Md.

Interest Rates Reflect Costs and Competition

To the Editor:

I take exception to the comments made by Richard G. Kelley, chairman/CEO of First National Bank of New Jersey, in the "Sound Off" column of the *American Banker* on July 9, page 4.

Mr. Kelley said that "under the present system, a savings and loan can pay 2% more in interest than a commercial bank." There appears to be no regulatory basis for the foregoing. Regulation Q has been rescinded for more than four years, and commercial banks and savings and loans now set their rates on the basis of cost of money considerations as well as a review of rates offered by local competition.

I do, however, agree with Mr. Kelley that the FDIC should adopt risk-based insurance premiums.

Credit Crunch Is 'Healthy,' San Francisco Fed Chief Says

Reuters

SAN FRANCISCO — Robert Parry, president of the Federal Reserve Bank of San Francisco, said the current credit crunch is a "healthy" response to an uncertain U.S. business environment.

"It's true, lenders have become more cautious," Mr. Parry said last week in a speech to business leaders in Salt Lake City. "This is a normal and healthy response to a business environment that has become more uncertain."

Although more prudent lending practices will make the U.S. economy more stable, he said, the transition to those standards has the potential to slow the economy temporarily.

Mr. Parry said the best odds are that the U.S. economy will continue to "chug ahead slowly." He did not rule out the possibility, however, that in the second half of the year, "the nation's output won't grow at all or might even decline."

Many economists say the U.S. economy is entering a period of negative growth. Even without the Iraqi invasion of Kuwait and the subsequent oil crisis, some say, a recession was likely.

U.S. Treasury Secretary Nicholas Brady said last Wednesday that he and President Bush want the Fed to lower interest rates. Many suggest the current situation calls for major easing of monetary policy.

Mr. Parry said that the risk of a downturn in the economy is one of the Fed's most important concerns in charting monetary policy. "At the same time," he said, "we've got to be careful not to overreact to today's weak economic numbers.

Mr. Parry did not rule out the possibility of zero growth in output in the coming year.

"If we lose sight of our ultimate goal, we'll end up with a kind of rudderless monetary policy that tends to generate higher and higher inflation."

To make lasting progress on controlling inflation, he said the U.S. economy must grow at only a moderate pace for some time.

Through the end of 1990, "we're likely to see sluggishness in inventory investment to allow businesses to get inventories back in line with sales," he said, adding that conditions are in place or soon will be in place for growth in 1991. "Once inventories get back in line with sales, inventory investment will pick up again. This will be a positive influence in 1991."

Growth in the West

Also in his speech, Mr. Parry said the economy in the western region of the United States likely will fare better than other regions over the coming year.

Population growth has helped keep the West's economic performance better than most other U.S. regions in the 1980s, he said. Mr. Parry said that population growth in California, Arizona, and Nevada soared over the national average for the 1980s, and that recent "rapid population growth in Oregon and Washington has stimulated economic growth as well."

Key industries such as aerospace have enjoyed strong manufacturing activity, and the region's strategic location to Pacific Rim nations also are important factors driving growth. The region's economic diversity has moderated the impact of problems that hit the agriculture industry in the mid-1980s. □

Southmark Emerges from Bankruptcy

DALLAS — Southmark Corp. emerged last week from bankruptcy proceedings, a little more than a year after the real estate and financial services concern filed for protection from creditors. The company's financial problems were a result of bonds it had issued.

The parent of San Jacinto Savings Association said it transferred $76 million in cash and new securities to parts of its creditors and shareholders pursuant to its reorganization plan announced in April.

Southmark also named Glen Adams to succeed Arthur Weiss as chairman, president, and chief executive officer. Mr. Weiss resigned Friday along with most of Southmark's board, who will be replaced by directors nominated by the unsecured creditors' committee.

Losses Exceeded $1 Billion

Southmark, one of the largest companies to seek bankruptcy protection, filed for Chapter 11 in July 1989 after a third-quarter loss of $1.08 billion put it in violation of net worth agreements on some of its publicly traded bonds.

Pursuant to its plan, Southmark shifted $100 million in assets to its wholly owned thrift, Houston-based San Jacinto Savings. The plan provides for the thrift's recapitalization and the release and settlement of any thrift or real estate claims against Southmark. The company, however, will have no management control of San Jacinto.

Southmark proposed deferring about $8 million in fees to representatives of the creditors' and equity holders' committees and the court-appointed examiner in the bankruptcy proceedings. — **Reuters**

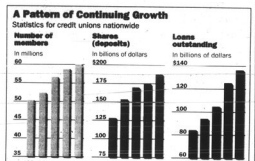
CREDIT UNIONS



Industry Keeps Growing – And So Will Federal Fees

By BARBARA A. REHM

The credit union industry put its 1989 performance out for review last week and braced to pay higher fees to its regulatory agency in 1991.

The National Credit Union Administration, the federal regulator, infuriated some in the industry by announcing a 16% increase in its budget for next year. This is expected to translate into a 9 to 10% increase in fees for credit unions, according to the federal regulator.

Forces beyond its control are responsible for the ballooning $77 million budget, said Herbert S. Yolles, the agency's controller. The thrift-bailout law requires people working in the various financial regulatory agencies, such as the Federal Deposit Insurance Corp. and the Federal Reserve System, to be paid comparable salaries.

Salaries Increase

We lagged below market, way below market," Mr. Yolles said in an interview last week. The federal agency raised salaries almost 20% and employee benefits more than 27%, he said. Salaries and benefits now make up 57% of the total budget.

Separately, the industry's largest trade association, the Credit Union National Association, released its 1989 performance report. The figures on asset growth, capital levels, and loan performance are intended to illustrate that credit unions are safe and strong, yet not nearly big enough to threaten commercial banking's hold on the deposit market.

Credit unions "stick to their knitting and focus on serving their members with consumer and residential mortgage loans," said the trade association's chief economist, William Hampel.

Though credit unions say they have more than 60 million members, their assets represent just 6.2% of the commercial banking industry's total.

$205 Billion in Assets

At yearend, there were 15,144 credit unions; their assets totaled $205 billion. Though the number of institutions declined 3.5% last year, assets grew by 4.7%.

Nearly half the institutions have less than $2 million in assets. The typical credit union in this category has 852 members, each of whom averages $2,272 in savings and $3,838 in outstanding loans.

Credit union capital rose to 7.9% of assets last year, the highest level for the 1980s. The industry's reserves hit $9.5 billion, up 10.7%. "With loan delinquencies at their lowest yearend level of the decade, credit union safety and soundness is manifest as the 1990s begin," the trade association reported.

Budget Criticized

The National Association of Federal Credit Unions complained that the latest budget for the National Credit Union Administration represents the fifth consecutive annual increase and the third double-digit hike since 1986. NAFCU criticized the agency for adding 14 people to its Washington office in this time of rising salaries.

"With personnel costs rising 46.7% due to increases in salaries and benefits, this is no time for CUNA to be adding 14 positions to headquarters staff," according to a NAFCU statement. "If new positions at headquarters are absolutely essential . . . they should be provided from examiner spaces which can be reduced as a result of continuing decline in the number of credit unions required to be examined."

Association Defends Increases

CUNA, often at odds with NAFCU, has taken a different view of the regulatory agency's burgeoning budget.

"I don't see that they have a lot of wiggle room, based on what's required by law," said CUNA spokesman Larry Blanchard. "I don't see any waste."

Mr. Yolles defended the staff additions, noting that five of the 14 positions are simply conversions of contract data processors to full-time employees and will save the agency money. Two more positions are for lawyers needed to handle a heavy load of lawsuits. □

How to Thrive in the 1990s With No ATMs

Continued from *page 1*

in an age when many institutions see ATMs as a business necessity. Golden West's thrifts do not even issue cards that customers could use in outside ATM networks.

Unique for Their Size

"For that size, they are absolutely unique. They probably are the largest retail depository institution in the country without ATMs," said Paul R. Mattaus, research director for Payment Systems Inc., a Tampa consulting firm.

Though it lacks electronic tellers, Oakland, Calif.-based Golden West is far from a horse-and-buggy operation.

It is generally recognized as one of the best managed thrifts in a much battered business, consistently ranking among the industry's top performers. Last year, Golden West earned $157.9 million, equal to an 0.85% return on assets and a 16.3% return on equity.

Gurus Preach Simplicity

Its cochief executives, the husband-and-wife team of Herbert M. and Marion O. Sandler, have built reputations as savings and loan gurus preaching a doctrine of simplicity and common sense as a formula for profitability.

Golden West's refusal to install ATMs reflects the Sandlers' hard-boiled philosophy: shy away from trendy products and services unless they fit a focused business strategy and pass stiff profitability tests.

"The thing you have to guard against is jumping on the bandwagon," says Mrs. Sandler.

ATMs Seen as Necessary

Although electronic tellers usually do not produce direct profits, other big thrifts view them as a service they must provide because customers demand it.

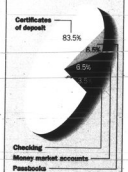
"We consider ATMs to be pretty vital," says Gary L. Sutula, senior vice president and retail operations manager with American Savings Bank, Irvine, Calif. "I couldn't really imagine operating without them."

Golden West may be putting some customers off by not having ATMs, Mrs. Sandler admits. "I'm probably losing some business," she says.

But, in Golden West's case, the costs of installing and maintaining ATMs are not worth the benefits, according to Mrs. Sandler.

What it boils down to is that many of the customers Golden West loses are customers Mrs. Sandler does not want. That, in turn, reflects the thrift's unusual business strategy.

While other thrifts have diversified into a wide range of products and services, Golden West has stuck to its core business of selling certificates of deposit to fund adjustable-rate mortgages.



Many thrifts crave low-interest-rate checking account deposits. Golden West scorns them.

Larger Accounts Needed

A company survey once showed the average checking balance was $800. "We lose money on accounts of $800," says Mrs. Sandler.

And while other deposit-takers fight over high-spending baby boomers, Golden West tries to lure older, prosperous savers, using slightly-higher-than-average interest rates on its certificates of deposit as bait.

At the end of 1989, checking accounts represented only 3.5% of Golden West's deposits. Certificates of deposit made up 83.5%.

A Special Niche

"They have effectively targeted a nonstandard niche," says W. Coleman Bitting, a thrift analyst with Kidder, Peabody & Co., Inc.

Industry experts say that only a handful of other midsize or large thrifts have followed a similar strategy. Among them is $2.6 billion-asset Washington Federal Savings and Loan Association, Seattle, another top-performing thrift without ATMs.

The kinds of savers Golden West seeks generally carry out fewer transactions than checking customers and have much less need to access their accounts through ATMs, electronic banking experts say. And Golden West's older customers are less inclined to use high-tech hardware than the computer-savvy baby boom generation.

Primary Accounts Elsewhere

What's more, Golden West executives acknowledge, many customers have primary relationships with another bank or thrift, where they have access to ATMs.

"It has not been demanded by the customers we serve," says senior vice president Thomas C. McBroom, who runs Golden West's savings programs.

A look at a World Savings branch in action demonstrates the point.

"There are minimal lines, an older crowd, much less floor traffic," says Mr. Bitting. "It's entirely different from a commercial bank.

Chance to Test Policy

Acquisitions in Texas and Ohio, plus a management agreement with federal regulators to run a Florida thrift, have given Golden West an unusual opportunity to test its ATM policy.

In Florida and Ohio, Golden West recalled ATM cards usable on local networks after taking over. In Texas, it actually ripped electronic teller hardware out of its branches.

"We did rather extensive research," says Mr. McBroom. "In each case, the customers who were most active [on ATMs] were not the customers we wanted to have."

The ATM users were "low-balance, high-volume" customers, Mr. McBroom says, the opposite of the ones Golden West targets.

Analysts generally praise

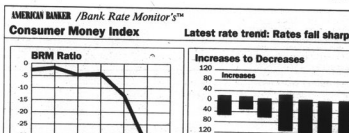
AMERICAN BANKER */Bank Rate Monitor's™*

Consumer Money Index — **Latest rate trend: Rates fall sharply**



Bank Rate Monitor's ratio indicates the probable direction of retail interest rates over the next several weeks. The ratio is computed by dividing the total number of rate decreases into the number of increases or vice-versa on six types of accounts offered by the 10 largest banks and thrifts in each of the nation's 10 largest markets. Example: 100 rate increases and 25 decreases would make a 4-to-1 "Plus" ratio. Or, 100 decreases and 25 increases would make a 4-to-1 "Minus" ratio. Over time, the longer and farther the ratio moves on the Plus or Minus side, the more sustained the current rate cycle is likely to be. When the ratio suddenly moves strongly in an opposite direction, it usually signals the beginning of the end of a cycle. The graph shows how the ratio has moved over the past 8 weeks, and the bar chart shows the actual number of rate increases to decreases used to calculate the ratio. The greater the number of ups and downs, the longer the cycle probably will last.

"Lunch at the usual place—or should we be daring!"

If this is your idea of planning, don't bother to read this. 1-800-456-2340.

It's no secret that planning and budgeting can be sheer drudgery. From doing the plan in the first place to tracking how your actual numbers compare to your plan all year long. It's slow, time-consuming labor.

Unless you let Sheshunoff **Bank Financial Planning & Budgeting Software** do the drudge work for you.

You set things up your way. By ROA, income, or percentage growth targets. And it's so easy-to-use that even a beginner can turn out complete, balanced plans and budgets in no time.

It's almost like having a budget that does itself.

Your categories are all set up and ready to fill in. And you can customize line items to suit your needs. The different approaches you can take are clearly explained in your easy-to-read user Guide.

Easy-to-use screens make it easy to enter your data. And you can set up alternative plans and budgets in minutes. Then compare your options at the touch of a key. Item by item.

Your software even checks to make sure you're in balance. Computes your monthly budgets from your annual plan. Does interest rate, margin, and ratio analyses. And gives you the flexibility to make adjustments line by line, month by month.

Plus, you can track your actual numbers against your plan, quickly and easily. Monthly or quarterly. And create variance reports and summary reports as you need them.

Easy, complete, and just for bankers. With our 30-Day Guarantee. Just what you'd expect from Sheshunoff Information Services Inc.

To get your Sheshunoff **Bank Financial Planning & Budgeting Software** for just $495 call 1-800-456-2340.

Rivals, Legal Issue Hobble Banks that Try Realty Advising

Continued from page 1

kerage by state-chartered banks, New York does not.

"We can't call it brokerage, but it sure seems like a close cousin to me," said Michael J. Leahy, newly hired managing director of the real estate capital markets group at the flagship subsidiary of Continental Bank Corp., Chicago.

'It's a Duck'

"If it looks like a duck and quacks like a duck; it's a duck," said Mr. Leahy, who has a real estate license.) "We'll probably bump into the state brokerage laws."

Mr. Leahy's group is part of his bank's real estate department and does not do business under the aegis of a state-chartered bank, according to Stuart Unger, a Continental attorney.

Most banks deny they offer real estate brokerage. They call it financial advising and insist that their activities satisfy both federal and state law.

"We will introduce you to investors who would be interested in buying your building, and we may assist you in negotiations," said Jackson Tai, a managing director at J.P. Morgan & Co., "but we do not engage in the act of real estate brokerage. We are financial advisers."

Sales at Heart of Business

But to compete toe-to-toe with the investment banking likes of Morgan, Stanley & Co. and Goldman, Sachs & Co., which dominate the industry, banks must offer the same services. Sales are a key part of the overall business because in general real estate firms give their financing business – where the real money is – to firms that help them sell buildings.

If they didn't offer these services, banks would only be entitled to small finder's fees – not fees ranging from 75 to 200 basis points – and would finish out of the running in the brutal "beauty contests" and "bakeoffs" that are a prominent part of real estate investment banking.

State regulators believe banks can't stay on the adviser's side of the fine line between advisory work and brokering.

Illinois Regulator's View

"If you're negotiating the sale of a property, you require a real estate license. If you offer to sell, offer to buy, or offer to lease, you require a real estate license," said Harold Tecktiel, supervisor of real estate investigations for Illinois' Department of Professional Regulations.

Alan Schott, the Comptroller of the Currency's chief counsel, calls the matter "a complex area and also fact-dependent. The OCC has permitted national banks to accept finder's fees in connection with real estate transactions. But if you're engaged in negotiations, you'd have to have an agency relationship, and we've not authorized that."

The OCC is reluctant to brand real estate investment banking as real estate brokerage; it distinguishes between brokerage and acting as a finder and generally considers real estate investment banking to be a finding activity.

> "The OCC has permitted national banks to accept finder's fees."
>
> **Alan Schott**
> *Comptroller's office*

Jurisdictional Squabble

To complicate matters, no one agrees whether OCC rules take precedence over state law or vice versa. Each side claims ultimate power, and each said it would sue if the issue arose.

"In most cases, federal preemption of state laws only takes place where there's a clear intention of a federal organization to occupy a particular area," said Larry Alamo, staff counsel of the California Real Estate Department. "If the courts say banks *may* engage in real estate brokerage, it doesn't mean they can do it without a license. On the other hand, if the courts say they *shall*, it would be different."

Banks involved in real estate investment banking are aware of the problem.

Banks Move Carefully

Many, such as Bankers Trust New York Corp. and Chemical Banking Corp., acknowledging how gray a legal area this is, move very carefully. They want their actions and how they write their documents to support the contention that they are financial advisers, not brokers.

Security Pacific Corp. skirts the problem by conducting all property sales through a California-chartered bank, which is permitted to conduct brokerage. It limits its real estate investment banking activity to debt placement. Others, like Bank-America Corp., considered entering the business but backed off, fearing it was impermissible activity.

Banking companies that offer real estate investment banking include J.P. Morgan, Chicorp, Chase Manhattan Corp., Bankers Trust, Chemical, First Chicago Corp., Continental, and Security Pacific.

Aside from the potential regulatory problems, hurdles facing anyone entering the business are high and expensive.

Several Wall Street firms, for instance, have tried and failed to make the cut in real estate investment banking. Also, banks are competing for business against well-entrenched players. But aside from being crowded and fiercely competitive, the business is one in which total volume is shrinking.

Industry observers estimate that the face amount of debt and equity placements reached perhaps $30 billion in 1988 but has since fallen 20% to 30%. And along with shrinking volume has come shrinking fees.

"It's very likely that the investment banking firms, to keep their armies of young professionals employed, will engage in more price cutting," said J.P. Morgan's Mr. Tai.

And while such deals are lucrative, they're also expensive to execute, which squeezes profits.

Expenses Are Great

"This ain't the LBO business," said Raj Singh, a Chase vice president, referring to leveraged buyouts. "There ain't a lot of money in this. There are some high-profile deals, but the expenses are very high."

Real estate investment banking carries with it problems of fitting into the corporate culture, too. "The banks have been in lending for so long that, when you start an advisory business, you have a natural tension between people who want to be principals and the fancy-dancy agent," said Mr. Tai. □

NEWSMAKERS
Equitable Unit Bets on a Market Upturn

By ANDREW REINBACH

Anticipating better times in a few years, Equitable Real Estate Investment Management Inc. is investing $500 million in renovations to 20 shopping centers it owns.

"It's the best investment we can make," said George R. Puskar, chairman of the unit of Equitable Life Assurance Society of the United States. "We've been in a big real estate recession for several years, but we [the real estate industry] led the nation into the recession, we'll also lead it out," he said.

Some Signs of Improvement

"We're already seeing some turnaround in the San Francisco area, but the vacancy rate on our 175 million square feet of space out there fell from 11.5% last year to 9% this year, and we're seeing some rent rises, too. I think that's a good sign."

Mr. Puskar holds banks responsible for many of the overbuilding problems the country now faces, but thinks the lending will atone for their mistakes.

"This is not a happy time – it's a very difficult time – for lending relationships," he said. "But banks have to be patient, they need to be flexible, they need to work these problems out. They can't just draw a line and say, 'That's it! We're not doing real estate anymore.'"

The current credit crunch in real estate finance is not such a bad thing, Mr. Puskar added, if it restores balance to supply and demand in real estate.

"I feel bad about some people who need credit, but we needed a credit crunch on unnecessary development," said Mr. Puskar.

"The problem is that the credit pendulum swings too violently. When the business was going great guns, people didn't make quality decisions. And now that it isn't, they still aren't making quality decisions."

Mr. Puskar said he is optimistic that banks will correct this mistake by eliminating the weak underwriting and lack of market knowledge that he considers to have been the fundamental flaws in their real estate lending.

George R. Puskar
Equitable Real Estate Investment Management Inc.

The Importance of Continuity

"You had unbridled activity by people without real proximity," he said. "A bank in Hartford would have kids with no real experience making apartment building loans in Charlotte, N.C., or strip shopping center loans in Florida. What did they know about it? And then they took them off the real estate desk and rotated it to another kid."

As a result, said Mr. Puskar, is that good developers have been ruined by overbuilding created by amateur developers who were set up in business by banks.

"When credit is so loose that it allows amateurs to build unwarranted projects, those are the first to go," he said. "But the level of the problem is so great that it takes down some very good people." □

U.S. League Skips Pressured O'Brien in Naming Chairman

Continued from page 1

of the U.S. League that wants to polish the group's tarnished image. Although the $6 billion-asset Carteret currently meets all capital requirements, some analysts regard it as a weak institution. They cite lackluster earnings, large additions to loan loss reserves, New Jersey's depressed real estate market, and the uncertain financial health of its parent company.

Mr. Shackelford, by contrast, is chairman of State Savings Bank, Columbus, Ohio, with $1.5 billion in assets, $105 million in net worth, and no taint from the thrift industry crisis.

"It's an issue of the haves and the have nots," said one state savings league official. "A good part of the membership wants to draw the line in the sand and say, 'From now on, we are an industry of strength.'"

Mr. Shackelford fills the bill, sources said. He is "identified with a part of the U.S. League membership that is very concerned about projecting an image of capital strength," the state league official said.

But "there may be some divisiveness. He's got a perspective that some people can rally to and some can't."

The shakeup in the U.S. League's highest ranks is a symptom of the turbulence that has rocked the thrift industry in recent years, sources said. The current chairman, Kenneth Seaton, has been distracted from the trade group's business by a shareholder proxy fight at his D&N Savings Bank, Hancock, Mich. And former league chairman Theo Pitt returned to serious earnings problems at Pioneer Savings Bank, Rocky Mount, N.C., after a year at the U.S. League's helm.

Problem of Continuity

In selecting a chairman for 1990, "you sure don't want a guy who, halfway through the year, is going to have his company sold out from under him," one source said.

U.S. League spokesman James Grohl said Mr. Shackelford "has a track record that is the envy of a lot of other people in the business. He really presents a good role model for the industry."

Mr. O'Brien insisted that concerns over Carteret's troubles did not figure into his decision to postpone his rise to the top. "We feel we are adequately reserved, and could meet demands for additional reserves if necessary," Mr. O'Brien said.

No Move Is Seen

"This was done at my request," he added, because of the restructuring program at Ambase. Carteret's parent, which is an insurance holding company. He also insisted there was no move to force him out. "It was at my request, and it came as surprise to the nominating committee."

Nor was there pressure from Ambase to give up the League post, despite persistent rumors to the contrary, he said.

"We were very proud of Bob serving on the League. It was done with the full support of the company," said Robert L. Woodrum, senior vice president of Ambase. He said that although Ambase announced plans in February to sell its three insurance subsidiaries, its options remain open. "I'm not saying we've considered spinning off Carteret," Mr. Woodrum said. "We just want to be in a position to do anything in this restructuring."

"We felt it was better for him

Donald B. Shackelford
State Savings Bank

and us and our shareholders if Bob remained pretty much committed to Carteret," Mr. Woodrum said.

But thrift analyst Henry Pelz said that while Carteret's capital is adequate, the thrift faces tough times. Mr. Pelz, of Keefe, Bruyette & Woods, New York, who followed Carteret until it was acquired by Ambase, said the thrift's problems "are akin to those of other companies that are faced with new [capital] regulations, and the fact that they operate in New Jersey, at least in part. That is a tough market." □

Crisis in the Persian Gulf Creates a Dilemma for Fed

By GARY SEIDMAN
Reuters

NEW YORK — Faced with a scenario it had long hoped to avoid – rising inflation and slowing economic growth – the Federal Reserve now must cut interest rates more aggressively if it hopes to avert a recession.

But central bank officials find themselves in a tough spot, economists said.

Normally, slower growth subdues inflation. But the surge in oil prices since Iraq's invasion of Kuwait Aug. 2 has upset the relationship by boosting inflation. That makes it more difficult for the Fed to act, since lower interest rates can also be inflationary.

Inaction Could Mean Recession

If the Fed fails to move, however, higher oil prices will further hamper economic growth and plunge the economy into recession for the first time in nearly eight years.

The last recession, in 1981-1982, has been followed by the longest domestic peacetime expansion on record.

The Fed's most recent money supply figures show continued sluggish growth, a sign to some experts of economic weakness. The figures, released Thursday, showed that M-2, a broad measure of the money supply, rose a meager $300 million, to $3,270.4 billion, in the week ended July 30.

"There is definitely sluggish money growth," said economist Kevin Flanagan at Dean Witter Reynolds Inc. "For some people, that is a harbinger of recession," he said, although he discounts the relationship.

Data Encourage Lower Rates

The money supply figures and recent signs of weakness in employment mean the Fed will likely settle on easing credit faster than envisioned before the Iraqi invasion in order to avoid a recession, economists said.

Some said it is already too late. Recession, a strong possibility even before the Mideast crisis, now is certain, they said.

"When the economy is growing at about a 1% rate and higher oil prices are likely to reduce real growth even further, then inflation is not the issue, recession is," said Charles Lieberman, an economist at the banking unit of Manufacturers Hanover Corp. Higher oil prices mean rising costs for business and less disposable income for consumers, who must spend more on energy.

Mr. Lieberman stopped short of saying the economy was in a recession. "It is at least flirting with it," he said, though.

Fed Funds Cut Likely

The Fed is likely to force down the federal funds rate, a closely watched interest rate that banks charge each other for overnight loans, Mr. Lieberman said. This charge widely influences rates for many consumer loans.

"I expect a quarter-point cut in the federal funds rate before the Aug. 21 meeting" of the Federal Open Market Committee, which sets Fed policy on interest rates.

The rate will probably have to be cut several times before yearend to keep the economy growing, said Darwin Beck, an economist at First Boston Inc. "I see it down 100 basis points [one percentage point] by yearend."

The Fed last eased credit July 13, forcing the fed funds rate down a quarter point, to 8%. It cited a credit crunch at commercial banks and weak money growth.

Move in Long-Term Rates

Since the Iraqi invasion, inflation worries have pushed long-term interest rates higher, a classic response that itself could compound the credit crunch, analysts said. As a result, "stagflation," a term coined during the oil shortages of the 1970s to describe slow growth with inflation, has returned to the lexicon of the financial markets.

"In an instant, oil became the linchpin of American economic policy," said a U.S. Treasury market analyst. Higher oil prices mean higher costs for business and could lead to further cutbacks in production and payrolls.

Job growth is already suspect. The government reported a sharp rise in unemployment Aug. 3, and last Wednesday, the Fed's region-by-region economic survey showed that, even before oil prices rose, weakness was widespread. □

FDIC to Open Big Boston Office

Continued from page 1

New England, the largest of the region's troubled banks and a subsidiary of the $23 billion-asset Bank of New England Corp., Boston.

Mr. Heller estimates there are anywhere from 23 to 42 problem banks in the six New England states, which could also be the reason for the FDIC's wanting to open a liquidation office.

Robert M. Cittadino, deputy regional director of the FDIC's division of liquidation in New York, said he could not comment on whether the office is being set up to handle a large failure, or whether the agency expects increased bank failures in New England.

"I am not at liberty to disclose our projections for closings," he said.

Mr. Cittadino said the office is being established to handle the liquidation of $1.2 billion in assets from four institutions in Boston and Milford that have recently failed.

> "There has got to be something big if they are staffing up to that level. I think you have got to consider BNE is a possibility, without a doubt."
>
> **Warren Heller**
> *Veribanc Inc.*

Mr. Cittadino said the liquidations would have been handled out of South Brunswick, N.J., but activity has picked up.

"We are not in position at this point to address those banks in the South Brunswick office," which opened in March, he said.

The new field office could be open by mid- to late October if a lease for space is signed by the end of this week, Mr. Cittadino said. He said it will have about 460 employees and contain three divisions: liquidation, legal, and accounting.

Already on the job, in addition to the 40 new hires, are 15 others "on detail" from the FDIC to help with such jobs as interviewing prospective candidates. They are working out of four small offices set up at institutions in liquidation.

Mr. Cittadino said the staff size will be just above the average of 350 to 400 for liquidation offices. Reflecting the scope of the Texas banking crisis, a consolidated field office in Dallas has 600 people, supplemented by 400 in a North Dallas office.

Varied Tasks to Perform

Of the anticipated 460 people in Boston, about 350 people will represent the division of liquidation. The rest will handle legal and accounting work.

"We don't want to go too much larger than that, Mr. Cittadino said. "If we get activity that warrants a larger staff we would be inclined to open up another office."

Mr. Cittadino said the office will be staffed by FDIC employees who transfer into the region, local individuals, and others hired from failed banks. He expects it will take three to five years for the office to complete its liquidation assignments. □

How to Thrive With No ATMs

Continued from page 6

Golden West's decision.

"They understood where ATMs would or would not fit in and costed it out," observes Linda Fenner Zimmer, a Connecticut-based researcher. "A lot of banks have no idea what ATMs are costing them."

Joseph A. Jolson, a thrift analyst with Montgomery Securities, notes that even without electronic tellers, Golden West's deposits have grown faster than the industry average in the last year. In the 12 months ending March 31, the company's deposits grew 14.3%, compared with 11.8% for H.F. Ahmanson & Co. and 8.9% for Great Western Financial Co., both ATM providers.

"Golden West has been gaining market share without ATMs," Mr. Jolson says.

Strategy Questioned

But some rivals question whether Golden West is being short-sighted by refusing to install ATMs.

They note that older customers increasingly are accepting electronic banking. At the same time, prime ATM users are moving into the age and income brackets Golden West wants.

Golden West managers do not disagree. In fact, they have hedged their bets: all new branches are wired for electronic tellers.

"We've been continuously evaluating this for 10 years," says James T. Judd, senior executive vice president and chief operating officer. "From a total company systems point-of-view, we're not quite ready."

> Some rivals question whether Golden West is being short-sighted by refusing to install ATMs.

But, says Mr. Judd: "If people using them now became a bigger part of our marketplace, if the cost of the equipment were to dramatically go down, if it could be serviced easier, if everybody who used [ATMs] were willing to pay . . . These are the things one would have to ask oneself." □

Chase, Met Life Officers Join Planning Institute

WASHINGTON – James F. Murray and Glen E. Coverdale have been appointed trustees of the Urban Land Institute, an organization dedicated to improving the quality of land-use planning and real estate development.

Each will serve a three-year term.

Mr. Murray is executive vice president, real estate, of Chase Manhattan Bank, New York; Mr. Coverdale is executive vice president and member of the corporate management office of Metropolitan Life InsuranceCo., New York. □

How they spend it is their business.

Last year, American businesses spent over $100 billion for hotels, meals and airline travel.

Plus billions more for entertainment, supplies and unexpected emergencies. From fixing a fax in Detroit to fixing a flat in Quebec.

The best way to tap into this enormous market is with the Visa® Business Card program.

Cardholders already rate Visa as their number one bankcard, both overall and for business T & E. And the Visa family of cards consistently gets the highest response on solicitations.

With this proven selling power, the business card program will be both easy to sell and lucrative to offer.

The best program for you is also the best one for your customers. They get the advantage of over 284,000 Visa member branches and 44,000 ATMs in 38 countries. Which gives them unequaled access to money all over the world.

Whether it's for a cafe in Paris, a cafeteria in Paducah or just the neighborhood deli.

Your customers also have the advantage of a superior MIS reporting system. Designed to help control and manage both their travel and business expenses.

They get detailed, timely reports broken down in expense report form—monthly, quarterly or annually. And the ability to customize reports according to their specific business needs.

Our program also integrates with your billing system and that of travel agents. Which will keep both your corporate and travel agent clients happy.

They'll be even happier when they hear about the new benefits we've added to the business card package. We'll soon be launching a national consumer campaign that will explain these benefits in detail.

To get the details on how you can sign up, just give us a call at the phone number nearest you. In San Mateo, California, call us at (415) 570-2120 or in McLean, Virginia, call us at (703) 827-8404.

And do it soon.

Midwest Banks in Slight Decline

Continued from page 2

for the rest of the year are for continued growth in jobs and wages, although at a slower pace. Kemper Financial Services Inc. economist John E. Silvia, said in a recent report that the relative strength of Illinois' export-manufacturing sector contributed to the state's falling unemployment rate.

Mr. Silvia's comments are echoed by the Federal Reserve Board outlook, a prediction that demand from abroad is likely to support continued growth in the nation's jobs and production.

There are also signs that the interest margin picture may improve. Although short-term rates are drifting downward; analysts said, money-center banks are not anxious to cut their prime lending rates.

Excitement at Continental

Among the region's biggest bank companies, Continental Bank Corp., with a $57 million loss, provided a full measure of excitement in the quarter. Just as the quarter was closing, it announced it was laying off 900 employees and taking a $50 million charge against earnings. Then, less than a week before it reported, Continental said it was doubling its domestic nonperforming loans.

While the company said the one-time charge was the major factor in the loss, it also reported a $21 million loss on the sale of government securities, only partly offset by a gain on the sale of real estate.

Big drops in earnings were also reported at First Chicago Corp. and Minneapolis-based First Bank System Inc.

First Chicago blamed its 35% decline on a larger provision for loan losses, a big jump in nonin-

> "Overall, a pretty boring quarter, but boring is good these days. Excitement is usually bad news."
>
> **Kenneth F. Puglisi**
> *Keefe, Bruyette & Woods Inc.*

terest expenses, and a decline in foreign exchange trading profits. First Bank System said its 43% drop was due to a higher provision for loan losses and declines in net interest income and noninterest income.

Outstanding Results at Norwest

The standout on the plus side was Minneapolis-based Norwest Corp., which reported a 12% increase due to strong results from consumer lending and fee generating businesses.

Banc One Corp., Columbus, Ohio, reported a 14% increase. The rise was due chiefly to added earnings from Banc One Texas, acquired last year, which more than offset increases in nonperforming loans and provision for credit losses. Without the Texas earnings, results were flat with the year-earlier quarter.

Society Corp., Cleveland, earned $39.9 million compared with $28.69 million a year earlier. The latest period includes the results of Toledo-based Trustcorp, which Society acquired earlier this year. Trustcorp reported a loss of $88.6 million in the 1989 quarter; if Society had owned Trustcorp then, the bank said it would have reported a loss of $59.9 million.

Midsize Bank Results

Among midsize banks, higher provisions for loan losses reduced earnings at INB Financial Corp. and Merchants National Corp., both Indianapolis; Michigan National Corp., Farmington Hills, Mich.; Ameritrust, Cleveland; and Marshall & Ilsley Corp., Milwaukee.

At Harris Bank Corp., Chicago, a subsidiary of Bank of Montreal, earnings plunged because of a $16 million charge to cover tariff cuts.

Strong performances were recorded at Fifth Third Bancorp, Cincinnati, where earnings rose 7%, and at Mercantile Bancorp, St. Louis, where profit doubled due to a halving of its loan-loss provision. □

DC Bank Fined for Money Laundering

Continued from page 2

more than $10,000.

Banks are allowed to exempt certain customers, such as supermarkets, which frequently make large cash transactions, said Lawrence Batdorf, a Treasury spokesman.

The Washington bank, however, was making exemptions not allowed by Treasury, Mr. Batdorf said.

The bank's system for recording required information about customers making larger than $10,000 transactions was not consistently used, said Mr. Batdorf.

Banks Fined in Past

Although it comes nowhere near the $4.7 million fine in 1986 against the Bank of America for money laundering charges, the penalty against NBW is among the largest the Treasury has assessed, said Mr. Batdorf. In one of the largest recent assessments for faulty transaction reporting, Bank Leumi Trust Co., a New York subsidiary of Bank Leumi of Israel, pleaded guilty to Bank Secrecy Act charges late least year and paid $533,000 in civil and criminal penalties.

National Bank of Washington, a subsidiary of Washington Bancorp., in 1986 had been warned and cited for other instances of having improperly exempted transactions from reporting.

The earlier violation did not result in a fine.

"Despite an earlier warning by Treasury and the involvement of its former senior vice president in money laundering, NBW continued to rely on a woefully inadequate Bank Secrecy Act compliance program which, led to a number of violations and created a situation ripe for money laundering," said Treasury Assistant Secretay Peter K. Nunez in a statement. □

Valley Federal Savings Closing Three Offices

VAN NUYS, Calif. — Valley Federal Savings and Loan Association said it will close three offices and transfer their business to three existing locations in the San Joaquin Valley.

"These consolidations are consistent with our goal of increasing efficiency and overall cost-effectiveness of Valley Federal's operation without sacrificing customer service," said Scott A. Braly, president and chief executive officer.

"We are sensitive to what this consolidation means to our employees, and we believe these consolidations will be effected with minimum disruptions," he said. □

Japan's Banks Shun New Loans In Venezuela Debt Negotiations

TOKYO — Few Japanese banks will opt for new lending under a Venezuelan debt relief package, bankers here said. Rather, most will choose options that effectively reduce Venezuela's debt burden.

"We will avoid new lending to Venezuela, as we do not want to increase Venezuelan debt exposure any more," said one banker. "But we will probably choose one of the other options anyway."

The Venezuelan debt package, aimed at helping to cut part of that country's $20.5 billion in commercial bank debt, offers five options. Banks have been asked to reply by Wednesday.

Objectives May Differ

Bankers said some smaller Japanese banks might want to get rid of all of their Venezuelan debt this time, while others still want to maintain a certain level of exposure.

But some bankers said rising oil prices, triggered by Iraq's invasion of Kuwait, could affect banks' last minute decisions by encouraging more banks to seek business ties with Venezuela.

"Venezuela's status as a big oil-producing country has been raised following the Iraqi invasion. This may make some banks more positive toward Venezuela," said a manager at a leading Tokyo bank.

Five Options Available

The package allows banks to choose among five options – new money; exchange of debt for 30-year Venezuelan bonds at a reduced interest rate (fixed 6.75%) or reduced principal (70% of face value); exchange of debt for "step-up" bonds (with a 17-year maturity and gradually rising yields); and debt repurchase at a 55% discount.

Bankers said that among Japanese creditor banks, the trust, long-term, and regional banks are likely to opt for debt repurchase, as their outstanding loans are not as large as those of city banks.

But city banks are expected to choose mostly interest-rate-reduction bonds. — *LDC Debt Report*

Top Japanese Banks Downgraded

Moody's Bounces Dai-Ichi and Fuji from Aaa Rank

By JAMES R. KRAUS

Japan's Dai-Ichi Kangyo Bank Ltd. and Fuji Bank Ltd., the world's biggest and third-biggest banks measured by assets, have lost their Aaa debt ratings with Moody's Investors Service Inc.

Monday the agency cut the long-term ratings of both Dai-Ichi Kangyo and Fuji to Aa1.

No Change for Short-Term Debt

The downgrading affects $2 billion in Fuji's long-term outstanding debt and $1.5 billion in long-term debt at Dai-Ichi Kangyo. The agency maintained both banks' short-term debt rating at Prime-1.

The downgrading leaves only three of Japan's big commercial banks with a triple-A rating. They are Mitsubishi Bank, Sumitomo Bank, and Industrial Bank of Japan.

Masaru Kakutani, associate director at Moody's in New York, said that Fuji's and Dai-ichi Kangyo's exposure to real estate lending and highly leveraged transactions as well as higher funding costs in Japan had created long-term uncertainty for both banks.

"We see some risk, but we don't really know whether they will be serious over the next few years," Mr. Kakutani said.

The recent fall in prices on the Tokyo stock exchange is also forcing the two banks and others to use more expensive subordinated bonds, he added.

1% Dividend Is Typical

Most Japanese banks pay an annual dividend of about 1%. That compares with 6% to 7% annual interest they have to pay on the subordinated bonds that they issue.

"We highly regret this decision, which we believe does not accurately reflect the bank's state of affairs," Dai-Ichi Kangyo said Monday in a statement.

A spokesman for Fuji Bank in New York declined to comment on the downgrading. □

Oil Price Rise May Stall East Europe Debt Payments

By JOHN EVANS

Price increases for oil and gold are "bound to improve the Soviet Union's position."
William Newman *Narodny Bank*

LONDON — The sharp rise in oil prices caused by tensions in the Persian Gulf could reduce the ability of Eastern European countries to repay loans and hamper their economic reforms, bankers and analysts said.

But the Arabian crisis could prove to be a boon for the Soviet Union, the experts said.

David Roche, an East Europe specialist at Morgan Stanley International Ltd. in London, said Soviet oil supplies were being reduced in Eastern Europe and "there is hardly enough hard currency to fund replacement purchases from the West."

Servicing Difficult

This will make Eastern Europe's hard currency debts even more difficult to service, notably in the case of Hungary, Bulgaria, and Poland, he said.

"Even in Germany," he said, "higher oil prices will substantially raise the cost of unity by making the energy-inefficient East German economy fail even more dramatically."

Morgan Stanley estimates that $30-a-barrel oil will absorb 20% of Hungary's hard currency income, 33% of Poland's, 90% of Czechoslovakia's, and more than 100% of Bulgaria's.

At the Soviet-owned Moscow Narodny Bank Ltd. in London, assistant general manager William Newman said the Soviet Union would be a "windfall" gainer from the soaring oil price, which might helpit overcome recent problems in meeting hard currency payments on its gross $52 billion of debt. "The increase in the price of oil and the associated gain in the price of gold because of Middle East tension are bound to improve the Soviet Union's position."

As of the beginning of next year, the Soviet Union will charge its former East European allies in convertible currency such as U.S. dollars for the imports of Russian oil, which they formerly enjoyed at highly subsidized rates, he noted.

Hungary has foreign debt of $20.7 billion, of which $12 billion is owed to Western and Japanese banks. Economists say its cushion of reserves is small.

Bad News for Hungary

At Moody's Investors Service, analyst David H. Levey said Hungary's international payments position would worsen as a result of oil price hikes and Soviet demands for hard currency for energy exports. "They are skating on the edge," said Mr. Levey, an assistant vice president. "I won't go as far as to predict rescheduling . . . but the country will probably need some form of debt relief. It has little financial flexibility."

The picture for other East bloc economies, according to a survey, is as follows:

- For Yugoslavia, which owes $20.5 billion, the higher oil price will have an adverse impact on the nation's reform program, may spark new inflation, and disrupt management of its external debt, economists agree.
- Poland, with a total of $39.5 billion in debts, will be badly affected. "Just as it's climbing back on its feet, it will be knocked off course again," one economist said. Western banks are owed $10.3 billion.
- Czechoslovakia, which owes $7.9 billion, may find higher oil prices "manageable." But the nation, which owes overseas banks $5.2 billion with foreign deposits of $2.2 billion, will be knocked off course.
- East Germany, with $20.5 billion of debts but a healthy $17 billion of reserves, is partly protected by impending unification with its Western neighbor.
- Rumania, which has oil production capacity and little foreign debt, should escape relatively unscathed. □

Plus, there's a weekly

INDEX *of top stories*

The following is a selective index, arranged by subject, of the top articles in *American Banker* last week. The date of appearance precedes each item. This column was compiled by Matt Barthel.

COMMENTARY

8/6 Never mind interest rate risk and credit risk – now banks have to contend with "covariance risk" and "career risk," writes Paul Nadler. *Page 4*

8/7 By persistently demanding that banks operate with ever higher ratios of capital to assets, the regulators may end up doing a disservice to the industry, to the country, and to themselves, writes Sanford Rose. *Page 1*

8/8 For consumers and financial institutions alike, ATM duality is an idea whose time has come, says John O. Smith. *Page 4*

COMMERCIAL LENDING

8/6 Moving to resolve a thorny legal controversy, the Environmental Protection Agency said it plans to revise the Superfund rules by yearend to clarify lenders' liability for cleaning up toxic wastes on foreclosed properties. *Page 1*

8/7 At a time when banks are at least paying lip service to relationship banking, their interest in securitization could endanger the relationships that have always driven middle-market lending. *Page 1*

8/8 Just when corporate bankers were sensing that deals were reappearing and lending spigots might open again, the crisis in the Middle East has put hopes of a loan revival on hold. *Page 1*

8/10 The day of reckoning is rapidly approaching for many companies that used interest-deferred securities to finance recapitalizations or leveraged buyouts. For banks, that will provide both opportunities and dangers. *Page 1*

COMMERCIAL REAL ESTATE

8/7 The bottom fell out of the real estate portfolios of the nation's largest banks in the first half as the banks racked up massive nonperforming loans. *Page 8*

8/10 The $33 million secondquarter loss posted by Bank of New England Corp. did not conclusively signal whether the deeply troubled institution can rebound from staggering real estate loan problems. But it is looking as if the third quarter could be decisive. *Page 1*

8/10 The commercial banking industry does not need forbearance from regulators, but it does require "a little breathing room" to adjust to the softening real estate markets, a prominent bank stock analyst told a House panel. *Page 1*

CONSUMER SERVICES

8/6 Mortgage originations at H.F. Ahmanson were $6.9 billion in the first half, up 42% from a year earlier. *Page 9*

8/6 Some private lenders have stopped disbursing student loans guaranteed by the Higher Education Assistance Fund, pending resolution of financial problems facing the agency. *Page 2*

8/7 Valley Bank of Nevada's application to accept ATM cards bearing the Cirrus logo could touch off another round of lawsuits in an industry already jittery over antitrust litigation. *Page 6*

8/8 The turmoil in the Middle East, the rapid rise in oil prices, and sharp declines in stock and bond prices have added new elements of danger to an already soft consumer lending market. *Page 1*

8/8 In an effort to tighten loan underwriting procedures, many private banks are revising their financial disclosure forms to place more emphasis on cash flow. *Page 6*

8/9 In yet another bond between the bank card and telephone industries, Comerica Inc. and U S West Inc. have struck a deal that could allow all MasterCard and Visa cards to be used as calling cards. *Page 1*

8/9 Boatmen's Bancshares has abandoned conventional wisdom market research and is instead using media campaigns to ask people what, exactly, they want in a bank. *Page 8*

8/10 A handful of big banks will announce nationwide ATM machine cards bearing the logos of either Cirrus or Plus when the networks begin sharing ATMs on Aug. 20. *Page 8*

CREDIT CARDS / POINT OF SALE

8/9 In yet another bond between the bank card and telephone industries, Comerica Inc. and U S West Inc. have struck a deal that could allow all MasterCard and Visa cards to be used as calling cards. *Page 1*

DEPOSIT INSURANCE

8/10 Following hints from Federal Deposit Insurance Corp. Chairman L. William Seidman that banks' premiums could go higher than expected next year, several industry analysts now say the industry should expect a substantial increase – perhaps approaching the FDIC's legal limit of 19.5 cents for each $100 of insured deposits. *Page 1*

EARNINGS

8/6 Bank of New England Corp. lost $33 million in the second quarter as asset quality continued to deteriorate in a declining regional economy. *Page 2*

8/8 Rising oil prices are likely to worsen a perceived credit crunch and further depress bank earnings, according to industry experts. *Page 1*

8/9 Credit quality concerns and slumping real estate markets overshadowed the results at Southeastern banks in the second quarter. *Page 2*

8/10 The $33 million secondquarter loss posted by Bank of New England Corp. did not conclusively signal whether the deeply troubled institution can rebound from staggering real estate loan problems. But it is looking as if the third quarter could be decisive. *Page 1*

FINANCE

8/6 Just a year ago, HomeFed Corp. was a darling of savings and loan investors. But suddenly, chairman and chief executive Robert F. Adelizzi is fighting for the survival of his thrift. *Page 1*

8/6 The stock market sold off sharply on Friday amid fears about the economic impact of turmoil in the Middle East, helping to push bank and thrift stocks to new lows at the end of their worst trading week of the year. *Page 1*

8/6 As banks find it more difficult to raise capital, the gap between the haves and the havenots grows wider. *Page 20*

8/7 In its first move to boost capital and liquidity since disappointing second-quarter results prompted funding difficulties, MNC Financial Inc. said that it will privately place $180 million of preferred stock with an already powerful member of its board of directors. *Page 1*

8/7 Major bank and thrift stocks fell sharply Monday as heavy across-the-board selling continued. *Page 20*

8/8 Citing the Mideast crisis as justification, the union group seeking to buy UAL Corp. will ask for another 30 to 90 days to obtain financing for the proposed $4.4 billion buyout, a banking source reported. *Page 30*

8/8 Bank of New York Co. said it is closing its BNY Securities unit, a primary dealer of U.S. government securities, because of unsatisfactory profits. *Page 2*

8/9 A huge, unprecedented gap has opened between bank equities and most other stocks during the past two days. *Page 24*

8/10 Wilmington Trust has stayed several steps ahead of the industry, bucking the downward trend among East Coast bank stocks. *Page 16*

8/10 R.H. Macy selected Manufacturers Hanover Real Estate to arrange a mortgage on several warehouses and distribution buildings. The proceeds will be used to reduce bank debt. *Page 16*

HOME MORTGAGES

8/6 Mortgage originations at H.F. Ahmanson were $6.9 billion in the first half, up 42% from a year earlier. *Page 8*

8/8 Fannie Mae and Mortgage-Power system, which lets borrowers collect bids for entering borrowers to the bank, is eliciting a chorus of protest in Washington. *Page 6*

INTERNATIONAL

8/6 The stock market sold off sharply on Friday amid fears about the economic impact of turmoil in the Middle East, helping to push bank and thrift stocks to new lows at the end of their worst trading week of the year. *Page 1*

8/6 Responding to an unclear presidential decree on Thursday, banks froze assets and asked questions later about accounts linked to the Kuwaiti and Iraqi governments. *Page 1*

8/6 Barclays Bank is the latest large British institution to report weak earnings. *Page 12*

8/7 Amid confusion over the terms of a freeze on Kuwait's assets, First National Bank of Chicago blocked and then released a $111 million payment to a Kuwaiti bank. *Page 12*

8/8 Rising oil prices are likely to worsen a perceived credit crunch and further depress bank earnings, according to industry experts. *Page 1*

8/8 Just when corporate bankers were sensing that deals were reappearing and lending spigots might open again, the crisis in the Middle East has put hopes of a loan revival on hold. *Page 1*

8/8 The sharp rise in oil prices since Iraq invaded Kuwait has strengthened economic prospects for oil-producing developing countries, but the crisis could have severe implications for Brazil. *Page 1*

8/8 The turmoil in the Middle East, the rapid rise in oil prices, and sharp declines in stock and bond prices have added new elements of danger to an already soft consumer lending market. *Page 1*

8/8 A former officer at the Atlanta branch of Italy's Banca Nazionale del Lavoro tells the inside story of its secret loans to Iraq. *Page 2*

8/8 U.S. bank branches in Britain are getting conflicting instructions from the U.S. Treasury and the Bank of England on the freezing of Kuwaiti assets. *Page 20*

8/8 Union Bank of Switzerland, one of the largest banks in the world, is making inroads into the private banking market in the United States. *Page 18*

8/9 Amid worries overseas about the health of U.S. banking, at least four U.S. dealers halted all trading here in the subordinated debt and floating-rate notes of U.S. banks issued in the international bond markets, London-based sources said. *Page 1*

8/9 Yutaka Hasegawa, general manager of the New York branch of Mitsubishi Bank, is urging better communications between Japanese and Americans. *Page 14*

8/10 Argentina will try harder to privatize state-owned companies to improve its finances and help pay its commercial bank debt. *Page 10*

LEGAL CRIME

8/6 Responding to an unclear presidential decree on Thursday, banks froze assets and asked questions later about accounts linked to the Kuwaiti and Iraqi governments. *Page 1*

8/7 James M. Fail defended himself against charges that he misled regulators about his plan to acquire Bluebonnet Savings Bank. *Page 2*

8/8 The Fed's "source of strength" doctrine, which says that bank holding companies must provide capital to troubled subsidiaries, suffered another legal blow. *Page 2*

8/8 A former officer at the Atlanta branch of Italy's Banca Nazionale del Lavoro tells the inside story of its secret loans to Iraq. *Page 2*

8/8 The theft of PCs from Bank of America underscores the need for heightened security as branches install the more expensive machines to replace terminal-based systems. *Page 3*

8/9 The government has lost the first round of a legal battle that could force it to repay billions of dollars to thrifts that are complying with an accounting provision in the 1989 bailout law. *Page 1*

8/10 Stepping up its effort to salvage some cash from the ruins of Lincoln Savings and Loan Association, thrift regulators took action to obtain $40.9 million in restitution from Charles H. Keating Jr. and five former directors of American Continental Corp., Lincoln's Phoenix-based parent. *Page 1*

8/10 The commercial banking industry does not need forbearance from regulators, but it does require "a little breathing room" to adjust to the softening real estate markets, a prominent bank stock analyst told a House panel. *Page 1*

MANAGEMENT

HUMAN RESOURCES

8/9 Chemical Banking Corp. realigned its senior management structure, giving a younger generation of executives clear mandates for directing the bank's four major business sectors. *Page 1*

8/9 Some progressive banks are trying to cut costs by measuring and enhancing the productivity of their officers. *Page 10*

MARKET FORCES

8/9 The Federal Reserve's latest report on regional economic conditions provided more evidence that much of the U.S. is entering a recession. *Page 1*

LEGISLATION

REGULATION

8/6 Experts say that price of avoiding political controversy in thrift rescues is exceedingly high, and that message came through loud and clear when the Resolution Trust Corp. revealed that it was running out of cash and was stuck with $37 billion of assets left over from 207 thrift rescues. *Page 1*

8/6 Sen. Jake Garn, R-Utah, says he has taken a bum rap for the financial reform legislation that he and former Rep. Fernand St Germain, D-R.I., shepherded through Congress in 1982. *Page 9*

8/7 By persistently demanding that banks operate with ever higher ratios of capital to assets, the regulators may end up doing a disservice to the industry, to the country, and to themselves, writes Sanford Rose. *Page 1*

8/7 Manuel H. Johnson, in his departing remarks as vice chairman of the Federal Reserve Board, said the Fed may move away from the holding company structure that he has advocated. *Page 2*

8/7 James M. Fail defended himself against charges that he misled regulators about his past to acquire Bluebonnet Savings Bank. *Page 2*

8/8 A proposal by the Office of the Comptroller of the Currency to relax some restrictions on trust departments' investment accounts appears likely to smooth the entry of commercial banks into the growth mutual fund business. *Page 1*

8/9 The Federal Reserve's latest report on regional economic conditions provided more evidence that much of the U.S. is entering a recession. *Page 1*

8/9 The government has lost the first round of a legal battle that could force it to repay billions of dollars to thrifts that are complying with an accounting provision in the 1989 bailout law. *Page 1*

Bankers Seem Skittish on Buyout As Aug. 9 Deadline Nears on UAL

By WILLIAM GOODWIN

Citicorp and Chase Manhattan Corp. representatives stayed away last week from a meeting with banks lined up to finance the union-led buyout of UAL Corp., raising speculation that the two banks have joined Chemical Banking Corp. in balking at the $4.38 billion deal.

Sources said Citicorp has in fact withdrawn from the bank group – at least for the time being – though it was not immediately clear why. A Citicorp spokeswoman declined to comment.

These rumblings come at a time when a spokesman for the union group said it is close to finding an outside investor, which could draw skittish banks back into the deal.

Equity Is Sticking Point

Chemical told the other banks on Friday that it was pulling out because the union group had failed to attract an outside equity investor, a source said. For that reason, Chemical did not attend the Friday meeting of bankers.

Citicorp and Chase Manhattan Corp. also canceled out of the meeting, leaving only Bankers Trust New York Corp. and Manufacturers Hanover Corp.

See **UAL** *page* **18**

this newspaper that Citicorp and Chase were likely to pull out of the deal. The stock was down as $21 before rebounding somewhat late in the day.

The union group proposed to buy the airline holding company in March for $201 a share and securities totaling roughly $4 billion from the banks.

Join One of the Country's Premier Consumer Banking Teams

Do you want to work closely with a team of enthusiastic marketing professionals and senior management? Put your talents to work as part of the country's premier consumer banking teams?

If you have consumer banking experience in product development and product management, you may be the one we're looking for. Central Bank of the South has a rare opening in its marketing department for a Manager of Product Development. We're looking for someone with the proven ability to generate growth in deposits, loans, and fee income through existing consumer products and the development of new ones. . . someone who is comfortable in a high-visibility position and works effectively with senior management.

If you possess these qualities, as well as a graduate degree in business and excellent communication skills— both written and oral — we want to hear from you. As our Manager of Product Development, you would report directly to the Marketing Director and serve as a catalyst between our team of product managers and senior management.

Central is a strong regional bank with offices throughout Alabama and Texas. As well as one financially sound, with over $4.8 billion in assets. For the right candidate, we offer a generous compensation package, including excellent salary and relocation expenses. If you're interested in joining one of the country's premier consumer bank marketing teams, contact Jo Lynne Wilson, Employment Officer, at the following address:

Employment Services Division
Central Bank of the South
Post Office Box 10566
Birmingham, Alabama 35296

Be sure to include your salary history along with your resume. All responses will be received in strictest confidence.

Guinness Peat Confirms Sale-Leaseback Talks with UAL Buyout Group

By WILLIAM GOODWIN

A Guinness Peat Aviation official confirmed that the company has discussed a sale-leaseback transaction with the unionled UAL Corp. buyout group "in the range of $500 million," but added that Guinness Peat has had virtually no contact with the group for several weeks.

Colm Barrington, chief executive of GPA Capital in New York, denied persistent reports that the aircraft leasing firm has discussed providing equity or on-balance-sheet debt financing for the proposed $4.4 billion buyout.

Mr. Barrington also denied that GPA has signed a letter of intent to provide financing.

Mr. Barrington added, though, that GPA remains interested in a sale-leaseback deal with the buyout group.

"There's a lot of good equipment in UAL – it's one of their greatest assets."

Colm Barrington *GPA Capital*

"There's a lot of good equipment in UAL – it's one of their greatest assets," Mr. Barrington said. UAL owns a much higher percentage of its aircraft than most of its airline peers.

Market rumors continued to circulate Monday that the buyout group had obtained letters of intent from a number of financing sources, including five banks, ahead of last week's meeting with the UAL board of directors.

In addition to the buyout group's lead banks – Bankers Trust Co., Manufacturers Hanover Trust Co., and Security Pacific National Bank – the other banks rumored to have provided letters of intent are Long-Term Credit Bank of Japan and Bank of America.

Syndication Remains an Issue

In the case of Bank of America, a well-placed banking source said the California bank did not sign a letter of intent, but would be interested in participating in the transaction if it can be satisfied about the ability to syndicate the loans. Long-Term Credit bank officials did not return calls by press time.

An official with one of the three lead banks working on the buyout financing said the group continues to be on structuring a deal that will appeal to the broad bank syndicate market.

Need for 'Credible Case'

"We've got to come up with a credible case people can understand and buy into," the official said.

"That's what's going on right now," he added.

No matter how well the deal is structured, though, syndicate officials at several banks said it will be tough to sell the deal following the collapse of Citibank, Chase Manhattan Bank and Chemical Bank. □

TRANS DATA
Research Division, American Banker • Bond Buyer

Can digitized imaging of checks contribute as much to your bank's profitability as to back office productivity?

Trans Data has investigated the technology top to bottom. Consumer receptivity. How fees can generate income. How depositors' concerns can be overcome. When and how other banks will offer this service. All in a second phase, we took a hard look at how imaging can boost the quality of your service and increase back office profitability.

Now you can look at the answers before you put your bank to the test.

Make a cool analysis of a hot topic.

When digital images replace returned checks, you ask customers to accept a radically new way of doing business with your bank.

Trans Data's recently completed studies outline what the impact will be on consumers and your relationship with them. There's no clearer or faster way to understand all the marketing implications.

We've learned how willing customers are to pay for the service...and how much. They've told us how this technology may affect your image. And whether they'll switch their business to a bank that implements the technology before you do.

Capital Holding Gets Credit Line For $450 Million

By STEPHEN KLEGGE

Credit Suisse First Boston Ltd. has arranged a $450 million line of credit, good for five years, for Capital Holding Corp. a Louisville, Ky., insurance organization with $15.4 billion of assets.

The fast-growing company's $750 million in credit lines, which initially was opened in 1986 by a group dominated by U.S. banks, are "a backup for our commercial paper program," treasurer Barbara J. Laski said. She said she would be surprised if Capital Holdings has to tap the lines .

Ms. Laski said Capital Holdings has similar arrangements from other insurance companies by functioning as a financial intermediary. "We don't take credit risk," she said.

Margaret Alexandre, analyst for Salomon Brothers Inc., said an accumulation and investment group and a credit card and consumer lending division, are among its fastest-growing units.

"We view the lines as a fair price for a safety net," Ms. Laski said, noting that Capital Holding pays an annual fee to the bank groups to keep the lines open.

Participants in the new syndicated facility include Credit Suisse, Australia and New Zealand Bank, Bayerische Vereinsbank, Credit Lyonnais, Dai-Ichi Kangyo Bank, Mitsui Taiyo Kobe Bank, Royal Bank of Canada, Sanwa Bank, Algemene Bank Nederland, Bank of China, Banque Nationale de Paris, BHF-Bank, Canadian Imperial Bank of Commerce, Deutsche Bank, Sumitomo Bank, Swiss Bank Corp., and Westpac Banking. □

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded U.S. banks. The 25 largest thrifts are listed separately. Bank size is measured by the market value of all common stock outstanding as of June 30, 1990, the most recent quarter available, as a percentage of $56.71 mil and for thrifts $107.8 mil.) **52 Wk Hi** (or the moving 52-week high and low prices for the previous 52 weeks). **PE** is the price ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. **Mkt. to book:** the ratio of the current day's closing price to the stock's book value, expressed as a percentage. **Book value** is adjusted for announced earnings and dividends. **Cls.:** The price at which the stock last traded. If no trade was reported the day, the last bid. **Chg.:** Change in the last trading day's closing price from the stock's previous market value and the top thrifts in **bold** face. Additionally, **especially highlights** show largest percent gainslosses in price, and two-volume leaders. Stocks are listed alphabetically under a heading as a percentage of average shares traded daily and thrifts in general.

Data sources: SNL SECURITIES, Charlottesville, VA, 804-977-1600, produced the tables; Thomson News Network, Vienna, VA, provides SNL with the daily prices.

Analyst Sours On 'Good' S&Ls, Citing Exams

By TERESA CARSON

LOS ANGELES — A prominent savings and loan analyst has plucked his last few healthy thrifts off the buy list until the regulators finish working the thrifts over in upcoming examinations. Given the possibility of increased loan-loss reserves, the workover may not be pretty.

S&L Reserve Ratios Weaker Than Banks'

Source: First Boston

Eric I. Hemel, a respected thrift analyst at First Boston Corp., said he is worried about "the possibility of negative and surprising results from upcoming regulatory examinations even at the 'healthy' savings and loans."

From 'Buy' to 'Hold'

H.F. Ahmanson & Co., Los Angeles; Great Western Financial Corp., Beverly Hills; Golden West Financial Corp., Oakland, Calif.; DF Southeastern Corp., Atlanta; and Citadel Holding Corp., Glendale, Calif., are now off Mr. Hemel's buy list and are relegated to hold.

"This regulatory issue is casting a pall over all the thrift stocks," Mr. Hemel said in an interview.

A former a director of policy and research at the Federal Home Loan Bank Board, Mr. Hemel said new examiners from the Federal Deposit Insurance Corp. are applying much tougher standards than the old thrift examiners from the Federal Savings and Loan Insurance Corp. That is especially true regarding the level of reserves and nonperforming assets.

"The regulatory risks currently facing all savings institutions would deter us from further purchases until the position to be taken by the FDIC in the examination process becomes clarified," Mr. Hemel wrote recently.

The commercial bank examiners are used to seeing higher levels of reserves to both total loans and nonperforming loans. "Most commercial banks post loan-loss reserves – relative to nonperforming asset levels – at 60% or higher. Most thrifts by contrast, post loss-reserves-to-NPA levels of 40% or lower," said Mr. Hemel.

Of course, the thrifts' portfolios are secured by real estate, much of it single-family homes. Commercial banks, in contrast, have mostly unsecured debt. "But whether the FDIC examiners will accept this rationale in all instances remains uncertain," Mr. Hemel said.

At least one thrift executive believes Mr. Hemel could be on the mark. William C. Walbrecher, president and chief executive of Citadel, said he agrees with Mr. Hemel's comments but believes his institution will escape any tougher treatment. "The auditors are asking most thrifts to increase reserves," Mr. Walbrecher said. "But we don't expect that. We think we are more than adequately reserved."

Citadel's problem loans are only 0.69% of its total. "They [nonperforming assets] have been going down, and at the same time we have been increasing reserves," said Mr. Walbrecher. He expects his $5 billion-asset thrift will host the FDIC examiners before the end of the year.

Even the healthiest thrifts have taken a beating. Ahmanson, at $18.625 on June 25, was priced at $17.50 in early afternoon trading on Monday. Great Western fell from $17 to $14.875, and Golden West from $28.875 to $26.50.

Others have fared much worse. HomeFed Corp., San Diego, has plunged from $21.875 at June 25, to $9.625, and CalFed Inc., Los Angeles, is off from $18.375 to $9.125. □

CAPITAL

Small Indiana Bank to Issue Convertibles

By FRED VOGELSTEIN

Many big banks are concerned these days about whether the capital markets are even open to them. Tiny CNB Bancshares in Evansville, Ind., however, is preparing to issue $15 million in convertible bonds, an even more difficult task for banks today.

Convertibles have benefits over straight bonds or equity because they allow the issuer to pay a reduced coupon to holders, but allow holders to convert at a premium to the current market price.

In return, the issuer gives holders the option to participate in the growth of the company and the ability to receive interest, albeit below market rates, until that growth occurs.

Stock Price Vital

But convertibles depend on solid stock prices, as companies do not like to issue equity at depressed prices.

They also depend on low dividend yields; high dividend yields mean high coupons on convertible debt, making straight debt cheaper. The logic there is that since investors think of convertible debt as the equivalent of stock, they require a premium over its dividend yield to invest in something else, such as a convertible.

With bank stock prices at all-time lows and dividend yield at all-time highs, the conditions could not be worse for most banks to issue convertible debt.

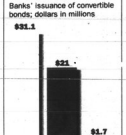
Price Above Book Value

CNB, with assets of $1.6 billion, seems to be one of the exceptions. Having avoided many of the problems plaguing the industry, its stock price, in the $20 to $21 range, is above its book value of $18.17, and its dividend yield is a low 4%.

"Convertible debt comes to us at lower cost than straight debt and allows us to issue stock three to four years down the line when we think it might be necessary," said David Knapp, CNB chief financial officer. In addition to general corporate purposes, proceeds of the offering will be used to complete two acquisitions.

A Small Market Gets Smaller

Banks' issuance of convertible bonds; dollars in millions



*As of Aug. 10

Source: Securities Data Co.

The company recently announced it was acquiring Valley Federal Savings in Terre Haute, Ind., for $11 million, or $10.50 a share, and Henderson Bank in nearby Henderson, Ky., for $1.7 million.

Before the merger, CNB's capital ratio was 9.5%. He said the mergers would reduce that to 8.5% because the banks it is merging with are not as highly capitalized.

Looking to Future

Mr. Knapp acknowledged the numbers seem high given the capital levels of most banks today. However, he said, "We're not sure people will be talking about excess capital in a few years."

The debt, which should be issued in late September, matures in 15 years and is convertible at any time into stock, probably at a 20% premium to the market price at the time of issue, said Woody McCoskey, head of corporate syndication at Burns Pauli & Co., one of the underwriters of the deal. He said the coupon on the debt should be around 7.5%. The actual terms will be set when the bonds are priced.

The bonds are noncallable for two years and after that callable at a premium above par that starts at 108 and declines one point a year until the bonds are callable at par, Mr. McCoskey said.

MARKET MONITOR

In a shelf filing with the Securities and Exchange Commission, Bankers Trust New York Corp. said it would periodically float debentures totaling up to $500 million. Proceeds will be used for general corporate purposes, including investments in, or extensions of credit to, its banking subsidiaries.

* * *

Citing increasing worries about real estate exposure, Standard & Poor's Corp. said it might downgrade Baltimore Bancorp's subordinated debt and the certificates of deposit of its subsidiary Bank of Baltimore. About $72 million in debt is affected.

The ratings have been on credit watch since neighbor First Maryland Corp. made an unsolicited takeover proposal in April. S&P had said it would raise the ratings if the deal went through and had said it would probably not alter them if the deal failed.

In last week's move, the rating agency affirmed that it would raise the ratings if the deal went through but probably cut the ratings if the deal failed.

The subordinated debt is rated BB-plus and the CDs are rated BBB/A-3. □

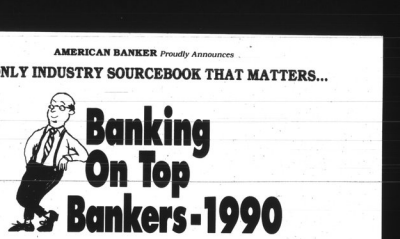
AMERICAN BANKER *Proudly Announces*

THE ONLY INDUSTRY SOURCEBOOK THAT MATTERS...



THE INDEX FOR THE 90'S

WHAT EXACTLY IS BANKING ON TOP BANKERS?

IT IS A 6"BY 9" BOUND SOURCEBOOK THAT GIVES YOU THE TOP 1000 BANKING PROFESSIONALS AT YOUR FINGERTIPS. THE BOOK IS COMPRISED OF THESE INDUSTRY LEADERS' CAREER HIGHLIGHTS, BIOGRAPHICAL INFORMATION, PHOTOGRAPH, ADDRESS, PHONE NUMBER AND OTHER ESSENTIAL INFORMATION.

THE THREE "EASY TO USE" SECTIONS INCLUDE:

I. TOP BANKERS BY PROFESSION

• BANKING ELITE • TOP BANK ANALYSTS • TOP STATE REGULATORS •
• BANKERS TO WATCH • TOP BANK LEGISLATORS • TOP BANK LAWYERS •
• TOP INVESTMENT BANKERS • TOP FEDERAL REGULATORS •
• TOP BANK CONSULTANTS •

II. TOP BANKERS BY AREA OF EXPERTISE

• ASSET SECURITIZATION • COMPLIANCE • FIRREA ACT • RETAIL BANKING •
• BALANCE SHEET MANAGEMENT • CORPORATE RESTRUCTURING •
• INTERNATIONAL BANKING • THRIFT SURVIVAL • CAPITAL GUIDELINES •
• COST CUTTING • MORTGAGE-BACKED SECURITIES • TECHNOLOGY •
• COMMERCIAL LENDING • ESOP'S • BANK RESTRUCTURING •

III. LISTINGS

• TOP COMMERCIAL BANKS • TOP INTERNATIONAL BANKS •
• TOP THRIFTS • TOP COMMUNITY BANKS • STATE BANKING ASSOCIATIONS •

WHY SHOULD YOU ORDER A COPY?

BECAUSE WE HAVE DONE ALL OF YOUR RESEARCH FOR YOU. SO NOW YOU DON'T HAVE TO SPEND COUNTLESS DOLLARS FINDING LEADING BANKING PROFESSIONALS TO ANSWER YOUR QUESTIONS. ALSO, NO OTHER SOURCEBOOK GIVES TO YOU THE TOP BANKING PROFESSIONALS BY AREA OF EXPERTISE AND SUBJECT CATEGORY.

SO ORDER **BANKING ON TOP BANKERS** TODAY. THE SOURCEBOOK THAT IS "CHOCK FULL OF INFORMATION, NOT CHOCK FULL OF AD'S".

Bankers Foresee 3% Capital Rule Stifling Growth

By LINDA CORMAN

WASHINGTON — Federal Reserve Board officials insist most banks have little reason to contest its most recent minimum capital requirement, known as the 3% leverage ratio. But some bankers disagree as controversy lingers over the usefulness of this method of measuring capital.

The standard, adopted Aug. 2 by the Fed – other regulators are soon to follow – requires the strongest banks to hold equity capital equal to at least 3% of assets. Bank health is measured on the regulators' Camel scale, an index based on capital, asset quality, management, earnings, and liquidity.

ANALYSIS: *Follow-up on the news*

Lower-rated banks will have to maintain leverage ratios at least one percentage point higher than 3%.

The leverage ratio must be met in tandem with the broader, risk-based capital requirement. At the end of this year, for example, banks must meet both the 7.25% risk-based standard and the 3% capital requirement.

Problem Only in U.S.

Therein lies the rub for U.S. banks. While most major foreign banks must comply with risk-based capital rules, they do not have to worry about the additional requirement that, in effect, limits U.S. banks' ability to leverage their assets.

The 3% capital must consist of Tier 1 capital, defined as common equity and perpetual preferred. State institutions must deduct goodwill.

Much of the debate over the risk-based capital requirements occurred several years ago in anticipation of the international negotiations that culminated in the Basel accords, which made the risk-based requirements an international standard.

The Fed, however, has gone beyond the Basel agreement by adopting the 3% leverage ratio as well, which some domestic bankers say will hinder them in competition with overseas institutions not equally restricted.

Problem for Some Banks

U.S. bankers also argue the 3% leverage ratio prevents a bank with a large portfolio of low-risk assets from taking full advantage of the risk-based capital standards.

Beyond the dispute over the leverage ratio, analysts say banks already are on edge. To meet higher capital minimums,

FDIC Premiums to Skyrocket 63%

Insurer Votes Largest Allowable Increase for 1991

By BILL ATKINSON

WASHINGTON — Moving to replenish the dwindling bank insurance fund, the Federal Deposit Insurance Corp. board voted Tuesday to raise bank premiums next year by a record 63%.

The proposed increase – the maximum allowed in a single year – is to 19.5 cents for every $100 of insured bank deposits in 1991. The 1990 rate is 12 cents per $100.

In a unanimous vote for the 19.5-cent rate, the five-member FDIC board superseded a scheduled 3-cent rise that had been mandated by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989. The higher rate for next year would become official after a 30-day period for public comment.

7.5 Cents More in 1992?

The FDIC has authority to consider another 7.5-cent rise in the rate to take effect in 1992.

The move came after a month of hints from FDIC Chairman L. William Seidman and other officials that a premium hike beyond the scheduled 3 cents per $100 was in the offing. While the increase will shore up an insurance fund that is at an all-time low relative to the deposits it covers, bankers and industry analysts have noted that higher insurance premiums will mean lower profits.

But a study by the FDIC staff concluded that the 7.5-cent assessment increase "would have a minimal impact on current industry capital levels." Commercial banks with deposits backed by the bank insurance fund had $224.7 billion at yearend 1989.

The increase in the premium will affect only commercial banks, which since 1989 will have seen a 135% boost in their premium rates, from 8.3 cents to 19.5 cents. Thrifts backed by the savings association insurance fund, which now pay 20.8 cents per $100, are to pay 23 cents next year.

Impact on Bank Costs

At the 19.5-cent premium level, banks insured by the FDIC's bank fund face a $1.1 billion in-

Major Banks Seeking to Calculate Profitability of Products, Clients

By RICHARD LAYNE

In an attempt to bolster stock prices and allocate capital more effectively, major banks are building sophisticated information systems that measure the profitability of individual products, customers, and lines of business.

While many sizable banks can measure profitability company-wide, only a handful have taken the next, crucial step: installing systems that measure the risk-adjusted return on equity for business units. With such systems, banks can manage their enterprises with the same eye to unit costs and dead wood that a manufacturer has.

About six of the nation's 20 largest banks have already developed such systems, including Security Pacific Corp., Bankers Trust New York Corp., First Chicago Corp., and Mellon Bank Corp., according to James M. McCormick, president of the First Manhattan Consulting Group, New York. Another eight or so, including Chase Manhattan Corp., Chemical Banking Corp., and PNC Financial Corp., are in the midst of de-

Global Data: U.S. Banks In Retreat

By JOHN EVANS

LONDON — Plagued with rising credit problems and worldwide concern about the health of the U.S. banking industry, American banks staged a major retreat from international credit activities in the first quarter, according to the Bank for International Settlements.

U.S. overseas banking assets fell $47 billion, or 8%, to $550.8 billion from the period ended Dec. 31, the Basel-based central banking organization said in a report prepared for release today. Foreign borrowings of U.S. banks declined $36 billion, or 6%, to $611.2 billion.

The BIS said the reduction was the sharpest it every recorded, surpassing a 4% decline of U.S. banking assets overseas and a 3% decline in liabilities in the quarter ended June 30, 1989.

All Areas Involved

The scaling-back of the international activities of American banks was worldwide and involved "all geographical areas and included both interbank and final lending business," the BIS said. The reduction in the first quarter reflected "the grow-

Stand Up and Resign.

In the best tradition of Madison Avenue, Chase Manhattan Corp. last week offered "for only a limited period of time" an enhanced severance package to several thousand junior employees.

In an internal memorandum, president-elect Arthur Ryan and chairman-elect Thomas

Labrecque urged employers to jump on the "voluntary separation" bandwagon before Sept. 10. People laid off after that date will be paid according to the bank's "regular" severance policy, the memo said.

The one-month special offers two weeks' pay for each completed year to employees with 10 to 20 years' service, double Chase's typical severance, a bank source said.

Veterans of 20 years or more can sign out for three weeks' pay per year versus two under Chase's routine policy.

Employees who accept the deal must leave the bank by Sept. 21. And they won't get any tax benefits, since payments are being made in a lump sum.

Chase expects to take a $50 million third-quarter charge for costs related to the severance plan.

Approximately 125 of Chase's senior officers are not eligible.

Neither are Chasers working outside the United States, despite senior management's announced intent to wield a sharp ax overseas.

Chase executives aim to cut some 3,200 jobs by the end of the year as part of a goal to slash operating expenses by $300 million annually. The memo said that cost-cutting plans and strategies for each business will be completed by the end of August and implemented "at designated times throughout the remainder of the year."

Poor Richard's Hot Auction.

Bidders are waiting in line to get their hands on the books of Benjamin Franklin Federal Savings and Loan Association, Oregon's largest thrift.

In an unusual show of eagerness, four potential buyers completed due-diligence reviews before an Aug. 9 bidders conference in Washington, sources said. About 15 have asked the Resolution Trust Corp. for information packets on the $3.8 billion-asset thrift, which was seized by federal regulators last February.

BankAmerica Corp. – which last spring outbid Security Pacific Corp. for Western Savings and Loan Association in Phoenix – is again facing its rival in the contest for Benjamin Franklin. Both California giants see the thrift as key to expansion plans in Oregon.

Two Seattle thrifts, Washington Federal Savings and Loan Association and Pacific First Financial Corp., a subsidiary of Canada's Royal Trustco Ltd., also have scoured Ben Franklin's books, Oregon sources said. Washington Mutual Savings Bank also has a due-diligence date later this month, the sources said.

Wells Fargo & Co., which has no Northwest presence, scrubbed earlier plans to review Benjamin Franklin, sources said. Wells and the three Seattle thrifts declined to comment. Final bids are due next Tuesday, but the deadline is likely to be extended.

— Sam Zuckerman

Abboud Stakes Up.

Putting his money where his mouth is, A. Robert Abboud has filed a change-in-control notice with the Federal Reserve Bank of Dallas to increase his holdings in First City Bancorporation of Texas.

Mr. Abboud, the company's chairman, owns about 6.2% of

the Houston bank's common stock but has warrants and options that could increase his stake to 10.87% if exercised by next January, according to the Fed filing. That would make him the bank's largest shareholder, based on the company's proxy statement as of the end of March.

Mr. Abboud's holdings are actually smaller, a bank spokesman said. But the Fed requires him to report ownership of all 1.6 million shares and options controlled by a limited partnership owned equally by Mr. Abboud and First City Vice Chairman Frank C. Cihak.

Most of the shares owned by the partnership were purchased when the former First Chicago chairman restructured the bank at $19.68 per share, a 6% discount to the market price. First City's stock closed at $21.125 a share last Monday.

* * *

CitiSells.

En garde, card issuers. Citicorp is rolling out a campaign to cross-sell a variety of bank products to the 27 million Americans who hold its credit or charge cards.

Citibank officials admit they've been lax in such efforts. Until now, bank services were cross-sold only to cardholders in the New York City area, said Richard J. Srednicki, general manager of Citicorp Credit Services.

"We were decentralized almost to a fault," he said, noting that his sector rarely talked to other retail bank units.

Citicorp, through a new group dedicated to cross-selling, is initially targeting cardholders who live within five miles of a branch. Winning 25% of those customers would double the company's assets, Mr. Srednicki said.

The new push jibes with Citi's effort to present itself with one voice, a process dubbed internally as "Citibanking." The company is replacing *Citicorp* with *Citibank* in many venues, and has adopted a new advertising slogan: "Not just banking, Citibanking."

— Yvette Kantrow

A $136.5 Million Loss Puts Columbia at Risk of Seizure

By TERESA CARSON

LOS ANGELES — Columbia Savings and Loan Association, announced on Tuesday that it left $136.5 million in the second quarter. The loss increased the thrift's capital deficit 63% to $352.1 million, increasing the likelihood that it will be seized by regulators.

"It is obvious from our negative capital position that we will need the continuing patience and cooperation of our regulators if Columbia is to survive," president and chief executive officer

Regulators may first try to dispose of Columbia's junk bond portfolio.

Edward G. Harshfield said in a statement.

Beverly Hills, Calif.-based Columbia said it lost $65 million "from real estate investment operations due largely to the declining commercial real estate market in Southern California."

The rest of Columbia's loss resulted from an $88.5 million provision for losses on its junk bond and loan portfolios, a $29.2 million loss related to corporate facilities, and a $20.9 million writedown in the portion of the mortgage-backed securities portfolio that is held for sale.

Although Columbia is best known for its huge investments in junk bonds and high-flying former chief executive Thomas Spiegel, the thrift is also actively involved in real estate business.

Columbia had about $2.3 billion at March 31 in real estate loans outstanding and also about $3.1 billion invested at year-end in commercial real estate joint ventures. The thrift also developed luxury homes in Beverly Hills. Columbia did not make public details of its real estate portfolio in the second quarter, and company officials were not available for comment.

Columbia's commercial investments included office buildings, shopping centers, and hotels in Los Angeles, Beverly Hills, Orange County, and elsewhere. Columbia is attempting to sell or refinance its equity investments in real estate over the next five years as a result of the Financial Institution Reform, Recovery, and Enforcement Act requirement of higher capital for these investments.

In July, Columbia reached an agreement to sell its junk bond portfolio for $3 billion to a group of international investors called Gordon Investment Corp. The controversial sale, which Columbia would finance, must be approved by the regulators. The investors must make a down payment of only 10% on the bonds and could return them if the portfolio drops in value more than 10%. If that happened, either Columbia or the government could end up with the portfolio again. Thrifts were required to dispose of junk bonds under the bailout law.

Columbia said there had not been a substantial change in the market value of its $2.9 billion high-yield bond portfolio during the second quarter.

Analysts said regulators are probably trying to dispose of Columbia's junk bond portfolio before they seize the thrift. The regulators are loath to take on another big junk bond portfolio. The Resolution Trust Corp. already owns $3.7 billion in junk bonds.

With a capital deficit of that magnitude, the regulators "have no choice" but to take over Columbia, said Allen Bortel, an investment banker with Sutro & Co., San Francisco.

In the six months, Columbia lost $429.9 million, compared with net income of $14.3 million in the year-earlier period. Columbia's second-quarter loss compares to a profit of $6.4 million, or 16 cents a share, last year. □

RTC Widens Mortgage Guarantees

By BARBARA A. REHM

WASHINGTON — The Resolution Trust Corp. decided Tuesday to extend to all investors the same quality guarantees on mortgage-related assets that it gives the governmental secondary-market agencies.

The move is expected to entice more investors to the residential mortgage loans, mortgage-backed securities, and mortgage-servicing rights in the RTC's portfolio. The agency holds approximately $70 billion in mortgage assets seized from failed thrifts.

"The more [the RTC] adopt standard practices, the better off they will be in drawing a broad number of investors."

Jayne J. Shontell *Fannie Mae*

The agency first proposed extending these quality guarantees, called representations and warranties, beyond the Federal Home Loan Mortgage Corp. and the Federal National Mortgage Association to all investors on May 31. Tuesday's action finalized that proposal.

A Boost to the Market

G. David Fensterheim, a partner with Rivkin, Radler, Bayh, Hart & Kremer and executive director of the Real Estate Capital Recovery Association, said broadening the guarantees will attract more buyers to the mort-

NY Banks Focus on Critical Areas

Back-Office Units Affected Most by Power Outage

By JEANNE IIDA

NEW YORK — A power outage in New York's financial district continued to disrupt many back-office operations of banks Tuesday, as institutions diverted resources to keep trading and funds transfer areas working smoothly.

Offices of several money-center banks remained without power and were operating through backup facilities.

"We've switched over to emergency generators in 60 Wall St., and we're providing power to priority functions," such as trading, a spokesman for J.P. Morgan & Co. said Tuesday. "Other functions are not being staffed – some people are not coming in today."

Six banks, including the flagship subsidiary of Manufacturers Hanover Corp., moved funds transfer and other operations to a "hot site" run by a vendor in New Jersey.

Banks that had recovered power were working to restore back-office systems that were using information up to 24 hours old. Operations of trading and systems for personnel records, accounting, or retail support, which provide data to on-line systems such as automated teller networks.

Impact Limited

Observers said the impact of the power outage was limited because the city's money-center banks had alternative generators for critical operations.

Electricity failures were first reported in the Wall Street area around 1 p.m. Monday, following a fire at a nearby utility substation. Consolidated Edison said that three of the four networks that failed Monday resumed operating by 5 p.m. that day. The fourth area – which encompasses the headquarters of the Bank of New York Co., J.P. Morgan , and the Federal Reserve Bank of New York – may be without power for several days, the utility said.

"This was not as bad as other disasters I've seen because the systems affected were not as complex and not as critical," said Edward Nyce, executive vice president at Manufacturers Hanover. "The main data centers were backed up, and everything performed beautifully for us."

Moving to New Jersey

Manufacturers Hanover Trust Co., which still had two buildings without power Tuesday, moved some of its operations to a hot site operated by Comdisco Recovery Services in Carlstadt, N.J. Employees worked there to restore accounting and other administrative files that had been shut down when the outage occurred.

Both Fed Wire® and Chips stayed open later than usual to settle their funds at the organizations said there were no dramatic problems.

Officials of those groups said the power disruption was not as severe as in earlier disasters, including the 1977 blackout in New York. After that incident, many banks installed alternative energy sources to prepare for future emergencies.

A spokesman for the New York Fed said that Fed Wire, which was able to settle Monday at about 10 p.m., did not open at all the day after the 1977 blackout.

Working Through an Outage

"This was an emergency, and it was trouble, but we worked our way through it," said John D. Lee, president of the New York Clearing House Association, which operates Chips.

Chips cleared $820 billion Monday, which the clearing house characterized as a normal day. Fewer than banks would have to "eat" funds because they would be unable to make payments appeared unfounded.

Mr. Lee said that fewer than 10 of Chips' members lacked power by Tuesday afternoon. They were using emergency facilities provided by Chips or correspondent banks to perform transactions.

Alternative Power

Because of their alternative power supplies, most major banks were able to continue working at their regular offices. Medium-sized banks and foreign banks fared less well. It was primarily those institutions that moved processing to outside vendors, said Comdisco officials.

The disaster recovery company declined to provide a complete list of the institutions using its hot site but said Credit Lyonnais was one.

Banks put their greatest emphasis on keeping trading desks open immediately after the electrical failures. Bankers Trust New York Corp., for example, said traders continued to work but at a slower pace. Morgan said trading was lighter than normal; it reported no disruptions in its securities area.

Citibank on Backup

Among the institutions still relying on backup power Tuesday was Citibank's correspondent banking operations. The banking subsidiary of Citicorp, which still lacked power in its 111 Wall St. offices, sent some employees to a New Jersey backup site for correspondent operations. Other locations had regained power but were scrambling to bring systems back up to speed. □

Software Alliance to Market Mellon's InFiSery Software

By KAREN GULLO

NEW YORK — Mellon Bank Corp. is turning over the marketing and servicing for its InFiSery trust management software to Software Alliance Corp., which will develop several enhancements for the product.

Under the agreement, announced Tuesday, Software Alliance will gain exclusive rights to market licenses for InFiSery software, which runs on IBM mainframes. Terms of the partnership were not disclosed.

Mellon will continue to market a trust processing service based on InFiSery and support existing customers.

Pittsburgh-based Mellon, which has 100 bank customers using the InFiSery system, said recently that it planned to invest $30 million to expand its trust capabilities.

Software Alliance, a banking software firm based in Berkeley, Calif., will develop seven to 10 enhancements for InFiSery. These include the ability to handle multicurrency transactions and track stock positions through the trust accounting system.

Mellon executives said that other additions are still being worked out and that it is too soon to project when the features would be made available.

SEI Corp., a Wayne, Pa., vendor of trust-accounting for 200 banks, is in the process of adding multicurrency capabilities and is working on other enhancements to its securities area.

Allan P. Woods, senior vice president and head of Mellon's new financial institutions services, says the enhancements will make InFiSery more competitive and boost Mellon's share of the trust services market. "We think they will make the product very appealing to customers," he said.

Mellon, which ranks among the top 10 providers of trust services, purchased InFiSery last year. Mellon does trust processing for some customers on its computers in a service bureau arrangement and licenses the InFiSery software for a fee to banks that want to install it on their own computer systems.

Too Busy In-House

The bank decided to have an outside firm develop enhancements for and market InFiSery software because the bank's in-house programmers and marketers have their hands full maintaining existing accounts.

"We didn't feel we had the ability to have a concurrent R&D schedule," said Mr. Woods. "A lot of people are re-evaluating their trust accounting vendor, and we think there's a significant window of opportunity there, but we're very conscious trying to digest more change and new business than the company is able to handle in-house."

Mellon will continue to provide service to existing customers that hold InFiSery licenses and to all service bureau customers.

Mellon is aggressively pursuing a greater chunk of the market for transaction processing, including trust and other fee-income generating services. The bank recently restructured its service organization into two units for corporate and institutional clients. The financial institution service unit handles trust accounting services, electronic funds transfer processing and other transactions. A technology products unit handles cash management and mortgage processing. □

Regulators Examining Risk In Asset Sales with Recourse

Presently, banks and savings associations do not follow the same practices in reporting asset sales with recourse for regulatory reporting nor in calculating capital adequacy. For both banks and savings associations, the divergence between regulatory reporting and capital requirements presently requires capital for recourse contingencies twice for the same institution.

An allowance is established for estimated credit losses at the time of sale, and capital is generally required for the off-balance sheet recourse contingency as if the assets sold were still on the institution's books.

These treatments impact competition, pricing, and efficiencies of the secondary market for mortgages.

This article will look at how recourse is treated by banks and savings associations for regulatory reporting and capital adequacy purposes and some of the issues presented by these treatments.

Positions Under Review

The regulators are in the process of rethinking their position on the treatment of asset sales with recourse, given the convergence of savings association regulations with those for banks and the Financial Institutions Reform, Recovery, and Enforcement Act mandate for the federal thrift and banking agencies to establish uniform regulatory accounting standards.

The Federal Financial Institutions Examination Council recently issued a request for public comment on recourse arrangements. The paper addresses a wide range of recourse arrangements, regulatory reporting requirements and the capital ramifications. Issues covered include:

- When is a sale with recourse a sale?
- When is it a financing?
- How does recourse affect the amount of capital required to support the activity?
- Should regulatory reporting differ from generally accepted accounting principles in this area?

Comments received in response to this request will ultimately affect the way in which asset sales are reported for regulatory purposes and the amount of capital required for the recourse contingency.

Risks Taken in Early 1980s

Prior to the adoption of risk-based capital guidelines, capital requirements for banks were only levied against balance sheet assets. Formalization of bank capital guidelines in the early 1980s encouraged management to take risks off the balance sheet, thus spawning new products and variations of securitization and asset sales with recourse.

This article addresses recourse as a credit enhancement only. Many other forms of recourse exist to protect the investor from such things as interest rate risk and risks stemming from natural disaster.

Heretofore, savings associations' capital requirements were based on liabilities and other risk factors, rather than on assets and the attendant credit risks. Savings associations took advantage of securitization to restructure their balance sheets and stabilize and grow earnings through risk-controlled arbitrage.

Mortage-Backed Securities

The securitization market has grown substantially in the past decade providing a liquid secondary market for mortgages on one- to four-family homes. The volume of mortgage-backed securities has grown from $373 billion at year-end 1985 to $859 billion by the third quarter of 1989, or more than 238%, compounded annually.

Regulators have recognized risks presented by the growing volume of recourse assumed during the securitization process and have taken steps to measure it and require capital for the credit risk it presents. In this effort, bank call reports have been modified by adding supporting schedules to capture information regarding the amount of loans sold each quarter and the amount of recourse retained by the selling institutions.

In all but limited situations, banks do not follow generally accepted accounting principles in reporting asset sales with recourse for regulatory reporting, nor in calculating capital requirements. Under generally accepted accounting principles, assets sold with recourse can be removed from the balance sheet provided certain requirements are met.

"Regulators have recognized risks presented by the growing volume of recourse assumed during the securitization process and have taken steps."

However, under regulatory reporting for banks, if a sale results in the retention of recourse, the transaction is treated as a financing for regulatory reporting; the asset is not removed from the balance sheet. The Call Report instructions specifically state that this treatment is "for purposes of . . . determination of capital adequacy."

Secondary Mortgage Markets

One major exception to this rule would be the sale or swapping of mortgages to one of the federal or federally-sponsored agencies. In such instances, the reporting bank may account for the transaction as a sale for regulatory reporting purposes, thereby removing the mortgages from the balance sheet even if risk is retained. Where no risk is retained, securitized mortgages can reduce the amount of capital required under the risk-based guidelines from 50 to 20%, or even to zero, based on the weight assigned to the security.)

During the development of the secondary mortgage markets, banks soon found that the best prices could be obtained if the mortgages, since the securitized assets were still treated as a sale for regulatory reporting purposes.

Privately issued mortgage-backed transactions also may be accounted for as a sale for regulatory reporting, depending on the structure and amount of risk retained. If the selling bank retains recourse representing less than a "significant risk of loss," the transaction is reported as a sale for regulatory reporting purposes, and the mortgages are removed from the balance sheet.

A "significant risk of loss" exists when the maximum contractual recourse exposure retained by a bank exceeds its estimated probable loss. Many private deals do not meet the test for treatment as a sale because the recourse retained is several times the amount of the expected losses.

Capital Requirements for Loans

For regulatory capital requirements, removing assets from the balance sheet reduces capital requirements for the leverage ratio which is calculated using balance sheet assets. However, recourse retained on mortgages sold requires the selling bank to hold capital for the entire amount of loans sold under the risk-based capital ratio as if the loans were still on the books.

If the security is held by the securitizing bank, it is not required to be capitalized in addition to the underlying mortgages. However, if the security is subsequently sold, capital is required to be maintained by both the depository institution that securitized the loans with recourse, and the depository institution purchasing the security. This is referred to as "double counting," that is, the original mortgages now require capital twice within the banking system, by the holder of recourse and by the purchaser of the security.

In addition, the diverging treatment of recourse under generally accepted accounting principles and for capital adequacy purposes is the equivalent of requiring capital twice for the same bank. A number of large players in the residential mortgage market are publicly reporting banking organizations using generally accepted accounting principles.

Under GAAP, a bank's obligation under the recourse arrangement is estimated and a allowance is established for this contingency at the time of the sale. However, this allowance for loss no longer counts as capital under the new risk-based capital calculations.

Under the capital requirements, capital is required to be held for recourse on the securitized assets. Therefore, under GAAP, a charge to income is taken to establish an allowance for the recourse contingency, but capital is still required to be maintained.

Savings Associations

Savings associations are required to follow generally accepted accounting principles in regulatory reporting for asset sales with recourse. Like banks, assets sold with recourse can be removed from the balance sheet, thereby reducing capital for the leverage requirement. And, like banks, savings associations must hold capital for recourse provisions under the risk-based capital framework.

However, the capital requirement for savings associations is slightly different from that for banks. The leverage requirement is somewhat easier for savings associations to meet, given their ability to report sales with recourse in accordance with GAAP, regardless of whether they are to agencies or without a significant risk of loss.

Banks are only accorded this exception in limited instances. Savings associations are required to maintain risk-based

Chemical Chief: Shake-Up Gives More Responsibilities to Hartigan

To the Editor:

Chemical Banking Corp. would like to lodge a strong protest over a reference to one of our senior executives, Maurice H. Hartigan II, in an article on Aug. 7 ("Younger Executives Gain in a Shake-Up at Chemical," page 1).

The article said that Mr. Hartigan became an "apparent also-ran" under a realignment of Chemical's top management and implied that his duties were changed because Chemical's real estate lending is "troubled." Both contentions are incorrect.

Under Mr. Hartigan's leadership, Chemical reduced its real estate lending by 22% since 1988. Mr. Hartigan also shifted Chemical's focus away from construction lending, which is now the most troubled part of the market, toward lower-risk types of lending and advisory activities. Recent developments in the real estate market clearly prove that his conservative strategy was correct.

Rather than becoming an "also-ran" under the new structure, Mr. Hartigan has assumed much broader responsibilities as the No. 2 executive in charge of Chemical's New York region, including our consumer, middle market, and private banking businesses, as well as real estate.

Walter V. Shipley
Chairman
Chemical Banking Corp.
New York

The most important thing about banking is the bottom line.

Here's the bottom line.

AT&T gives banks a highly cost-effective way to do business.

When it comes to delivering the telecommunications services that banks really need in today's market, AT&T is unmatched. And we're going further.

More flexibility and better cost control.

For headquarters to branch, or branch-to-branch communications, the AT&T Software Defined Network (SDN) gives you all the benefits of a private voice network. But with greater flexibility and better cost control, plus the ability to track and monitor call volume.

The hottest technology in banking today.

And what SDN does for voice, our new Software Defined Data Network (SDDN) now does for data. SDDN is a switched data service with dynamic bandwidth allocation that provides the transmission flexibility necessary for image-processing applications, such as signature verification, document processing and check processing.

AT&T is committed to meeting the banking industry's needs.

In 1989, AT&T introduced the Retail Banking Solution, which gives branch banks the tools needed to manage and grow customer relationships effectively. And the AT&T DEFINITY® Communications System helps speed calls to and from customer service centers. So go with AT&T because with our innovative services we give your bank the competitive edge. And that's what counts on the bottom line.

Innovation. Another AT&T advantage.

For more information, call your AT&T Account Executive or 1 800 247-1212, Ext. 580.

AT&T
The right choice.

COMMENT

Continued from page 4

capital equal to the lesser of that required for the full amount of the loans sold with recourse or the contractual amount of the recourse.

In future transactions, savings associations may use this point to reduce their capital requirement by accepting less recourse under the securitization contract than the amount of capital that would be required on the underlying mortgages.

For example, one hundred million dollars of one-family to four-family mortgages would require risk-based capital of $4 million (half of 8% of $100 million). If they are sold and the amount of contracted recourse is less than $54 million, the capital requirement becomes the dollar amount of the contractual recourse.

This may be a temporary method of reducing capital, since the regulators have indicated that if this practice becomes common, the capital guidelines will be amended to eliminate the opportunity to reduce capital in this fashion. Of course, the ability to reduce recourse obligations will depend on pricing considerations and the characteristics of the underlying pool.

Ultimate resolution of the recourse issue, at least for regulatory reporting purposes, will be begin with the FFIEC's recent efforts. Pressure to meet capital requirements coupled with the redundancies of the GAAP treatment of asset sales with recourse and the capital requirements for recourse should bring about changes in regulatory capital adequacy guidelines as well.

"Single family loans had a serious delinquency rate of 0.38% during 1989."

Inasmuch as GAAP require an allowance for the estimated amount of loss to be established at the time of the sale, capital requirements in addition to these allowances appear unnecessary. Although some aspects of GAAP addressing recourse financing are being reevaluated in connection with a larger financial instruments project undertaken by the Financial Accounting Standards Board, completion of the project is not expected in the near future.

As a result of the new risk-based capital requirements, a growing number of savings associations are striving to reduce capital required for recourse contingencies on assets that have already been securitized. One method of doing so is to purchase credit enhancements in the form of letters of credit or surety bonds which relieves the issuing savings association from some or all of the recourse liability under the sales contract. This has successfully reduced the amount of capital needed at these institutions.

Recourse Likely to Decline

Until reporting requirements and capital treatment of recourse become compatible, the amount of recourse retained in future securitizations will likely decline. This may be the case for federal agency securitization, in particular, since the high underwriting standards result in relatively low delinquency and default rates, making it unnecessary for banks and savings associations to keep 100% recourse. For example, the Federal National Mortgage Association's 1987 conventional single family loans had a serious delinquency rate of 0.38% during 1989.

Lower amounts of recourse will result in changes in the pricing and structure of securitization, and in the costs of third party credit enhancements. Private securitization will become more costly if less recourse is retained because, typically, some multiple of the expected losses must be covered either by recourse, guarantees or other credit enhancement arrangements in order to obtain a high credit rating. □

RTC Widens Its Mortgage Guarantees

Continued from page 2

gage assets and will allow the RTC to get better prices.

"What this does is put the RTC on a more level playing field in the disposition of these assets because when the RTC demands [to make exceptions to standard market practices] people get nervous and require substantial discounts," he said.

Attractive to More Investors

"The more they adopt standard practices, the better off they will be in drawing a broad number of investors," said Jayne J. Shontell, vice president for business and product development at Fannie Mae.

Representations and warranties are facts – related to legal, underwriting, or servicing issues – about a loan that any seller ought to be able to know with certainty. Such facts might include loan balances, maturity dates, or incomes of borrowers. They are important, particularly in the secondary market, because buyers do not typically perform on these loans.

"The secondary market is very efficient because a buyer doesn't have to do quality exams," Ms. Shontell said. "He trusts the seller to represent and warranty the quality of a loan." □

Brenton Acquisition Aids Expansion Plan

DES MOINES — Brenton Banks Inc. said its Brenton Savings Bank subsidiary has bought the Cedar Rapids and Marion, Iowa, branches of Banc Iowa Federal Savings Bank.

Terms were not disclosed. The acquisitions added $110 million in deposits to Brenton's base in the Cedar Rapids area, where it plans to add offices.

In a related move, Brenton Banks said it would merge the operations of Brenton Savings Bank and Brenton Bank & Trust Co., Cedar Rapids. □

Before You Commit
Make Sure It Gives You An

To An Imaging System,
Open View Of The Future

Your success in this decade could very well depend on your ability to adapt to the volatile change that is predicted. NCR's open systems approach to item and document imaging can help you manage that change…and use it to your advantage.

NCR's imaging technology will allow you to electronically capture, store, process, display and retrieve text, graphics and photographs on-line…resulting in significant benefits.

For example, NCR Check Processing Systems include regional and distributed processing strategies, and will help you deal with shrinking processing windows, check safekeeping, truncation and other changes more quickly and cost effectively. NCR Document Management Systems can help you shorten processing cycles and reduce filing costs, while providing higher levels of productivity for your employees and better service for your customers.

NCR Imaging Systems offer you key technology benefits, too. For example, they are designed to be scalable from entry level to an enterprise-wide system, giving you the power you need as you need it. More importantly, they are based on open systems and industry standards, which gives you complete system flexibility and allows seamless integration between your Imaging Systems and your other information systems. This not only protects your existing technology investment, but creates a powerful, competitive weapon to use in the changing banking environment of the 90s.

If your vision of success in the coming decade includes imaging, make sure it is an open vision. Take a closer look at the company that can help you use it as a strategy to manage change. Phone 1-800-CALL NCR for more information, including our white paper series, *Issues In Imaging*.

EXECUTIVE *changes*

Women's Bank Chooses Smith To Be President

The board of directors of **First Women's Bank of Maryland**, a community bank based in Rockville, elected Clyde P. Smith president.

Clyde P. Smith

He formerly was president and chief executive officer of Federal City National Bank, Washington.

"Clyde Smith brings an outstanding record in banking to FWB," said **Joan Schoenholtz**, who heads the board. "His credentials made him the obvious choice to position FWB's move into the 1990s as a major community bank in the metropolitan area."

"We are committed to the Community Reinvestment Act," Mr. Smith said, "and plan to take full advantage of FWB's ability to make loans up to $1 million."

He joined Federal City National in 1988 as president and CEO. Since then, the bank has grown by 67% and moved from a loss of more than $500,000 in 1988 to a $280,000 profit in 1989. From 1979 to 1988, he was with Crestar Bank, Washington, as manager of the Commerce office and then as senior vice president in the corporate banking division.

Brenton Brothers Shift Bank Roles

C. Robert Brenton, president of **Brenton Banks** Inc. for 20 years, has been elected chairman of the Des Moines-based regional bank holding company, replacing his brother, **William H. Brenton**, chairman since 1969.

Robert Brenton is now chairman of the company's policy committees and of some individual bank boards and continues to head the trust and financial services division.

William Brenton, as company vice chairman, continues as chairman of the executive committee and of most metro division banks.

J.C. Brenton, executive vice president since 1970, succeeds his brother as president of the holding company. He assumes responsibility for administration of the company's operating entities and support staffs.

The new leadership slate was adopted to ensure a smooth management transition, the company said, and follows William Brenton's announcement of his changed role under terms of an agreement with the company that runs through 1995. The three brothers have been in banking and farming all their adult lives.

Others elected company officers include: **R. Dean Duben**, senior vice president; **Robert L. DeMeulenaere**, senior vice president-metro bank division; **Roger D. Winterhof**, senior vice president-agribank division; **Norman D. Schaenzer**, senior vice president-lending; **Saulene M. Richer**, senior vice president-marketing-technology; **Steven T. Schuler**, chief financial officer and vice president-treasurer-secretary; **Phillip L. Risley**, vice president-operations, and **Craig V. McGarry**,..vice president-trust.

M&I Subsidiary Elects Lathrop

Thomas C. Lathrop was elected president and chief executive officer of M&I Thunderbird Bank, Phoenix, a subsidiary of **Marshall & Ilsley** Corp., a multibank holding company headquartered in Milwaukee.

Mr. Lathrop joined the company's flagship institution, M&I Marshall and Ilsley Bank, Milwaukee, in 1960. He became vice president of the commercial loan division in 1974 and has headed it since 1985.

Thomas C. Lathrop

He replaces **James S. Lee,** who resigned. The company's Phoenix subsidiary has 14 offices.

— **Franklin Smith**

NEW ENGLAND

Webster Financial Corp., Waterbury, Conn., holding company for First Federal Savings and Loan Association, elected **Lee A. Gagnon** executive vice president and chief operating officer and **John V. Brennan** senior vice president and chief financial officer of both entities.

MIDWEST

Society Corp., Cleveland, appointed vice chairman **James W. Wert** chief financial officer, succeeding **Robert M. Patrick**, senior vice president, who took a new post with responsibility for strategic financial analysis.

MIDDLE ATLANTIC

Sandler O'Neill & Partners, New York, appointed **H. Robert Monsky** associate director and **Thomas Glasser** senior vice president.

Mr. Monsky, formerly an associate director at Bear, Stearns & Co., will market fixed-income products to middle-market banks and thrifts. Mr. Glasser will market investment products to insurance companies. He formerly sold mortgage-backed securities at UBS Securities.

SOUTHEAST

SourceOne Consulting Group, Atlanta, hired **Roger L. Cupp, Laura A. Raymond,** and **Larry E. Franklin** as senior associates.

Mr. Cupp joined SourceOne from a vice presidency at BEI-Goelmbe, Atlanta. Ms. Raymond was formerly with Wessell Group Inc., Grand Rapids, Mich. Mr. Franklin was vice president and trust officer at Hibernia National Bank in New Orleans.

SourceOne Consulting Group is a financial firm specializing in strategic earning improvements for bank trust departments. □

PRIVATE BANKING

A Bank of New York Unit Goes Courting in the City

By MAUREEN NEVIN DUFFY
Special to the American Banker

Despite real estate credit woes in the overall bank, the Bank of New York is actively soliciting and booking loans in the private banking area.

In July, real estate problems prompted Prudential-Bache Securities to place a sell recommendation on Bank of New York's stock. But the custom bank, as the private banking unit is known, has had "very few problem loans," said David W. Kilbride, vice president and group head.

When pressed for numbers, Mr. Kilbride said, "It is a short list, and the numbers are not significant when weighed against the individuals' portfolios."

Advertising Campaign on the Agenda

The $49 billion-asset institution is also shopping for a slick marketing image for the custom bank. It is now reviewing themes for a campaign from ad agency Ally & Gargano, New York. The bank, which has private bank operations only in Manhattan, considers its competition to be Citibank, U.S. Trust Corp., and Boston Safe Deposit and Trust Co.

Bank of New York's custom banking area gained about a third of its clients through the merger with Irving Trust. That combination, completed 18 months ago, expanded its deposits from affluent clients to roughly $3 billion.

Generally, Irving's emphasis had been more on deposit gathering, and Bank of New York's on asset and loan growth.

But Mr. Kilbride said the structures and sales cultures of the two private banks were similar, easing the merger.

"There are pockets of potential still in areas of the city."
David W. Kilbride
Bank of New York

Bucking the trend toward integration, Bank of New York has kept its trust and private banking operations decentralized, with specialized departments.

The investment sector, headed by Charles Booth, and the trust sector, which handles some asset management and is headed by Thomas Archibald, report to Peter Herrich, vice chairman.

Custom banking falls under the branch banking sector. The advantage is that professionals handling a business transaction are experts in that particular business, said Mr. Kilbride, who also runs the New York City branches. "The people who work for me are experienced bankers; they understand deposits and lending.

"If a client had some money to invest, within five minutes we'd have the officer from the investment side in the office to meet the client."

The Manhattan market is divided among 13 geographic units, which are grouped into four clusters.

Each cluster is run by an officer who also has operational responsibilities for some of the 13 units.

Chairman Takes a Hand in Wooing Clients

J. Carter Bacot, chairman of the company, makes a point of personally meeting with custom bank clients, as well as assisting with the initiation and cultivation of relationships.

Apparently, the "hard nose" image he developed in the takeover fight for Irving has not discouraged potential clients and may have created some intrigue, said Mr. Kilbride.

Publicity Helps Attract Customers

"Private bank clients find him informed and eager, and they are interested to meet him because of the publicity."

The custom banking sector looks for people willing to make $10,000 interest-free or $25,000 interest-bearing deposits – a relatively low level in the New York market.

The criteria are flexible, depending on the entire financial profile and growth potential. "We don't want to exclude people," said Mr. Kilbride.

Bank Will Concentrate on New York Market

For now, the bank has no plans to mine custom bank clients outside Manhattan. "There are pockets of potential still in areas of the city. We don't feel it's worthwhile spreading our resources too thinly."

Additional acquisitions, however, are another story. "We have no strict geo preference but would probably like it to be outside the Northeast," said Mr. Kilbride.

"For good diversity of funding, it should be outside the area." The wish list includes, banks of $10 billion to $15 billion in assets that are No. 1 or No. 2 in their market.

Ms. Duffy is a freelance banking reporter based in New York.

ATM Sharing Plan Clears Review

14 States Won't Object Now to Cirrus-Plus Network

By YVETTE D. KANTROW

NEW YORK — The Cirrus and Plus networks can proceed with their plans to share automated teller machines without fear of antitrust litigation – at least for now.

The 14 state attorneys general examining the national networks' machine-sharing plan wrote Cirrus and Plus executives Monday that they have "no current intention of instituting litigation." But the state officials told the networks' general counsels their letter was not an "approval or authorization" of the sharing plan.

"We are concerned . . . that, in the long run, ATM sharing may actually reduce ATM deployment, stifle technological innovation, and lead to undue concentration in the ATM and other payment system markets," the attorneys general wrote. "We are also concerned that the Cirrus-Plus ATM sharing arrangement may adversely affect or inhibit point-of-sale debit card development."

Monitoring Promised

In the letter, the attorneys general indicated they would monitor the sharing plan and its impact on the electronic banking industry. That prospect is not being taken lightly by ATM executives, many of whom fear that the Cirrus-Plus agreement will harm regional networks.

"At a minimum, the fact that they said they are not going to consent to the plan and will watch it means there will be a cloud over it," said Richard P. Yanak, president of New England Network Inc., operator of the Yankee 24 regional network.

"They didn't have any time to do anything significant. But the issue is far from dead."
Del R. Tonguette
GulfNet Inc.

He said the pledge to continue watching Cirrus and Plus will deter smaller machine-owning banks from joining the so-called machine duality plan.

Several larger banks have said they will use the Cirrus and Plus sharing arrangement.

Industry executives said they are not surprised by the position taken by the attorneys general. Under pressure to issue a statement before Aug. 20 – when the sharing arrangement is to take effect – the officials had no choice but to take a wait-and-see approach, these executives said.

"They didn't have any time to do anything significant," said Del R. Tonguette, a regional network executive who has been critical of the Cirrus and Plus plan. Because Cirrus and Plus have not yet shared machines, the attorneys general could not prove that the arrangement is anticompetitive, he said.

"But the issue is far from dead," added Mr. Tonguette, president of GulfNet Inc., Mandeville, La.

The attorneys general have been examining the national networks' plan to share ATMs since May, when the states squashed a joint effort by MasterCard International and Visa U.S.A. to develop the Entree debit card system. The settlement of that antitrust lawsuit contained a provision preserving the states' right to challenge Cirrus and Plus duality if they find it anticompetitive.

Cirrus, Downers Grove, Ill., is wholly owned by MasterCard, and Visa owns a small interest in Denver-based Plus.

Mr. Tonguette said it is only a matter of time before the attorneys general begin to examine other activities of the bank card associations.

"In light of the comments being made by these people, they will be looking at credit card duality," he said, referring to banks' ability to belong to both Visa and MasterCard. □

Suit Accuses Indiana Lender of Loan Overcharges

Reuters

NEW YORK — Consumers have launched a class-action lawsuit against an Indiana lender for alleged errors on adjustable-rate loans, part of a problem that some experts said may mean billions of dollars in overcharges nationwide.

The suit, filed Friday against Workingmen's Federal Savings Bank, Bloomington, may be joined by consumers nationwide as early as September, a plaintiffs' lawyers said Monday.

"We hope to have the majority of lawyers in other states on board in 30 days," said Henry Price of the law firm Price & Shula. Lawyers from Alabama, California, the District of Columbia, Florida, Illinois, Maryland, Michigan, New York, Pennsylvania, and Texas are preparing to join, he said.

Outside Review Urged

The plaintiffs want lenders to pay outside firms to review their adjustable-rate loans and correct any mistakes. Workingmen's has rejected that proposal.

Lawsuits will be filed and consolidated against other Indiana institutions if they refuse to allow external review of their lending practices by Aug. 22, according to Mr. Price.

Workingmen's declined to comment on the lawsuit until it has reviewed the court papers.

Separately, the Senate Banking Committee, the General Accounting Office, and financial regulators are working to find how much overcharges may total. The Federal Deposit Insurance Corp. acknowledged the problem this year and promised to reimburse borrowers. □

LAST YEAR, JAPAN GRADUATED 71,000 ENGINEERS.

THAT'S AS MANY AS A NATION TWICE ITS SIZE. OURS.

There's only one way to reach our academic potential. We must provide opportunities for higher education to the millions of young Americans who have the intellect and the motivation to achieve their academic goals. But not the money.

By supporting higher education, by making more varied and flexible education-lending options available, America's leaders are helping our young people meet the challenges of the '90s. And creating enormous opportunities for our economy along the way. Sallie Mae is working with forward-thinking lenders across the country as co-investors in America's future.

Higher education has never been more important. And the financing of higher education has never been a better opportunity for our country's most competitive lenders.

SallieMae

Big Banks Seek Deeper Data on Profitability to Aid Stock

Continued from *page 1*

veloping them, he said.

The growing importance of these systems has not gone unnoticed on Wall Street. Analysts say that banks lacking these systems are more likely to stay in losing businesses and fail to back potential winners.

These profitability systems, which cost millions of dollars to design and install and can require a bank to solve some knotty accounting problems on allocating equity, are the managerial tools of choice for a new breed of executive.

An Eye on Risk and Reward

Observers call this group "systematic managers," for their focus on managing businesses based on apples-to-apples comparisons of such performance criteria as risk-adjusted return on equity for business lines.

Members of this new class say they can strengthen their companies' return on equity by as much as two percentage points. The average return on equity for all banks last year was 7.79%, while in 1988 it was 12.79%. Return on equity, or ROE, is a significant determinant of stock value.

The need for profitability systems is spurred by the growing complexity of the banking business. A bank operating 100 lines of business in several states must be able to optimally price products and decide on a quantitative basis, primarily ROE, which business to exit or build up.

"Banks that have this capability have a leg up on understanding their resources," said Arthur P. Soter, a banking analyst with Morgan Stanley & Co.

"That doesn't guarantee success, but it increases the likelihood that they are putting their money to work in the better opportunities."

Mr. Soter said the use of a profitability-measurement systems was a key factor in the recent turnaround of Detroit-based Comerica Inc.

"Not having such a system hurts banks," said Diogo B. Teixeira, a banking technology specialist with McKinsey & Co. If "you don't know your product profitability, it's hard to make the right decision on how to price a product or whether to drop out of a business."

Setting the Standards

At a meeting last month in San Diego, Security Pacific's top 85 managers sat on the edges of their seats while executives announced which of the bank's 49 major businesses reached the goal of a 20% ROE. Fourteen businesses did not. The result: Security Pacific plans to announce the sale of some units and will restructure others.

For Security Pacific, the focus on ROE, derived via the profitability system, is new. "We've never been able to monitor these businesses as well before – we had some gut feelings, but you couldn't prove them," said John Singleton, the new chief operating officer at Security Pacific.

"In manufacturing, you live and die by unit costs and product costs," said Mr. Singleton. "Banking never had to do this."

"You had some gut feelings, but you couldn't prove them."

John Singleton
Security Pacific Corp.

A Heavyweight Group

Mr. Singleton is one of the new systematic managers, a group that includes Edward Miller, vice chairman of Manufacturers Hanover Trust Co., New York; Terrence A. Larsen, chairman of CoreStates Financial Corp., Philadelphia; and Anthony P. Terracciano, who used such a system at Mellon before taking the top job at First Fidelity Bancorp, Newark, N.J.

Executives at Security Pacific believe the the system can increase ROE by 1.5 to 2 points.

"If you are going to be a powerhouse acquirer, you have to drive your stock price up," said Mr. Singleton.

Security Pacific is not alone. At CoreStates, which finished its profitability system last year, hundreds of financial analysts, wholesale bankers, and even the chairman, Terry Larsen, check the system regularly, monitoring the performance of customers, business units, and products, according to Robert N. Gilmore, executive vice president.

Other banks must follow the example of these pioneers, according to observers.

"How can you manage without knowing how profitable your businesses are?" asks Mr. McCormick of First Manhattan Consulting.

Mr. McCormick said the first profitability system was installed in 1983, although he declined to name the bank.

Mr. McCormick said that in a sizable bank holding company with some 100 businesses, a third have a high ROE; a third have an ROE from 10% to 20%; and a third have an ROE of less than 10%.

"Once you know the ROE for lines of business, you behave fundamentally different – you know whether to fix, restructure, or wind down," he said. "That's the world that allows for the systematic management for shareholder value."

While few banks have systems that measure return on equity, most can measure profitability to some degree.

In a 1989 survey by the accounting company Price Waterhouse & Co. of 115 of the 250 biggest bank holding companies, all but a few said they had at least some ability to measure the organizational unit profitability, whether through return on assets, net income, or performance to budget. The study said product and customer profitability systems were far less common.

The Price Waterhouse study did find that two out of every three bank holding companies with more than $1 billion in assets said they planned to install or enhance their profitability system within two years.

Accounting Needs Work

Building profitability systems is an enormous undertaking. First, the bank must hammer out the accounting practices: how to allocate equity, funds transfer pricing, and goodwill, to name just a few.

Then it must overcome the technological hurdles. A profitability system sits on top of a bank's transaction processing systems. It must snatch up-to-the-minute information from scores of systems to create individual balance sheets and income statements on balance.

Then the data gleaned from the bank's operations must be stored in such a way that managers can easily retrieve it.

Mr. Soter and others point to the unique problems of banks as compared with other industries that has slowed this progress: a lack of separation between lines of business, issues in transfer pricing, the allocation of capital.

ISSUES

Machine Dialing Speeds Collections

By KAREN GULLO

NEW YORK — Using technology that automates telephone dialing, banks have discovered that they can greatly speed collection operations, reduce labor costs, and increase their telemarketers' productivity.

Banks began installing automatic or "predictive" dialing systems in the mid-1980s to make collections and telemarketing operations more efficient. Such systems can be programmed to dial several hundred phone numbers an hour and route calls and customer information to operators.

In Massachusetts and a few other states, any company using an autodialing system for telemarketing must buy lists from the phone company of consumers who do not want to receive the calls. So far, banks that use such systems for collections are not covered by such legislation.

200 Bank Installations

Davox Corp., a Billerica, Mass.-based major provider of such systems, said it has installed autodialing systems at about 200 U.S. banks. Citicorp is one of its largest customers, with systems for its nationwide Visa and MasterCard account collection network. Last spring, the banking company ordered $1.4 million worth of Davox products for its regional collection center in Erlanger, Ky.

A typical system uses personal and mainframe computers with a dialing device. The mainframe sorts delinquent files with customers' names, addresses, and phone numbers and sends them to the PC.

Contacting More People

The PC is programmed with calling criteria that sort the accounts by area code and delinquency period. The information is passed to the autodialer, which begins dialing numbers in rapid succession and passing answered calls to operators.

"The system allows us to talk to more people," said William H. Haddock, collection manager in the credit card group at Star Banc Corp., Cincinnati.

His company installed its first Davox system in the loan collection department two years ago. With 5,000 delinquent accounts to contact each day, collections moved slowly; operators contacted two to five customers an hour. The automated dialing system picked up the pace to 20 to 35 calls an hour. □

FDIC Hikes Deposit-Insurance Premiums by 63% for 1991

Continued from *page 1*

crease in operating costs before taxes – above total costs anticipated with the 15-cent premium rate – while the insurance reserve would increase by that amount.

On an after-tax basis, the increase in premiums would represent about 5% of the $15.7 billion in net income earned by FDIC-insured banks in 1989 and about 3% of industry earnings in 1988, said Bert Ely of Ely & Co., Alexandria, Va.

"The big question for banks is how much of the premium increase can be pushed through to the customer," said Mr. Ely. "A lot of bankers say they can't pass it through, and to the extent banks operate in competitive markets, they will have to absorb the extra costs.

"This puts that much more pressure on banks to cut operating costs," Mr. Ely added. "Maybe more people will be laid off because of these increases than would have been."

The FDIC said that, if banks pass along to depositors the full amount of the higher assessment, interest payments would fall by 4.5 cents per $100, or $4.50 on a one-year time deposit of $10,000, disregarding compounding.

No Panic Seen

At Tuesday's FDIC board meeting, Mr. Seidman sought to play down what would be the largest single premium hike in the FDIC's history. "I don't see any panic," he said in response to questions.

The FDIC's bank fund covered 70 cents per $100 of insured deposits at the end of 1989, and coverage has since fallen to 60 cents, said Mr. Seidman, who has repeatedly said the fund is adequate to deal with foreseeable problems. He recently said the coverage ratio would fall this year to between 50 and 60 cents – after $2 billion in anticipated losses brings the balance down to $11 billion at yearend.

The FDIC Tuesday said a premium increase to 15 cents next year would have raised $750 million; the 19.5 cents will generate $1.85 billion more than the current premium for the bank insurance fund.

"They are reaching for every last buck," said Mr. Ely. "In effect, it is looking out only for the FDIC's interests and ignoring the impact of this on the healthy banks in the country."

"We are slowly strangulating the healthy segment of the banks," he said. "Basically, deposit insurance is becoming increasingly unfair to America's healthy banks. In effect, we have the good subsidizing the bad."

Roger V. Smith, president and chief executive officer of Palo Alto, Calif.-based Silicon Valley Bank, said this year his bank will pay $550,000 in insurance premiums at the 12-cent rate. An increase to 19.5 cents would bump up the payment to $896,000.

"That is substantial," Mr. Smith said. "You are talking about [not hiring] a lot of good loan officers. Clearly, it is penalizing the good guys for the bad apples in the system."

But he supports the FDIC. "As a banker, I hate to pay it, but I think we should," he said.

The health of the FDIC's insurance fund has already become a high priority in Congress, which is anxious to avoid any duplication of the thrift crisis. Late last month, Sen. Donald W. Riegle Jr., D-Mich., sent a letter to Federal Reserve Board Chairman Alan Greenspan, expressing concern about the health of the fund. The "Fed should take a fresh look at that now," he said.

"I think that this issue over the period of the next six to eight weeks will just about move everything else off the agenda," said James Buters, a Washington attorney and lobbyist.

Mr. Butera said he believes Congress will be wary, because it has already experienced the S&L crisis, of an outcry from the banking industry that the assessment is too draconian.

The American Bankers Association said in a statement that the FDIC's proposed action reinforces the need to reform the deposit insurance system in a way that protects the fund's soundness without requiring additional premium increases.

"The banking industry cannot, nor should it be expected to, go on endlessly paying higher premiums," it said. "Putting more money into the fund is not a panacea."

Another trade group, the National Council of Savings Institutions, issued a statement saying, "the higher costs add to already overburdened operating costs" and "highlight the need for policymakers to move as quickly as possible toward a restructuring of the federal deposit insurance system that will put that system on an economically sound basis for the long term." □

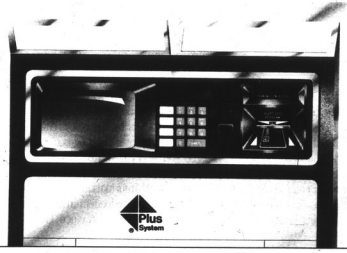
IF YOUR ATMs AREN'T QUITE LIVING UP TO THEIR POTENTIAL...



U.S. Mortgage Debt Thrives, Defying Mideast-Led Rout

By RICHARD CHANG
Reuters

NEW YORK — The U.S. mortgage securities market is thriving, even though the Mideast crisis fueled inflation fears in the bond markets and propelled investors to safe investments such as Treasury bills.

Real estate mortgage investment conduit securities, or Remics – which were created to fill the appetites of short-term and long-term investors – boomed in volume in the past two weeks, with an estimated $8 billion in new issues. This already exceeds July's $6.5 billion, suggesting that August could break May's record volume of $12.5 billion, analysts said.

As Treasury bonds slumped on Mideast unrest, mortgage issues – the next-safest market – weakened less and often firmed as the mortgage securities offered much higher yields.

This fueled a flood of new Remics which, in turn, pushed up the price of simpler mortgage pass-through certificates as dealers bought these to repackage into Remics.

"There's a Remic collateral crunch" as dealers scramble for a limited supply of pass-throughs, one trader said.

Yield Spreads Anemic

Yield spreads are at the lowest levels since early 1989 and could fall even below the 100 basis-point range for benchmark mortgage pass-throughs, analysts said. Early this week, banks and insurance companies wary of recession snapped up short-term classes of Remics, which resemble corporate bonds but are not hurt by events that could harm individual companies.

"Mortgage securities' credit quality is so high" that they attract funds whenever event risk hits the market, said Andrew Davidson, managing director of Merrill Lynch Capital Markets.

Long-term Remic classes drew funds and individuals as yields rose along with inflation expectations.

Dealers were able to meet this demand as "the Remic bid came back very strongly" due to the Middle East crisis, said Monica Barry, vice president of Morgan Stanley & Co.

Dealers can profitably create Remics only when long-term debt yields exceed those on short-term paper, analysts said. This allows them to buy high-yield 30-year pass-throughs to create shorter-term Remic securities with lower yields.

> **"Mortgage securities represent good value and can hold their value."**
>
> **Andrew Davidson**
> *Merrill Lynch Capital Markets*

Arbitrage Opportunity

This arbitrage opportunity – marked by a steepening of the yield curve – presented itself when the Middle East crisis depressed bond prices and forced up long-term debt yields.

"Dealers can upsize a lot of [recent] deals and are confident that the bonds they create will keep moving," one trader said.

Remic sales have become easier as oil-led inflationary fears cut the major risk affecting mortgage securities. As rates rise, borrowers are less likely to refinance the securities' underlying loans. Bondholders can thus be more assured that their interest income will not fall.

Further Tightening Foreseen

As the trend continues, "some further tightening [in yield spreads] is possible to less than 100 basis points," said Mr. Davidson of Merrill Lynch.

"But mortgage securities represent good value and can hold their value," he said.

"There may be a short-term disturbance if there is a rally in the market," Ms. Barry of Morgan Stanley added. "But there is no end in sight to strong demand for high-quality, high-yielding paper." □

MAYBE IT'S TIME FOR A FACE LIFT.

Join the CIRRUS® & MasterCard® ATM Network and our 275 million cardholders can be yours.

More cardholders mean more income and more profits for you!

Soon, ATM duality will be ATM reality. And for ATM acquirers, that reality means greater profits than ever. Just by joining the CIRRUS and MasterCard ATM Network now.

Put the CIRRUS and MasterCard symbols on your ATMs, and our 275 million cash and credit cardholders can access your machines, instantly. That's nearly twice the number of PLUS® cardholders who can use your ATMs today! And driving these millions of cardholders to your ATMs is the combined power of CIRRUS and MasterCard – the recognized leaders in international ATM marketing.

So, why wait? Claim your share of the profits by joining us now. It's a smart move for ATM acquirers, and hooking up is easy. You can use your existing PLUS or regional link to gateway to CIRRUS and MasterCard. Or, if you prefer, connect directly to the MasterCard Debit Switch.

Don't miss out on the single greatest ATM income opportunity ever. Call Art Kranzley, Senior Vice President, at 212-649-5178 today.

Realtors Fearful Of Higher Rates From Gulf Crisis

WASHINGTON (UPI) — A prolonged crisis in the Middle East could significantly harm potential first-time home buyers, whose median income was about one-third short of what was necessary to purchase a typical starter home during the second quarter, the National Association of Realtors said.

Higher family incomes allowed first-time buyers to offset rising home prices and mortgage rates in the second quarter, but their purchasing power remained much below that of repeat buyers.

Norman D. Flynn, president of the NAR, said if the situation in Kuwait blew over quickly, interest rates would return to their earlier trend downward. But Mr. Flynn warned that "if the crisis is of longer duration, we expect there to be a significant negative impact on housing markets and affordability, especially for first-time buyers."

Pressure on Rates

A prolonged crisis in the Middle East could force the Federal Reserve to maintain or increase interest rates to contain inflationary pressures created by higher oil prices.

The NAR's first-time home buyer affordability index measured 72.9 for the second quarter, indicating the typical entry-level buyer had only that percentage of the income needed

GLOBAL *dispatches...*

Bank of Montreal Reduces Prime Rate by Half a Point

Reuters

TORONTO — The Bank of Montreal caught industry analysts and money market participants off guard when it cut its prime rate to 14.25% from 14.75% late Monday.

Analysts and traders said they had not expected Canada's big five banks to start dropping their primes – the lending rate for top commercial customers – until early next week.

Usually, the banks wait to see the results of the Bank of Canada's weekly treasury auction Thursday and the setting of the central bank's key rate.

"It's a little bit of an aggressive move," said analyst Kevin Choquette of First Boston Canada Ltd.

No Reaction from Other Top Banks

Canada's big five national banks tend to drop their prime rates on the same day, but none of the others immediately reacted to the Bank of Montreal's move. Spokesmen for the other banks were either unavailable for comment or declined to say whether they planned rate cuts before Thursday's central bank auction.

Industry analysts said there have been cases in the past where one bank has cut rates a week before its competitors.

"They seem to be anticipating a lower bank rate on Thursday and perhaps trying to get a bit of an edge on the competition," said analyst Susan Cohen of Deacon Barclays de Zoete Wedd Ltd. She added that the Bank of Montreal had acted aggressively with regard to rate cuts in the past, so today's move was not out of character.

The analysts said the bank's early move might be perceived positively by consumers.

Bank and money market players expect the Bank of Canada to cut its key rate Thursday after fresh evidence late last week that the country's economy is slowing.

Recession Called Possible

Some economists said reports Friday that unemployment climbed and housing starts tumbled in July mean Canada may even be on-the verge of a recession.

Canada's unemployment rate, seasonally adjusted, rose to 7.8% in July from 7.5% in June, Statistics Canada said. Housing starts fell 11% in July to a seasonally adjusted annual rate of 173,000 units, from 195,000 in June.

Bond traders said they had already discounted the effect of a rate cut on prices. But Peter O'Marra of Richardson Greenshields Canada said the timing of the Bank of Montreal cut was not discounted.

Mr. O'Marra said news of the prime cut pushed short bonds up a nickel in late trading. "There's room to trade up early tomorrow," he added.

The Bank of Montreal cut was effective as of Tuesday.

... by country

MIDDLE EAST

The U.S. Treasury Department is still putting together an exact accounting of Iraqi and Kuwait assets held in the United States nearly two weeks after they were frozen, Treasury officials said.

"There's a lot of reporting that's coming in," one official told reporters. "[The assets] are significant. As to an exact number, I don't have that right now."

The Treasury has established teams to handle queries from companies affected by the freeze.

The Treasury is working with oil companies to ensure that any payments they make for Iraqi or Kuwaiti oil shipped before the economic embargo go into blocked bank accounts, Treasury officials said.

"I think we're resolving that problem with the oil in the high seas," said one official.

The officials also confirmed that **Kuwait Real Estate Bank** had been added to a list of banks covered by the Presidential order to freeze Kuwaiti assets.

JAPAN

Major Japanese banks face more downward pressure on their credit ratings because of rising rates and changing markets in Japan, U.S. analysts said.

Moody's Investors Service said on Monday it downgraded to Aa-1 from Aaa the long-term debt of **Fuji Bank** Ltd. because of its "higher risk profile," and **Dai-Ichi Kangyo** Bank Ltd. because of greater margin pressures and vulnerability to an earnings squeeze as rates rise.

Standard & Poor's Corp. on negatively changed the credit outlook on five Japanese city banks on Monday, reflecting changes making it harder for them to meet historical operating levels.

The agency reduced its rankings Dai-Ichi, **Kyowa Bank** Ltd., **Mitsubishi Bank** Ltd., **Sanwa Bank** Ltd., and **Sumitomo Bank** Ltd. Late last week, S&P also said it might downgrade Tokai Bank Ltd.'s CDs and letter-of-credit backed issues.

"We're letting the market know what likely direction the ratings will move over a 12- to 36-month period, if any action were to take place," said Ernest Napier, a ratings analyst with Standard & Poor's.

The by country **briefs were supplied by Reuters.**

U.S. Banks Retreat on Global Lending

Continued from *page 1*

ing caution of banks at a time of greater 'perceived vulnerability of the U.S. financial system."

The void created by U.S. banks was filled by European banks, which increased their international business in the first quarter by $106 billion, or 4.3%, to $2.5 trillion. Japanese overseas banking assets decreased to $829 billion, a drop of 1.5% or $13 billion.

Overall, overseas cross-border lending rose $85 billion, or 3.1%, to a total $2.8 trillion.

Focus Is Changing

U.S. banks in recent years have been dismantling their overseas operations in the wake of tougher capital requirements, mounting credit problems, and heightened competition. The international downsizing is part of a broader restructuring aimed at focusing on their home markets, where many face a growing challenge from better-capitalized and more profitable regional banks.

U.S. bank assets now account for 9.5% of the worldwide total, compared with 12.5% in 1987.

The BIS said the decline of U.S. overseas banking assets in the first quarter was partially due to the $48 billion debt reduction package signed with Mexico in March. The accord allowed many banks to exchange their loans for collateralized bonds at a 35% discount, resulting in a $41 billion reduction in all banks' claims on Mexico, the BIS said.

Loans Written Down

In addition, the agency said, many banks wrote down the values of their loans to developing companies.

International banking experts say worldwide nervousness about the health of the U.S. banking system is hampering the international activities of U.S. banks. European banks, particularly those that retain AAA ratings, indicate they have been enjoying a "flight to quality" as interbank lines to the U.S. and Japanese banking systems are curtailed because of credit worries.

BIS data in fact confirm there was such a slowdown in first-quarter 1990 in U.S. banks' activity in the interbank market, an important mechanism used by banks worldwide for helping to fund cross-border business and a system highly sensitive to credit quality issues.

Change of Direction

U.S. interbank transactions with overseas banks contracted by $48 billion, or 6.3%, to $696 billion after expanding $61 billion in the previous three months.

Dennis Weatherstone, chairman of J.P. Morgan & Co. said in recent testimony to the House banking committee, that credit problems like troubled highly leveraged transactions and junk bonds, "have made many U.S. institutions – not just banks – less acceptable as counterparties in global trading."

John S. Reed, chairman of Citicorp, concedes the U.S. banking system is being affected to some degree by credit worries. Asked whether U.S. banks are feeling the backwash of deteriorating quality perceptions versus more highly rated banks overseas, Mr. Reed, speaking during a recent London visit, said: "I suppose that, at the margin, you have to say yes."

Moody's Investors Service senior analyst Christopher Mahoney said a tightening of bank-to-bank lines "is going on everywhere in the U.S. and Europe" in line with worries over credit quality.

Intra-European banking activity has been expanding fast as a result of moves to integrate the European Community into a single market from the end of 1992. Interbank transactions among European banks increased $73.6 billion, or 11.3%, to $955.7 billion, after growth of 38.5 billion in the previous quarter.

Tokyo Market a Factor

The BIS attributed the decline in Japanese overseas banking assets to the major decline in stock prices on the Tokyo stock market as well as in the yen earlier this year. This resulted in a deterioration of the capital ratios of Japanese banks by reducing the value of their Tier 2 capital and increasing the yen value of their foreign currency assets.

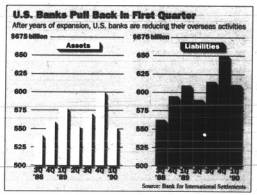
Among borrowing nations, Eastern Europe cut its funding from international banks by $100 million after being the largest group of borrowers in 1989.

But the big drop came in borrowing by Latin America, which contracted by $18.6 billion – a decline largely associated with the effects of Mexico's debt reduction package.

Most banking activity was concentrated within the advanced industrial nations, whose gross new borrowings of $106 billion were equivalent to the growth figure posted in fourth-quarter 1989. Among the major borrowers here was France, which raised $19 billion from international banks as domestic business migrated overseas after the nation fully abolished capital controls on Jan. 1. □

U.S. Banks Pull Back in First Quarter

After years of expansion, U.S. banks are reducing their overseas activities



Source: Bank for International Settlements

Analysts say credit problem such as junk bonds have made U.S. banks less desirable partners in global lending transactions. Writedowns of Mexican loans have also been a factor in the lending retreat.

Don't start 1991 without your most important business associate. The *1991 Banker's Diary and Guide.*

Impressive. The *Diary and Guide* has been specially prepared by *Banker's Magazine* and Warren, Gorham & Lamont with attention to the smallest detail...a genuine fine-grain leather cover...gilt-edged pages...personalized with the recipient's name, company name, or company logo embossed on the cover in 23-karat gold.

Practical. The *Diary and Guide* will help you organize your business, set appointments, and save time throughout 1991. At a single glance, you can plan for the week at hand, or from month to month.

Intelligent. A uniquely-functional desk reference for bankers, the *Diary and Guide* was designed with your information needs in mind. You'll find important bank reference material–facts, figures, charts, sources, checklists–including:

- **Annual compound interest annuity table**
- **Treasury bill yield computations**
- **Tax-exempt yields and taxable equivalent yields**
- **Bond and security glossary**
- **Income tax rate table**
- **And much more!**

Ideal. As a gift for your clients. Your staff. Or even as a treat for yourself. It's a convenient reference and planning tool to use–and depend on–daily.

The *1991 Banker's Diary and Guide*–plan on it. For more information, call:

Retail Sales Stagnation Could Prod Fed, Analysts Say

Reuters

NEW YORK — Despite upward revisions in U.S. retail sales data for May and June, the lower-than-expected figures for July show a continued flat pattern that suggests further easing by the Federal Reserve, analysts said Tuesday.

"Year-over-year retail sales were up 2.8% in July 1990 over July 1989, that is obviously not keeping up with inflation," said Joseph Liro of S.G. Warburg and Co.

The Commerce Department reported July retail sales rose 0.1%, compared to economists' expectations of an increase of 0.4%.

"I think the trend is still down; the fact that June and May were revised up doesn't really change that year-over-year retail sales are declining in real terms," said economist Lawrence Krohn of Shearson Lehman Hutton.

Fed Ponders Response

But he said the Federal Reserve is clearly wrestling with the question of "to what extent they should withhold the ease because of the inflationary impact of higher oil prices."

Retail sales for June were revised to a 1.1% increase from a gain of 0.5% reported previously. The May number, previously reported as down 0.6%, was revised to show a drop of 0.1%.

> **"Year-over-year retail sales are declining in real terms."**
>
> **Lawrence Krohn**
> *Shearson Lehman Hutton*

"Despite the inflation jolt, the Fed is still going to be easing policy, it's just a question of when," said Bruce Steinberg of Merrill Lynch and Co.

Tightfisted Consumers

He continued, "As we moved into the summer, the consumer was showing no great desire to spend money and I imagine that has only intensified." Now, with energy prices rising, "consumers are going to remain a very subdued lot."

Mr. Steinberg said the most likely course of action by the Fed would be a further reduction of a quarter of a percentage point in the federal funds rate, now around 8% after a quarter-point drop in June.

Charles Lieberman of Manufacturers Hanover Corp. said the May through July numbers, "while a bit higher, are not suggesting that the consumer is doing well or spending actively." Excluding autos, he said, spending has simply kept pace with consumer inflation.

Repercussion of Iraqi Invasion

The Fed, he added, "probably would have eased monetary policy in the absence of the Iraqi invasion, but now they're simply biding their time."

One of the surprises in the numbers, Mr. Lieberman added, was the strength in furniture and building materials over the three months, which was unusual considering the weak housing market.

Mr. Liro of S.G. Warburg said the next move by the Fed could be a reduction of one-quarter to three-eighths of a percentage point in the Fed Funds rate, bringing it down to roughly 7.70%.

Recession a Possibility

Merrill Lynch'sMr. Steinberg, who expects a similar reduction, said "the odds have risen" that the U.S. economy could be in a recession by the fourth quarter.

Mr. Krohn of Shearson Lehman said the third-quarter gross national product could be flat or negative. A recession is defined as two consecutive quarters of declining gross national product. □

Tap into the thinking of over 500 commercial lending customers

In a tight credit market, it's more important than ever to service and cross-sell your strongest active accounts...and to protect them from aggressive competitors in search of worthy new customers.

That's why you should tap into the results of the 1990 Commercial Lending Study from Trans Data.

Understand the latest mindset.

Trans Data has just surveyed 523 middle market firms that used lending or leasing services in the past year.

They've projected their credit needs for the coming year to help you segment the areas of greatest demand. To look for ways you can outmaneuver competitors, we've asked how firms feel about non-bank providers and solicitation methods. We compare the middle market's usage of both credit and cash management services to help you formulate cross-selling strategies.

And there's much more.

Results are available right now.

You can start using the 1990 Commercial Lending Study immediately. Trans Data has already done the legwork, so you save the time it would take to mount your own survey. And you can trust the results — backed by our decade of experience in banking research — to be accurate and actionable.

So call now. To do your best planning, find out what your customers are thinking.

For a prospectus, mail the coupon below or FAX to (301) 546-3836. Or call toll-free **1-800-456-3282**

Realtors Fearful Of Higher Rates

Continued from *page* 13

to buy the typical starter home. The index was at 73 in the preceding quarter and at 71 in the period a year ago.

The index shows the ability of renters, who are prime potential first-time buyers, to qualify for a conventional mortgage on a starter home. Their median income represents the typical income of a renter family with wage earners between the ages of 25 and 44.

The 72.9 index for first-time buyers was 29.9% below NAR's composite housing affordability index, which measures affordability for all buyers of existing homes. The composite index measured 104 for the second quarter.

During the second quarter, the median income of first-time home buyers was $23,368, up $245 since the first quarter. The median starter-home price rose to $81,800, from $81,500 in the first quarter.

The interest rate – the closing contract rate plus fees or points paid at settlement – used in the index rose to 10.15% from 10.04%. The additional charge of private mortgage insurance raised it to 10.40%, the NAR said. □

Join One of the Country's Premier Consumer Banking Teams

Do you want to work closely with a team of enthusiastic marketing professionals and senior management? Put your talents to work as part of the country's premier consumer banking teams?

If you have consumer banking experience in product development and product management, you may be the one we're looking for. Central Bank of the South has a rare opening in its marketing department for a Manager of Product Development. We're looking for someone with the proven ability to generate growth in deposits, loans, and fee income through existing consumer products and the development of new ones. . . someone who is comfortable in a high-visibility position and works effectively with senior management.

If you possess these qualities, as well as a graduate degree in business and excellent communication skills— both written and oral — we want to hear from you. As our Manager of Product Development, you would report directly to the Marketing Director and serve as a catalyst between our team of product managers and senior management.

Central is a strong regional bank with offices throughout Alabama and Texas. And we're financially sound, with over $4.8 billion in assets. For the right candidate, we offer a generous compensation package, including excellent salary and relocation expenses. If you're interested in joining one of the country's premier consumer bank marketing teams, contact Jo Lynne Wilson, Employment Officer, at the following address:

Employment Services Division
Central Bank of the South
Post Office Box 10566
Birmingham, Alabama 35296

Be sure to include your salary history along with your resume. All responses will be received in strict-est confidence.

CENTRAL BANK OF THE SOUTH Member FDIC

An Equal Opportunity Employer M/F/H/V

PRESIDENT

Our client, the Massachusetts Bankers Association, is a 248 member trade organization representing banks and thrifts throughout the state of Massachusetts.

Reporting to the 28 member Board of Directors, the President will be responsible for the execution of its mission, which is to protect and represent to the fullest the interests of the members, and to effect the full comparability of competitive opportunities.

The President will formulate for the Board's approval all basic policies, programs and services which will further the Association's objectives.

This individual will represent the Association to the member banks, the media, and to state and federal agencies.

Qualified candidates will have a thorough understanding of the key issues affecting banking today.

The successful candidate will possess proven management skills and will have the interpersonal skills necessary to operate effectively with a disparate group of member presidents.

Our client offers an excellent salary and benefits package. For consideration, please forward your resume in confidence (no calls please) to:

Bankers Argue that 3% Leverage Rule Will Hinder Growth

Continued from page 1

or simply if they have aspirations to grow, banks will have to confront a stock market that at best has been indifferent to bank stocks, they said.

An additional concern is that if the economy dives into a recession – as seems increasingly likely – the newly set requirements may go beyond the reach of more banks. Banks would then be forced to shed assets, said Robert Litan, a research fellow at the Brookings Institution.

Burden Was Noted

When the Fed proposed the 3% leverage ratio, a handful of commenters told the agency the ratio was overly burdensome. Among them were Continental Bank Corp. of Chicago, PNC Financial Corp. of Pittsburgh, and Citicorp of New York.

"We're comfortable with the risk-based capital guidelines," said Brian W. Nocco, vice president of Continental. "Our feeling is, do you really need [the leverage ratio]? If investment banks can leverage up, why shouldn't banks?"

Continental currently has no problem meeting the leverage ratio, Mr. Nocco said. But for Continental and other large banks moving toward more liquid assets, the leverage ratio could become a constraint, he said.

Competitive Problem

Not only does the leverage ratio put banks at a competitive disadvantage against nonbank financial institutions, but it also handicaps U.S. banks against foreign competitors, said Mr. Nocco and other commenters.

Others objecting to the leverage ratio in the context of international competitiveness were Chemical Banking Corp. and Chase Manhattan Corp.

But it is banks' desires to pile on more assets that regulators are trying to prevent, suggests Robert F. Miailovich, the Federal Deposit Insurance Corp.'s assistant director of the division of supervision.

> **"Their argument is exactly what's giving us pause. They're saying we ought to be able to be bigger with the same amount of capital."**
>
> **Robert F. Miailovich**
> *Federal Deposit Insurance Corp.*

Argument Called Faulty

"Their argument is exactly what's giving us pause. They're saying we ought to be able to be bigger with the same amount of capital," said Mr. Miailovich. "The whole idea of risk-based capital is to improve analysis, not to be able to reduce capital.

"No one is arguing our banking industry is overcapitalized."

The FDIC, which soon will come out with its own leverage guidelines, will probably follow the Fed's lead. For the sake of interagency uniformity, the FDIC is no longer arguing that the 3% leverage ratio may be too low. The Office of the Comptroller of the Currency, which has endorsed the 3% leverage ratio, should be issuing its final rule shortly.

How difficult the broad set of new capital standards is for banks to achieve will also largely depend on how stringent bank regulators are, observers said.

"If the economy continues troubled and regulators require more write-offs, institutions will have more trouble meeting the guidelines," said Robert Mannion, former deputy general counsel at the Fed. "It is all a function of where the economy is going."

Subjectivity Charged

Ever since the leverage rule was first proposed, the American Bankers Association has registered strong disapproval. Its main objection is that regulators want to link a bank's Camel rating to its leverage ratio; the lower the rating, the higher the leverage must rise above 3%.

The Fed contends that most banks should have no trouble meeting that standard, most of all the strong banks that receive a rating of 1 on the five-point Camel scale. The ABA says the dependence on the Camel rating leaves a bank too vulnerable to the subjective judgments of regulators. □

When you're being watched this closely...

one wrong move can spell disaster.

When it comes to complying with all the federal laws governing commercial and retail banking today, one wrong move can end up costing a fortune–in penalties, fines, even your bank's reputation.

That's why you need a guide you can trust–*Federal Banking Laws*.

Federal Banking Laws examines all the important statutory and regulatory issues you must be aware of–in one comprehensive volume! So you can determine what phases of your operations are affected and how...what the various provisions mean... and, most important, what you can do to plan for the future.

It turns confusion into comprehension.

Quickly. Easily. With practical emphasis on how to ensure compliance and avoid costly penalties.

So you can concentrate on your business–instead of worrying about getting pounced on for non-compliance.

Now you can examine *Federal Banking Laws* FREE for 30 days. Call today for your copy and see for how it quickly answers your banking law questions.

Ex-Thrift Chief Is Indicted on Embezzlement

BEAUMONT, Tex. — Alan Rothery, former chairman of a failed Texas thrift, has been indicted on charges of embezzling more than $4 million from the institution, a federal prosecutor said.

Mr. Rothery, a California lawyer who headed Trinity Valley Savings and Loan Association in Cleveland, Tex., faces up to five years in prison and a fine of $250,000 if convicted on any of 31 counts, said U.S. Attorney Bob Wortham.

The indictment, which was handed up Aug. 2 and unsealed Tuesday, charges that Mr. Rothery borrowed money from Trinity Valley Savings to fund California real estate ventures. The thrift failed two years ago.

Losses to the federal government, which controls the loan portfolio after having seized the thrift and reimbursed depositors, are expected to be about $33 million, said Mr. Wortham.

Trinity Valley was one of the top 100 savings and loan fraud cases on a list prepared by the Justice Department, according to Attorney General Dick Thornburgh. — Reuters

COMMENT/MERGERS
Key Centurion Grows by Annexing Strong Franchises in W. Virginia

By JOSEPH F. SANCHEZ
SNL Securities

How did Key Centurion Bankshares emerge as the largest banking company in West Virginia? "We are the creature of an acquisition program. We have increased our size at least 25% in additional assets every year," said Larry Stark, vice president and investor relations coordinator for the Huntington-based company.

Key Centurion is the result of a series of mergers of community banks. There was no large lead bank or substantial central organization around which a string a series of smaller acquisitions. The company's expansion program has positioned it to reach $3 billion in assets, making it the undisputed leader among West Virginia's financial institutions. Last April, within the span of a week, Key Centurion announced two acquisitions

> **"Key Centurion tends to acquire profitable, well-capitalized, clean institutions."**

in different regions of the state that would increase the company's assets by 24%.

The deals with Beckley-based Southern Bankshares, and Wheeling-based Spectrum Financial Corp., are the 15th and 16th announced by Key Centurion since the creation of bank holding companies was allowed in the state in 1982, and would place it in the enviable position of being about as large as the next two in-state competitors combined ($1.2 billion-asset United Bankshares Inc., and $1.9 billion-asset One Valley Bancorp.).

Going into New Territory

With the exception of its pending acquisition of Southern Bankshares, the company has normally targeted regions in which it has had little or no presence. This strategy of adding new local markets has dictated a particular expansion style. Key Centurion acquires banks with solid management teams that will remain in place and continue to operate with a great degree of autonomy.

While this style has the benefit of low central overhead, the opportunities for immediate synergies through cost reductions are limited. As a result, Key Centurion has had to avoid paying large premiums for its acquisitions.

The company has proved to be an adroit acquirer, incurring little dilution in earnings per share, with most new affiliates contributing at least somewhat during the first year of combined operations. While it takes a projected 22 years for the buyer in the average bank merger to achieve its return-on-investment target, Key Centurion usually expects to reach its goals in 12 years or less.

Key Centurion tends to acquire profitable, well-capitalized, clean institutions. "We have done nothing to disturb the credit profile that was there to begin with. In the rare exceptions where a bank is not a high performer, we go in on a different basis, and we have paid a lower price," said Mr. Stark.

The only significant case is the First National Co., a $221 million-asset one-bank holding company in Pikeville, Ky., which had some loan problems when it agreed to be acquired. That deal was priced at 1.04 times book value and structured so that if First National earned $2.7 million, which would be roughly 1% on assets, its shareholders would receive additional consideration. First National's reserves were increased before it became part of Key Centurion's balance sheet.

Good Track Record

The West Virginia company has managed to perform well while accumulating in rank. It has posted an average return on assets of 1.15% since 1985 and maintained a strong capital position, with an equity-to-assets ratio currently at 10.15%. During a period when most banks have suffered deterioration in asset quality, Key Centurion has improved its ratio of nonperforming loans to total loans from 1.84% in 1985 to 0.97% as of June 30. In all these measures, the company exceeds the averages for publicly held banking institutions in West Virginia and the nation.

According to chief executive Michael Perry, an important ingredient in Key Centurion's dealmaking is that it not only buys good managements, but also creates a class of motivated "owner-managers" who regard their financial well-being as closely tied to the company's. In West Virginia's fragmented, family-owned banking industry, the directors and senior officers at Key Centurion's acquired institutions usually have had large percentage ownerships of their banks. "If you do a stock deal with them, they then have a goodly number of your shares," said Mr. Stark.

Management by Consensus

To coordinate affiliate operations, local managements, as corporate board members, hold monthly meetings at which each subsidiary's performance is examined, experiences are shared, and decisions are jointly made concerning policies and procedures.

This system of participative coordination, which Key Centurion calls "management by consensus," is instrumental in assisting local boards in solving local problems and finding new business opportunities, and in shaping the company's overall direction and performance.

For example, among the policies developed by the company were one dealing with meeting data processing requirements and another concerning loan policy and documentation.

In early 1987, Key Centurion signed a long-term contract with Mellon Datacenter, the high-profile Mellon Bank Corp. data processing unit, to provide the West Virginia company with the capacity to grow to $3 billion in assets without a proportional increase in data processing cost.

Savings from Outsourcing

The contract is being renegotiated at present, but the outsourcing of each additional acquired institution's data processing requirements has saved Key Centurion an average of $1 million a year since 1987.

Working committees of Key Centurion's subsidiaries have made recommendations on loan policy and documentation that have already been adopted by a majority of the subsidiary boards. By the end of this month, the company will have a common loan policy and loan documentation in place throughout the franchise. An important element of this policy is that all lending is done at the subsidiary level.

> **"Key Centurion has distinguished itself as a bank able to structure moderately priced acquisitions by expanding its markets and building its management team in the process."**

Since each unit is a separate legal entity, there is a lending limit applicable in each case, and even though Key Centurion's lending limit on a corporate basis is over $35 million, the largest single credit at any subsidiary would be $10 million. "And there are precious few of those credits," noted Mr. Stark. Key Centurion is in good company. A similar policy is followed at Banc One Corp., which because of its larger size sets a $50 million maximum exposure to any individual customer.

Maintaining the lending cap at $10 million helps the company avoid excessive exposure with any one borrower. The policy does not infringe on a loan manager's ability to recommend a credit or price a transaction, because his or her experience with the local market is what determines those types of decisions.

Room for Growth

There is still room for growth for Key Centurion in West Virginia. The pending Spectrum and Southern acquisitions would increase the company's statewide deposit share to 15.5%, but with West Virginia's deposit cap of 20%, additional acquisitions in the state should be expected. The company is also eager to make headway in Kentucky, where it operates in only out-of-state banking unit. In the Blue Grass State, the only sizable banking institutions are $3.5 billion-asset Liberty National Bancorp and $1.7 billion-asset First Security Corp.

Key Centurion has distinguished itself as a bank able to structure moderately priced acquisitions by expanding its markets and building its management team in the process.

If the company remains independent, it will have to face the issue of creating a stronger centralized management. Given its size, it may also have to consider affiliating with a large out-of-state regional bank. Since such an option is not likely to be created until regional bank stocks recover, Key Centurion may be doing fine, waiting for several years to come. □

Atlanta Developer in Restructuring Negotiations with Bank Groups

By STEPHEN KLEEGE

Lenders are expected to look hard and long before agreeing to a plan by Atlanta developer John C. Portman to give his unsecured lenders a security lien.

The Portman Co.' secured lenders, including Citicorp, First Chicago Corp., and Bank of Boston Corp., appear resistant to sharing their collateral with unsecured creditors. They will meet Friday in New York.

A senior vice president of one of his lenders, asked whether he would allow a second lien, responded: "Are you kidding? We wouldn't think of it."

The usually secretive Portman Cos. announced a restructuring of its debt – $1.6 billion on Atlanta properties alone – following reports in the *Atlanta Journal and Constitution* suggesting that Mr. Portman's "debt woes" are comparable to Donald Trump's. The company hasn't missed an interest payment, but could have problems rolling over existing debt.

Potential Creditors' Conflict

The Trump analogy is apt in some ways because of the potential conflict within the creditor camp. Industry sources noted that the type of financing used by Mr. Portman usually does not permit a second mortgage.

Mr. Portman said the restructuring was needed because of more stringent examination standards being imposed by the bank regulators. Ellen Stockbridge, agency director of the Atlanta office of the Comptroller of the Currency, confirmed that examiners "are more careful about personal guarantees" than formerly.

The *Atlanta Journal* said Mr. Portman is developing a major Atlanta office tower with a $300 million construction loan and a $78 million personally guaranteed loan personally from Citicorp. The bank declined comment. One source said Citicorp's attempt to syndicate the construction loan had "no success in the marketplace."

Security for the Unsecured

Mr. Portman, noting his unsecured debt amounts to only a small portion of his overall debt, said he was proposing "the commercial equivalent of a home-equity loan" to give his unsecured lenders a security interest in certain properties.

While Mr. Portman said in a prepared statement that it's "business as usual" for his company to negotiate with lenders, real estate analysts suggest Mr. Portman may have trouble leasing the 1.2 million square feet of space which is expected to come on the market in 1992. The Portman Cos. control seven hotels, 17 office buildings, five "mart" and showroom buildings, and other properties in Atlanta, San Francisco, New York, and Shanghai.

"Our equity in this vast portfolio is more than adequate to provide security positions to our currently unsecured lenders and to meet the new, more-stringent guidelines," Mr. Portman said.

The Atlanta newspaper, citing court records, lists the following loans to Mr. Portman:

- A $140 million construction loan from First Chicago Corp., due December 1990.
- A $152 million loan from First Chicago and Swiss Bank Corp., also due December 1991.
- A $132 million construction loan granted late last year by Security Pacific Corp. and recently increased by $5 million.

Several insurance companies and Japanese financial institutions are also listed among Mr. Portman's creditors. □

First Chicago Launches Unit

By NANINE ALEXANDER

CHICAGO — Taking advantage of the many overleveraged companies now in trouble, First Chicago Corp. announced a new business group on Tuesday that will make equity investments in troubled, debt-laden companies.

The restructuring advisory department will also offer financial consultant services to troubled companies, said Lawrence Fox, senior vice president, a 23-year veteran of First Chicago who will head the department. The division will not do business with First Chicago borrowers, to avoid any conflicts of interest.

Even though banks invest in companies through venture capital subsidiaries, it has not been banking practice to take stakes in troubled firms.

$10 Million to $30 Million Range

"It's a kinda the church of what's happening now," said Mr. Fox, at a news conference. He said the company would seek a board seat in the case of an equity investment, but not in the case of an advisory arrangement. Mr. Fox said the unit will make investments in the range of $10 million to $30 million, with a goal of 17% return on investment within three years.

The group will also work with creditors of financially troubled companies. First Chicago has targeted companies with debt exceeding $50 million or creditors with more than $50 million in problem loans.

"We're looking for final fixes for companies," said Peter B. Sweet, a senior advisor to the restructuring group, adding that the goal would be to exit a company in three to four years. □

Analysts Back SunTrust After It Passes Exam

By GORDON MATTHEWS

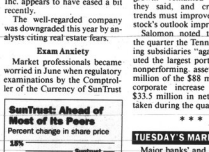
NEW YORK — After months of uneasiness, investor concern about Atlanta's SunTrust Banks Inc. appears to have eased a bit recently.

The well-regarded company was downgraded this year by analysts citing real estate fears.

Exam Anxiety

Market professionals became worried in June when regulatory examinations by the Comptroller of the Currency of SunTrust

SunTrust: Ahead of Most of Its Peers
Percent change in share price



*Average of 225 largest publicly traded commercial banks by market capitalization
Source: DB Technology Inc.; Standard & Poor's Corp., DRI, Schedule I

banking subsidiaries ran longer than they expected. At the time, anxieties surrounding such exams were high.

But SunTrust emerged relatively unscathed. Although its second-quarter nonperforming assets increased 21%, partly because of a tougher regulatory stance, the company still earned 4.5% more per share than in the second quarter of 1989.

That led Goldman, Sachs & Co., among others, to upgrade its investment opinion of SunTrust from "hold" to "long-term attractive" based on "the company's strong balance sheet and better-than-expected asset quality indicators" from the exam.

Rising Investment Ratings

Analysts in Atlanta at Interstate/Johnson Lane raised their rating on the company from "accumulate" to a more aggressive "buy" stance, based on their feeling that SunTrust shares are undervalued in the near term.

Recently, the shares have weakened on profit taking in better-known bank stocks; SunTrust closed Monday at $20.25 a share. But the stock has fallen only one-third as much as those of other banks since the end of the first quarter.

SunTrust was formed in July 1985 when Trust Company of Georgia, Atlanta, merged with the larger Sun Banks of Florida, Orlando. It was one of the first banking combinations later to be dubbed superregionals, and it is regarded by industry observers as among the nation's best interstate banking deals.

In 1986, the company expanded by acquiring Third National Corp., regarded as the best banking firm in Nashville. But real estate overbuilding and a sluggish economy have caused problems and led some analysts to be wary of the company.

Not all analysts, though, are singing the praises of SunTrust. Analysts at Salomon Brothers Inc. called the second-quarter results "disappointing." Loan growth "remained lackluster," they said, and credit-quality trends must improve before the stock's outlook improves.

Salomon noted that during the quarter the Tennessee banking subsidiaries "again contributed the largest portion of new nonperforming assets – $39.5 million of the $88 million total corporate increase – despite $33.5 million in net chargeoffs taken during the quarter."

TUESDAY'S MARKET

Major banks' and thrift institutions' share prices were mixed in moderate trading Tuesday as analysts said the stock market continued cautiously to assess the impact of developments in the Middle East on the U.S. economy.

Citicorp, the nation's largest banking company, gained 12.5 cents a share to climb back above $20. The stock had been weak for several weeks after disappointing second-quarter earnings were reported.

Meanwhile, two other money-center banks whose shares have suffered did well. Chemical Banking Corp. was up 37.5 cents, to $24.375 a share, and Manufacturers Hanover Corp. rose 12.5 cents, to $30.25.

"Investors are familiar with the situations at these companies, and they are comfortable with their earning levels," said James J. McDermott Jr., research director at Keefe, Bruyette & Woods Inc. □

CAPITAL
Have Banks Overeaten at Treasury Table?

By FRED VOGELSTEIN

Some experts are starting to wonder if the recent spike in interest rates hasn't further wounded the already limping banking industry.

Jerry L. Jordan, chief economist at First Interstate Bancorp and a member of the Shadow Open Market Committee, is concerned that some banks, seeing weakening economic conditions and slowing loan demand in July, "loaded up" on government securities in their investment portfolios.

If that proves true, they now have a chunk of holdings that are "under water," he said.

Recent data from the Federal Reserve show that banks have significantly increased their holdings of Treasury securities.

Bank analysts and funding experts, however, doubt banks would have purchased enough in July to severely impact the portfolio. Also, since gains and losses in investment portfolios don't impact earnings until the holdings are sold, they say short-term paper losses are irrelevant.

In for the Long Term

"Even if banks do end up with a negative market valuation [in their Treasury portfolios] that's not something to be concerned with because they're not liquidating tomorrow, they're holding for the long term," said a funding expert at a New York bank.

J. Richard Fredericks, an analyst for Montgomery Securities Inc., noted that banks with slack loan demand and excess funds from deposits would do better to reduce deposit flow by cutting CD rates than to hunt for places to put their money to work.

Since Aug. 1, the day before Iraq's invasion of Kuwait, the maturities in which banks do most of their buying – intermediate securities – are up between 10 basis points and 34 basis points.

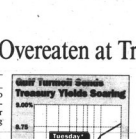
Two-year Treasury notes are up 10 basis points, five-year notes are up 30 basis points, and seven-year notes are up 34 basis points. Longer maturities are up even more with the 10-year bond up 38 basis points and the 30-year bond up 43 basis points.

Mr. Jordan acknowledges the criticism, but says short-term earnings impacts are not the only indicator worth looking at. He said that increased holdings of negatively valued securities reduce a bank's ability to use those funds for other, more profitable purposes.

"[If it's true,] it means their flexibility has been reduced," he said.

In their current depressed state, many banks can't increase their assets without putting more pressure on their capital ratios than regulators will tolerate, he said. Selling the securities at a loss has the same negative effect on capital.

Cash' Turnout Sends Treasury Yields Soaring



Source: American Banker, Reuters

Banks are further constrained to deal with losses in their securities portfolios because raising capital today is either impossible or very expensive.

"To the extent that banks acquired bonds at lower yields and they popped up because of the [Kuwaiti] crisis, they are stuck holding them until yields fall," Mr. Jordan said.

Statistics on bank Treasury security holdings for July were not available. However, economists at Midland Montague believe the heavy buying of the first and second quarter continued.

Fed Data Confirm Growth

Federal Reserve Board statistics compiled by Midland Montague indicate that, during the second quarter, bank holdings of Treasury securities grew at a 23.72% annualized rate, following a 27% jump in the first quarter.

"[They] remain the fastest-growing [sector] of the banking system's assets ..." said Midland Montague economist William Schultz in the report.

Th fact that the portfolios are growing fast is of more concern to some analysts than whether bank Treasury security holdings are in investment portfolios or trading accounts.

"It is a factor that will weigh heavily on margins," said Raphael Soifer, an analyst at Brown Brothers Harriman & Co.

He said the margin squeezing will come from the fact that increasing holdings of Treasuries without corresponding increases in loans reduces the average yield of a bank's assets, since Treasuries have a lower yield than loans.

He said, however, that if the Fed eases rates, banks may be able to offset that by lowering their cost of funds. □

FINANCIAL TECHNOLOGY UPDATE

NCR's Electronic Journal (EJ) automates the audit data collection of ATM operations.
EJ eliminates costly journal printers and supplies in favor of floppy disk storage in the existing disk drive.

EJ simplifies replenishment, speeds customer inquiries, and increases storage capacity of audit data for the ATM.

PC utilities allow bank personnel the ability to browse, search, and store diskette data contents. And the diskette is reusable after the transfer of its contents.

NCR's 5223 Passbook/General Purpose Printer is a compact, light-weight device which has been designed to print on passbooks and most non-continuous documents.

It can be used by tellers, either as a dedicated unit or in a multi-user mode. The printer's multi-functional characteristics, its reliability, high speed, and friendly, human interface, make it ideally suited for today's financial and office environments.

The NCR 5367 Financial Workstation is designed to provide an effective price and performance solution for the different functional areas of the branch.

The 5367 Financial Workstation has standard security features like battery back-up for storing totals and protecting sensitive data in the event of a power failure, and it can support multiple peripherals.

Various options enhance the workstation's capability. These options include 2-speed NBS/DES Encryptor which protects data files and other sensitive information being transmitted or stored.

The 5367 Financial Workstation can be customized for specific environments and it is based on industry standard components and an open architecture... making sure it can meet the growing needs of financial institutions.

Western Banks May Be Facing Leaner Times

By SAM ZUCKERMAN

SAN FRANCISCO — A marked slowdown in California's economy and signs that the state's real estate market is losing steam suggest the West's banking boom may be drawing to a close.

"Whatever the second quarter showed isn't necessarily an indicator of what the third or fourth quarter or first quarter next year will show," said Michael Abrahams, an analyst with Bateman Eichler, Hill Richards Inc., Los Angeles.

Second-quarter profits at California banks rose up 7.4% over the year-earlier period, compared with a 3% decline for banks nationwide, according to Keefe Bruyette & Woods Inc., New York.

Analysts said bank loan demand, margins only slightly down from a year ago, and surprisingly stable credit quality accounted for most gains in the West.

"Volume growth in the consumer sector continues to be strong, and middle-market businesses continues to chug along," said Arthur P. Soter, an analyst with Morgan Stanley & Co.

Total assets of big western banks grew 5.2% last quarter, faster than the 3.6% increase in nonperforming assets during the same period, according to Montgomery Securities Inc., San Francisco.

Nevertheless, downturns in the defense and construction industries are beginning to hit the West. Analysts said that bank earnings will suffer, although there is no consensus on how bad the pain will be.

"We have seen the beginnings of a slowdown," said J. Richard Fredericks, an analyst with Montgomery Securities. "Will there be a rout? I don't think so. It will be somewhere between [the forecasts of] the bulls and the bears."

In California, cutbacks by Pentagon suppliers, overpriced housing, and an exodus of commercial real estate market have started to take the snap out of the state's economy.

Nonfarm Jobs Rise

Boosted by Census Bureau hiring, nonfarm jobs in the Golden State grew at a 2.8% annual rate during the first six months of 1990, down from 3.5% growth in 1989, according to the UCLA Business Forecasting Project. But UCLA projects job growth of only 2.3% for the

1988 Sale of 200 Failed S&Ls Cost Taxpayers $4.6 Billion

By STEPHEN KLEEGE

NEW YORK — The Federal Home Loan Bank Board's controversial 1988 sales of more than 200 failed thrift institutions cost taxpayers $4.6 billion in 1989, according to a report obtained by the *American Banker* from the Federal Deposit Insurance Corp.

The FDIC tally is the first official accounting of costs associated with the 1988 deals, which included guarantees by the government that investors in the failed thrifts would earn a spread over their cost of funds for a 10-year period.

The $4.6 billion cost of the first full year after the sales is in line with current government estimates that they will cost the taxpayers $50 billion to $60 billion over the 10 years.

Tax Breaks Not Included

The estimates do not include tax breaks granted to the purchasers of those thrifts, and are only a portion of the costs associated with the thrift-industry bailout that got fully under way with the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.

The complex 1988 deals have come under fire from members of Congress and other critics for the way they handed to well-connected entrepreneurs who acquired thrifts with minimal contributions of their own money. Among the prominent buyers were Ronald O. Perlman, chairman of Revlon Corp.; William E. Simon, former U.S. Treasury Secretary; and Ford Motor Co.'s First Nationwide Financial Corp.

But the biggest share of the assistance money – $750 million – went to a thrift that has yet to be sold to an outside investor. That thrift, Sunbelt Savings of Dallas,

Bankers Support FDIC Decision To Hike Rate

By BILL ATKINSON

WASHINGTON — Bankers around the country on Wednesday rallied around the Federal Deposit Insurance Corp.'s proposal for an unprecedented hike in insurance premiums, conceding that it is better to take the bitter medicine now than risk a government bailout later.

"If there is a problem, we ought to step up to it," said John B. McCoy, chairman of Columbus, Ohio-based Banc One Corp., whose remarks typified the views of many senior bankers.

"Our fund should handle it. I'd like it [the premiums] to be zero, but it is the cost of doing business. I'd much rather have a viable industry."

Highest Boost Ever

The industry was reacting to an FDIC board decision Tuesday to raise bank premiums a record 63% to 19.5 cents for every $100 in insured deposits – the

Eleven Banks Form Group For Clearing Checks Faster

By KAREN GULLO

NEW YORK — With the deadline to shorten check-hold times rapidly approaching, several large banks plan to begin processing each other's checks this month through a new nationwide clearing house that will use electronic check information to speed operations.

The Electronic Check Clearing House Organization, which named its officers and outlined its plans Wednesday, was established by 11 large regional and money-center banks.

Through it, institutions will be able to use electronic information from the magnetic-ink line of the check to begin processing, instead of waiting for the actual check to be delivered.

Preparing for New Rules

The group's goal is to help banks identify checks more quickly that are not backed by sufficient funds. On Sept. 1, regulations take effect that shorten the time banks may hold deposited checks, and banks are worried about increased losses as they make funds available more readily. Banks on the East Coast

Architect of Fleet/Norstar Growth Sees No Reason for a New Design

By SUZANNE CHRISTY

PROVIDENCE, R.I. — J. Terrence Murray of Fleet/Norstar Financial Group is not letting the business cycle get him down.

Defying the troubled New England economy that has taken a toll on Fleet's earnings and brought unusually close scrutiny by regulators, Mr. Murray continues to talk the language of growth and diversification that he used in bringing Fleet to the forefront of New England banking in the 1980s.

To outsiders, it might seem the talk of a contrarian gambler taking long odds, but Mr. Murray says he intends to play the same strong hand that brought him thus far.

Not Really Time to Relax

"Psychologically, it might seem like the time to relax," said the chairman, president, and chief executive officer of the $34 billion-asset company. "The troops have been beaten up and are stressed out.

"But that is a lot of baloney," he added in a recent talk to the

PEOPLE *in the news*

Atlanta Banker Splits Time Between Job and Association

By FRANKLIN SMITH

Having risen to the presidency of the National Association of Urban Bankers, which represents minorities in the profession, Tony B. Oglesby said he does not regret leaving his original career choice behind.

He set out to be a freelance photographer and said he got into banking accidentally, through part-time work at Trust Company Bank in Atlanta.

Now an 18-year banking veteran, with 14 of those years spent at Trust Co., a subsidiary of SunTrust Banks Inc., Mr. Oglesby, 36, is group vice president and division manager of operations support services. In March 1986, he became the first black executive at Trust Co. to gain the rank of group vice president, which brought him prominence in the urban bankers group.

Tony B. Oglesby

"Sometimes, it feels like I have two full-time jobs, working at the bank and with the association and my community involvement," Mr. Oglesby said. "But my primary focus is Trust Company Bank."

Organized in 1973, the Washington-based National Association of Urban Bankers represents more than 1,500 minority professionals in 30 regional chapters, but Mr. Oglesby wants to see it grow.

"There are a lot of people in the financial industry who are not aware of the association," Mr. Oglesby said. "I'm tired of hearing the number 1,500 strong. Why not 10,000 members strong?".

Move to Broaden Financing

"I want to make sure that we concentrate more on the administrative side of NAUB," he said, "and that everything is operating smoothly and is in focus."

To improve its finances, the association will seek support from companies outside the banking industry that share a desire for a strong minority contingent in the industry, Mr. Oglesby said.

"In moving toward the year 2000, NAUB must evolve with the financial services industry," he said. "For many years, NAUB has had to contend with the issue of 'glass ceilings,' downsizing, and more recently the savings and loan crisis."

Plans to Attract Minority Youth

He said the association is prepared to respond to these issues, particularly with educational programs aimed at African-American youth.

Mr. Oglesby said he and other senior executives met with President Bush and discussed the association's expanding legislative agenda. The President urged the urban banker the advocates to meet with his domestic affairs adviser, Roger Porter, to continue the discussions. "We'll have a follow-up meeting with the President later," Mr. Oglesby said.

He has worked at the former First Georgia Bank and the Federal Home Loan Bank of Atlanta and is active in community and professional organizations. "Sometimes, you cannot be involved in a lot of community activities because of the time element and have to say no," he noted, however.

He is past chairman of the executive committee of the Atlanta Exchange Inc., past board member of Creative Options Inc., and president of the Brown High School Alumni Association. □

NEWS *briefs*

Chemical Plans to Raise Loan Loss Reserve for Half

NEW YORK — Chemical Banking Corp. said in a Securities and Exchange Commission filing that it expects to make more loan-loss provisions in the second half than in the first six months of 1990.

The company cited deteriorating economic conditions but did not specify an amount. Chemical added $152 million to reserves in the first six months. Nonperforming loans will rise from the current $3 billion, the filing said, but "the corporation does not anticipate that its total nonperforming assets at yearend will exceed Dec. 31, 1989, levels" of $3.3 billion.

MCorp Reports a Loss

DALLAS — MCorp, the Texas banking company in voluntary reorganization under Chapter 11 of the bankruptcy code, reported a net loss of $188,000 or 1 cent a share in the second quarter, compared with earnings of $1.4 million or 3 cents a share a year earlier.

Mortgage Rate Stable

WASHINGTON — The final average contract interest rate on conventional mortgages for existing single-family homes was unchanged in June, at 9.85%, the Office of Thrift Supervision said. The contract rate excludes fees and points.

The News Briefs were supplied by Reuters.

Greenspan: Rule Would Hurt U.S. Banks Abroad

By LINDA CORMAN

WASHINGTON — Federal Reserve Board Chairman Alan Greenspan has conceded in a letter to the Senate Banking Committee that competitiveness of U.S. banks overseas will be further eroded in the short run if they must raise more capital as the Fed has recommended.

But in the long run, he added, Basle's risk-based capital will make U.S. banks more competitive and will make the present shortrun setbacks worthwhile.

"In the short run, higher capital requirements for U.S. banks are likely to place foreign banks in somewhat better competitive positions," Mr. Greenspan said in a letter dated Aug. 10, responding to questions submitted by Donald W. Riegle Jr., the Michigan Democrat who heads the Senate Banking Committee.

Discipline of Market

"However, it would be shortsighted to overlook the urgent need to induce market-sensitive behavior by banks: Over the long run, our banks, to compete successfully, must be prepared to meet new opportunities and changing circumstances. Well-capitalized banks are best positioned to do that, by continuously ensuring the scope of their activities and in exploiting profit opportunities."

Mr. Riegle's questions followed up on testimony Mr. Greenspan gave last month in which he said that the Fed might reconsider its advocacy of thick firewalls separating securities from banking activities in the subsidiaries of holding companies. The chairman said that tougher capital standards, early intervention and increased supervision might adequately replace the firewalls.

In his follow-up questions, Mr. Riegle asked whether the chairman's recommendations would inadvertently hamper the already lagging competitiveness of U.S. banks.

Mr. Greenspan, in acknowledging that they would, noted that "raising capital will be neither easy nor cheap for U.S. banks."

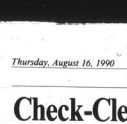
The Fed chairman also said that his earlier recommendation for early intervention did not embody a recommendation for market-value accounting, as Mr. Riegle also asked.

Mr. Greenspan said marketvalue accounting — which assigns present rather than historic values to assets and liabilities — had its positive attributes and was under study. But he also said it had its drawbacks in that it could diminish confidence in banks by introducing volatility into the evaluation of financial conditions.

Also, market values cannot be determined for some assets and increased reporting costs and requirements could be overly burdensome, he said.

His proposal to intervene quickly to forestall bank problems can be adopted using existing accounting principles, he said.

"A key part of this proposal is the conduct of on-site examinations — focusing on the quality of asset portfolios and off-balance sheet commitments – at least annually, where it is not already in practice." This would ensure that loan loss reserves are "consistent with the quality of the portfolio." If they were not, early intervention would mean regulators would require banks to take immediate steps to improve their capital positions. □



Rosemary Stewart
Office of Thrift Supervision

Chief Enforcer To Leave OTS

By DEBRA COPE

WASHINGTON — Rosemary Stewart, who weathered congressional rage over the government's handling of the Lincoln Savings and Loan failure, has resigned as enforcement chief of the Office of Thrift Supervision.

Ms. Stewart, a 16-year veteran of the thrift regulatory system, will join the Washington law firm of Jones Day Reavis & Pogue. She will formally step down from her OTS post on Aug. 31.

Her departure, coming as the OTS embarks on a vigorous enforcement agenda, surprised few observers. Sources said Ms. Stewart, 41, had earned the confidence of her new boss, chief counsel Harris Weinstein, but was fed up with criticism over

Corrections

In an article published Tuesday ("DC Bank Fined for Money Laundering," page 2), it was incorrectly reported that the lead banking subsidiary of BankAmerica Corp. was fined $4.7 million in 1986 for money laundering. The bank was charged with failure to report transactions involving more than $10,000 in cash.

■

A table published Tuesday ("Second-Quarter Earnings at Top Midwest Banks," page 2) incorrectly listed the percentage change at Society Corp. from the corresponding period of 1989. Its earnings were up 39%.

Check-Clearing Group Formed

Continued from *page* **1**

and West Coast are particularly vulnerable to losses from checks drawn on institutions on the opposite coast.

"Electronic check presentment should be especially beneficial to banks with large-dollar, large-volume transit checks, checks going between Federal Reserve districts," said Alan Holroyde, executive vice president at Wells Fargo Bank and chairman of the organization.

Members of the clearing house are Bankers Trust Co., Bank of America, the Bank of California, Banc One Texas, Chemical Bank, First Interstate Bank of California, First Tennessee Bank, Manufacturers Hanover Trust Co., Security Pacific National Bank, Texas Commerce Bank, and Wells Fargo Bank. The banks, which will pay dues to the clearing house, worked with J.D. Carreker, a Dallas-based consulting firm, to establish the clearing house organization.

David K. Sias, executive vice president of Bankers Trust, was named president of the group, and Richard Ercole, senior vice president of Security Pacific Corp., was named secretary-treasurer. Dennis Carreker, head of the consulting unit, was named executive director.

Under its plan, banks that belong to the clearing house will send each other electronic files containing check information at night. The checks will then be sent the following day to complete processing. Some checks will be returned to customers as with traditional check processing.

Bankers Trust, New York, and Wells Fargo, San Francisco, began testing electronic presentment of checks two weeks ago.

Some other banks are expected to join the test this month. Other banks may need several months to modify their systems before beginning electronic transmission of check information.

'An Early Warning System'

"The system is doing what we'd hoped it would," said Dominick Cavuoto, senior vice president of operations at Bankers Trust. "We're trying to establish an early warning system. Based on what I hear from Wells, it's working."

In its tests, Bankers Trust is sending Wells Fargo a nightly electronic transmission over telephone lines containing data from the magnetic-ink line of checks drawn on Wells. Bankers Trust processes a few thousand checks each day from Wells.

> **"The system is doing what we'd hoped it would."**
>
> **Dominick Cavuoto**
> *Bankers Trust*

Wells compares the data with account-balance information on its computers and is able to determine which checks may be paid and which must be returned because of insufficient funds.

Crucial Time Savings

The system shaves almost a day off the funds-collection process. This time saving is considered crucial to the bankers, who must make deposited funds available more quickly on Sept. 1. At that time, Regulation CC stipulates that funds for local checks must be available within two business days of deposit, instead of the current three, and five days for nonlocal checks, instead of seven.

Bankers working to create the new clearing house had hoped that the Reg CC clock would not start with electronic presentment but when the check arrived the next day. After consulting with lawyers, bankers have determined that presentment occurs when the electronic information arrives at the bank.

Bankers still consider electronic presentment a distinct improvement because they can obtain information and begin the funds collection process quicker.

Coast-to-Coast Tests

In the Bankers Trust pilot, Wells will begin sending electronic information on checks drawn on the New York bank in a few weeks, Mr. Cavuoto said. The number of checks in the test represents a small fraction of the banks' total check volume. Mr. Cavuoto said a significant portion of the checks processed by Bankers Trust will eventually come from the organization's California members.

The members will send electronic files containing check information directly to computers at other member banks. As membership in the organization grows, a switching facility for sending and fetching files may be established, possibly in conjunction with existing regional clearing houses.

Modifications Required

Participation in the organization will require some major modifications in existing check-processing operations.

To send information, banks must alter computer systems to sort the data on the magnetic-ink line of checks from various banks, establish specifications for the electronic files, and pay for the transmission.

To receive information, banks must install software that can handle the incoming transmission, compare the information to account information residing on large computers, and reconcile the electronic information with the paper check when it arrives. □

NY Power Outage Cuts Off Direct Deposits at Citibank

By JEANNE IIDA

NEW YORK — Citibank customers said they had difficulty accessing funds on Wednesday as the institution continued to report ripple effects from a power outage in New York's financial district.

Customers of the Citicorp unit said they could not access direct deposit funds that normally would have been available Wednesday, the 15th of the month, through automated teller machines.

Such funds may not have been posted because of continuing problems at a Citibank processing center. The bank shut down nonessential processing at 111 Wall Street again on Wednesday, according to industry sources.

Backup Generator Fails

Operations were curtailed because a backup generator failed at the processing site, which handles correspondent and retail banking, sources said. Those back-office operations have been shut down twice in the past three days.

Because of the continuing power outage in a limited area around Wall Street, the Federal Reserve Bank of New York was said to be considering moving its operations to Pearl River, N.Y. Consolidated Edison said electricity might not be restored until Monday.

"We're operating on alternate power, and only if our alternate power failed would we change sites," a spokesman for the Fed said.

Citibank was expected to make an announcement late Wednesday about its operating difficulties.

At Citibank branches, customers could obtain advances against their payroll stubs. Customers were told to expect a 24-hour delay in the posting of direct deposit funds because of systems problems.

Problem Downplayed

A Citibank spokeswoman, however, minimized the problem and said the New York Clearing House Association was responsible for any delays.

No other major New York bank, however, reported similar

> **Citibank customers could obtain advances against their payroll stubs.**

problems with the posting of direct deposit funds.

John F. Lee, president of the New York Clearing House Association, said the Automated Clearing House system, through which direct deposit transactions are made, experienced no difficulties at all this week. The ACH processing site, which is located in New Jersey, "has about four times as much capacity as I need," Mr. Lee said.

Frustrations

One Citibank customer said she tried to get funds from an ATM to no avail and then contacted a customer service operator, who instructed her to go to her bank branch. When she went into her branch at 11 a.m., there were already long lines of customers with similar problems, the woman said.

"They told me their systems were down for wire transfers," she said. "They said for a lot of people who got paid on the 15th, the transfers just didn't happen." □

COMMENT/ *By Kenneth H. Thomas*

A Critic Points Out Flaws In GAO's Junk Bond Study

The March 1989 General Accounting Office study titled "High-Yield Bonds: Issues Concerning Thrift Investments in High-Yield Bonds" has long been used by the junk bond lobby as the primary defense against critics of thrift junk bond investments.

In fact, this GAO study was most recently cited in the April 2 *Junk Bond Reporter*'s commentary, "Lobbying Effort Needed to Halt Further Regulation," by David K. Aylward, executive director of the Alliance for Capital Access.

Our July 1989 study "The Case Against Thrift Junk Bond Holdings" contained the original and most comprehensive evaluation of the GAO report. This study was prepared by our firm in support of the Congressional prohibition of thrift junk bond investments.

We should point out, however, that most representatives of Congress who supported the thrift junk bond prohibition backed away from associating themselves with our study, because we were the lone critic of the GAO -- the highly esteemed congressional investigative agency.

GAO Report Limitations

Our evaluation of the GAO report revealed the following limitations regarding its study of thrift junk bond investments:

1. The GAO failed to complete its own objective study of the risk and return tradeoffs of junk bonds compared with alternative investments and loans that thrifts are permitted to make.

The argument that junk bonds are "good investments" for thrifts, which the GAO later made, must be based on such an objective study. We believe it was a major error of omission for the GAO not to complete such a study.

The GAO mentioned on several occasions that such risk and return data were generally unavailable. This is no reason why the GAO should not have completed the study itself.

Surprisingly, the junk bond lobby expressed some concern that the GAO might not be able to complete the required study. Therefore, the junk bond lobby offered its assistance in the way of suggesting sampling procedures and even a questionnaire.

The GAO ultimately obtained and analyzed a study sponsored by the junk bond lobby.

Reliance on Industry's Figures

2. The GAO placed undue reliance on a study sponsored by the junk bond industry because the GAO did not complete one itself.

The subject study was completed by the WEFA Group. Formally known as Wharton Econometric and Forecasting Associates, this group is a separately incorporated forecasting service. It has not been affiliated with the Wharton School of the University of Pennsylvania since early 1987.

The study was sponsored by the Alliance for Capital Access, the main voice for the junk bond lobby.

Prophetic Speculation

Prior to the completion of the WEFA study, the alliance speculated on the possible results of

Plan to Seize Healthy Mutuals Seen Illegal, Unworkable, Reprehensible

To the editor:

An article by Reid Nagle and Kevin Stiroh ("Auction of Mutual Thrifts Could Raise Bailout Funds," July 5, page 14) suggested that Congress may seek to confiscate healthy mutual savings associations in an effort to defray the cost of the resolution of the thrift crisis. The article estimated that up to $10 billion could be raised through the sale of these healthy institutions.

Close analysis of this concept, however, reveals that it is tenuous from a legal perspective. Moreover, as a policy matter, the idea is unworkable and would be reprehensible behavior on the part of the United States government.

The problem with this concept in a legal context is that the depositors in a healthy mutual association have cognizable ownership interests in the institution. The article by Mr. Nagle and Mr. Stiroh suggests that the management of a mutual thrift is the true owner and that management can be "persuaded" to agree to turn over the institution if properly compensated.

However, this approach will not work from a legal perspective because it totally ignores the depositors' ownership interests.

The Office of Thrift Supervision regulations authorizing mutual-to-stock conversions of healthy institutions -- the ones that would presumably be most coveted under this approach -- carefully accommodate the ownership interests of mutual depositors to comport with principles of due process of law under the Fifth Amendment to the United States Constitution.

First, the regulations require that a mutual-to-stock conversion be approved, after full and fair disclosure, by at least a majority of the outstanding votes of the association's members. This recognizes the depositors' right as owners to direct the fundamental corporate matters of the association.

Second, the regulations require that the stock of the association be sold pursuant to an independent appraisal, thereby ensuring that fair value is received for the institution, and that the association's members receive a meaningful priority right to purchase the stock of the converting association. This recognizes the depositors' ongoing interest in maintaining an ownership interest in the institution.

Finally, the regulations require that the converting association establish a "liquidation account" as of the time of conversion in an amount equal to the association's net worth prior to conversion. This account provides mutual depositors with a priority distribution of net worth in the event of a liquidation of the institution and is intended to preserve the depositors' interest in the liquidation value of the association.

Confiscation of healthy mutual savings associations would not satisfy any component of the depositors' ownership interest, let alone all three. It is true that the regulators and the courts have recognized that a depositor's equity interest in a healthy mutual thrift is secondary to his interest as a creditor.

However, this is a far cry from concluding that the equity interest does not exist or can be eradicated with impunity. It should also be noted that this approach would raise serious questions of federalism insofar as the federal government sought to seize healthy state institutions without the approval of the appropriate state regulators.

Aside from legal issues, the concept is simply unworkable. Does anyone really believe that the market will bear the introduction of 900 thrifts such that fair value would be received?

The more likely result is a fire sale approach, which will create downward pressure on the pricing of the institutions involved. Moreover, the flooding of the thrift market with healthy institutions would provide fatal competition for the RTC, and that agency's ability to dispose of failed thrifts and acquired assets would be severely hindered.

Whatever funds are generated by the sale of healthy mutual thrifts would easily be offset by increased clearing costs on the RTC side. It is also worth noting that the government's efforts as auctioneer thus far have not exactly gone smoothly.

Also, by seizing healthy mutuals and selling them, the opportunity for mutual-to-stock conversions, a proven approach that has raised billions of new capital for the thrift industry, will be lost. Further, sales of the magnitude contemplated by this approach would diminish the capital raising ability of commercial banking industry since banks are the most likely acquirers of the healthy mutuals. This will result in less protection to the Bank Insurance Fund at a time of increasing loan quality problems in many sections of the country.

Aside from the impracticality of the concept, a more fundamental thought should be considered. Do we really want our government engaged in activities of this nature? The FIRREA era has seen the United States government attempt to abrogate contracts entered into by acquirers of failed thrifts, repudiate bonds issued by thrifts subsequently placed in the RTC, authorize RTC institutions to call home equity loans held by innocent borrowers, and permit acquirers of failed thrifts to repudiate certificate of deposit rates.

Surely, there must be something better when the government will not sink in the name of political expediency. It is not a giant leap from seizing healthy mutual thrifts, once the precedent is set, to extending the precedent to mutual insurance companies, stock thrifts, or commercial banks the next time.

Washington

Mutuals Didn't Cause the Problems

To the Editor:

The proposal by Reid Nagle and Kevin Stiroh in a July 5 article ("Auction of Mutual Thrifts Could Raise Bailout Funds," page 14) to have the federal government confiscate successful mutual thrifts, auction them off, and apply the estimated $10 billion proceeds to the S&L bailout is the most irresponsible suggestion ever offered for the thrift debacle.

The mutual thrifts did not cause the problems. For the most part, they are conservatively local institutions that do a good job of providing credit and deposit services to their communities.

We need well-managed, local institutions.

In Colorado, we have seen what happens when large, out-of-state banks and thrifts purchase local ones. Many jobs are lost, money flows out of Colorado to other, more populated areas, and involvement in the community becomes a very low priority.

Let's not destroy the responsible, well-managed side of the business to pay for the sins of the high fliers who raided the stockholder-owned thrifts.

The Nagle-Stiroh proposal is one trial balloon that needs to be shot down.

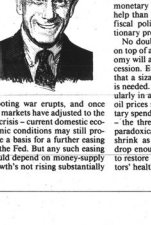
COMMENT/ *By Stephen H. Axilrod*

Mideast Crisis May Prompt Fed to Refrain from Easing



The United States now faces a need to adapt its monetary and fiscal policies to the great uncertainties stemming from the Mideast crisis.

Both higher oil prices and greater military spending than were expected are likely outcomes of the crisis, even if the present worldwide economic, political, and military pressures against Iraq can be sustained and successful.

2 Reasons Not to Ease

From a monetary policy perspective, the confrontation with Iraq should retard moves toward a further easing.

There are two reasons.

• First, and most obvious, the crisis makes potential inflationary pressures greater.

• Second, a good argument can be made that the Federal Reserve should, to the extent consistent with overall stability, let markets adjust on their own to the crisis, so that any economic impacts may be better gauged in light of market reactions unimpaired by potential misinterpretations of any Fed action.

As it happens, financial market reactions have been fairly strong, mainly in domestic sectors, but not destabilizing. The dollar has been reasonably stable on foreign exchange markets during the first week, after rising substantially as would have been expected if a worldwide capital flight to safety had developed nor declining sharply as an abrupt rise in inflationary fears might have prompted.

Orderly Market Retreat

The U.S. stock and bond markets have retreated considerably but under relatively orderly conditions. This suggests both some rise in inflationary expectations and also, at the margin, a market fear that the economy and profits will worsen as the Federal Reserve acts to contain inflation.

The markets have told the Fed that a new and potentially dangerous factor is now affecting economic calculations, that the tradeoff between inflation and unemployment is worsened, but that they do not expect the situation to get out of hand.

Indeed, there is reason to believe that inflationary pressures in the United States will not be excessively strong as a result of the boycott of Iraqi and Kuwaiti oil.

Underlying supply-demand conditions in the oil market appear more favorable for containing upward price pressure than in the 1970s, and in any event, the Organization of Petroleum Exporting Countries is in some disarray at the moment as a result of Iraqi actions and the world's response. In addition, key U.S. economic sectors, such as construction and spending on consumer durables, remain weak.

While consumer spending as a whole appears to have perked up a bit recently, it will still be difficult for businesses to transform added cost pressures into bigger price increases, given the underlying caution in attitudes toward debt and spending.

Thus, profits are likely to remain constrained, with possible adverse consequences for business spending on plant and equipment.

This suggests that – if no shooting war erupts, and once the markets have adjusted to the oil crisis – current domestic economic conditions may still provide a basis for a further easing by the Fed. But any such easing would depend on money-supply growth's not rising substantially and persistently and on continued signs of undue weakness in the economy's nonfinancial sectors.

Unfortunately, because of recession fears, it now appears that monetary policy will get less help than had been hoped from fiscal policy to suppress inflationary pressures.

No doubt, a rise in oil prices on top of a relatively weak economy will add to the threat of recession. Even so, I would argue that a sizable budget deficit cut is needed. Without one – particularly in an environment where oil prices remain high and military spending is less constrained – the threat of recession could, paradoxically, grow rather than shrink as interest rates fail to drop enough, and soon enough, to restore weakened private sectors' health.

Moreover, the structural need for a smaller federal budget deficit remains compelling – and, indeed, may have become even more compelling after the latest revision in the nation's gross national product statistics.

Budget Deficit Must Fall

The personal savings rate had been thought to have risen to about 6% before the revisions, but it now appears to be closer to 5%. That one-percentage-point difference means that consumers are saving about $40 billion less than we thought at current levels of disposable income.

A steadily smaller budget deficit seems to be the main, if not the only way, to increase revisions, to reduce our dependence on foreign funds, and to cut domestic interest rates more or less permanently. □

MARKETING/ADVERTISING

A Chorus of Realty Agents Sings Praises of FirstFed

By TERESA CARSON

A thrift company in Santa Monica, Calif., believes it has found a way to make itself heard above the advertising din created by big financial institutions.

In the latest advertising campaign for FirstFed Financial Corp., 50 real-life real estate agents describe their positive experiences working with the thrift. FirstFed considers the radio spots effective not only in winning mortgage customers, but also in building a good image among real estate agents.

The $2.8 billion-asset parent of First Federal Bank of California shuns advertising that's oriented to products or price, said Martin Gottlieb, executive vice president of the holding company. "There will always be someone with a lower mortgage rate or a higher certificate-of-deposit rate," he said.

Choosing the Battlefield

"Dollarwise, we are not in a position to compete" with Great Western Bank, Beverly Hills, or Home Savings of America, Los Angeles, he said. "We want to stand out because we are different."

The agents were afforded true star treatment. Recording sessions began with a tony buffet lunch with the thrift's top brass in the executive dining room. Then the agents were whisked to a Hollywood recording studio in a limousine.

Agents were allowed to write the copy for their own 60-second spot. One chose to emphasize that First Fed stands behind its loan commitments. Steve Springer of Del Rey Realty, Venice, Calif., said: "All too often buyers focus on getting the rock-bottom rate at the sacrifice of all else. When it is just a few days from the closing of escrow and the lender backs away from the deal or imposes new conditions, the buyer is in the worst kind of crunch."

> **"We want to stand out because we are different."**
>
> **Martin Gottlieb**
> *FirstFed Financial Corp.*

Mr. Springer said making the commercial was fun. "And they really are neat guys. The commercial was no baloney."

Thrift Shows a Profit

Results are hard to refute. Though many thrifts reported red ink in the second quarter, First Fed posted $7.1 million in profits, up 74% from $4.1 million a year earlier.

The thrift also originated $271.7 million in mortgages in the second period, which executives say is on schedule with their goal of $1 billion for the year. For the first six months of the year, its return on equity was 19.92% and its return on assets was 1.05%.

Apart from the agent ads, First Federal is continuing to run a radio and print campaign tied to specific holidays and other sentimental issues.

The image ads are aimed at attracting new depositors instead of mortgage customers, said David Newmark, executive vice president of Newmark & Associates, Santa Monica, which created the advertising.

Praise for Teachers

One spot is designed to be a tribute to the nation's teachers. It praises teachers for giving "so much of themselves . . . with patience and tenderness."

First Federal's chairman, William S. Mortensen, introduces the radio commercial by saying, "The state of education today is one of our most important issues. Equally important is the respect and the public acknowledgment we give our teachers."

Holiday-specific ads run at Thanksgiving, Mother's Day, and Father's Day.

"They are designed to make people feel that the people that run First Federal are good, honest people," said Mr. Newmark of the ad agency.

Cruise Program Does Double Duty

Coast Federal Bank, Los Angeles, which earlier this year launched a program to provide discounts on cruises to its high-balance customers, is attempting to franchise the program to other financial institutions.

Through an arrangement with an outside tour operator, Coast offers its own customers 25% and greater savings on cruises. Coast gets a cut of the commissions for the income. That totaled $130,000 in the program's first six months.

Coast said it was negotiating intensively with one institution interested in adding the program. Along with generating fee income, the program can help institutions retain and attract customers, Coast officials said.

Participating institutions would receive the discount travel packages, a quarterly magazine for customers, direct response mailers, statement stuffers, and a customer newsletter. □

Cirrus to Allow an ATM Surcharge

Exception Applies Only to Banks in State of Nevada

By YVETTED. KANTROW

NEW YORK – Cirrus System Inc. has approved Valley Bank of Nevada's controversial application to accept automated teller machine cards bearing the Cirrus logo – despite the bank's aggressive ATM pricing policies.

The Downers Grove, Ill.-based network also gave approval to 87 other financial institutions that want to place the Cirrus logo on their machines. These institutions – which include units of BankAmerica Corp., Chase Manhattan Corp., Security Pacific Corp., and others – will be among the first to accept cards bearing either the Cirrus or Plus logo when the networks begin sharing ATMs on Aug. 20.

> **Valley Bank's ATMs are mostly found in hotels, casinos, and other Las Vegas tourist attractions.**

Valley Bank of Nevada is hardly the largest member of Cirrus System Inc. that sought permission to accept Cirrus cards. But its application was by far the most widely watched.

Litigation Sidestepped

Electronic banking executives feared a denial of the bank's request would touch off the latest round of lawsuits in an increasingly litigious industry. Valley – which filed a lawsuit last year against Plus alleging price-fixing – had said it would take Cirrus to court if its application to the network was not approved.

The bank routinely charges customers of other banks a $1 fee each time they use its ATMs, which are mostly found in hotels, casinos, and other Las Vegas tourist attractions. But these surcharges are prohibited by Cirrus, as they are by Plus.

At a board meeting on Tuesday, Cirrus voted to retain its prohibition on surcharging, said G. Henry Mundt 3d, senior vice president for the network. But it adopted an exception to its surcharging rule to bring it into compliance with a new Nevada law – a move which also allows Valley to accept its cards.

Constitutional Challenge

The law, which essentially empowers banks to levy surcharges, was passed two months after Valley filed its antitrust claim against Plus. That network has challenged the constitutionality of the law and the case now stands before the U.S. Court of Appeals for the Ninth Circuit.

"The only reason we are where we are is because the state law does allow surcharging," Mr. Mundt said, reiterating Cirrus' objections to the pricing policy. The exception will be withdrawn if the law is overturned, he said.

Cirrus has asked Valley to notify 90 days before applying the $1 surcharge to Cirrus transactions. "They want to be able to notify their members," said Jon A. Joseph, executive vice president and general counsel for Valley Bank. "We believe it is a reasonable request." □

C&S Expands ATM Statement Availability

By TOM LEANDER

Aiming to increase its lead in the Georgia retail market, Atlanta-based Citizens and Southern Corp. is enhancing 200 automated teller machines to print account statements.

C&S has been offering the statement-printing service through its ATMs in South Carolina since 1986. The service will be available at all its Georgia ATMs by the end of October, the company said.

Expansion Possible

"It's a transportable technology," said Gerald O'Meara, an analyst for Robinson Humphrey Co. in Atlanta. "It's logical to assume that they'll transfer it to other states." C&S also serves Florida and will add Virginia, Tennessee, Maryland, Kentucky, and the District of Columbia to its list of markets through its soon-to-be-completed merger with Norfolk, Va.-based Sovran Financial Corp.

BayBanks Inc., Boston, which has boosted its retail earnings in recent years by developing a widespread ATM franchise, is the only other bank company to offer printed statements to customers through the machines, said Cynthia Wilson, spokeswoman for the Bank Marketing Association in Chicago.

Scott Screedon, a C&S spokesman, declined to say how much it cost to refit the ATMs or to expand the project.

C&S is already the dominant retail bank in Georgia, with a 19.5% share of deposits, according to Mr. Screedon. With the enhanced ATMs, it expects to woo depositors away from Trust Company of Georgia, a subsidiary of SunTrust Banks Inc., Atlanta, and First Atlanta Bank, a subsidiary of First Wachovia Corp., Winston-Salem, N.C.

The printed statements will be available to people with instant checking or money saver unlimited checking accounts. Other checking account customers must request the service by pressing a series of buttons.

No Charge for Statements

The statement lists balance information, checks that have cleared, and withdrawals and deposits that have been posted to the customer's accounts. Statements reflect all account activity for the month ending on the previous day.

Nothing is charged for the ATM bank statement, and customers will continue to be mailed monthly statements. □

EXECUTIVE *changes*

Upstate NY Bank Elects Heineman, Hoy to New Slots

Herbert A. Heineman Jr. president of **Glens Falls National Bank,** Glens Fall, N.Y., has been elected to the additional post of chief executive officer.

Mr. Heineman previously served as president and chief operating officer, a position he assumed in 1989.

He joined the bank in 1963 as an assistant vice president and commercial loan officer, and was elected vice president in 1966. He assumed responsibility for the bank's loan division in 1972, and was elected executive vice president in 1977. He was elected senior executive vice president and a director of the bank. In 1987, he was appointed executive vice president and elected a director of Arrow Bank Corp.

H.A. Heineman Jr.

He also serves as a director of the bank's parent company, **Arrow Financial Corp.**

In another move, **Thomas L. Hoy** has been elected executive vice president of the Glens Falls bank. He was formerly a senior vice president.

Mr. Hoy, division head for the investment, trust, and marketing departments, will assume additional administrative responsibilities.

Thomas L. Hoy

Bank One Unit Gets New Chief

Raymond E. Heh, executive vice president and senior lending officer of Bank One, Akron, a unit of **Banc One Ohio Corp.,** has been elected president, chief operating officer, and a director.

Mr. Heh is now responsible for daily operations within the bank's commercial banking, consumer lending and community banking divisions. The community banking division includes the 37 branches of Bank One, Akron.

"We are extremely pleased that Ray Heh has accepted the responsibility of this position," said Richard D. Headley, chairman and chief executive officer of the bank.

Raymond E. Heh

Prior to Mr. Heh's appointment, Mr. Headley served as both chief executive officer and chief operating officer.

Mr. Heh is a 26-year veteran of the banking industry. He joined Bank One, Akron, in his former position in 1985.

— **Franklin Smith**

MIDDLE ATLANTIC

Tokai Bank Ltd., which is headquartered in Nagoya, Japan, has named **Takashi Motoi** as general manager of its regional headquarters, Americas. Mr. Motoi will oversee all of the bank's operations in North and South America.

Takashi Motoi

He has also been appointed president of Tokai Trust Co., New York.

Mr. Motoi succeeds **Kazuo Takeda,** who is returning to Japan as general manager of the Osaka branch office, with operating responsibility for western Japan.

Since June 1988 Mr. Motoi has been general manager of the bank's international banking headquarters in Tokyo.

Oppenheimer & Co. Inc., New York, said **Charles Tulloh 3d** has joined the firm as a senior vice president. He will head the investment banking and brokerage firm's new restructuring and reorganization advisory services group.

Mr. Tulloh comes to Oppenheimer from Pittsburgh's Mellon Bank where he was senior vice president and manager of the bank's commercial credit recovery group.

SOUTHEAST

Crestar Bank, Richmond, Va., has named **Beryl W. Ball** manager of its institutional financial services division, a unit of the trust and investment management group.

Mrs. Ball, who is a senior vice president, was previously manager of benefits and executive compensation for Crestar.

First Union National Bank of North Carolina, Charlotte, has named **Ronald L. Fisher** to community/urban banking officer.

Mr. Fisher, who is currently manager of employee relations for the North Carolina bank, will be responsible for managing First Union's lending efforts in low- and moderate-income communities and directing economic development activities across the state.

Mr. Fisher will replace W.

Ronald L. Fisher

Earl Bardin, First Union's Raleigh-based corporate banking executive and community reinvestment coordinator, who is retiring Sept. 1.

Mr. Fisher will be based in Charlotte, reporting directly to **Frank H. Dunn Jr.,** president of First Union NB.

"I share the concerns of neighborhood and community leaders who say help is needed for the disadvantaged, for small and minority owned businesses, and for young families seeking their first home," Mr. Fisher said.

MIDWEST

First Bank System Inc., Minneapolis, said **Robert H. Sayre** is joining the company as a senior vice president and director of human resources, effective Sept. 1. □

When Commercial Loan Performance Goes Down, This Goes Up.

Introducing the Lending Examiner, from Syntelligence.

A new application software product that automatically flags deteriorating commercial loans in your bank.

The Lending Examiner continually monitors the quality of loans in your commercial portfolio by making assessments based on the most current financial statement information, borrower and industry data, and collateral. It searches for negative trends and risks associated with each credit. Checks financial covenants for compliance. Highlights problem loans for immediate review. So your staff can focus on new business, without neglecting existing loans.

The Lending Examiner also stores critical borrower and facility information on-line for easy access. Generates portfolio analysis reports unavailable with other software products. And it can be implemented quickly on your IBM® mainframe, easily fitting into your existing credit process.

To find out more, call Syntelligence today at 800/624-2474 or 408/745-6666, or write to 1000 Hamlin Court, Sunnyvale, CA 94089.

Lower risk through higher technology.

Architect of Fleet/Norstar Expansion Sticks to Blueprint

Continued from *page 1*

better shape than most. And now is the time to go on the offensive and capitalize on business opportunities that our competitors are too sick to go after."

Taking the Risks

Mr. Murray well knows that a growth strategy in a tougher business climate could have negative consequences. Still, the hard-driving banker, who at the age of 51 has already logged 12 years as president and eight years as CEO, is sticking to his guns.

Fleet has been identified as one of the best-managed and best-positioned companies by such industry watchers as PaineWebber Inc., First Manhattan Consulting Group, and Moody's Investor Service.

One of the Largest

At midyear it ranked No. 17 in the country and just $3 billion in assets smaller than No. 16, Bank of Boston Corp.

Fleet's reputation has survived a rocky 1990 that included increased loan-loss provisions, a $98 million loss in the first quarter, and a downgrade of its debt rating in the wake of an intensive examination by state and federal regulators.

The company rebounded to a $60 million profit in the second quarter, about half of it coming from nonbanking affiliates such as Fleet Finance and Fleet Mortgage Group – which Mr. Murray sees as justification for a "diversified earnings base."

"In comparison to its competitors – Bank of New England Corp. and Bank of Boston – Fleet/Norstar is in much better shape, said Salomon Brothers Inc. analyst Thomas H. Hanley.

A Shirtsleeve Style

Fleet and its vision are largely the products of an atypical banker, an affable strawberry blond with a self-deprecating sense of humor who frequently chooses sports jackets or shirtsleeves over the usual banker's pinstripes.

His family background and early career stages were far from patrician.

His mother was a switchboard operator and his father a factory worker and later a purchasing agent for a manufacturing company. Mr. Murray developed strong work habits in his youth as a newspaper boy and waiter.

A Rhode Island native, he was known as a promising athlete and more than a little streetwise. After working in a textile mill for a year, he said he was frightened enough by the mundane job to realize it was time to get serious, and he wound up at Harvard University.

Family Formed Early On

At age 20, while still in college, he married a Radcliffe student and, before he graduated, two of their five children were born. Upon graduation in 1962, he searched for a job as a stockbroker, but settled for a position as an $85-a-week trainee at Fleet National Bank's predecessor, Industrial National Bank. He never left.

Though it was not his lifetime dream to become a banker, the need to make a living for his young family was great motivation. He purchased a two-family house, living in one part and renting out the rest. It was his start as a mini-real estate mogul that supplemented his then-low salary.

Fleet bankers still rave about the complex deals Mr. Murray put together, his negotiating skills and investment savvy. By 1967, he was a force to be reckoned with. By the mid-1970s, still in his 30s, he was the second-ranking officer at Industrial National. He rose to CEO after John Cummings Jr. died in 1982, and engineered Fleet's merger with Norstar Bancorp. in 1987.

A Tough Consolidator

When interstate banking arrived in the early 1980s, Mr. Murray snapped up some of the best banks in the Northeast and showed his colors as a stern taskmaster in the consolidation of operations.

The consolidation that most impressed analysts was the biggest, with the upstate New York operation of Norstar. The similarities between the two companies – both served middle-market businesses, featured decentralized management, and had been acquiring other banks for several years – made them a good fit.

"The Norstar combination was a godsend," said Montgomery's Mr. Fredericks.

Predecessor Had Vision

In fact, the Norstar deal was the pinnacle of a diversification strategy – both functional and geographical – that Mr. Cummings launched in 1968.

"Diversification may have been his predecessor's idea, but the fulfillment of it is the most certainly the auspices of Terry," said Mr. Fredericks.

Fleet needed the broader canvas. In 1982, Rhode Island was suffering unemployment rates as high as 12%.

A Major Expansion

At the time, Fleet's assets totaled $4 billion and yielded a net income of $39 million. Last year, with more than 1,000 offices in 40 states, assets totaled $33 billion with profits of $371 million after taxes.

One of its steadiest sources of income is the mortgage servicing business. Fleet Mortgage has grown into the second-largest mortgage company in the United States. Its portfolio skyrocketed from $3.2 billion at the end of 1980 to more than $40 billion loans worth $42 billion at the end of last year.

That revenue stream may be just what the bank needs. But in June, the bank put $2.9 billion of its servicing portfolio up for sale in a rocky market, raising eyebrows among those who saw it as reactive.

The bank has also scaled back its auto leasing business, and Mr. Murray predicts further consolidation in Fleet's credit card servicing business. Already, Fleet has sold $200 million of its $450 million card portfolio.

Diversifying the Lending

Mr. Murray believes in diversifying not only product lines, but lending strategy as well. Even though the company has a legal lending limit of $300 million, it has no loans greater than $50 million.

Fleet bankers make a point of the fact that they did not get caught in the web of Third World loan problems, and they pulled out of the condo market before most. But the company has not escaped entirely.

"Some of the criticisms the examiners had on us was that we should have had more detailed data on our loan breakdowns," Mr. Murray said. "We should have been tracking delinquency trends and used that as a short-term warning system. And while we do well on the consumer end of the business, we don't do so well on the commercial side."

Not to be deterred, Mr. Murray assigned Michael R. Zucchini, the bank's chief information officer, to bring the technology up to speed to monitor such things. Whether he can, in light of what are sure to be tight cost controls, remains to be seen.

Flexibility Is Praised

One analyst praises Mr. Murray for being flexible, even on the seemingly single-minded commitment to diversification.

"There is no set strategy that cannot be violated. Murray and his group are not afraid to modify their tactics," said Thaddeus W. Paluszek, a vice president at Kidder Peabody & Co., New York.

Four years ago, Fleet was outbid by Bank of New England for Conifer Group Inc., a respected Worcester, Mass. banking company. At the time, Mr. Murray was viewed as the loser. Since then, he has been vindicated.

In fact, speculation surfaced in late December that the company would buy part of the troubled Bank of New England. Mr. Murray admitted only to conducting due diligence at the BNE subsidiary, Maine National Bank, but recently withdrew from the negotiations.

Thinking Like a Shareholder

With Mr. Murray holding 150,000 shares of Fleet – "which is a substantial amount of my net worth" – he is hungry for every basis point he can get for shareholders.

Fleet offers generous stock option programs for most of its managers. "The majority of our senior managers have almost half of their net worth in Fleet stock," said Mr. Murray. Eight senior people made more than $500,000 last year.

The generous incentives have gone a long way toward keeping managers in place. Mr. Murray is not the only lifetime banker at Fleet, and despite his relative youth says his succession is a major concern. Most top managers are of his generation, be-

COST CONTROL
Employees Give Sovran Tips on Efficiency

By MICHAEL WEINSTEIN

Sovran Financial Corp. saw dollar signs when an alert systems analyst spotted a way for the company to cut payroll costs.

Maureen Henry reckoned that Norfolk, Va.-based Sovran was spending an average of 42 cents a month on each of 9,500 employee checking accounts by sending statements through the U.S. mail. But at her suggestion, Sovran began distributing those statements via the company's internal mail system.

Total savings on the move: an estimated $45,000 a year.

14-Year-Old Program

Ms. Henry's brainstorm was among the latest in a series of cost-cutting ideas at Sovran solicited under a program called Ideabank. It has saved the $26 billion-asset company several million dollars since its inception in 1976. Last year alone, Ideabank helped Sovran reduce costs by nearly $2 million.

Another idea came from Libby Patterson, vice president and manager of cash management products. She recommended that the company pay interest only on the investible balances of commercial accounts, not on the larger collected balances.

Using the suggestion, Sovran reduced overall interest expense by about $1.4 million.

Sticking Cash Drawers

And when the cash drawers in Sovran's automated teller machines were sticking in cold weather several years back, the company considered installing heaters for each unit. Cost estimates topped out at $1,200 per machine.

But an operator who answered customers' calls from the ATMs suggested the bank simply run a light-bulb circuit inside each cash drawer to keep it warm. That cost only about $100 per machine.

Employees are motivated to participate in Ideabank partly by the cash paid for their suggestions, said Mary Belk, who oversees the program. Sovran gives employees 10% to 15% of the first year's savings on any accepted suggestion.

For example, Ms. Henry got $4,500 for her postage initiative. Ms. Patterson, who dreamed up the interest-saving scheme, collected $20,000. Last year, Sovran handed out some $70,000 in rewards.

15% of Ideas Are Used

Employees with the rank of senior vice president and above are ineligible for cash awards.

Ideabank, part of Sovran's human resources division, has two full-time staffers, including Ms. Belk. On average, the two evaluate 70 suggestions a month. About 15% of them turn out to be winners, Sovran said.

"We're not really pushing numbers as much as the quality of the suggestion," Ms. Belk said. About 60% of the winning suggestions boost the quality of service, she said.

As Sovran has expanded through mergers into Tennessee, Maryland, Kentucky, and Washington, D.C., it has brought Ideabank with it.

"Every we time we have a merger, it's a wonderful way to make employees feel they belong," Ms. Belk said.

Architect of Fleet/Norstar Expansion Sticks to Blueprint

Continued from *page 8*

No Need for Words

"We know each other so well that my managers know when I'm mad without having me rant and rave," said Mr. Murray, who admits that he is better at letting people know when he is unhappy than when he is happy.

Recently, a handful of employees systemwide – who Mr. Murray felt were responsible for some of the bank's problem loans – were fired. "There is a whole new breed of managers out there that have never faced hard times. I lived through the rough times in the 1970s. These guys haven't. But that doesn't mean they should not be held accountable for their mistakes."

"In tough times like this, Terry is the kind of boss who can inspire the loyalty of the troops," said Mr. Ackerman.

In his typical, blunt style, Mr. Murray demurs. "These guys are here because this is a heavily incentive-oriented company, right down to the bottom line."

A Spirited Cadre

Outsiders talk about the esprit de corps at Fleet.

"Everybody works pretty hard, and they play hard too," says Charles M. Vincent, vice president at Provident National Bank, Philadelphia. "If you lived on Narragansett Bay, you'd do a little playing too."

Managers say even though Mr. Murray is firmly in control, he lets them run their own show.

"It is a very open company. If you were to ask for an organization chart, we probably couldn't reach in the drawer and give it to you," said chief financial officer John W. Flynn, a 20-year veteran who is Fleet's No. 2 man. **"But in the final analysis, we don't rule by committee. There is one boss – and it's Terry."**

Meetings on the Fly

Mr. Murray said he keeps abreast of developments with a lot of impromptu meetings – a haphazard style that could be ineffective in a far-flung regional empire. But far from being hands-off, Mr. Murray is known by analysts as detail-oriented, with a dazzling command of the performance data.

When the regulators were examining the books last March, Mr. Murray flew to Boston through more than 50 loan reviews.

But the CEO is far from a workaholic. "I don't work long hours," said Mr. Murray, who usually exercises in the corporate gym for an hour before showing up at his office around 8:30. Most nights he wraps it up by 7:00, and "in the summertime, I try to get out by 5:30.

"I can't be worrying about my kids and my job in the same breath. So I make room for both. "I don't think I have that whatmakes-Sammy-run type of personality."

To turn his mind off, Murray enjoys boating (he has a 20-foot Boston Whaler), golfing (typically shoots an 85 and admits he hates to loose), and is an avid reader and Red Sox fan.

Mr. Flynn says that two of the most important ingredients for being successful at Fleet is having a sense of humor and an interest in sports. "You can probably survive without sports, but having a little bit of fun doesn't suggest you are not serious or not accomplishing anything."

"You get the sense there is a collegiate atmosphere among the top managers," said one banker at the Bank of New England. **"God bless Murray if he goes on a business trip to Europe** and gets some personal travel in as well."

Two years ago, Mr. Murray slashed the number of company cars and eliminated first-class travel and club membership for executives. And Mr. Murray is known for having the guts needed to consolidate costs.

Mr. Murray puts a lot of stock in keeping the lines of communication open. Robert Lougee Jr., Fleet's director of corporate communication, said Mr. Murray spends a good 40% of his time communicating in some fashion or another.

A Chance for Others

Reflecting on his future, Mr. Murray said, "I've been here quite a long time. It wouldn't be fair for me to stay here forever and not give my top managers a chance to lead the bank."

Some have speculated that he might become a player in the political arena, but Mr. Murray said he is probably much more suited to starting his own business – if his sons were interested in joining him.

In July, he created a vice chairman position and gave additional responsibilities to some senior vice presidents. Their success is by no means guaranteed.

"There will continue to be pressures to consolidate. The survivors will be the ones who can be low-cost providers and who can drive volume through operations," says Tom Brown, an analyst at PaineWebber.

"The surviving banks will need diversity to its earnings mix," he added. "One must not only be able to acquire but more importantly to integrate. So far, Fleet is above average on all these scores," but New England conditions make Mr. Murray's gamble far from a sure thing. □

IMF Is Expected to Press Brazil on Debt Repayment

By RICH MILLER
Reuters

WASHINGTON — Before striking a new financing deal with Brazil, the International Monetary Fund is expected to put pressure on it to agree to resume debt payments to creditor banks, according to international monetary sources.

"Any IMF agreement would require some form of progress [on mending relations with the banks], probably including some debt payment," said one source, who declined to be identified.

Brazil, the Third World's biggest debtor nation, and its banks have been at loggerheads since July of last year, when the country stopped making payments on its medium-term and long-term bank debt.

Brazil is about $6 billion behind on its payments to the banks and has shown little willingness to pay off any of the arrears.

Compromise Is Expected

The banks are pressing Brazil to clear all its arrears but the IMF is likely to strike a middle ground between that demand and Brazil's refusal to make any payments, one source said.

An IMF team is in Brazil trying to negotiate a standby credit agreement with the country, which has about $115 billion in external debt. A final agreement on a new financing package is not likely until next month.

As part of its financing package with the IMF, Argentina agreed in May to resume debt payments to its bank creditors.

Given that Brazil is relatively better off than Argentina, it would probably be expected to make a larger payment than that, one source said.

Reforms Are First Step

The IMF decided last year to start lending money to Third World nations that take tough economic reforms even though they had not yet struck debt agreements with their banks.

That policy angered the banks, who complained that the fund was encouraging debtor nations to pile up arrears and thus discouraging new lending by the banks.

The monetary official also expressed concern that what he called Brazil's "bad behavior" would spread. "Perhaps Brazil is a country where we should draw the line," he said.

The country, though, has impressed many analysts with its tough economic reforms, which have succeeded in slashing inflation.

UNITED STATES

The Securities and Exchange Commission has proposed to ease registration requirements for foreign banks and insurance companies that offer securities in the United States.

The proposal, an amendment to the 6c-9 exemption of the Investment Company Act, would allow foreign banks and their finance subsidiaries to sell equities in the United States without registering as investment companies.

It also would exempt foreign insurance companies and their finance subsidiaries that sell debt and equity.

Foreign banks and insurance companies are considered investment companies under the Investment Company Act but they cannot meet the stringent requirements. To sell securities in the United States, they apply for individual exemptions. U.S. banks and insurance companies already are exempt.

In 1987, the SEC agreed to let foreign banks sell debt and nonvoting stock in the United States. The proposed amendment would expand this rule to cover bank equities as well as debt and equity offerings by insurance companies.

SAUDI ARABIA

The Saudi Arabian Monetary Agency stepped in Tuesday to help its banking system, which has been besieged by calls for cash from worried depositors since Iraq invaded Kuwait.

Dealers in the kingdom said the central bank had made it easier for banks to get funds by allowing them to use a greater percentage of government bondholdings as security.

"This gives us more room to breathe," said one Saudi bank treasury manager.

TURKEY

Turkey is likely to discuss with the World Bank next month a possible fresh loan to help it weather the economic consequences of enforcing U.N. sanctions against neighboring Iraq, a Treasury official said.

"Right now, neither the amount of any new loan nor the timing have been determined. We expect it will be discussed at regular meetings with the bank in September," said the Turkish official, who asked anonymity.

Turkey joined U.N. sanctions against Baghdad and Kuwait on Aug. 7, including closing its end of two major Iraqi oil pipelines.

Banking sources say Turkey relied on Iraq for 63% of its oil imports last year.

Kuwaiti officials have indicated they also might help Turkey financially to offset losses caused by the embargo.

The By country briefs were supplied by Reuters.

German Bank Closing 2 U.S. Offices

Strategy of Bayerische Shifts to Specialized Products

By KENNETH CLINE

ATLANTA — Bayerische Vereinsbank, Germany's sixth-largest bank, said it planned to close its agency offices in Atlanta and Cleveland this week as part of a reorganization of its U.S. operations.

The Munich-based bank said it had decided to switch its focus from geographic-based marketing to specialized products, according to a senior officer in New York. "To do that, we do not need an office in Atlanta or Cleveland," the officer said.

He said the bank would concentrate its lending efforts out of its offices in New York, Chicago, and Los Angeles.

Variety of Products

Bayerische Vereinsbank's new marketing effort will emphasize asset-based securitization, multinational and real estate lending, and other products and services being reviewed by the board, said the officer, who said company policy prohibited him from being identified.

"We're following the old adage of 'trying to be smarter than the next guy,' " he said.

The Atlanta office has five employees, the Cleveland office seven or eight, according to the officer. He said some of the employees would be offered transfers to the bank's New York and Chicago offices.

Although Bayerische Vereinsbank came to Atlanta 11 years ago, it experienced management turnover and has had difficulty establishing itself in the Southeastern market, according to local banking sources.

It is the second German bank to withdraw from the Atlanta market. Hamburg-based Vereins-und Westbank closed its four-year-old representative office in April to concentrate on retail opportunities opening up in East Germany, said David N. Muirhead, the bank's former Atlanta manager.

The bank will emphasize asset-based securitization and multinational and real estate lending.

"This was the big chance to re-establish [Vereins-und Westbank] in that area. You've got to take care of the domestic market before you start taking care of everything else," Mr. Muirhead said.

Vereins-und Westbank continues to cover the Southeast from its Miami agency, but has retreated from the U.S. corporate lending market in favor of servicing German companies in the region, Mr. Muirhead said.

Commerzbank and Deutsche Genossenschaftsbank, both Frankfurt-based, will be the only German banks to maintain a presence in Atlanta. Commerzbank, which arrived in 1978, has been involved in some major syndicated deals for Southeastern companies, including Atlanta-based Georgia-Pacific Corp.

"We've been here a long time and we're happy here," said Peter K. Thiels, Commerzbank's manager in Atlanta.

DG Bank opened its Atlanta office in May 1989.

Atlanta Still a Focus

With the departure of Bayerische Vereinsbank and Vereins-und Westbank, Atlanta will remain home to 23 foreign bank agency and eight representative offices.

Cleveland, which is not a major center for foreign banks, will be left with three representative offices.

An agency office is licensed to originate loans, but cannot take deposits. A representative office can advise and refer business, but cannot conduct any business of its own. □

Ex-Im Bank Set to Cover Some Iraqi Credits

By JAMES R. KRAUS

NEW YORK — The United States Export-Import Bank said it has applied to the U.S. Treasury to reimburse banks for $2.5 million in unpaid export credits to Iraq.

An Ex-Im Bank official said that although the Iraqi payments are not yet technically in default, the agency doubts the money will be paid. Any delay in payment makes the Ex-Im bank liable for interest payments on the amount due.

"It doesn't look like Iraq's going to pay and the interest clock is ticking. It's getting more expensive the longer we wait," said Kenneth Tinsley, loan officer in the Ex-Im Bank's insurance division.

The $2.5 million in payments are between 30 and 60 days past due but have not yet passed the 90-day period the Ex-Im Bank usually waits before paying default claims.

Short-Term Payments Insured

The Ex-Im Bank has insured short-term payments on around $60 million worth of goods already shipped to Iraq and a further $25 million in payments for goods not yet shipped.

"We can still pull the cover on the $25 million, but we consider it potential exposure," Mr. Tinsley said.

The Ex-Im Bank, through the Foreign Credit Insurance Association, insures only short-term export credits of less than one year for Iraq. The agency halted all medium- and long-term export credit insurance for Iraq in 1985 because of that country's poor record of payments.

The insurance is mainly for letters of credit issued to exporters. Typically, a bank pays the exporter as soon as the goods have been shipped, then obtains payment from the foreign importer.

Around 10% of the Ex-Im Bank's $3.2 billion in outstanding insurance has been issued for exports to the Middle East.

In addition to the $85 million in insurance for exports to Iraq, the agency has insured exports valued at $79 million to Saudi Arabia, $42 million to Turkey, $33 million to Israel, and $11.9 million to Kuwait.

Separately, the Commodity Credit Corp., an arm of the Department of Agriculture that has issued around $2 billion in credit guarantees for food exports to Iraq, has requested a Treasury license to pay out insurance claims banks have submitted for nonpayment by Iraq.

The Commodity Credit Corp. is currently unable to pay out any claims on Iraq because of the Aug. 2 executive order barring all trade and financial transactions related to Iraq. □

Swap or sell– Freddie Mac now offers a golden opportunity either way.

Whether you're swapping fixed-rate loans for securities or selling them for cash, you'll always come out on top with Freddie Mac's two new programs: Gold Cash℠ and Gold PCs℠.

For lenders interested in swap transactions, Freddie Mac's Gold PC reduces the payment delay by 30 days, making it today's fastest mortgage passthrough. In addition, the Gold PC offers actual factors to compute principal prepayment, plus the investor receives a guarantee of timely payment of interest and scheduled principal.

Freddie's Gold Cash program offers the price advantage of a swap transaction, while simplifying the entire process. Beginning this fall, you'll just call Freddie Mac with the note rates and unpaid principal balances of the mortgages you'd like to sell. You'll then receive a price closely tied to the mortgage securities market.

When you're looking for the best prices for your mortgages, turn to Freddie Mac. With the introduction of its Gold PC and Gold Cash, there's no reason to deal with anyone else.

Call your Freddie Mac account executive today for additional information.

COMMENT
A Critic's View Of GAO Study

Continued from *page 4*

such a study in a GAO hearing. This speculation was on a result that would clearly favor the junk bond lobby. Its speculation was indeed prophetic as the junk bond industry study resulted in such a favorable conclusion.

This industry-sponsored study was unduly relied upon by the GAO and formed the primary basis for this study's finding that junk bonds have been "good investments" for thrifts.

Accuracy of Findings Untested

3. The GAO failed to evaluate or test the results contained within the junk bond industry-sponsored study.

The GAO stated that it reviewed the methodology and assumptions of the industry-sponsored study but "did not test their accuracy." The GAO would have been far better off spending its time preparing its own objective study rather than reviewing and utilizing an industry-financed study.

"The GAO placed undue reliance on a study sponsored by the junk bond industry."

A critical evaluation of the industry-sponsored study would have revealed that inappropriate junk bond default rates were utilized. The combination of understated junk bond default rates and overstated credit losses for commercial loans (as independently verified by the Federal Reserve Bank of New York) helped make junk bonds look much more attractive than commercial loans. This was a critical conclusion for the industry-sponsored study in the overall comparative evaluation of risks and returns.

Little Cooperation from Thrifts

4. The GAO obtained little useful data from thrifts on comparative risks and returns of alternative investments.

Only two of the 11 thrifts the GAO visited provided comparative risk and return data, and there was no indication as to the quality or quantity of it. Imperial of California, the second-largest thrift junk bond purchaser, submitted one table of risk/return tradeoffs in a GAO hearing. Utilizing a risk-adjusted comparison of rates for one day only and an unrealistically low 1% junk default rate, Imperial concluded that junk bonds were nearly 60 times more attractive than fixed-rate residential mortgages!

Focus on Default Risk

5. The GAO report focused on the default risk of junk bonds as compared with their liquidity or interest rate risk.

The GAO study focused on default risk, with some attention being given to interest rate risk but virtually none to liquidity risk. The study sponsored by the junk bond lobby did not consider interest risk or liquidity risk at all. Of course, by excluding these other two risk categories, junk bonds look much better on a comparative basis.

The GAO's conclusion that junk bond have been "good investments" for thrifts after accounting for comparative risk is therefore a questionable one because of the study's focus on default risk compared with the other two types.

Packing the Hearing

6. The majority of witnesses in the GAO's "public" hearing were junk bond market participants.

The GAO stated that it "solicited and obtained comments from market experts and interested observers" for a March 1, 1988, public hearing. Seven of the 11 witnesses, who accounted for two-thirds of all the pages in the hearing transcript, represented the junk bond lobby in the form of issuers, purchasers, or mutual fund managers.

An academic panel of three witnesses, representing just over one-fourth the volume of the hearing transcript, were all in favor of junk bond investments with no restrictions for thrifts and even, in two cases, for commercial banks. Two of these academic witnesses were well known proponents of junk bonds, and the third was a third-year law student.

"Understated junk bond default rates and overstated credit losses for commercial loans helped make junk bonds look much more attractive than commercial loans."

The only witness who was in any way critical of junk bonds was a representative of Standard & Poor's Corp. whose testimony and exhibits represented only 7% of the transcript. Because this "public" hearing was dominated by market participants strongly in favor of junk bonds and thrift junk investments, it was of limited value for purposes of an objective analysis.

Gaps in Data

7. The GAO report failed to collect data from two of the top 10 thrift holders of junk bonds.

The GAO stated that it collected data and visited only eight of the top 10 thrift holders of junk bonds. One thrift that was not visited because it "was not near the others" was Northeast Savings of Hartford, the 10th-largest holder of Junk bonds. The other thrift for which the GAO did not collect data was excluded because it "did not respond to our contacts."

We independently identified all of the thrifts in the GAO sample and determined that this noncooperating thrift was none other than Lincoln Savings and Loan of Irvine, Calif., the fifth-largest holder of junk bonds at that time.

In fact, a previous February 1988 GAO study of seven California thrifts with large junk

COMMENT
Limitations Seen In GAO Report

Continued from *page 12*

bond holdings also excluded data on Lincoln, but no reason was given at that time. The refusal of Lincoln to cooperate with the GAO studies allowed that thrift to keep secret the details of its junk bond portfolio and policies. Lincoln's failure to respond to the GAO's contacts should have motivated this watchdog agency to pursue the study of this maverick with even greater vigor, rather than walk away – as the GAO apparently did.

Soundness Issue Bypassed

9. The GAO failed to examine the generally unfavorable financial condition and risk profiles of the major thrift junk bond investors it surveyed.

After independently identifying all 11 of the thrifts in the GAO study, we proceeded to examine their respective financial performance. We considered the 11 surveyed thrifts plus the two excluded by the GAO.

Almost all of the resultant 13 major thrift junk bond holders, which represented 82% of all thrift junk bond investments at that time, were underperforming ones. Specifically, six of the 13 were insolvent, in conservatorship, or otherwise troubled last year. Six of the remaining seven had overall "below average" financial ratios.

The condition of these 13 thrifts has significantly worsened, and only five of the original 13 have yet to be taken over by the government. Those five are considered below-average performers, with some being highly likely government takeover candidates.

To examine the thrift junk bond investors without evaluating their overall financial condition and health to determine any important patterns or relationships is indeed a limitation of the GAO study. The GAO should have pursued an in-depth investigation of the overall performance of each thrift and related it to that company's junk bond investment strategy.

Such an analysis would have pointed out the high-risk profile nature of such thrifts and the likely consequences for them, especially those that did an inadequate job of junk bond risk portfolio management.

"The GAO's conclusion that junk bond have been "good investments" for thrifts after accounting for comparative risk is a questionable one."

Points of Agreement

The GAO's economic analysis of thrift junk bond investments was fatally flawed for the nine reasons mentioned above. The GAO, however, was correct on two counts. These two counts have been the junk bond lobby's rallying cry since the GAO study was released and widely publicized.

First, the GAO was correct in noting that junk bonds had yet to cause any thrift to fail at that time. Although true for 1989, this is no longer the case with the failure of CenTrust Bank, which we predict will be the costliest thrift failure of all time.

Imperial Bank was the second thrift to fail primarily as a result of its junk bonds. Moreover, many failed thrifts (e.g., City Federal and both Gibraltar and Lincoln of California) had substantial junk bond portfolios, assembled in some cases as "end-of-game" plays.

"The GAO report failed to collect data from two of the top 10 thrift holders of junk bonds."

Concern for the Future

Second, the GAO was correct in noting that junk bonds did not cause the thrift crisis. But, we agree with many market observers that we should be more concerned about preventing the next thrift crisis. The RTC already holds nearly $4 billion in junk bonds from failed thrifts. We estimate that the government will become the largest single holder of junk bonds.

The junk bond lobby's (but not the GAO's), latest claim has been that Congress' thrift junk bond prohibition "caused" the junk bond crisis. Repeated editorials in *The Wall Street Journal* have similarly blamed Congress for the junk bond market's collapse.

A gradual selloff by a handful of thrifts with a roughly 7% market share can hardly be blamed. Congress had nothing to do with the two major shocks last June and September, namely Integrated Resources and Campeau, respectively, that precipitated the downfall of the junk bond market. Maybe a secondary "aftershock" impact but nowhere near being the cause of the problem.

Rather than blaming Congress for the junk bond crisis, the junk bond lobby and other observers should face up to the fact that it was just a matter of time before such "market corrections" resulted from grossly mispriced corporate debt obligations. Unfortunately, we believe we have yet to see the last of such market corrections. □

California Real Estate Slowdown Expected to Be Moderate

By MARGUERITE NUGENT
Reuters

LOS ANGELES — Sky-high California property values have fallen prey to a national economic slowdown, but industry experts say the state will sidestep the full-blown real estate downturn under way in other parts of the nation.

To be sure, parts of California are showing the strains of a housing market that jumped as high as 30% a year in the late 1980s – leaving homes out of reach of many buyers.

Economists are also concerned about the rising level of vacancy rates for office buildings, hotels, and shopping malls, which have glutted the market and gone begging for tenants.

Slump Seen Ending in 1991

Still, "this is not a crisis," said Joseph Wahed, chief economist at San Francisco-based Wells Fargo Bank. Although Mr. Wahed expects little improvement in the commercial real estate market over the next year, he said the slowdown in the housing market should end in 1991.

"The real estate sector has clearly slowed," said Robert Parry, president of the Federal Reserve Bank of San Francisco.

"Price appreciation in certain geographical areas and in certain market segments has actually declined."

But he described the situation as a pause in the market, or a flattening out, rather than the beginning of any sharp decline.

Investors on the Watch

Despite that optimism, investors are carefully watching California to see whether the real estate recession under way in the Northeast will jump the continent and hit the West Coast.

Nowhere is this more evident than in the share prices of the state's four large banks, which have fallen sharply as the problem loans of Northeastern banks have mounted, casting a shadow over the entire industry.

San Francisco-based Wells Fargo & Co. has been hit hard, as has Security Pacific Corp. of Los Angeles, albeit to a slightly lesser degree. BankAmerica Corp. of San Francisco and First Interstate Bancorp of Los Angeles have also felt the impact.

An Eye on Writedowns

While banking analysts believe all four of the major banks have protected themselves from potential real estate losses, investors remain wary. This is especially true now that some of the state's savings and loan associations, such as San Diego-based HomeFed Corp., have had to write down the value of many of the real estate loans in California.

But economists are concerned about rising vacancy rates for office buildings, hotels, and shopping malls.

Adding to the uneasiness has been a spate of announcements of big layoffs by defense contractors, such as McDonnell Douglas Corp., Lockheed Corp. and Northrop Corp., which account for a huge chunk of the state's economy.

Already, economists say, the housing markets in Los Angeles, San Diego and the San Francisco Bay Area are showing signs of weakness.

However, they say that values in the inland areas, such as Sacramento and the Central Valley in the north, are rising, helped along by more reasonable prices than in other areas. Condominium prices and sales are also gaining statewide.

"We [California] have been slowing for the past year because of the escalation in the market in 1988 and 1989," said Leslie Appleton-Young, vice president of research and economics at the California Association of Realtors, which is based in Los Angeles.

During the boom period, houses were on the market for an average of about four months before being sold, compared with a historical average of 11 to 12 months.

Sales Rate Was High

Single-family homes during the period were selling at a rate of about 600,000 a year, while prices increased 30 to 35% each year.

In the past months, home sales have slowed and prices have started to come down. The California Association of Realtors said home sales dipped 5.2% in June from the May level and 10.2% below sales in June 1989.

In June, the median price for a single-family home was $194,821, which was 0.6% below the median price for May and 2.3% below the price a year earlier. At the median price, half of all sales sell above that price and half below.

Incomes Need to Catch Up

"What we are seeing is an adjustment period, when buyers' incomes catch up with home prices," said Ms. Appleton-Young. Although she doubts that home sales will return to the high levels of 1988 and 1989 period, she does not see them falling to the levels of the 1982 recession.

The commercial property market is perhaps the most worrisome, largely because of continued high vacancy rates.

"The commercial property market has been in a recession for the past three or four years and is likely to remain high for the next few years," said Wells Fargo's Mr. Wahed.

"But this is not a crisis. And while the rates are high, they are not nearly as high as they are in other troubled real estate markets like Texas, Arizona, and the Northeast," the Wells Fargo executive said.

LIFE TODAY

Seidman: Realty Ills Unlikely To Cause Wide Bank Failures

By DONNA SMITH
Reuters

WASHINGTON — Real estate markets are in trouble nationwide and lenders will be suffering some losses, but Federal Deposit Insurance Corp. Chairman L. William Seidman says he does not see those problems causing widespread bank failures.

"Right now we don't see many banks that can't handle the kinds of losses that they're going to have," Mr. Seidman said in an interview this week. "They are going to show losses, but they are not going to fail."

Real estate prices have softened nationwide, with commercial properties and high-priced homes suffering from a lack of buyers, Mr. Seidman said.

Problems Are Nationwide

"There are very few parts of the country that are not having some problems in real estate," he added. New England in particular has been suffering from a deteriorating real estate market, putting some banks in trouble.

Whether other banks suffer similar problems depends largely on how long the recession in the real estate market continues and whether the downturn spreads throughout the economy, Mr. Seidman said.

The deposit insurance fund is expected to lose about $2 billion this year after years of record bank failures. The fund totaled $13.2 billion at the end of 1989.

FDIC Fund Ratio at Low Point

The loss would bring the ratio of the fund to insured deposits to about 50 cents per $100 of deposits, its lowest level in the FDIC's 56-year history. Mr. Seidman said it will be years before the fund is restored to the $1.25 level deemed safe by the savings and loan bailout legislation signed into law last year.

The board voted Tuesday to raise insurance premiums to shore up the fund.

The number of bank failures so far this year, at 118, is behind last year's at this time. But Mr. Seidman said he expects the number of failures this year to total 200, about the same as last year.

Interest Rates Hold the Key

The key to the health of the banking industry and the success of the government cleanup of the savings and loan industry is interest rates, Mr. Seidman said.

Oil price increases following Iraq's invasion of Kuwait have brought fresh inflationary pressures to the economy and raised chances of a recession, economists have suggested. While higher oil prices may help real estate values in oil-producing states like Texas, where the RTC has substantial property holdings, inflation could bring higher interest rates and more problems for the banking industry, Mr. Seidman said.

"I do think the bottom line on the adverse effect is if it results in substantially increased interest rates. Because those clearly increase our costs, it will increase the chance of institutions failing and reduce the market for the assets we're selling," Mr. Seidman said.

Mr. Seidman said he expects to resolve about 40% of the RTC's expected caseload by the end of this year and have about 75% completed by the end of next year. □

Pittsburgh Home Loan Bank Reports Interest from Banks

By TOM LEANDER

Some Pittsburgh-area banks appear to have a keen interest in joining their local Federal Home Loan Bank to secure low-cost funding.

Iron and Glass Bank, a subsidiary of Iron and Glass Bancorp, disclosed this week that it has been accepted as a member of the thrift agency. And a spokeswoman for the federal regional bank said that a major bank in its jurisdiction is negotiating to become a member.

Major Bank in Talks

The spokeswoman would not name the bank or say whether it is based in Pennsylvania, West Virginia, or Delaware. "It's not the largest," said Rosemary A. Abendroth, "but it's a large company in the area."

Ms. Abendroth also said the Home Loan Bank expected to approve applications from two small commercial banks and a credit union in coming weeks. Ten commercial bank applications are pending at the system's Pittsburgh branch, she said.

Analysts said the commercial banking companies most likely to join the Pittsburgh Home Loan Bank were Integra Financial Corp. and Equimark Corp., both of Pittsburgh. Integra has 15% of its $7.6 billion in assets in one- to four-family homes; Equimark, 18.5%, according to James Marks of SNL Securities.

"It's a large company in the area."
Rosemary A. Abendroth
Pittsburgh Home Loan Bank

Officials at both banks were unavailable for comment.

Analysts ruled out the banking subsidiary of Mellon Bank Corp., second-largest bank in the region. It has only 3.4% of its assets in residential home mortgages.

The Federal Home Loan Bank system, which offers a cheaper source of funds than the Federal Reserve's discount window, is proving popular with small banks around the country. Twenty-five community banks in the past year have joined the system, which was set up to give thrifts low-cost funding.

The troubled Boston-based subsidiary of Bank of New England Corp. is negotiating to join the system, but to date, no major commercial bank has been accepted.

Before the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, the Federal Home Loan Bank system's membership was limited to savings and loans. The new law, however, expanded eligibility to commercial banks and credit unions with at least 10% of their assets in residential mortgage loans.

Iron and Glass' residential mortgage portfolio is $13 million, or 12% of total assets.

Iron and Glass, a community bank with $116 million in assets, is the second bank to join the Pittsburgh Home Loan Bank. First National Bank of Keystone, W.Va., joined last month. □

Chief Enforcer To Leave OTS

Continued from *page 2*

the Lincoln case, which will cost an estimated $2 billion to resolve.

"She probably said, 'Enough is enough,'" said one attorney who worked closely with her. Ms. Stewart could not be reached for comment at press time. OTS spokesman William Fulwider said only that Ms. Stewart was not asked to resign.

Ms. Stewart has kept a low profile since November 1989, when she was called on the carpet during a House Banking Committee investigation of the government's two-year delay in shutting Lincoln Savings. The Irvine, Calif., thrift owned by American Continental Corp. and its chairman, Charles H. Keating Jr., was closed on April 14, 1989.

Ms. Stewart is the last of the front-line decisionmakers on the Lincoln case to exit the agency. The congressional probe brought down OTS chairman M. Danny Wall and prompted the reassignment of another key official, regulatory chief Darrel Dochow.

Linkage to Lincoln

It was Ms. Stewart who concluded in July 1987 that Lincoln could not be seized by the government, overriding the recommendations of Lincoln's supervisors at the Federal Home Loan Bank of San Francisco, according to a supervisory chronology released by the OTS.

In the regulatory scramble that followed, Lincoln in May 1988 negotiated a settlement with the Federal Home Loan Bank Board, OTS's predecessor, that stripped San Francisco of its jurisdiction over the S&L.

Ms. Stewart's name was so closely linked to the Lincoln fiasco that Bank Board wags dubbed it "Rosemary's baby."

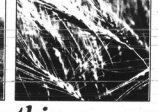
"It's a matter of record that a lot of the committee was highly critical of her work on Lincoln," said Joseph Lewis, an aide to House Banking Committee Chairman Henry B. Gonzalez.

Ms. Stewart gets high marks from her colleagues.

"I've known her for many years, and have nothing but the highest regard for her abilities as a lawyer," said Thomas Long, the Jones Day partner who hired her. □

If you have a secured interest in

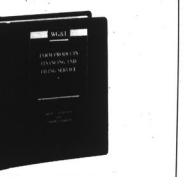
this...



this...

or even this...

here's how to protect it.



It used to be that when you made a secured loan to a producer of farm products, your interest was automatically protected by the farm products exception of the UCC.

Then came Section 1631.

Now you have to give *actual notice* that a farm product is serving as collateral against a loan. And because each state has its own notification system, there are literally *fifty* sets of rules and regulations that you must comply with. Or you risk losing your protection.

Cause for concern, but not for alarm.

Because now, **Farm Products Financing and Filing Service** gives you all the information you need to ensure that your secured interests in farm products are protected under Section 1631.

This is the only in-depth examination of Section 1631 available. It analyzes all the legal issues surrounding the allocation of risks among lenders, buyers, selling agents and commission merchants. Examines the two notification systems Section 1631 creates—PNS and CNS. And offers practical guidance on how to file valid PNS and CNS notices—including sample forms and schedules for state CNSs.

And since Section 1631 is in its infancy, and litigation and changes to its requirements will no doubt occur, **Farm Products Financing and Filing Service** is updated three times a year with special supplements that keep you apprised of *any* new developments and changes.

Call now for more information. Or to receive a copy to examine for 30 days without obligation.

Call 1-800-950-1210 now.

1988 Sale of 200 Failed Thrifts Cost Taxpayers $4.6 Billion

Continued from *page 1*

is a conglomeration of failed institutions with about $10 billion of assets.

Quarterly Reimbursements

The assistance payments, detailed in a report by the division of the Federal Deposit Insurance Corp. that now handles the operations of the defunct Federal Savings and Loan Insurance Corp., represent quarterly cash "reimbursements" to investors.

The size of the payments depends on the terms of contracts that committed the FSLIC to make up the difference between targeted returns on the investors' business and the sick thrifts' actual performance.

"We are operating as a recycling operation for all the junk of America," said Thomas J. Wageman, president of Sunbelt, defending the taxpayer payments to the thrifts. "We're supposed to create a value out of this for the insurance fund, for a reasonable return."

Fast Pace of Sales

Mr. Wageman said more was paid into Sunbelt than others because of the pace at which it has been disposing of assets. He said Sunbelt receives a payment each quarter for "capital loss coverage," representing the loss on each asset sold.

To date, Mr. Wageman said, Sunbelt has sold more than $465 million of assets, most of that during 1989.

> **"We are operating as a recycling operation for all the junk of America. We're supposed to create value of this for the insurance fund."**

"We think we got less than anybody in yield maintenance," he said, referring to another form of assistance that was used in most of the deals.

A staff member of the House Committee on Banking, Finance, and Urban Affairs who is preparing for a hearing next month on the deals, said virtually all of them relied at least in part on grants of yield maintenance.

"It's a cash-poor way of doing business," he said, adding that "you don't see the Resolution Trust Corp. doing yield maintenance at all, although they do allow acquirers a free look at assets."

By offering guarantees that assets would continue to provide investors a spread over their cost of funds, the cash-strapped Federal Home Loan Bank Board was able to sweeten the pot without putting any money up front, the staff member said.

The Bank Board used the prospects of tax benefits to attract investors, he said, and the generous yield maintenance gave the investors profits against which to charge the benefits.

Incentives Questioned

But yield maintenance also entails "perverse incentives" for the acquirer to keep bad assets on the books, the congressional staff member noted.

In addition to capital loss coverage and yield maintenance, the assistance packages in the 1988 deals included promissory notes from the FSLIC to bring the institutions' net worths up to zero.

In some cases, as with the acquisitions by Ford's First Nationwide Bank, acquirers agreed to pay back part of the tax benefit resulting from past losses of their thrifts, and that amount was subtracted from those acquirers' cash assistance payment.

Aid Level Was $185 Million

First Nationwide, which made several sizable acquisitions from FSLIC in 1988, received $185 million in assistance in 1988.

Bluebonnet Savings Bank, controversial lately because of questions about the business background of its buyer, James B. Fail, received $169 million of assistance in 1989.

First Gibraltar Bank, Dallas, was acquired by a group led by Ronald Perelman in a deal that was criticized as overly generous for granting about $600 million of tax benefits. The direct aid received in 1989 was $483.4 million, second only to Sunbelt's amount.

And the government paid $372.3 million to United Savings Association of Texas, Houston, a thrift controlled by mortgage-securities guru Lewis S. Ranieri.

Some Have Failed

While these thrifts have used the assistance to post impressive profits, the government also funneled taxpayer money into a handful of institutions that have failed despite assistance, notably Southwest Savings Association, Dallas, which received $273 million.

"When it's all over, a lot depends on real estate markets," said former Federal Home LoanBank Board member Roger Martin, who argued the Bank Board's method, necessitated by a lack of cash, is proving better than the methods used by the Resolution Trust Corp.

"By leaving the assets with the acquirer, we're paying yield maintenance, sure, but you have in place the people who are going to move those assets," Mr. Martin said. "Now think about the RTC. We're about 12 months into this, and they haven't sold much of anything."

"The issue" Mr. Wageman of Sunbelt said, "is, are we doing it better than the government." □

DEPOSIT INSURANCE SHOCK TREATMENT

THE FDIC Watch

THIS WEEK

OCC's Clarke Vows Consistency In Real Estate Examinations

Fed's New Capital Guidelines Tougher Than OCC Proposal

When the FDIC announced August 14 that bank deposit insurance premiums would increase 63%, subscribers to *The FDIC Watch* were not shocked. They were warned in advance by a report in the July 20 issue, and the actual percentage increase was cited in the August 10 issue. Months in advance, readers learned of the bank insurance fund's woes, and of the federal budget pressures that would force the FDIC to raise insurance rates.

Now more than ever, you can't afford to be without *The FDIC Watch*. This weekly service from the publishers of the *American Banker* provides exclusive coverage of the nation's most powerful financial services regulator, with insightful analysis of developing regulatory and legislative issues, and a detailed ledger of bank regulation.

To avoid future shocks, call today to begin a no-risk subscription and review four issues under no obligation.

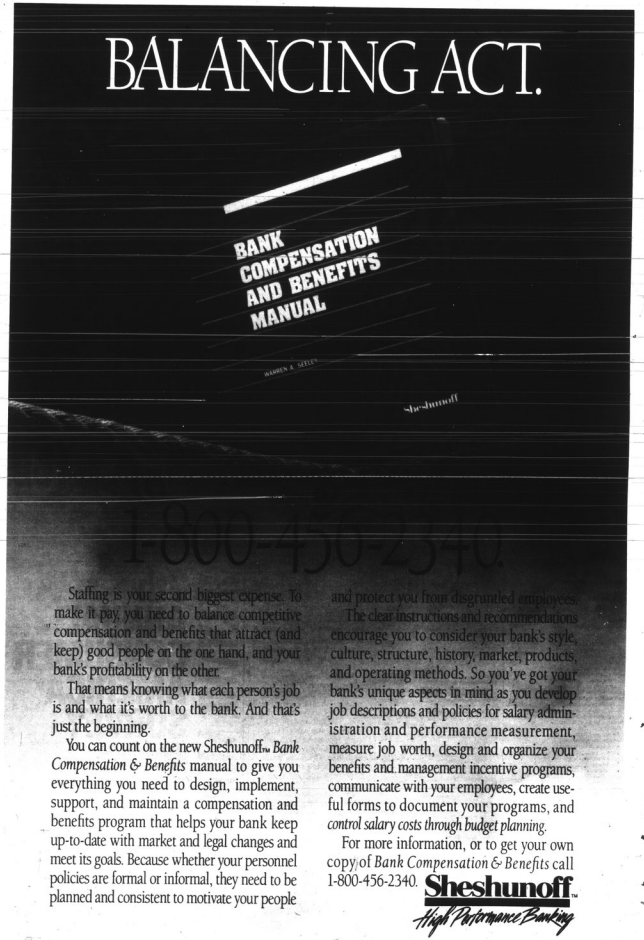
For Bankers Who Mean Business.
Commercial Real Estate
Every Tuesday in AMERICAN BANKER

BALANCING ACT.



Staffing is your second biggest expense. To make it pay, you need to balance competitive compensation and benefits that attract (and keep) good people on the one hand, and your bank's profitability on the other.

That means knowing what each person's job is and what it's worth to the bank. And that's just the beginning.

You can count on the new Sheshunoff™ *Bank Compensation & Benefits* manual to give you everything you need to design, implement, support, and maintain a compensation and benefits program that helps your bank keep up-to-date with market and legal changes and meet its goals. Because whether your personnel policies are formal or informal, they need to be planned and consistent to motivate your people and protect you from disgruntled employees.

The clear instructions and recommendations encourage you to consider your bank's style, culture, structure, history, market, products, and operating methods. So you've got your bank's unique aspects in mind as you develop job descriptions and policies for salary administration and performance measurement, measure job worth, design and organize your benefits and management incentive programs, communicate with your employees, create useful forms to document your programs, and *control salary costs through budget planning.*

For more information, or to get your own copy of *Bank Compensation & Benefits* call 1-800-456-2340. **Sheshunoff**™ *High Performance Banking*

Banks in West May Start to Feel Effects of Slower Economy

Continued from page 1

full year, followed by 1.1% in 1991 and 1.5% in 1992.

The state's long-predicted real estate slump seems to be under way, affecting both the housing and office markets.

Home prices are beyond the reach of four out of five Californians. As a result, new construction is in a free fall, off more than 40% since the beginning of the year.

For months, office vacancies have been near 20% in much of Southern California. Commercial rents have started to fall in some markets, and several major building projects have been foreclosed.

Ameliorating Factors

Analysts said California's diversified economy and growing population should soften the effects of a real estate recession. "The signs are ominous," said Mr. Soter. "But California does not have the kind of downside risk of Connecticut or Massachusetts."

Although several large California thrifts have reported big real estate losses, the slump has not yet cut deeply into the profits of most banks. Earnings trends were mixed for banks headquartered in the state.

Sumitomo Bank of California, majority owned by Japan's Sumitomo Bank Ltd., reported a 38.3% increase over the second quarter of 1989, a result of improved interest margins and good expense control.

Moderate Increases Posted

Security Pacific Corp.; Wells Fargo & Co.; Union Bank, 77% owned by the Bank of Tokyo; and the Bank of California registered moderate increases in operating income. Improvement at the Bank of California, a unit of Japan's Mitsubishi Bank Ltd., came despite a 63.3% rise in problem real estate assets to $116 million.

Net income was down 12.2% at BankAmerica Corp. to $267 million, largely because last year's second quarter included $54 million in Brazilian interest payments.

City National Corp. said lower interest margins reduced operating earnings about 1%. First Interstate Bancorp and Sanwa Bank of California also reported earnings declines from the year before.

Among big California-based banks, Security Pacific, Wells Fargo, and Union experienced small increases in nonperforming real estate assets in the second quarter.

Problem Assets Seen Rising

Nonperforming construction and commercial mortgage credits declined at BankAmerica and First Interstate. But, in a statement accompanying its second-quarter earnings report, First Interstate warned that problem assets "are likely to increase" at its California bank if the state's real estate market continues to weaken.

In other parts of the West, bank results reflected widely varying regional economies.

With foreign trade strong and the technology and commercial aircraft industries humming, the Pacific Northwest is the one part of the continental U.S. where the economy can still be called booming.

As a result, Portland, Ore.-based U.S. Bancorp, which operates the largest bank in Oregon and the third largest in Washington, boosted loans nearly 21% and net income 23% from last year's second quarter.

Even the Northwest showed signs of slowing, however. Job growth in the region is down from last year, prosperous Seattle faces its own commercial real estate slump with several downtown office towers facing foreclosure.

There was no sign of a downturn in Hawaii. As a Pacific Rim hub, the state continues to enjoy a commercial and tourism bonanza.

At Bancorp Hawaii, the state's largest banking company, assets and profits soared 26.3% and 16.8%, respectively. At No. 2 First Hawaiian Inc., assets were up 23.2% and 17.9%.

Arizona is still mired in the nation's worst real estate recession, which has pounded the state's financial institutions.

Although few observers will say definitively that Arizona's real estate market has turned the corner, there were signs of improvement at the state's largest banking company. Valley National Corp. reported modest earnings of $2 million in the second quarter, compared with a $83.2 million loss a year ago.

Valley's problem loans and foreclosed real estate both declined 3.6% from the second quarter of 1989. Although nonperforming assets still represented 7.3% of loans and foreclosed property, the drop was the first reported since the second quarter of 1988.

Valley's second-quarter loan-loss provision was $34.3 million, while net chargeoffs totaled $34 million. Loan-loss reserves at the end of the period represented 4.04% of total loans and 78.7% of nonaccrual credits. □

Thomson Exec To Step Down

NEW YORK — The Thomson Corp. said Wednesday that Robert J. Jachino would step down at yearend as corporate executive vice president and chief executive officer of the Information/Publishing Group, which is the parent of American Banker • Bond Buyer.

Michael Brown, president of the Thomson Corp., said Mr. Jachino had "asked to relinquish his executive role" after six years in the post. The Information/Publishing Group earned operating income of $325 million last year on revenue of $2 billion. Operating profit in the first half of 1990 was $108 million, up 46% from a year earlier.

Mr. Jachino said he wanted to scale back his travel commitments and spend more time with his family. He will retire as a Thomson Corp. director and take the role Jan. 1 of nonexecutive chairman of the Information/Publishing Group.

Robert C. Hall, currently chief executive officer of Thomson Financial Services, will move into Mr. Jachino's posts Jan. 1. Effective Sept. 1, Mr. Hall will be chief operating officer of the publishing group.

Bankers Back FDIC Move To Hike Rate

Continued from *page 3*

highest rate increase ever. Banks now pay 12 cents per $100 and had been expecting premiums to rise 3 cents to 15 cents on Jan. 1. Instead, the increase will total 7.5 cents.

The FDIC has been forced to step up the premiums because the fund has lost $5 billion in the past two years and could lose as much as $2 billion by the end of 1990. The Bank Insurance Fund has slipped to about 60 cents backing every $100 in insured deposits, the lowest level in its 56-year history.

FDIC Chairman L. William Seidman wanted an even larger increase, but said FDIC lawyers advised him 7.5 cents was the largest increase allowable by law in any one year.

He said that with premiums at 19.5 cents, it could still take five years to recapitalize the fund to a desirable ratio of $1.25 for every $100 in deposits.

In a letter Wednesday to Mr. Seidman, House Banking Committee Chairman Henry B. Gonzalez applauded the proposed premium increase, but said it was not enough. The Texas Democrat said he was considering a proposal to lift the current ceiling on annual premium increases, as well as the ceiling on designated insurance fund reserves.

"Given the present difficulties facing the Bank Insurance Fund," Mr. Gonzalez said, "do you think that the premium assessment should be raised to 0.23% [23 cents], the rate currently imposed on savings and loans?"

Reacting to the prospect of a 19.5-cent premium in 1991, a majority of bankers interviewed Wednesday appeared more than willing to pony up the extra fees if it means avoiding their sagging insurance fund.

"It is a conservative move," said James G. Lindley, chairman of Columbia-based South Carolina National Bank. "What I think we have to do is take the extra mile to promote a strong signal that the banking industry is going to support a strong fund. We are not going to let it deteriorate."

Still, some bankers were surprised at the steep increase and argued that the deposit-insurance system should have been reformed years ago.

Money-Centers Blamed

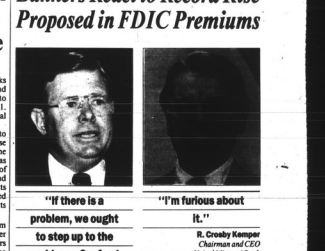
"I'm very upset that we're being penalized to pay for the frivolity and foolishness of the money-center banks," said R. Crosby Kemper, chairman and chief executive of Kansas City-based United Missouri Bank.

Carl J. Schmitt, chairman and chief executive of Community National Bank and Trust Co. in Palo Alto, Calif., said he hoped the increase would prompt the industry to operate more carefully.

"It is time that the industry shapes itself up a bit," he said.

Louis Gerhardstein of the Media Networks Service contributed to this story.

Bankers React to Record Rise Proposed in FDIC Premiums



"If there is a problem, we ought to step up to the problems. Our fund should handle it. . . . I don't think it will reduce our earnings 1%."

John B. McCoy
Chairman
Banc One Corp.
Columbus, Ohio

"I'm furious about it."

R. Crosby Kemper
Chairman and CEO
United Missouri Bank
Kansas City, Mo.

"We are sorry that it had to be done without a concurrent reform."

Joel R. Wells Jr.
Chairman
SunTrust Banks Inc.
Atlanta

"I think it is a conservative move. I think what they have done is gone the extra mile to promote a strong signal that the banking industry and the [FDIC] are going to support a strong fund."

James G. Lindley
Chairman
South Carolina National Bank
Columbia

"The most important thing is the safety and soundness of the system."

John W. Flynn
Vice chairman, CFO

Progress at Consolidated Freightways May Be Costly to Chemical Bank

By WILLIAM GOODWIN

A recent improvement in Consolidated Freightways Inc.'s operating results could mean the loss of a substantial piece of business for Chemical Bank.

In June, the Chemical Banking Corp. unit committed to provide $500 million of a new senior secured credit facility for Consolidated, and agreed to raise up to $360 million more on a best-efforts basis.

The new five-year loan package was to be used in part to replace an existing $300 million revolver from a group of banks led by Security Pacific National Bank.

Revolving Credit Terminated

Consolidated was restricted from drawing on the revolver because of the continuing losses at its Emery air freight subsidiary, which was acquired in April 1989. The revolver was terminated last month.

While the Emery operation continues to lose money, there are signs that it may have begun to turn the corner.

Emery's second-quarter operating loss narrowed to $30.9 million from $69.5 million in the first quarter, and the positive trend is continuing, a Consolidated Freightways spokesman said.

Cheaper Credit Considered

As a result of the improvement at Emery and the continued strong results from its trucking operations, Consolidated is reexamining the need for the $860 million credit, and is now discussing the possibility of obtaining a smaller, cheaper credit facility from three major money-center banks.

While the identity of the three money-center banks has not been disclosed, Chemical is not believed to be among them.

Chemical officials declined through a spokeswoman to comment on Consolidated. Chemical also refused to say whether it received a fee for the $500 million commitment, which remains in place.

Sustaining Relationship

Even if Chemical loses the business, it still has a relationship with Consolidated through a short-term $75 million revolving receivables purchase facility. That facility was provided in June.

Details of the proposed $860 million credit have been sketchy, but it is believed to consist of a term loan and revolver. It was designed to handle Consolidated's corporate financing requirements over the five-year period.

The credit facility also included payment of common dividends for the near term. As a result, Consolidated suspended dividend payments in June.

"As the company's financial condition continues to improve, the board of directors will consider reinstatement of dividends," the company said in a letter mailed to shareholders this week.

Sumitomo Trust Is Lender On Marriott Hotel Project

NEW YORK — Sumitomo Trust & Banking Co. has issued a $240 million, seven-year bullet loan to a limited partnership sponsored by Marriott Corp. to finance the Fairfield Inns, the economy lodge division that is the fastest-growing unit in the Marriott chain.

Marriott builds its hotels and sells them to such partnerships in order to get them off the books and avoid the impact of depreciating property on its earnings, a financial expressed concern over this strategy, given the softness of the hotel markets and the reluctance of American banks to finance hotel properties.

As is typical of its financings, Marriott is providing Sumitomo with a limited guarantee on the principal of the loan.

Mortgage-Backed Paper Sold to Cigna Insurance

National Cooperative Bank, Washington, sold $13.7 million of securities backed by commercial mortgage loans on 22 apartment buildings in New York and one in Washington to a unit of Cigna Corp.

The issue received an A rating from Duff & Phelps Inc. on the strength of the location of the cooperatively owned properties and the low loan-to-value ratios, according to a Duff & Phelps report.

The mortgage loans were made to finance improvements to cooperatively owned apartment buildings, said Daniel B. Campbell, assistance vice president in the treasury department of the cooperative bank.

Limit on Residential Lending

He said the bank routinely sells the loans it makes on residential properties because its nonresidential mandate caps its residential lending at 35% of assets.

The proceeds will be used for additional lending and for general corporate purposes.

As a credit enhancement to support the A rating, the bank is obligated to advance up to three months of principal and interest as a liquidity guarantee.

— Stephen Kleege

Get clear direction on how to make returned check imaging succeed.

Can digitized imaging of checks contribute as much to your bank's profitability as to back office productivity?

Trans Data has investigated the technology top to bottom. Consumer receptivity. How fees can generate income. How depositors' concerns can be overcome. When and how other banks will offer this service. Then, in a second phase, we took a hard look at how imaging can boost the quality of your service and increase back office profitability.

Now you can look at the answers before you put your bank to the test.

Make a cool analysis of a hot topic.

When digital images replace returned checks, you ask customers to accept a radically new way of doing business with your bank.

Trans Data's recently completed studies outline what the impact will be on consumers and your relationship with them. There's no clearer or faster way to understand all the marketing implications.

We've learned how willing customers are to pay for the service...and how much. They've told us how this technology may affect your image. And whether they'll switch their business to a bank that implements the technology before you do.

TRANS DATA
Research Division, American Banker • Bond Buyer

The savings begin immediately.

Mounting your own studies of technology and consumer attitudes could cost tens of thousands of dollars and valuable months of lead time.

But Trans Data, backed by a decade of rigorous experience in banking research, has anticipated your needs. Our already prepared studies are available immediately. So call now.

We'll point you in the direction of the best returns from returned check imaging.

For a prospectus, mail the coupon below or FAX to (301) 546-3836. Or call toll-free **1-800-456-3282**

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the total assets of their most recent annual reports as of June 30, 1990, the market value cutoff for banks was $56.71 mil. and for thrifts $127.8 mil.) 52 Wk Hi and Lo are the highest 52-week high and low prices for the stock. PE: the price-earnings ratio. It is the current stock price divided by the four-quarter earnings per share adjusted for latest announced earnings. Mkt. to book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. **Book value** is adjusted for announced earnings and dividends. Chg.: The price at which the stock last traded. If no trades for the day, the latest bid. **All Bank and Thrift Stocks:** Daily closing prices for the 250 banks and thrifts with market value of $56.71 million or more, respectively. Highlights show large percentage increases in price, and so may also indicate most shares traded and today's volume as a percentage of average shares traded the daily over last year.

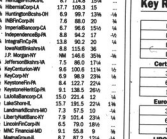
Data sources: SNL SECURITIES, Charlottesville, VA 804-977-1600; Standard Data, Financial News Network, Vienna, VA; provides SNL with the daily prices.

Libor Swap Yield Curve

August 8

Wednesday, August 15, 1990

August 15



Data source: Manufacturers Hanover Trust Co., New York

Description of table: For lenders and borrowers in interest rate swap market, the LIBOR swap yield curve is the benchmark interest rate used to active participants when arranging the exchange of fixed- and floating-rate cash flow streams of different maturities. For example, a fixed-rate lender holding a one-year fixed-rate loan and wishing to swap into floating would pay the one year rate at the end of a year in exchange for a floating-rate payment stream, usually 3-month LIBOR, paid and reset quarterly.

Price Slide May Signal Death of Maryland Merger

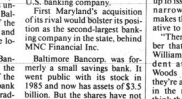
By GORDON MATTHEWS

Doubts are setting in about the likelihood that First Maryland Bancorp will pursue its unsolicited $17-a-share bid for Baltimore Bancorp., in light of the decline in bank stock prices and the growing weakness in the local real estate market.

The stock of Baltimore Bancorp. has fallen steadily in the past few weeks, a victim of the general anemia afflicting bank equities. On Wednesday it traded unchanged at $8.875, an astonishing 47% below the offer by First Maryland, which is a subsidiary of Allied Irish Banks PLC.

Baltimore Bancorp. On Roller Coaster Ride

Price per common share.



"Obviously nobody thinks the deal is still on, or the stock wouldn't be trading that low. It's been several months, and we haven't seen further steps by First Maryland," said Lacy M. Shockley, banking industry analyst at Smith Barney, Harris Upham & Co., New York.

Worse Drop Than Average

The stock's 25% tumble since the end of the first quarter has been even worse than that of banks in general. Over the same period, the *American Banker* index of the 225 largest publicly traded bank stocks has declined 15%.

Baltimore Bancorp. sharply rejected the offer, saying it wanted to remain independent. But some shareholders have asked the company to reconsider and have written letters to the board of directors.

Some observers suspect that the slowdown in the real estate market and local economy in the Baltimore-Washington area and stricter examinations by bank regulators have dampened enthusiasm for dealmaking at First Maryland.

A spokeswoman for First Maryland said Wednesday that the offer remains on the table but declined to say when or how the company might pursue it. She also declined to comment when asked if the bank was currently being examined by the Office of the Comptroller of the Currency.

The stock was trading at around $10 when the $17-a-share offer was made on April 30. It jumped to $15.25 on the news but has eroded steadily since then, except for a small uptick in late May when First Maryland said it might raise the bid.

The offer is believed to be the first hostile attempt by a foreign banking company to acquire a U.S. banking company.

First Maryland's acquisition of its rival would bolster its position as the second-largest banking company in the state, behind MNC Financial Inc.

Baltimore Bancorp. was formerly a small savings bank. It went public with its stock in 1985 and now has assets of $3.3 billion. But the shares have not performed well in the past three years as the company has struggled to achieve higher efficiency and profitability.

MARKET MONITOR

Major bank and thrift stocks were mixed and mostly traded in a narrow range on Wednesday, appearing to mark time along with the rest of the stock market as news of further developments was awaited from the Middle East.

"There is nothing new about bank stocks for the moment and they are at a standstill for the time being," said one analyst. Volume in most of the bank and thrift issues was small.

J.P. Morgan & Co., the nation's premier money-center institution, was off 62.5 cents to $35.125, while Citicorp, the country's largest bank, was off 25 cents to $20.

The largest decline in late afternoon trading was posted by Texas Commerce Bancshares, Houston. Its shares, off $1 to $19.75, appeared to be giving back some of the gains they tallied on early news of Iraq's invasion of Kuwait and the subsequent upward spike in oil prices. □

CAPITAL

Banks Gearing Up to Tap Debt Markets

By FRED VOGELSTEIN

Despite a rise in Treasury bond rates spurred by the Iraqi invasion of Kuwait, experts say the recent spate of shelf offerings suggests that banks are gearing up to issue debt. And the modest narrowing of bond spreads makes the financing cheaper relative to Treasuries.

"There seem to be a fair number that want to get in," said William J. Downes, a vice president at Keefe, Bruyette & Woods Inc. "I'm not saying they're all going to want to issue in the next two weeks, but I think they will pick a number of points to issue between now and the end of the year."

Banks have been dipping their toes in the debt markets since the beginning of summer. Bank-America Corp., Bankers Trust New York Corp., NCNB Corp., and First Chicago Corp. have issued a total of $750 million in subordinated debt since June.

More May Test Waters

But with talk of interest rate easing by the Federal Reserve Board, continued pressure on bank capital ratios, and the dearth of supply in bank debt, experts say more and more are thinking of taking the plunge.

"A lot of issuers would like to come in at what spreads are now," said Richard Kendrick, syndicate manager at Donaldson, Lufkin & Jenrette.

In fact, Banc One Corp. was in the market on Tuesday, successfully selling a $200 million offering of 20-year bonds through Salomon Brothers Inc. that is expected to be priced today at about 140 basis points over 20-year Treasuries.

Mr. Kendrick noted that spreads have narrowed in selected credits, signaling that some institutions, such as Barnett Banks Inc., should consider issuing debt now before spreads widen.

Bank Bond Spreads Tighten Marginally

Spread over 10-year Treasury bonds, in basis points, for selected bank issuers

	July 24	Aug. 7	Aug. 15
Barnett Banks Inc. 8.5% debentures of 1999	180	180	170
Bankers Trust New York Corp. 9.5% debentures of 2000	135	135	130
Chemical Banking Corp. 8.75% debentures of 2000	375	385	365

Source: Keefe, Bruyette & Woods

He said banks could move fast when they see an opportunity to issue because it will evaporate quickly. They may not want to issue tomorrow, but if the Fed eases and the Treasury market rallies, only a few banks will be able to get into the market before the spread between bank bonds and Treasuries gets wide.

Spreads on the debt of Barnett Banks have narrowed versus 10-year Treasuries around 10 basis points in recent weeks, according to Keefe Bruyette, while spreads on Bankers Trust debt were about 5 basis points tighter. Some debt of Chemical Bank's narrowed as much as 60 basis points.

The pace of shelf filings has clearly picked up. Banc One, Columbus, Ohio, filed a shelf at the end of July that for $300 million in subordinated debt as part of its effort to raise funds for acquisitions, and Barnett Banks last Friday filed a shelf for $100 million in debt for general corporate purposes.

Others Filing Recently

Other banks recently filing shelf registrations are Bankers Trust New York Corp., Chemical Banking Corp., and Great Western Financial Corp.

Not everyone, however, believes the spate of shelf filings is meaningful.

"The banks that sorely need capital are capped out on subordinated debt," Anne McDermott, an analyst at Kidder, Peabody & Co. "What they need is equity, which is impossible to raise given the depressed state of bank stock prices."

Ms. McDermott acknowledged the flurry of shelf registrations that have been filed recently but said that since they are good for two years, they don't necessarily mean a flurry of offerings is imminent.

MARKET MONITOR

Standard & Poor's Corp. downgraded the ratings of Continental Bank Corp. on Wednesday, citing the erosion of core profitability "as a result of a lower volume of transactions, particularly for leveraged buyout financings."

The bank's senior debt was dropped from BBB-plus to BBB; the preferred stock rating fell from BBB-minus to BB; and its commercial paper rating was affirmed at A-2. About $1 billion in securities are affected.

S&P added that it is "concerned about Continental's large exposure to highly leveraged transactions and the recent deterioration in that portfolio's asset quality," factors that are an adequate level of capital and full reserves for the remaining exposure to lesser-developed countries. □

Security Pacific Agrees to Exit South African ADRs

By TERESA CARSON

LOS ANGELES — Security Pacific Corp. said it would stop backing South African securities after a union put pressure on the company.

But Security Pacific charges that Amalgamated Clothing and Textile Workers Union has a hidden agenda. The union has been in a dispute with Security Pacific over the fate of Health-tex Inc., New York, a big maker of children's clothing. The textile workers have charged that Security Pacific is trying to liquidate Health-tex. Security Pacific was one of a group of banks that helped finance a leveraged buyout of Health-tex in 1985.

'A Very Small Player'

"It strikes us as a little strange that they have picked Security Pacific for this type of action, since we are a very small player in this market," Russell A. Freeman, Security Pacific's executive vice president and general counsel said in an interview.

At issue is Security Pacific's involvement in the market for American depositary receipts, certificates that represent securities in foreign companies. Foreign stocks that do not trade in the United States can be deposited with a bank, which issues depositary receipts representing those interests. The ADRs can be traded in U.S. markets and pay the dividends of the underlying stocks.

> **"It strikes us as a little strange that they have picked Security Pacific for this type of action, since we are a very small player in this market."**
>
> **Russell A. Freeman**
> *Security Pacific Corp.*

Security Pacific maintains that these ADRs do not benefit the South African companies. Still, the bank decided to pull out of the market.

"To avoid the appearance that Security Pacific might be even indirectly supporting apartheid, we are taking steps to withdraw from our existing ADR business involving South African securities and no new depositary agreements will be accepted for ADRs involving South Africa securities," Mr. Freeman wrote in a letter to the union.

"Your actions appear to be motivated more by a desire to seek retribution against Security Pacific for its participation in the Health-tex matter, rather than a commitment to eliminate apartheid," Mr. Freeman said.

"Security Pacific is trying to dodge the issue," said Damon A. Silvers, international representative for the textile workers union.

Bank's Allegations Denied

"We have been very active on apartheid issues," Mr. Silvers said, "this has no connection with Health-tex." He said Security Pacific was selected for action because they had gone into the business most recently of all the American banks.

Mr. Freeman said the bank has no timetable for withdrawing from this business and is exploring ways to exit. □

Why Did Fed Finally Reject Northeast Deal?

By GORDON MATTHEWS and BARBARA REHM

NEW YORK — The Federal Reserve Board rejection of Bank of New York Co.'s foot-dragging bid to acquire Northeast Bancorp probably stifles what life was left in the moribund bank merger and acquisition scene.

The question some observers are now asking is whether the Fed has raised the capital requirement for bank mergers.

"I doubt if too many years are being shed at Bank of New York over this, but the message here may be that regulators right now will not approve any deal in which capital ratios are weakened, even when they don't go below the minimum limits," said Felice M. Gelman, a bank analyst at Dillon Read & Co.

Meanwhile, Northeast, based in Stamford, Conn., signaled that it is not yet ready to give up the fight. It asserted Thursday that Bank of New York deliberately filed an incomplete application with the Fed to ensure that the deal would be rejected.

'Breach of Contract'

"Northeast believes that the lack of a proper capital plan within the application constitutes a breach of contract, and it will decide within the next few days whether to pursue legal action," Frank J. Kugler Jr., its chairman, said in a statement.

"We were not asked by the Fed to submit a capital plan," responded a spokesman for Bank of New York. "Moreover, the management at Northeast saw this application before it went to the Fed, and we did not previously hear from them that it was incomplete."

The Fed operates mainly behind closed doors. So industry sources were unsure Thursday whether the Bank of New York order, released late Wednesday, signaled that the Fed is applying a higher capital standard to acquisition requests.

Reading Fed Intentions

"I think the Fed has been intensifying, but I'm not sure whether it is an increase or not," said a former Fed governor, who did not want to be named. "The Fed is clearly committed to high capital, but I don't think there is a specific level. I think they do it on a case-by-case basis."

About the only clear implication is that "the Fed doesn't like large cash deals," said Mark

WORK IN PROGRESS: Citibank's branch at 55 Wall St. was closed Thursday as Consolidated Edison toiled to restore power in the fourth day of a blackout in the heart of the financial district.

Citibank Works to Bring Accounts Up to Date After Generator Failure

By KAREN GULLO

NEW YORK — Citibank scrambled to update customers' accounts Thursday after bringing in additional generators to restore back-office computer systems for its New York City branches.

A power outage in New York's financial district has become an operational nightmare for the giant bank, affecting key computer systems supporting correspondent and retail banking operations and customer service.

The systems failure delayed posting of withdrawals and deposits to consumers' accounts, but the number of accounts affected could not be determined. Corporate accounts were affected to a lesser degree, bank officials said.

"We're doing catch up right now, but we're almost completely caught up," said Daniel J. Denaci, vice president in charge of retail banking for Citibank in south Manhattan. He said account activity had been posted through Tuesday.

Two Citibank branches, including one at 55 Wall Street, remained closed Thursday because power had not been restored three days after a fire destroyed a utility station operated by Consolidated Edison Co. in lower Manhattan. Customers were diverted to other branches in the area.

Operations for the retail and correspondent banking systems were disrupted Wednesday when a backup generator failed at the bank's downtown Manhattan processing site at 111

Fed Wire Disrupted, Is Moved to Backup Site

By JEANNE IIDA

NEW YORK — A backup generator at the Federal Reserve Bank of New York failed Thursday morning, disrupting the Fed's nationwide wire-transfer system and adding more confusion to a federal funds trading market already in turmoil following a blackout in Lower Manhattan earlier this week.

The Fed's wire network, which processes more than $900 billion in payments a day, opened two-and-a-half hours late as officials scrambled to move operations to a backup site 24 miles north of the city.

Payment Bottleneck

Corporate and interbank payments faced bottlenecks as the tedious process of linking users to the new site slowed operations well into the afternoon. The Fed Wire was expected to close after its normal 6:30 p.m. deadline, officials said.

"We're not out of the woods yet," E. Gerald Corrigan, president of the New York Fed, told a press conference at 4 p.m. Thursday. "What we are talking about are terribly complex systems."

However, Mr. Corrigan stressed he was encouraged by how the backup system was op-

Hanover Exiting From Sweden And Switzerland

By JOHN EVANS

LONDON — Manufacturers Hanover Trust Co. announced on Thursday that it is closing its branches in Switzerland and Sweden as part of a global restructuring of its wholesale banking business.

The move is consistent with a broad retreat by U.S. banks overseas in the wake of rising credit problems and international concerns about the health of America's banking industry. Though Switzerland has traditionally been considered an essential component for a global banking network, Hanover insisted the pullout will not damage its international operations.

Ten U.S. banks operate branches or subsidiaries in Switzerland, including Citibank, Bank of America, Morgan Guaranty Trust Co. of New York, and

Ameritrust Will Cut 780 Workers, Take Charge of Up to $18 Million

By NANINE ALEXANDER

CHICAGO — Ameritrust Corp. announced Thursday that it will reduce its staff by 11.5% and take a charge of as much as $18 million against third-quarter earnings.

The Cleveland-based banking company also disclosed that it has signed a memorandum of understanding with the Office of the Comptroller of the Currency.

Lightest Regulatory Act

A memorandum of understanding is the lightest form of regulatory control; it involves a written declaration that a banking company intends to improve its business practices.

Most analysts were not surprised by Ameritrust's planned restructuring charge, but several said they were concerned about the OCC accord. "I don't think it restricts their operations," said Kenneth F. Puglisi, an analyst at Keefe, Bruyette & Woods Inc., referring to the OCC memorandum, "but it does send a negative signal."

Ameritrust's stock closed Thursday at $14 a share, down 62.5 cents from Wednesday's

FDIC Veteran Woos Buyers For RTC Bulk Asset Sales

By BARBARA A. REHM

If, as is widely assumed, the biggest problem facing the Resolution Trust Corp. is selling assets seized from failed thrifts, then Thomas F. Horton has the RTC's toughest job.

Mr. Horton is the first director – he is officially acting director – of the RTC's real estate sales office in Washington. His mission is to attract big-time investors to do big-dollar deals. Those, by Mr. Horton's definition, are transactions ranging from $200 million to $1 billion.

Putting Together Large Packages

"Our whole goal right now is to put together large packages of loans and REO [real-estate owned] that we can sell in bulk," Mr. Horton said in an interview Monday. "We have to establish some credibility that we are willing to do a big deal."

But don't expect a salesman in a plaid sports coat hawking used assets. Mr. Horton is more a systems man.

At 43, Mr. Horton is one of the band of men who defected from the Federal Deposit Insurance Corp. to the RTC when the latter agency was born, last August. These ex-FDIC people make up most of the RTC's top staff.

> **"We have to establish some credibility that we are willing to do a big deal."**
>
> **Thomas P. Horton**

Mr. Horton has focused on asset sales.

The agency, which has regional sales centers in nine states in addition to the Washington office, has five big asset-sales deals in the works, Mr. Horton said. Two $40 million deals are ready, and three larger packages are being put together.

"We expect to have three packages on the street for bidding by yearend," Mr. Horton said. These deals will not be homogeneous like the two packages currently out for bid, which feature about 10 pieces of property each. One package comprises hotels and motels in Texas, Colorado, Arizona, Arkansas, and Florida; the other, multifamily housing, mainly apartment buildings, in Florida.

Investors May Be Scarce, but 'Market Is Ready'

Mr. Horton said the RTC is peddling bulk sales to investment bankers and consortiums of people with several hundred million dollars to invest.

How many of those are there?

"Let's be frank about it. There aren't that many people in the world today with that much money to invest in real estate," Mr. Horton said. "But I think the market is ready to bid on these packages."

Sources in and out of the RTC agreed that Mr. Horton is a nice guy who gets things done.

"He's a straight-up guy," said Joseph E. Robert, chairman and chief executive of J.E. Robert Co., an Alexandria, Va.-based real estate asset management firm. "I know for a fact the industry has a lot of respect for him." □

Chase Discloses Dividend Pinch

NEW YORK — Chase ManhattanCorp. said in a regulatory filing that its lead bank would not have been able to declare dividends at the end of the second quarter under proposed regulations of the Comptroller of the Currency.

Even under existing limitations, Chase Manhattan Bank's ability to pay dividends during the remainder of 1990 and 1991 "is likely to be severely impacted," the company said.

Chase made a similar prediction in the first quarter, but at that time it said its lead bank would have been able th declare dividends of $38 million under the proposed rules.

Chase pays out about $400 million a year in common and preferred dividends to shareholders, but it earned only $96 million in the first half of 1990. The company repeated in its 10-Q filing this week that it expects to pay its declared dividends with funds from other bank and nonbanking subsidiaries.

Manufacturer Hanover Trust Corp. reported in its 10-Q that Manufacturers Hanover Trust Co. has not paid dividends to its parent this year in order to build capital, despite the fact that it historically pays 50% of its net income in the form of dividends to the parent.

Problem Loans Seen to Rise

Through another SEC filing, Bankers Trust New York Corp. became the latest of several major banking companies to say problem loans are likely to rise further this year.

In the first half of 1990, nonrefinancing country, cash-basis loans rose $122 million from the end of 1990 to $772 million. Included were $221 million of highly leveraged loans at the end of June and $312 million at the end of December 1989. □

'Jumbo' Purchase Plan Dropped

New York Home Loan Bank Yields to Opposition

By DEBRA COPE

WASHINGTON — Opposition from member thrifts of the Federal Home Loan Bank of New York has derailed that bank's plan to invest in jumbo mortgages.

The bank had been considering the loan-purchase program since March. It was part of an effort to increase its asset yields as member institutions have closed or cut down on home loan bank borrowings.

The program would have involved the purchase of loans of more than $187,450, which generally are not eligible for purchase by the Federal Home Loan Mortgage Corp. or Federal National Mortgage Association.

Member thrifts objected because they saw the New York home loan bank crowding them out of one of their most lucrative markets. They also raised questions about the appropriateness of a government-backed institution participating in the upscale housing market.

Sources expected a vote on the proposal to purchase $4 billion of jumbo mortgages over the next three years at the New York bank's board meeting Thursday, but the question never made it onto the agenda.

On Inactive Status

Brian Dittenhafer, president of the New York home loan bank, said the mortgage-purchase program is no longer under active consideration. But in a telephone interview, he added, "I wouldn't want to preclude it forever."

A Federal Housing Finance Board official said several of the other 11 Federal Home Loan banks are discussing purchases of mortgages – both loans that conform with Fannie Mae and Freddie Mac standards and those that do not – but "New York was further along than the others."

The housing finance board, the agency created last year to oversee the home loan bank system, would have to approve such a program. The board had not indicated how it might rule, but it has been sympathetic to the district banks' need to boost earnings.

The New York proposal "hit a raw nerve, particularly with institutions in the same market that don't want [the bank] and some systems had been diverted to a backup facility in Secaucus, N.J. The bank said it did not plan to move the entire processing operation to its backup site in New Jersey.

Getting Up to Date

Customer service representatives at branches advised customers Thursday that postings would be delayed at least a day.

Some customers were unable to withdraw funds because automated teller machines Wednesday because deposits had not been posted to accounts. To withdraw funds from deposits that had yet to be posted, customers were instructed to bring deposit receipts to a Citibank branch, where they would receive cash.

Most direct payroll deposits were not posted to accounts on Wednesday, the 15th of the month, because of the outage, but Citibank officials said all direct deposits were completed Thursday afternoon.

Processing for some corporate clients is also handled at the 111 Wall Street location, but bank officials said the impact was limited on corporate accounts because cash management is handled elsewhere.

Along with delayed deposits, withdrawals may not have been up to date on some accounts.

Clarification

An international news brief in Wednesday's issue (page 14) reported that Standard & Poor's Corp. had adjusted downward its credit outlook for the following five Japanese banks: Dai-Ichi Kangyo Bank Ltd., Kyowa Bank Ltd., Mitsubishi Bank Ltd., Sanwa Bank Ltd., and Sumitomo Bank Ltd. S&P did not lower the credit rating of any of the banks.

Citibank Scrambles to Update Accounts

Continued from *page 1*

Wall Street.

The interruption in back-office operations was the second this week for the Citicorp unit. Systems went down Monday, but were brought back up the following day.

Citibank said its retail processing site was up and running Thursday. The generator that failed Wednesday had been replaced, the bank said, and some systems had been diverted to a backup facility in Secaucus, N.J. The bank said it did not plan to move the entire processing operation to its backup site in New Jersey.

Peggy Lachard

CLOSED FOR THE DAY: A Citibank employee at 55 Wall St. directed customers and employees to other facilities Thursday.

Getting Up to Date

Customer service representatives at branches advised customers Thursday that postings would be delayed at least a day.

Some customers were unable to withdraw funds because automated teller machines Wednesday because deposits had not been posted to accounts. To withdraw funds from deposits that had yet to be posted, customers were instructed to bring deposit receipts to a Citibank branch, where they would receive cash.

Most direct payroll deposits were not posted to accounts on Wednesday, the 15th of the month, because of the outage, but Citibank officials said all direct deposits were completed Thursday afternoon.

Processing for some corporate clients is also handled at the 111 Wall Street location, but bank officials said the impact was limited on corporate accounts because cash management is handled elsewhere.

Along with delayed deposits, withdrawals may not have been up to date on some accounts.

Some customers therefore could have overdrawn their accounts without the bank knowing it. Bank officials declined to comment on what its exposure might be.

Many customers have "overdraft protection, Citibank officials said, but some checks coming in for collection on other accounts would be returned for insufficient funds, they said.

"In the worst case, we could return a check, but if it was a problem return caused by the delays, we would fix it," said Matthew Kissner, managing director for New York bank marketing.

Customers appeared to be taking the problems in stride. The scene inside downtown Manhattan branches was business as usual, except at 111 Wall Street, where lights and air conditioning were shut off to conserve power. And a refreshment stand provided relief for utility workers and bank customers and employees.

Extended Hours

Mr. Kissner said Citibank branches would extend their hours for the next several days to make up for the inconvenience. Branches were scheduled to stay open until 7 p.m. Thursday, and to open from 8 a.m. to 7 p.m. Friday.

The bank will also take out full-page ads in New York newspapers explaining the situation, said Mr. Kissner. □

Fed Moves to Backup System To Process Wire Transfers

Continued from *page 1*

erating and said he was hoping that Friday would be "as close to a normal business day as possible."

The Fed's problems came as the continuing power outage in the Wall Street area taxed institutions' backup systems to the limit.

Funds Market Disrupted

The failure of major clearing systems to operate normally has also lead to account imbalances that have pushed the fed funds rate as high as 15% this week. Banks have found themselves either holding excess reserves they need to sell or scrambling to find fed funds and avoid being overdrawn.

"It's a debacle," said Lawrence J. Toole, a senior vice president at the fed funds broker Fulton Prebon (U.S.A.) Inc. "People don't know what their positions are. They're frozen in time. They're trading on suppositions." (See Capital column on page 16.)

The Fed Wire failed to open at 8:30 a.m. Thursday because of a rupture in a 10-inch pipe providing water to a generator, Mr. Corrigan said. The generator, which stopped operating at 3 a.m., had been running at full speed around the clock since the blackout cut power to the Fed Monday, Mr. Corrigan said.

The problem forced the Fed to shift operations to its backup site in Pearl River, N.Y.

The Fed began linking banks to the securities and funds wires from its alternate site at 11 a.m.

Because banks had to connect to the backup system over regular telephone lines, rather than the leased lines normally used, many banks were not hooked up until the afternoon, sources said.

Less than 24 hours earlier, a failure in a backup generator at Citicorp's main processing center brought down its retail and correspondent banking systems. The Fed Wire and Chips, the other major payment network, had to stay open unusually late to accommodate the payments from Citicorp, whose systems did not come back up until 11 p.m.

Citicorp, which clears about $50 billion on an average day through its Fed Wire and Chips, was up and running normally on Thursday.

Bankers in areas such as domestic custody said the disruptions in the payments system would cost them primarily in overtime.

Chips, the Clearing House Interbank Payments System, experienced "accelerated" volumes as it worked faster to handle volume unusually sensitive to the Fed Wire, but officials believed that by the end of the day volumes would be normal.

"We discussed closing Chips early [on Thursday] to ease the strain on banks that are running on diesel generator power," said John F. Lee, president of the New York Clearing House Association, which operates Chips. "Nobody wants to take the chance that they won't be operative five minutes longer than necessary."

However, it was decided that Chips would close at its normal time, 4:30 p.m.

The Fed Wire has opened as late as 11 a.m. before because of systems problems, sources said.

This is the first time the Fed has used the Pearl River site, which the Fed has owned since late 1987.

Institutions were much better prepared to cope with this power outage than they were with the aftermath of the 1977 blackout, when the Fed Wire did not open for a day.

COMMENT/*By Angelo Mozilo*

Amendment Could Injure Low-Income FHA Buyers

The Federal Housing Administration's home-ownership program is intended to facilitate the delivery of mortgage credit to qualified borrowers. Over the years, this purpose has generally been well served.

However, due to the escalation of home prices in recent years, FHA financing has become unsuitable for many buyers in high-cost housing markets because of the unrealistically low loan limit – $124,875 – authorized by Congress.

To add to this problem there is an amendment to the 1990 Housing Bill (HR 1 180), currently wending its way through Congress, that would prohibit lenders from imposing different interest rates, discount points, origination fees, or other charges on FHA loans with different loan amounts.

Tiered Pricing Is Target

Ostensibly, the aim of the amendment, sponsored by Rep. Thomas Ridge, R-Pa., and Rep. Mary Rose Oakar, D-Ohio, is to help lower-income buyers. The proposed legislation would force lenders to make loans in lower-cost areas of the country and control fees charged by eliminating "tiered" pricing.

Mr. Mozilo is president and chief executive officer of Countrywide Funding Corp. and vice president of the Mortgage Bankers Association

In reality, though, it is the customary tiered pricing methodology that has permitted lenders to make loans in economically deprived areas on a sound business basis.

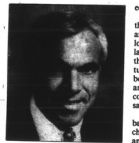
Even if well-intended, as I believe this amendment is, this legislation is an attempt to legislate economics – an impossible task. The authors would make lenders charge the same percentage, regardless of the loan amount.

Unintended Results

This practice, without question, would result in pricing lenders out of those communities where FHA financing if an essential ingredient for the viability of the housing market. The Ridge-Oakar amendment would clearly have the effect of shutting off FHA housing credit to many who are seeking the opportunity of home ownership.

The reason is simple and straightforward: The cost of originating a loan is a dollar amount, not a percentage. Regardless of size, every loan requires the same documentation and time; all loans incur virtually the same amount to originate. This patent fact of economics is the key to understanding the fallacy of the proposed amendment.

Admittedly, if a borrower or a congressman does not understand that our origination costs are roughly equal regardless of



"The true result of an amendment requiring lenders to adopt 'uniform' pricing would be far from uniform."

the size of the loan, then the current method of pricing would appear unfair. However, the true result of an amendment requiring lenders to adopt "uniform" pricing would be far from uniform.

Rather, it would be grossly unfair. Consider the following: Under this amendment, the borrower of $120,000 would pay 12 times as much as the borrower of $10,000. No doubt, higher-balance borrowers are apt to find this difficult to swallow.

Some Basic Arithmetic

A higher number of "points" – the percentage of the loan amount – on lower-balance loans translates into roughly equal dollar amounts being charged by lenders. Let's look at some basic arithmetic equations.

Six points on a $20,000 loan, three points on a $40,000 loan, and one point on a $120,000 loan all add up to the same dollar amount – $1,200. So, under the current tiered pricing structure, each of these hypothetical borrowers pays the same dollar amount to cover the lender's cost – a cost that is about the same in each case.

The proposed amendment is based on the premise that by charging more for higher-balance loans, lenders can subsidize the cost of originating lower-balance loans. This theory, though, is not practicable. Consider that currently the origination fee for all FHA loans is capped by the Department of Housing and Urban Development at 1% of the loan amount.

Originations at a Loss

In effect, higher-balance loans are subsidizing lower-balance loans. However, even on the highest balance loan currently allowed under FHA, which is $124,875, FHA lenders are unable to cover their average origination costs with the current 1% cap. In 1990, the average net loss to originate each single-family loan, regardless of size, was $1,244.

With the origination of loans already operating at a loss, lenders rely on income from points to make origination of these loans economically viable. If a mandate to charge a uniform number of points on all FHA loans, regardless of loan amount, is enacted, the result will be direct subsidization of low-balance borrowers by higher-balance borrowers.

As such, lenders will have no choice but to increase interest rates or points across the board to ensure adequate yields from higher-balance loans to cover costs of originating lower-balance loans.

As the cost of higher-balance FHA loans are forced up, these larger and more profitable loans might be lost by the FHA program to conventional financing. Consequently, the FHA program would be put under even greater financial stress.

Program with a Social Purpose

FHA is unarguably a program with a social purpose – fostering home ownership. But there is nothing in its legislative history mandating direct subsidy from one class of borrowers to another class of borrowers on the pricing of these loans.

The current practice of tiered pricing, where a higher number of points is charged on smaller loans, is not an effort to discriminate against lower-income borrowers or to covertly discourage lending in certain neighborhoods. Lenders have adopted tiered pricing practices simply to cover the cost of originating lower-balance loans.

Forcing lenders to discriminate against their higher-balance loan customers will only hurt the very people the amendment's sponsors are trying to help.

Furthermore, a law that forces a lender to operate at a perennial deficit would be unconstitutional. Such a law would only force lenders to shut off the availability of housing loans to those seeking small balances, thus taking home ownership away from the very American families that FHA has historically been intended to help. □

Idea of Limiting FDIC Coverage Seen Threat to Banking System

To the Editor:

After having read Linda Corman's article "Putting Limits on Insurance: Is It Practical?" [Aug. 2, page 1]. I felt a few comments were appropriate.

Congress couldn't pick a worse time to consider reducing or curtailing Federal Deposit Insurance Corp. coverage. Obviously, there is no confidence in the savings and loan industry. Confidence in the banking industry is also dwindling, so reducing the insurance would only result in further erosion of confidence in be banking system. It is critical for the country, and maybe the world, that the financial system of the United States remain strong.

Savings Would Suffer

Americans don't save enough at present. Reducing insurance coverage would surely cause disintermediation, thereby reducing the banking system's ability to finance capital investments. Also, lowering the insurance would cause people who can afford to save to seek other investment opportunities.

I would respectfully suggest the most prudent use of the peace dividend is clearly to satisfy the government's obligations with regard to the savings and loan bailout. If our children are to enjoy at least the standard of living they are accustomed to, we simply owe it to them to get our financial house in order.

Congress' Priority

We all know what the cure is — raise taxes and reduce expenditures. When will members of Congress make this their No. 1 priority rather than thinking about getting re-elected? (Actually, that's probably one of the main reasons why we are in this position). Finally could hear President Kennedy once again: "Ask not what your country can do for you; ask what you can do for your country."

In conclusion, the key to a strong financial system is having confidence in the banking industry – and FDIC insurance just happens to be the cornerstone.

William W. Davis Jr.,
President, chief operating officer
Third National Bank & Trust
Scranton, Pa.

Reforming Mortgage Insurance

To the Editor:

On page one your newspaper ran Aug. 2 on the overhaul of Federal Housing Administration mortgage insurance ["House Votes for Overhaul of FHA Mortgage Insurance," page 7] was incomplete in describing the Vento-Ridge amendment. Our amendment includes several meaningful reforms to maintain the safety and soundness of the FHA insurance fund.

The Bush administration's proposal and our amendment both meet a higher capital standard for the FHA fund, but our amendment does it in a manner that is less harmful to potential homebuyers. The Vento-Ridge amendment will restore FHA to sound financial footing without the adverse side-effects of the administration's proposal.

With young families finding it more and more difficult to purchase a home, it is imperative that we do not impose unnecessary obstacles to home ownership.

Rep. Bruce F. Vento
Democrat of Minnesota
Rep. Thomas J. Ridge
Republican of Pennsylvania

Editor's Note: The Vento-Ridge proposal, which would lower the initial FHA mortgage-insurance fee payable by homebuyers and spread the cost over the life of the loan, passed the House in late July on a vote of 418 to 2.

Handy Excuses When Your Boss Asks Why You Didn't Get The Best Deal On Seasoned Loans.

We've Never Sold Seasoned Product To Fannie Mae Before. How Was I To Know Their Price For Seasoned Loan Cash Sales Was Better Than Their Posted Quote For Current Production?

Somehow I Missed That Fannie Mae Will Negotiate A Guarantee Fee With Us Based On The Seasoning And Quality Of The Package.

I Admit Their Flexibility In Pricing Seasoned ARMs And Almost Any Fixed-Rate Mortgages Caught Me Off Guard. This Will Really Help My Portfolio Restructuring.

The Loans On My Shelf Don't Fit Fannie Mae's Current Underwriting Standards, So I Wasn't Sure They'd Even Look At Them.

I Just Plain Forgot How Much Better Their Price Is For An MBS When We Swap Our Loans And Sell The Security.

Since Most Of Our Seasoned Stuff Is On Non-Standard Documents, I Never Dreamed Fannie Mae Would Accept Them.

I Must Have Overlooked Their PC-Based Delivery And Reporting System. MORNET™ Makes Our Loan/Pool Delivery And Reporting More Cost- And Time-Efficient. They Can Help Us Straighten Our Loan Portfolio, Too.

I Wasn't Sure They'd Take The Time To Help Smaller Lenders And New Customers Walk Through The Seasoned Loan Transaction.

I've Never Done Business With Fannie Mae Before. I Will Now.

When it comes to seasoned loans, there's simply no excuse for not talking to Fannie Mae. No matter whether you're swapping or selling the loans outright, Fannie Mae has the edge. There is just no excuse for passing up a better deal.

Freddie Mac Chooses a Liaison For Deals on RTC-Held Loans

NEW YORK — Jo Ann Pierson, a 17-year veteran of the Federal Home Loan Mortgage Corp., or Freddie Mac, has been chosen to guide the agency to one of its newest business frontiers.

Leland C. Brendsel, Freddie Mac's chairman and chief executive, this week named Ms. Pierson full-time liaison to the Resolution Trust Corp., which eventually may funnel a large number of mortgages through Freddie Mac.

"My goal as liaison is to find out what they [RTC officials] want to do and how they want to do it and to then bring the right Freddie Mac resources to the table," Ms. Pierson said in an interview.

Jo Ann Pierson
Working closely with RTC

An Important Signal

As a vice president, Ms. Pierson has been working closely with the RTC since March. But observers said the formal appointment was an important sign of Freddie Mac's commitment to the task.

Freddie Mac and the rival Federal National Mortgage Association, or Fannie Mae, are angling to help the RTC dispose of mortgage-related assets that total about $70 billion. The quasi-governmental agencies specialize in buying and securitizing home mortgages.

Bruce Harting, an analyst at Solomon Brothers Inc., estimated that RTC-held mortgages could boost Freddie Mac's purchase volume by up to 10% in the next three or four quarters.

Overture to Congress

Moreover, he said, the special liaison could help Freddie Mac curry favor with Congress because the appointment shows that the agency wants to aid the massive RTC asset liquidation.

Ms. Pierson, 42, rose through Freddie Mac's finance ranks and was treasurer from 1988 to 1988. She became vice president of operations at the agency's five regional offices and, in February 1989, vice president of distressed-asset management.

Top 25 Lenders Gain Market Share

Will Size Bolster Profits as Competition Intensifies?

By PHIL ROOSEVELT

NEW YORK — The giants of the mortgage industry just keep getting bigger.

A new study by SMR Research Corp., Budd Lake, N.J., found that the nation's top 25 mortgage lenders accounted for 34.7% of all originations last year, up from 31% in 1988. It was the first time the giants accounted for more than one-third of the market.

The gains, which apparently are continuing this year, are the latest sign of an industry consolidation that began in the mid-1980s. The trend reflects both a broader consolidation of financial services and ambitious expansion plans by some of the nation's biggest mortgage lenders.

"A number of companies are driven by visions of huge size, which they think can be equated with prosperity," said SMR president Stuart A. Feldstein. "And maybe they're right."

The company's annual study has found, however, that mortgage lenders of all sizes are facing hard times from a weak economy and heavy competition. The giants tend to be more profitable than the rest of the industry, but few are posting truly strong results, Mr. Feldstein said.

The top 25 are a mix of banks, thrifts, and mortgage companies. In line with previously published rankings, SMR pegged Citicorp, New York, as the 1989's top originator, with estimated volume of $13.7 billion. For the first quarter of 1990, the latest period tracked by SMR, Fleet/Norstar Financial Group, Providence, R.I., was No. 1, with $3.9 billion.

This month, the newsletter *Inside Mortgage Finance* identified H.F. Ahmanson & Co., Los Angeles, as No. 1 originator for the first half of 1990, followed by Fleet/Norstar.

Pressure on Small Fry

The emergence of industry giants clearly has put some pressure on the thousands of smaller lenders. For example, the giants are sometimes able to beat their smaller peers on loan pricing, said Thomas T. Shealy, chief executive of the mortgage unit of SunTrust Banks Inc., Atlanta.

To respond to the price challenge, his midsized unit tries "to bend over backward and give a little better service," Mr. Shealy said. "Hopefully, we can give more hands-on service than the big boys."

Many small lenders have shifted strategies to concentrate on funneling loans to the giants.

Indeed, a sizable part of the growth of the top 25 is attributable to increased wholesale purchases of new loans. Such deals — counted as an origination by the buyer when closed in the buyer's name – allow big lenders to increase their volume and geographic diversity without opening more branches.

"It appears that the wholesale business is here to stay," said Mr. Feldstein of SMR. "With that in mind, we would expect the top 25 to break the 40% market share during the next two or three years."

Stuart A. Feldstein
SMR Research Corp.

In the first quarter of 1990, the latest period for which the government has estimated total mortgage originations, the top 25 lenders accounted for 33.4% of all new loans, SMR said.

Though less than the 1989 market share, this number is misleading because the Department of Housing and Urban Development has changed the way it estimated total market size, SMR said. If HUD had not changed its method, SMR said, the share of the top 25 would have grown more than 35%.

Commercial Banks Advance

The research company's study noted that several thrifts have fallen from the top 25, reflecting turbulence in that industry. But commercial banks and some mortgage companies have been coming on strong.

The study zeroes in on nine "new players," based on growth in originations and servicing, most are affiliated with commercial banks.

Two of these – mortgage units of Norwest Corp. and Wells Fargo & Co. – are already in the top 25. The others are units of NCNB Corp., Hyperion Partners, Banc One Corp., Huntington Bancshares, Meridian Bancorp, General Electric Capital Corp., and the soon-to-be formed C&S/Sovran Corp. □

Likelihood of Credit Squeeze Looms over Japan Investors

By SCOTT MILLER
Reuters

TOKYO — Belt tightening at Japanese banks is threatening to lead to a credit squeeze that could force up the cost of borrowing and choke corporate investment.

Bankers said Tokyo's stumbling financial markets are forcing them to cut back lending in an attempt to meet international banking standards and boost profitability.

"Japanese companies are going to face upward pressure on their borrowing costs as a result of stock market weakness," said Hidehiro Iwaki, economist at Nomura Research Institute Ltd.

Government Thinks Tightening Would Help Control Inflation

While a credit squeeze would be bad news for Japan's corporate borrowers, Mr. Iwaki and other analysts said Japanese financial authorities would welcome the tightening as they fight to control inflationary pressures.

Since Jan. 1, the key 225-share Nikkei index has lost 29.2% of its value. About one-third of this loss has occurred since the Aug. 2 Iraqi invasion of Kuwait. But bond yields have soared. The yield on the government's benchmark 10-year bond, for example, has topped 8% in the past two weeks, to near its high since 1983.

"Banks are going to ration credit," said Roger Gough, senior financial analyst at Baring Securities (Japan) Ltd.

Bankers said the three Japanese long-term credit banks are likely to raise their long-term prime rate in September, probably to 8.2% from this month's 7.9%. A rise in the long-term prime rate above 8% would be the first since early 1984, bank officials said.

> **"Japanese companies are going to face upward pressure on their borrowing costs as a result of stock market weakness."**
>
> **Hidehiro Iwaki**
> *Nomura Research Institute Ltd.*

While part of that rise may be due to generally strong economic conditions in Japan, bankers said, they have reasons of their own to restrict lending, starting with planned new banking rules.

Japanese and other international banks must meet an 8% ratio of capital to risk assets by March 1993 under requirements set by the Basel, Switzerland-based Bank for International Settlements. Japanese banks had relied on so-called hidden assets – the difference between market and book values of their stock holdings – to meet much of the requirement.

Banks are permitted to count 45% of their hidden assets toward their capital bases. As of March 31, 1990, some of Japan's biggest banks, including Industrial Bank of Japan Ltd., Nippon Credit Bank Ltd., Mitsui Taiyo Kobe Bank Ltd. and Sakura Bank Ltd. were below the 8% ratio.

Many banks have found it difficult to raise capital by issuing equity or by other means and are now trying to meet the standard by limiting lending growth. On bank balance sheets, loans are considered risk assets.

"There are not a lot of options for Japanese banks right now," said a senior official at Mitsubishi Bank Ltd. "You are going to see much slower and more selective lending in future."

Rising Interest Rates May Also Force Reduced Lending

Analysts said risk-weighted asset growth at Japanese banks has been expanding at a rate of about 15% annually but that the rate is slowing to less than 10%.

Soaring interest rates, which have eroded profitability, may also force banks to cut lending. They now pay nearly 8%, annualized, on three-month certificates of deposit that cost just 5.2% a year ago.

The climbing cost of funds and looming capital standard spell trouble for some Japanese corporate borrowers. The rate that top companies have paid for loans has risen by about 250 basis points in the last year, to more than 8%. So far, most companies have been able to shrug off the higher borrowing costs, but they may not be able to do so indefinitely.

Banks' Moves Could Cut Capital Spending by Companies

Capital spending by Japanese companies rose by an average 21% in the financial year ended March 31, according to data from the government's Economic Planning Agency. But a further tightening in bank lending could cut that to 10% to 15%, analysts said.

However, Alicia Ogawa, financial analyst at S.G. Warburg Securities (Japan) Inc., said medium-sized Japanese companies are in the late stages of a capital spending boom. Their demand for bank loans could be declining, she said.

A recent Bank of Japan survey showed that liquidity levels among small and medium-sized companies were at their highest levels since World War II. Analysts said those funds may be enough to last midsized companies for about eight months. □

Hanover to Quit Sweden, Switzerland

Branch Closings Part of Global Restructuring Plan

Continued from *page* 1

Bankers Trust Co.

"We can serve Swiss and other major corporations in a pan-European environment out of London, the main center for our investment banking and corporate finance activities in the European Community," said James Brokken, Hanover's group executive for Europe.

Hanover has branches in Zurich and Geneva employing a total of 50 people. Its branch in Stockholm also employs 50.

Mr. Brokken said Hanover is not planning additional closings in Europe. He said the bank aims to develop local banking businesses on the Continent, where it feels it has competitive advantages.

Focus on Growing Economies

He noted that Hanover is expanding its presence in Spain, Portugal, and Turkey, countries that have been enjoying strong economic growth.

"These fast-developing countries have special needs, demanding local specialities, and you can't service them out of your global activities," he said.

The Zurich Geneva branch, which specializes in private banking, will close immediately. The Zurich branch, which operates commercial and investment banking and corporate finance, will be wound down over the next three months.

The Swiss operations earned a "small positive net" profit last year, Mr. Perkowsky said. The bank will maintain a representative office in Zurich, focusing exclusively on correspondent banking services for its New York headquarters.

> **The bank is expanding in Spain, Portugal, and Turkey, whose economies have been growing fast.**

The decision to close these branches is part of the company's plan to reshape its global business and cut 1,400 jobs, Mr. Perkowsky said.

"Everyone in the international financial community is asking himself whether the things he did in the last five years are going to give a good enough return on capital in the five years ahead."

He added, "Many banks, even the Swiss themselves, now run much of their European corporate finance and related activities from London. It's where the important markets you need for that business – like swaps, foreign exchange, and structured finance – are based."

Hanover's private banking operation in Geneva has about 200 clients, typically high-net-worth individuals.

"We hope to keep them in our network but if they decide that they need to keep their funds in Switzerland, they'll have to find a new home for their money," Mr. Perkowsky said.

Many U.S. banks in recent years have been dismantling their international operations as part of a broader restructuring aimed at focusing on their home markets. The retreat was especially pronounced in the first quarter, when U.S. overseas banking assets fell $47 billion, or 8%, to $550.8 billion from the period ended Dec. 31, according to the the Bank for International Settlements. Foreign borrowings of U.S. banks declined $36 billion, or 6%, to $611.2 billion. □

Fed Approves Cook Purchase of Deak Offices

By JAMES R. KRAUS

NEW YORK — Thomas Cook Group, a unit of Britain's Midland Bank, got Federal Reserve Board approval to acquire the U.S. retail foreign exchange operations of Deak International Inc. from Jarden Morgan Ltd., a New Zealand-based financial services company.

Midland is paying $12 million to acquire Deak International's banks, including Deak International Bank Ltd., Mitsui Taiyo Kobe Bank Ltd. were below the 8% ratio.

Many banks have found it difficult to raise capital by issuing equity or by other means and are now trying to meet the standard by limiting lending growth. On bank balance sheets, loans are considered risk assets.

"There are not a lot of options for Japanese banks right now," said a senior official at Mitsubishi Bank Ltd. "You are going to see much slower and more selective lending in future."

Rising Interest Rates May Also Force Reduced Lending

Analysts said risk-weighted asset growth at Japanese banks has been expanding at a rate of about 15% annually but that the rate is slowing to less than 10%.

Soaring interest rates, which have eroded profitability, may also force banks to cut lending. They now pay nearly 8%, annualized, on three-month certificates of deposit that cost just 5.2% a year ago.

The climbing cost of funds and looming capital standard spell trouble for some Japanese corporate borrowers. The rate that top companies have paid for loans has risen by about 250 basis points in the last year, to more than 8%. Because of continued power-outage problems in New York, data for the *Key International Rates* table, which normally appears in this space, were not available.

and Deak International Bank.

Deak International, headquartered in Toronto, reported $35 million in revenues for the year ended April 30.

Deak Offices to Be Renamed

"It's a marriage made in heaven for us," said Christopher Rodrigues, chief operating officer of the Thomas Cook Group.

Deak offices in the United States and Canada will be renamed Thomas Cook Foreign Exchange and will be run separately from the 300 franchised Thomas Cook Travel offices in the United States.

Thomas Cook was acquired by Midland in 1971 and has 1,600 offices worldwide. The British bank is barred from owning travel-related operations in the United States under the Bank Holding Company Act.

Midland Executive Tapped

H. Eugene Lockhart, Midland's chief executive for United Kingdom banking and deputy chairman of Thomas Cook, has overall responsibility for the travel services group.

As Deak & Co., the concern filed for bankruptcy in December 1984. It had encountered severe liquidity problems after a run on liabilities at its banking unit, Deak-Perera International Banking Corp., prompted by a report that the bank was being used for money laundering. In 1985, the firm's founder, Nicholas L. Deak, was shot to death by a deranged homeless woman in his New York City office. □

SMALL BUSINESS

Lenders Skittish over Cleanup Liability

By LAURYN FRANZONI
Special to the American Banker

Concerns about environmental liability are prompting small-business bankers to alter their lending policies, according to a recent survey.

The 49 bankers who responded to a poll by the American Bankers Association's Community Bankers Council reported being "concerned" or "very concerned" about environmental liability. More than three out of four said they had changed their lending policies in some way to avoid it.

Banks can become liable for cleanups of contaminated sites in several ways under the Superfund regulations enforced by the Environmental Protection Agency. If the borrower is unable to pay for decontamination or is unable to repay a loan because of environmental liabilities, the bank may have to pay for the cleanup.

Conditions of Liability

A bank may also be liable for a cleanup if it exercises control over a borrower's board or influences management's daily operating decisions, if it forecloses on contaminated property and becomes the owner, or if its trust department owns or manages property as a trustee or executor.

Community banks with assets of less than $250 million appear to be most concerned about the potential threat.

"We have to look cautiously at any loan," said J. Bart Colwell, executive vice president of First State Bank, Brazil, Ind. "EPA is using Superfund to go after the deep pockets that a bank has when the borrower doesn't have the resources. Even government officials say people who never expected to be associated with the property will be."

Certain Businesses Shunned

Mr. Colwell said his bank has turned down some loan applications from dry cleaners, service stations, and manufacturing companies in recent months because of the potential risk. In one case, the bank backed away from an oil distributor whose business it had pursued for five years.

The biggest threat Mr. Colwell sees is a trend toward assigning liability to banks when they provide financial advice to their clients. "Lenders have been construed to be operators if they serve on the board of directors of the business," he said.

"In small communities like ours, a lot of what we do is provide financial advice," he said. "That could make us liable for the cleanup." First State is a $34 million-asset unit of First Financial Corp., which has $800 million in assets.

"It's scary when you look at the overall impact on economic development of small communities," Mr. Colwell said. In addition, he fears that loans made through Small Business Administration programs will be curtailed because of the agency's tradition of providing operating and management advice to its borrowers. Based on current legal trends, even the SBA could become liable for an environmental cleanup.

Strong Impact Seen

According to David Gohn, chairman of the ABA community bankers' council and president of West Plains Bank, West Plains, Mo., "The results of the survey emphasize how strongly environmental liability is impacting banks and their customers." The ABA did not ask members how much they have spent on cleanup activities.

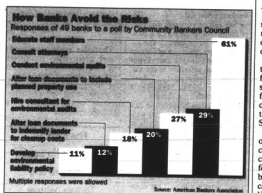
The ABA reports that banks are already taking steps to protect themselves. Several respondents said they have consulted attorneys, arranged environmental audits, and redrafted loan documents.

Some banks have altered their loan papers to include borrower information about the loans and planned property use. Others have redrafted loan documents to have the borrower indemnify the lender for all cleanup costs, regardless of fault.

Even though a small number have made such changes to date, more than half of those surveyed plan to begin environmental audits and a third plan to revise loan documents.

Mr. Colwell of First State says all banks – and especially community banks – should be reviewing their exposure. "You've got to know what the borrower is doing with the property," he said. "Chances are, if he's producing anything, the property can be contaminated." Agricultural loans should also be examined, because chemicals used for fertilizers and other purposes are under increased scrutiny as pollutants.

Ms. Franzoni is a freelance banking reporter based in Springfield, Mo.



Debit Card Use In Britain May Outrun Checks by 2000

By JOHN EVANS

LONDON — British consumers will make more payments with debit cards than checks before the year 2000, according to an industry forecast.

The cards, which are essentially plastic checks, will account for more than four billion consumer payments in 2000, versus fewer than three billion via checks, predicted the Association for Payment Clearing Services.

The industry group, which is operated by Britain's major commercial banks, expects debit cards to emerge as the dominant force driving consumer banking business in Great Britain. Debit card transactions totaled 60 million last year. Some 13.5 million cards are in use, for a penetration of about 30% of the British adult population.

Checks Seen Peaking in '91

Check volume, whose growth has been slowing in recent years, is expected to peak this year or in 1991 at about 3.7 billion items before declining during the remainder of the 1990s.

Debit cards will also cut into the market for credit cards, held by about 40% of the adult population, the association said. Credit card transactions grew only 4% last year; debit cards may cause volumes to level off or even fall, the group said.

This trend may be accentuated by a recent antitrust ruling ordering banks to stop discrimination practices that have prevented retailers from offering discounts for cash transactions.

Use of Cards to Quadruple

Withdrawals through automated teller machines are expected to continue rising rapidly, reaching almost 1.4 billion by 2000, compared with more than 800 million in 1989.

Overall, transactions made with all types of plastic cards are likely to quadruple from 1.7 billion last year to about 6.6 billion in 2000, the group said.

Total transmissions of non-cash items, including direct debits from checking accounts for charges like utility bills, will grow about 5% annually, reaching 13 billion items by the year 2000, according to the association's research. The predictions were based on trends among the almost 90% of adults in Britain who now hold some form of bank or thrift account.

Spending patterns are expected to favor Britain's banks.

These spending patterns are expected to favor Britain's banks, which are facing rising costs in their credit card operations, industry analysts say. Growing numbers of customers are paying their card bills on time to gain free credit for a month.

While some banks here have begun to add annual charges for credit cards, they are also strongly promoting debit cards. Banks stand to make an estimated $750 million annually by processing debit transactions for retailers.

The main cooperative debit card system in Britain is Switch, whose chief operator is Midland Bank PLC. □

What the regulators don't tell you.
1-800-456-2340.

Complying with CRA/HMDA is simple. You post your public notice, keep a public file, and file the required HMDA forms. And you act in the *spirit* of the law and actively support your community.

Now what exactly does that last part mean?

Turns out it's not as simple as it seems. The regulators will grade you on your efforts. And your grade will become available to the public in a few months. So anyone can find out how you're doing in this gray area. And use it to challenge your decisions to branch or enter new businesses.

The only way to prevent this threat is to be sure you have a CRA/HMDA program that complies in spirit, act, and deed with the regs. And while the regulators don't tell you how to do that, we do.

The **Community Reinvestment Act/Home Mortgage Disclosure Act Regulatory Compliance Manual** covers it all in one easy-to-read book.

We show you exactly how to structure a good CRA program, develop community outreach programs that meet community needs, document everything, train your people to comply, and audit your program to be sure it works.

There's also a summary of the regs in plain english, a reprint of the regs for your reference, and a review of an actual program in use now at successful banks.

You can be sure it meets the regulators' standards because it's written by a former OCC field officer. And it's published by Sheshunoff Information Services Inc., the leader in high performance banking information since 1971.

Get your copy and make sure you've got a CRA/HMDA program that no one can challenge. Call 1-800-456-2340 today.

Guilty Plea in $52 Million Loan Fraud

By BILL ATKINSON

WASHINGTON — A former chief financial officer of a defunct New Jersey-based textile converting firm has admitted to playing a role in fraudulently obtaining a $52 million loan from a subsidiary of Bank of Boston Corp.

Bruce M. Bloom, 44, former director and chief financial officer of Laurence Harbor, N.J.-based Coated Sales Inc., faces a maximum of 10 years in prison and a $250,000 fine. U.S. District Judge Alfred J. Lechner Jr. accepted Mr. Bloom's plea to a one-count federal felony information.

Mr. Bloom faces a maximum of 10 years in prison.

May Be Record N.J. Fraud

The case is believed to be the largest dollar-volume bank fraud in the history of the District of New Jersey, U.S. Attorney Michael Cherkoff said Thursday.

In April 1988, BancBoston Financial Co., an asset-based lending subsidiary of Bank of Boston, agreed to lend Coated Sales $52 million for debt restructuring.

As an outgrowth of the fraud, BancBoston transferred more than $45 million to four banks on behalf of Coated Sales. The Justice Department said the banks were First Fidelity Bank, and Midatlantic National Bank, both of Newark; First Eastern Bank, Wilkes-Barre, Pa., and Citizens Savings Bank, Providence, R.I.

Wayne Taylor, a Bank of Boston spokesman, said his company cooperated with the U.S. Attorney in the investigation.

Cost To Shareholders

When asked if the bank has recovered the funds, Mr. Taylor said, "I think it is inappropriate for us to comment further.

There is really not a whole lot more that I can tell you – this is still the subject of an investigation."

The collapse of Coated Sales, which specialized in finishing and treating fabrics for industrial use, is estimated to have cost shareholders $100 million. □

Report on Buyer Hampers RTC Asset Sale

By PHIL ROOSEVELT

NEW YORK — A proposed sale of one of the Resolution Trust Corp.'s largest mortgage-servicing portfolios has run into limbo, with part of the buyer group coming under pressure to withdraw.

A lawyer for Barron Financial Group, Tustin, Calif., said the RTC has renewed its attack the company's participation in a deal to buy the $7.2 billion portfolio of Commonwealth Mortgage of America, Houston.

The lawyer, George Hannen of Irvine, Calif., said a federal report that alleges a questionable mortgage banking tactic by Barron, a mortgage company, helped prompt the RTC action. Mr. Hannen, however, said the report is false.

Deal with Bass Affiliate

Earlier this month, a preliminary agreement was announced whereby Barron and an affiliate of the Robert M. Bass Group, Fort Worth, would buy the Commonwealth portfolio for an undisclosed sum. Commonwealth is a unit of a thrift under government control.

The proposed sale immediately raised eyebrows among Wall Street mortgage professionals, who knew of the report citing Barron's mortgage banking practices.

In the June 15 report by the inspector general of the Department of Housing and Urban Development addressed "live free," or planned refinancing, mortgages. Such loans, when packaged as mortgage-backed securities, can cause unexpected losses to investors because they prepay them off very quickly. Many mortgage professionals consider the tactic deceitful.

The report suggested that Barron had originated and sold such loans, but Barron said it has not.

Pressure from Wall St.

Some Wall Streeters reportedly pressured the Government National Mortgage Association, Ginnie Mae, to block Barron from the Commonwealth deal. Much of the Commonwealth servicing portfolio relates to loans packaged as Ginnie Mae securities, so any sale would require that agency's approval.

"The RTC has indicated that it will not go through with the deal with Barron as a deal participant," Mr. Hannen said in an interview this week. "We're exploring our option to withdraw," he said, suggesting that the affiliate, Lazarre Partners, may proceed on its own.

A spokesman for Castine said only, "We're still looking at the portfolio and trying to make a decision whether to go ahead."

The RTC has indicated it would be receptive to a bid from Commonwealth's management. Commonwealth is said to be considering a bid from Mr. Bass' Lazarre Partners, which may proceed on its own.

Officer at Fleet Mortgage Retires

NEW YORK — Loyal V. Laplante, head of loan production at Fleet Mortgage Corp., has retired after 30 years with the company and become director of mortgage banking services at Sentinel Advisors, an advertising and public relations concern in Brookfield, Wis.

Mr. LaPlante, 57, started at Milwaukee-based Fleet Mortgage as a loan officer when the company had only three branch offices. The company – one of two mortgage banking units of Fleet Financial Group – now has more than 100 offices.

Most recently he had been executive vice president of loan production and sales.

Fleet officials said he said his retirement stemmed in part from some reorganization of Fleet-Norstar's management operations. Mr. LaPlante said he concluded that his best opportunities would be at the helm of a smaller mortgage unit, in Columbia, S.C. But "at this point in my life," he said, "I don't feel very transferable."

Fleet said that he looked forward to a career change.

Victim of a Thrift Failure Weeps at Senate Hearing

By KATHLEEN FIEWEGER
Reuters

CHICAGO — A victim of the nation's thrift crisis wept openly at a Senate committee hearing here this week as she recounted the loss of her life savings.

Senators Paul Simon of Illinois, Howard Metzenbaum of Ohio, and Herbert Kohl of Wisconsin, all Democrats, listened as Mabel Dixon of Peoria, Ill., described how an official of Germania Bank in St. Louis persuaded her to buy $229,000 of its subordinated, unsecured debt issued in January 1988.

Ms. Dixon said that she had to pay for expensive cancer treatments because she had no medical insurance. She was, therefore, especially cautious about investing her money.

"I asked him over and over again, 'Is this secure?' And he'd say, 'Oh, yes.'" She said the man never identified himself by name, simply as the man from Germania Bank.

Debt Holders File Suit

The federal government took over Germania Bank in 1989 when it stopped paying interest on the notes. About 800 debt holders, mostly elderly people, have filed a class action seeking to recover their money.

But Marie Zarlingo, another Cahokia resident, testified she was not hopeful she would get her money back.

"I trusted them because it was an old establishment," Ms. Zarlingo said. "It's really been a devastating thing."

According to Mr. Simon, Germania's investment ventures, including an office complex and a Colonial-era theater, have all failed.

Individuals were not the only ones duped. St. Louis-based Laclede Gas Co., in disclosing Monday a second-quarter loss of 47 cents a share, said it set aside $5.8 million for possible losses in investments in Germania.

Nine hundred insolvent thrifts, or about one-third of the savings and loan industry, are still losing an estimated $10 to $15 billion per year, according to Robert Litan of the Brookings Institution in Washington.

Of the estimated $500 billion needed to clean up the industry, "I'd be surprised if we got back 10 cents on the dollar," Mr. Litan said. "Over 90% is gone."

Frand Blamed in Losses

Sen. Kohl said about $150 billion of the $500 billion bailout price tag stemmed from fraud. Such assertions have prompted regulators, legislators, and law enforcement officials alike to blame each other as the public fume over the mounting cost estimates.

Sen. Metzenbaum criticized law-enforcement agency representatives for not doing enough to recover the money.

"Let's face it, money doesn't disappear," Mr. Metzenbaum said. White collar criminals have not been threatened hard enough with stiff prison terms and thus have no incentive to produce the money cached in safe haven accounts.

Prison Terms Average 2 Years

James Richmond, special counsel for financial institutions at the Department of Justice, conceded that prison terms for those convicted of thrift fraud average a mere two years.

About 15% of those convicted have had their sentences suspended.

DEALS
American Stores Closes All-Japanese Loan

By STEVEN LIPIN

American Stores Co. closed a $75 million loan this week that was not only sole-agented by a relatively unknown Japanese bank, but syndicated exclusively to regional Japanese lenders.

While U.S. companies acquired by Japanese corporations have in the past used only Japanese lenders, this loan is thought to be one of a handful in which an American-owned company raised bank funds through an exclusively Japanese syndicate.

The deal was not arranged by one of the Japanese leaders in the U.S. The term loan facility was arranged by Bank of Yokohama Ltd., the 58th-largest bank in the world and the largest regional Japanese bank, but a minor player in the U.S. market. The company had no previous relationship with the bank.

"They called on us for a year and a half," said Gerald Glancey, treasurer of the West Coast grocery and drug chain. "We replaced existing debt and got a better rate."

A banker from the Bank of Yokohama said that the deal reflects the growing role the bank wants to play in the U.S.: "Our strategy is to use our position as the lead Japanese regional bank to continue to find deals and then syndicate them with our regional bank network."

Morgan Guaranty Trust Co.

American Stores' traditional bank. The J.P. Morgan & Co. unit arranged a $5.1 billion facility for American's acquisition of Lucky Stores. This $75 million HLT replaces part of the existing facility, Mr. Glancey said.

The Bank of Yokohama's only relationship with the borrower was purchasing pieces of the existing American Stores facility. "We had no direct relationship with the borrower," the banker said. "This was the first major deal that Bank of Yokohama has led in the U.S."

He attributed the mandate to "selling effort" and thinner pricing than the existing facility, which reportedly pays around 175 basis points over the London interbank offered rate.

Mr. Glancey said the company may save 20 basis points or 30 basis points a year on the new facility, and said Bank of Yokohama arranged a group that also lowered the company to lock in attractive fixed-rate funding.

"We caught the swap market at a good time," the Bank of Yokohama official said. He declined to elaborate. □

Morgan Leads Revolving Facility Backing MNC Financial's Paper

By WILLIAM GOODWIN

MNC Financial Inc. said it obtained a $750 million revolving credit line from a group of banks led by Morgan Guaranty Trust Co.

Members of the syndicate are believed to include the banking units of BankAmerica Corp. and Manufacturers Hanover and as well as Union Bank of Switzerland.

The new 18-month facility is intended as a backup line for the issuance of new commercial paper and variable-rate renewable notes, an MNC official said.

Tied to 'Financial Initiatives'

MNC has $1.1 billion of commercial paper outstanding and $823 million of outstanding variable-rate renewable notes, the official said.

Up to $600 million of the new bank facility will be available initially. That amount will rise to $750 million by January 1991 if MNC achieves "certain planned financial initiatives," the Baltimore-based superregional said in a statement.

MNC is also exploring the sale of three nonbank units that together comprise MNC Credit Corp.

The three units – MNC Commercial Division, MNC Leasing Division, and LeaseFirst – have combined assets of about $1.2 billion.

Goldman, Sachs & Co. is assisting MNC in the possible sale.

MNC also recently announced that it was raising $180 million in much-needed capital through a private placement of convertible preferred stock with insider directors.

Hit by real estate problems in the Washington-Baltimore area, MNC reported a second-quarter loss of $74.7 million, after adding $233 million to its reserve for possible loan losses. □

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking companies and the 25 largest publicly traded thrifts, measured by the market value of all common shares outstanding (as of June 30, 1990, the market value cutoff for banks was $58.71 mil. and for thrifts $107.8 mil.) 52 Wk Hi: Set the moving 52-week high and low prices for the stock. PE: The price-earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. Mkt. to bk: Stands for ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for latest announced earnings and dividends. Cha.: The price at which the stock last traded, relative to the day's close on the latest bid. 52 Wk Chg.: The percentage change in market value of the top 250 banks in market value and the top 25 thrifts over the past 52 weeks. Highlights cites stocks with the most adventurous increases in price; and two volume indicators most shares traded, and shares traded as a percentage of average shares traded daily over the past year.

Data sources: SNL Securities, Charlottesville, Va., 804/971-1600, produced the tables. Financial News Network, Vienna, VA, provides SNL with the daily prices.

Experts Try to Figure Out Why Fed Rejected Northeast Merger

Continued from page 1

Lynch, a banking analyst at Bear, Stearns & Co., "but we knew that." He said it also appeared clear "that Bank of New York did not want this deal approved anyway."

Richard V. Fitzgerald, a former chief counsel for the Office of the Comptroller of the Currency and now a Washington partner in the law firm of Muldoon, Murphy & Faucette, said the Bank of New York decision is noteworthy because merger applications are normally withdrawn if the capital level of the merged company is declared insufficient by the staff.

"Usually, this kind of thing is resolved in staff discussions," said Michael C. Bradfield, a former Fed general counsel who is now a Washington partner in the law firm of Jones, Day, Reavis & Pogue.

Carol Berger, an analyst at C.J. Lawrence, Morgan Grenfell Inc., said she could not recall the outright rejection of a merger on capital grounds in a situation similar to the Bank of New York case. "Usually, the questions on capital end up as attached conditions," she said.

Northeast, whose shares plunged $5.25, to $12.25, on the news Thursday, said it was "deeply disappointed" at the rejection. In its statement, it appeared to lay part of the blame on Bank of New York's 1988 acquisition of Irving Bank Corp. Bank of New York shares rose 12.5 cents, to $24.625.

'Strange Logic' Seen

"The logic of this complaint is strange, if not fantastic," said Michael M. Pascale, spokesman for Bank of New York. "Are they saying that we paid through a 14-month hostile takeover battle to acquire Irving in order not to have to acquire Northeast?"

Bank of New York struck its bargain to buy Northeast in August 1983. The landmark deal prompted the U.S. Supreme Court to say that two New York states did not violate the Constitution by forming exclusive regional compacts on interstate banking in order to bar banks from large states like New York.

That ruling ushered in an era of limited interstate banking and was the catalyst for creation of what became known as superregional banks. But it put the Bank of New York-Northeast deal on hold until this year, when Connecticut finally removed its legal barrier. □

Excerpt from Fed's Bank of New York Ruling

The Bank of New York Company, Inc., New York (BNY), has applied for the prior approval [Federal Reserve] Board's approval under section 3 of the Bank Holding Company Act to acquire all of the voting shares of, and through a wholly owned subsidiary to merge with, Northeast Bancorp, Inc., New Haven, Conn., and thereby acquire its subsidiary bank, Union Trust Co., Stamford, Conn.

BNY and Northeast compete directly in the Metropolitan New York-New Jersey banking market. BNY is the fifth largest commercial banking organization in this market, controlling deposits of $20.6 billion and representing 7.3% of total deposits in commercial banks in the market ("market deposits"). Northeast is the 26th largest commercial banking organization in the market with deposits of $1.9 billion which represents less than 1% of market deposits. Upon Consummation, BNY would become the fourth largest commercial banking organization, controlling $22.5 billion in deposits and representing 7.9% of market deposits.

In evaluating this application, the Board is required, under the terms of section 3 of the BHC Act, to consider the financial resources of the companies and the banks involved and the effect of the proposed acquisition on the future prospects of the bank and applicant organization. The Board has stated and continues to believe that capital adequacy is an especially important factor in the analysis of bank holding company expansion proposals.

In this regard, the Board has stated that it expects banking organizations contemplating expansion proposals to maintain strong capital levels substantially above the minimum levels specified in the Board's Capital Adequacy Guidelines without significant reliance on intangibles, particularly goodwill.

The Board carefully analyzes the effect of expansion proposals on the preservation or achievement of strong capital levels and has adopted a policy that there should be no significant diminution of financial strength below these levels for purposes of effecting major expansion proposals.

Thus, for example, the Board has generally approved proposals involving a decline in capital only where the acquiring company promptly restored their capital to preacquisition levels following consummation of the proposal and have implemented programs of capital improvement to raise capital significantly above minimum levels.

"The Board finds that financial considerations are not consistent with approval of these applications."

BNY proposes to acquire Northeast for approximately $195.6 million, excluding BNY's existing investment of $43.2 million in Northeast common stock, warrants and nonvoting stock. . . . Although the purchase price is in dispute, the Board has assessed the impact on capital of the proposed transaction on the basis most favorable to the applicant by using the lower purchase price projected by BNY.

Under either financing alternative, however, the proposal is inconsistent with the Board's capital policy that an expansion-minded organization not interfere with an applicant's ability to maintain a strong capital position above the minimum levels required under the Board's guidelines, without significant reliance on intangibles.

After the proposed acquisition, tangible capital ratios for the combined organization would not be substantially above the Board's minimum capital levels and would be less than the current average levels of BNY's peer group of the nation's largest regional banking organizations. BNY has also failed to present any proposal to strengthen the capital levels of the combined organization within a short period of time after the consummation.

In addition, BNY's tangible common equity to tangible assets ratio would be below the applicable capital commitment required by prior Board order. (The Board notes that BNY has been required to achieve, within one year of consummating its acquisition of Irving Bank Corporation, a 4.1% tangible common equity to assets ratio, based on the deduction of all intangibles from the calculation of this ratio and not only goodwill, under the Board's capital guidelines applying this acquisition). Accordingly, based upon all the facts of record in this case, the Board finds that financial considerations are not consistent with approval of these applications.

Managerial resources and considerations relating to the convenience and needs of the communities to be served are sufficient weight to warrant approval of these applications.

On the basis of all the facts of record, the Board concludes that the banking considerations involved in this proposal present adverse factors bearing upon the financial resources and future prospects of BNY that are not outweighed by any other factors. Accordingly, it is the Board's judgment that the proposal and these applications would not be in the public interest and that the applications should be, and hereby are, denied. □

Bank Issues Take A Beating After Analysts Weigh In

By FRED VOGELSTEIN

California bank stocks were hammered in the wake of analysts' estimates of lower earnings for Security Pacific Corp.

The drop in California banks, and the fall in the overall market, drove other bank stocks lower. Also, an across-the-board earnings estimate reduction for banks by Salomon Brothers Inc. analysts contributed to the selloff.

The broader market was off sharply, with continued fears of the economic repercussions from the Iraqi invasion of Kuwaiti. The Dow Jones industrial average was down 66.83 points to 2681.44 at the close.

Merrill's Revision On Security Pacific

Earnings per-share	New	Old
3Q '90	$1.27	$1.55
1990	5.70	6.35
1991	6.20	6.80

Source: Merrill Lynch

Security Pacific started the slide on Thursday after Livia Asher of Merrill Lynch & Co., said that she was reducing her 1990 earnings estimates to $5.70 a share from $6.35 a share because the Los Angeles-based bank holding company announced it was building its loan-loss reserves.

Others Follow Suit

Oppenheimer & Co. analyst Cheryl Swain said she lowered her 1990 estimates to $5.95 a share from $6.40, and Montgomery Securities analyst J. Richard Fredericks said that while he had not formally lowered his, he was also inclined to drop them to the $6-a-share level.

In late afternoon trading, Security Pacific was off $3 to $28.75, Wells Fargo & Co. was off $3.125 to $59.65, and First Interstate Bancorp. was off $1.375 to $31.25.

Shares in Bankers Trust New York Corp. were off $1.25 to $37 on news that its problem loans may continue to rise through the end of 1990. A downgrade by Moody's Investors Service Inc. sent shares in First City Bancorporation of Texas tumbling $1.25 to $18.50.

Other banks that dropped sharply were Michigan National Corp., which was off $1.75 to $25; U.S. Bancorp, which was off $1.50 to $24.25; Banc One, which was off $1 to $26.75; and Citizens and Southern Corp. and Sovran Bank, which were off $1.375 each to $20.75 and $25.875, respectively.

Nancy Bush, an analyst at Brown Brothers Harriman & Co., said her traders told her that Sanford C. Berstein & Co. was a big seller of Citizens' stock and that Sovran was probably moving in sympathy. The two are in the process of merging.

Future Estimates Also Drop

In her report on Security Pacific, Ms. Asher said she was also lowering her 1991 estimates to $6.20 from $6.80. "I just assume that some of the trends that are affecting them now will be impacting them next year as well," she said.

In addition to increased reserves, Ms. Asher said that the bank's announcement of expected weakness in the growth of noninterest income prompted her decision to lower estimates. Noninterest income represented 19.3% of total income for the first half of 1990. The information was disclosed in the bank's 10Q report, filed with the Security and Exchange Commission on Wednesday.

Ms. Asher said she was not lowering her ratings on Security Pacific, however, which are now a "neutral" short term and an "attractive" long term. "To dump the stock at this point would be an overreaction," she said.

John F. Kooken, Security Pacific's chief financial officer, responded to the downgradings: "We clearly expected people would change their estimates as a result of the announcements. ... I don't think we are as pessimistic on California real estate as much of the rest of the investment community is."

Commenting on recent pessimistic statements on the California economy by Robert F. Adelizzi, chairman of HomeFed Corp., and Thomas Marrie, chief financial officer of First Interstate Bancorp, Mr. Kooken said: "My general memory of it is that it sounded more pessimistic about California real estate than we are."

He said that he did not know how much reserves would be increased but that they would "at least go to 1.7%" of credits outstanding, excluding LDC obligations, by the end of the year. □

Power Outage Jolts Fed Funds Market

By KELLEY HOLLAND

The difficulty that financial institutions are experiencing because of Monday's power outage in Manhattan sent shudders through the overnight federal funds market.

The failure of major clearing systems to operate normally has meant the federal funds market has been open late into the evening all week. The Fed funds rate moved as high as 15% at closing when clearing imbalances caused retention of reserves.

And banks have found themselves either holding excess reserves they need to sell or scrambling to find fed funds and avoid being overdrawn.

'Trading on Suppositions'

"It's a debacle," said Lawrence J. DiTore, a senior vice president at the Fed funds broker Fulton Prebon (U.S.A.) Inc. "People don't know what their positions are. They're frozen in time. They're trading on suppositions."

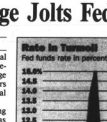
"Banks freeze up," said one fed funds trader at a money-center bank. "They don't want to sell because they don't see money coming in."

The problems in the fed funds market have not yet created major liquidity problems for any banks, sources say. But bankers pointed out that banks finding themselves short of funds late in the day are having to pay exceedingly high rates.

Also, banks with substantial excess reserves are either having to pay for funds they do not need or lend those funds, possibly in amounts under the credit lines they normally extend to other banks.

Immediately after the power outage on Monday, the fed funds market stayed open until 10 p.m. as the rate rocketed up to 15%, traders said. The market remained open Tuesday, closing at 7 p.m., only slightly later than the normal 6:30 close, with fed funds at 8.25%.

Rate in Turmoil
Fed funds rate in percent



But Wednesday, Citibank's clearing system, which handles trades for many correspondent and foreign banks, did not operate until 7 p.m. When the market finally closed nearly five hours later, the fed funds rate had moved to 11%.

Fed Wire Moves Upstate

Operational problems continued on Thursday. The Federal Reserve's clearing system, Fed Wire, failed to open until 11:15 a.m. on Thursday as its operations were moved to a contingency site in upstate New York.

Meanwhile, foreign banks traded nervously, with spurts of buying activity, amid uncertainty about the viability of the Fed Wire's backup system and of Citibank's clearing operations. And fed funds traders said the Fed had asked the New York Clearing House Association to close the Chips system an hour early, at 3:30 p.m., and requested that securities firms keep trading activity on the securities wire to a minimum.

An official at Citicorp said his bank was experiencing no problems clearing fed funds transactions on Thursday. But bankers elsewhere in Lower Manhattan said that, with the Fed Wire opening late, it was hard to tell which commercial banks were operating normally.

With clearing systems out of order, banks are finding themselves operating without firm information about their fed funds position relative to their reserve requirements.

Scores of regional banks, settling with regional Federal Reserve banks, have found themselves with excess reserves in the morning when late-clearing New York systems have pumped extra funds into them. The confusion has also made many banks loath to sell fed funds because they want to avoid being overdrawn at their local Federal Reserve bank.

At the same time, a number of New York and foreign banks have been coming up short at the end of the day.

In response to the natural drain, the Federal Reserve executed four-day system repurchase agreements on Thursday to inject new supply into the system. But the fed funds rate remained slightly above the target level of 8%.

Bankers and fed funds brokers are thankful for one thing, though: the power outage did not take place during a settlement week. "To have that happen on a settlement day would have wreaked havoc," said one banker.

MARKET MONITOR

Banc One Corp. has issued $200 million in 20-year subordinated bonds in an offering leadmanaged by Salomon Brothers Inc. and co-managed by Goldman, Sachs & Co. and J.P. Morgan Securities Inc., a subsidiary of J.P. Morgan & Co.

The bonds, which carry a 10% coupon, were priced at 140 basis points over 30-year Treasuries to yield 10.25%. □

Ameritrust to Cut 780, Take Up to $18 Million Charge

Continued from page 1

close.

The company said its costcutting is expected to reduce expenses by $26 million next year and $32 million in 1992. It plans to cut 780 people from its total work force of 6,800. Ameritrust's operating expenses in 1989 totaled $380 million.

Offsetting Gains Cited

The company said a restructuring charge of $14 million to $18 million would be partly or wholly offset by gains from "extraordinary transactions." A spokesman said the gains may include a sale of assets, but he declined to identify them.

Areas being targeted for reduction include nonrelationship corporate lending, especially in national syndicated loans.

Ameritrust's nonperforming loans have risen steadily; they totaled $262.4 million at the end of the second quarter. The spokesman said nonperforming loans could increase by as much as $30 million in the year's second half.

The Ohio company reported first-quarter loss of $51.6 million after taking a $120 million loan-loss provision. Its secondquarter profit declined 39%, to $18.4 million.

Despite Thursday's disclosures, Thomas K. Brown, an analyst at PaineWebber Inc., reaffirmed an earlier buy recommendation for Ameritrust stock, which he said was undervalued.

Mr. Brown said Ameritrust has gotten most of its credit-quality problems behind it, adding that much misunderstanding exists about the company.

"Management is moving in the right direction," said Mr. Brown. "Unfortunately for investors, that's not necessarily a straight line."

Some analysts have been critical of management for uneven performance. "They seemed to fumble around a lot," said one analyst who stopped following the company because of its erratic performance. □

VOL. CLV NO. 162 | Monday, August 20, 1990 | 155th year

Securitization: Can It Work in Middle Market?

By SANFORD ROSE

As pointed out in a recent report in this newspaper, some banks have expressed an interest in securitizing middle-market loans. What are the obstacles to securitization of commercial as opposed to consumer loans? And how can these obstacles be surmounted?

Economic theory and common sense – unfortunately, the two don't always coincide – seem to hold that a market will not long exist if the inequality of information between buyers and sellers is too great.

An asymmetry of information between buyers and sellers causes a problem if two conditions hold: First, the seller has detrimental information about a product, say a loan, that he chooses to withhold from the potential buyer; and, second, the cost to the buyer of discovering the relevant information on his own is significant relative to the value of the product.

If sellers withhold information and buyers have no cost-effective way to obtain that information, a market cannot long be sustained. This is called the agency or adverse-selection problem.

There apparently is only a small agency problem when banks sell the loans of rated companies to other banks, thrifts, or pension funds. The buyer has access to the agency ratings at minimal cost in order to remedy his information disparity.

Role of Deal Managers

There is a somewhat larger, though still perhaps not an insuperable, agency problem when pieces of large, well-publicized leveraged buyout credits are sold down. The deal managers and the agent banks make it their business to clarify the nature of the cash-flow projections, thus eliminating the information asymmetries.

But there is a larger and perhaps formidable agency problem when banks sell pieces of less-publicized LBO deals, or when they sell middle-market commercial loans. How does the buyer know that he isn't getting a lemon?

If the buyer knows less about the credit than the seller and lacks the ability to bridge this information gap in a cost-effective fashion, shouldn't he demand a higher yield on the loan than did

RJR Loan Is Flop in Syndication

By STEVEN LIPIN

The general syndication of RJR Nabisco Inc.'s $2.25 billion bank facility is basically a failure.

While some bankers boasted that the $7 billion in commitments the company received reflected the willingness of commercial lenders to invest in RJR, agent banks had sold a mere $200 million as of Friday. That's out of a pool of roughly $1.4 billion that they are trying to sell off. Bankers in and out of the deal attribute the failure to the skimpy fees reoffered.

The general syndicate is set to expire Aug. 24, and banks will likely continue selling in the secondary market. Officials in the deal did not expect to sell much more of the deal before Friday's deadline.

'Not Too Pretty'

"A billion four went in and over a billion is coming out," said one syndicate official in the deal. "That's not too pretty."

While RJR is not directly affected, the figures are significant because many banks, reluctant to increase their exposure to highly leveraged transactions, will nevertheless be holding a greater portion of RJR loans than they had hoped.

Most do not want to retain more than $25 million to $50 million, bankers in the deal say. With concerns over credit quality from both regulators and shareholders, "the trend is to get fees up and risks down," one banker involved in the deal said.

Secondary Fees Blamed

And the fees are certainly generous in the RJR Nabisco deal. Not only are fees over 300 basis

Gonzalez Seeks Ouster Of Vocal FDIC Critic

By BARBARA A. REHM

WASHINGTON — House Banking Committee Chairman Henry B. Gonzalez is seeking to fire the outspoken economist R. Dan Brumbaugh from a committee-sanctioned study of the Federal Deposit Insurance Corp.

Mr. Brumbaugh, a senior research scholar at Stanford University and one of three economists preparing a report for the House financial institutions subcommittee, has attracted considerable media attention in recent weeks to his argument that the bank insurance fund is technically insolvent and inadequate to handle a likely spate of bank failures.

Objectivity Questioned

Mr. Gonzalez said in an interview last week that Mr. Brumbaugh is unable to do an objective analysis of the FDIC because he has testified against the government in lawsuits against thrift managers.

"I wasn't aware of his involvement as a paid witness against FDIC," the Texas Democrat said, referring to Mr. Brum-

Morgan Helps Japanese Bank Skirt Barrier to Subordinated Bond Issue

By KELLEY HOLLAND

A Japanese bank Friday found a way around a recent move by the Ministry of Finance to make it more difficult to issue subordinated bonds.

A J.P. Morgan & Co. unit devised an innovative method of skirting the ministry's near prohibition and used it to help Daiichi Kangyo Bank Ltd. raise $500 million in capital.

Ministry's Stand Assessed

Capital markets specialists said they expect the ministry's restrictions to be short-lived in any case. "They want to put people on hold for a month or two while they reconsider," said one investment banker. "They're not shutting [the banks] down."

The Ministry of Finance authorized Japanese banks to issue subordinated loans early this summer in a move to give banks more options for raising capital. At that time, ministry officials indicated they would not rule out authorizing banks to issue public subordinated bonds but said such deals would be approved only case-by-case.

Almost immediately after its decision on subordinated debt issuance was made public, the ministry allowed a subsidiary of

CEOs Jump on Technology Bandwagon

Technology Execs Rank High on Totem Pole

Title of executive technology manager...

Source: American Banker Technology Survey

By JEFFREY KUTLER

NEW YORK — Shedding some of banking's past conservatism and mistrust of computers, chief executive officers are getting in on the technology act. They are doing so with great enthusiasm and, perhaps paradoxically, gaining the loyalty and respect of underlings from very different career backgrounds.

The CEOs' increasingly hands-on role and technology managers' positive response are clearly evident in the 1990 *American Banker* technology survey.

At three out of four institutions, the top operations or tech-

"SOUND OFF"

Stocks in the S&P 500 carry dividend yields averaging 3.6%, while the shares of many of the biggest U.S. banks trade at prices that put their dividend yields at or near double digits. Jed Horowitz, chief of the American Banker's Northeast bureau, asked the following question:

In light of the depressed earnings at many banks, should they be cutting their dividends?

■ William C. Ferguson
President and CEO
Ferguson & Co.
Washington

I suspect that many of the money-center banks will be forced to cut dividends in the near future to meet the new risk-based capital standards and to offset the impact of decreased earnings and real estate writeoffs. They are simply going to have to be cut because capital is king.

If you're not making enough income to support a dividend, then in effect you are returning capital as opposed to distributing earnings. Every time some of these banks pay a dividend they are writing their own prescription for takeover.

Prudence would dictate that banks should go ahead and bite the bullet themselves. But they are under tremendous pressure from shareholders and highly leveraged holding companies that need the continued income stream of dividends to meet obligations.

Also, some controlling shareholders borrowed a large amount of money to buy bank stock and need this income to pay off their loans.

■ W. Anthony Hitschler
President, chief investment officer
Brandywine Asset Management
Wilmington, Del.

Many of the banks need to build up capital. I don't see how they're going to do it, other than by cutting their dividend or merging.

These high yields are saying that nobody believes the dividends can be sustained. It will be interesting to see what will be happening toward the end of this year when dividend rules [from regulators] are expected to change.

It is likely that a dividend cut will be disguised in some kind of intramarket merger transaction.

■ Robert Bertolotti
Vice president, analyst
Bessemer Trust Co.
New York

Given capital requirements and the deterioration of their earnings, many money-centers and some regionals are paying out an intolerable amount. Some have used their high yields shamelessly to increase capital through dividend reinvestment programs. . . . first, you drag the money in, then you cut the dividend.

■ Howard Sherman
Director of proxy advisory service
Institutional Shareholder Services
Washington

Cuts should only be made in the most extreme cases, but obviously there are many of those around today.

It's a much tougher question for a bank than for an industrial firm. A lot of investors purchase bank shares because of the dividends. But as a long-term business strategy, all constituents in a bank – its stockholders, in particular – are much better off if a bank realizes which if it has to and builds up cash reserves.

Institutional shareholders – pension funds, in particular – by nature are long-term investors, since their planning horizons go out 30 years. In practice, they still have a very short-term orientation. But some of our clients are questioning whether they are placing too much emphasis on short-term quarterly results.

■ J. Richard Fredericks
Analyst
Montgomery Securities
San Francisco

I don't think there is a bank around that will cut a dividend unless they see no possibility of eking it out. But I think that many of the money-centers are on, or ready to go on, a short leash with regulators [regarding dividends].

If a bank is poorly rated by the regulators [with a 3, 4, or 5 Camel ranking] and is not covering its dividend through earnings, it better have a legitimate plan to present to regulators, or else the dividend is suspect. Based on what is happening at some money-center banks, I think regulators will probably give banks that are not covering the dividend three to five quarters to show results. □

Skeptical Bankers Remain On Alert in Wall Street Area

Power Surges, More Outages Feared

By JEANNE IIDA

NEW YORK — As payment systems returned to near normal on Friday, bankers braced for more unpleasant surprises as electricity began to be restored to the Wall Street area.

Bankers whose buildings had electricity expressed concerns about losing it when darkened areas were relit, and others fretted about power surges in the coming week.

Representatives of the Federal Reserve Bank of New York, the New York Clearing House Association, and major banks met at 8:30 a.m. on Friday to review the situation. Among other issues, the officials discussed how long diesel back-up generators could continue to hold up. The Fed also said it expected to bring Fed Wire operations, which were moved to an alternate site Thursday, back to Manhattan on Monday.

Con Ed Cites Sunday

Consolidated Edison Co. of New York, whose substation caught fire Monday and touched off the week-long power disruption, said it was expecting electricity building-by-building on Friday and would be finished by Sunday.

Bankers were more skeptical. "Con Ed says we'll be back in power sometime Sunday, but we're going to be cautious about moving operations back," said Carl Klemme, executive vice president, National Westminster Bancorp.

He said National Westminster, which moved all its New York City operations except funds transfer to Long Island earlier this week, would wait till about midday Saturday. By then, the bank hopes Con Ed will be providing "clean" power, without voltage variations.

Citibank, which shifted downtown operations to several locations, was said to be considering keeping Manhattan retail operations permanently at a site it owns in Secaucus, N.J. The bank moved the retail systems to New Jersey on late Wednesday after its backup generator failed at 111 Wall Street. Sources said it was considering keeping those activities there because of the unreliability of facilities in the city.

Staying 'On Alert'

A Wall Street investment firm that was receiving power from Con Ed on Friday put its provider of disaster recovery services "on alert" as the utility began to turn on the juice in other parts of the district.

"As Con Ed begins to reconnect, they don't have confidence that power will stay up," said Judith Eckles, a spokeswoman for the vendor, SunGard Data Systems in Wayne, Pa. She declined to identify the brokerage house.

No On-Line Backup

The events of the past week are bound to lead many banks to reassess their disaster recovery plans and may encourage them to install more expensive back-up systems for protecting time-critical data, such as funds transfer transactions.

Few banks have on-line backup for such functions. When banks move these on-line activities to another location, they therefore have to reconstruct transactions that have already taken place that day.

Partly for this reason, many New York City banks kept funds transfer operations running this week at their normal sites using diesel generators to provide power. As the electrical outage continued, some backup systems began to fail, creating problems at the Fed and Citibank

Buyer Found For Unit of Ailing BNE

By TOM LEANDER

Bank of New England Corp. has received a firm offer for its Rhode Island unit, but regulators may approve the sale only if the proceeds are pumped into the company's troubled flagship bank in Boston, according to a 10-Q regulatory filing with the Securities and Exchange Commission.

Analysts said the possible regulatory restriction casts doubt on the company's chances of converting the majority of its $700 million in outstanding debt to equity.

It is widely believed that Bank of New England needs the cash from the sale of the Rhode Island unit to finance a debt-for-equity exchange with its bondholders. The debt-for-equity exchange is considered crucial to Bank of New England's survival, because it would eliminate about $60 million in annual interest payments.

Bank of New England's Rhode Island unit has $1.3 billion in assets and equity capital of about $70 million. The sale would yield Bank of New England Corp. an estimated $60 million to $80 million.

Some analysts also speculated that Bank of New England bondholders would be reluctant to exchange their holdings for stock in a company that cannot retain proceeds from asset sales.

A Bank of New England spokesman declined to comment.

'Source of Strength' Concerns

"The regulators and the bondholders are on the opposite side of the ring on the issue of an exchange offer," said Kristina E. Anderson, an analyst with Kidder Peabody & Co., alluding to the legal doctrine known as "the source of strength." This says that regulators have the right to

CEOs Awaken to Strategic Importance of Data Processing

Continued from *page* 1

nology officer reports directly to the president or chief executive. At another 7%, the president or CEO takes direct responsibility for back-office functions.

Meanwhile, most technology managers said they receive substantial support from CEOs. On a scale of 1 to 5, with 5 denoting total support, the CEOs at the banks in the survey rated a solid 4.

The data come from a poll of the senior technology managers at 333 banks with at least $75 million in deposits. Trans Data Corp., an *American Banker* research affiliate in Wayne, Pa., conducted the survey by telephone in March and April. A magazine containing summaries and analyses of the findings has been sent to subscribers.

While many technology executives still feel removed from the banking mainstream – more than half say it is unlikely that someone of their background will become a bank president or CEO – their close contacts with top managers have brought them credibility and respect that they lacked a decade ago.

"To say I am hands-on in technology may be a little unfair, but I'm talking to those people a lot," said Samuel McCullough, chairman and chief executive officer of Meridian Bancorp, Reading, Pa. "Aside from credit quality, the area where I have to be most concerned about things going wrong is data processing.

"We are committed to devote the talent and resources necessary to this increasingly important part of our business," he added. "I feel very comfortable with the way data processing is run."

Mutual Admiration

The feeling seems mutual: Most technology officers give their CEOs credit for making a reasonable, if not strong, commitment to automation and innovation. Six out of 10 in the survey described their CEO's attitude as "costs are monitored but opportunity exists for major return on investment." Few complained about technology falling victim to obsessive cost cutting, as some bank automation enthusiasts had feared.

"The use of automation in the delivery of products and services is well understood among our senior management – in some cases the technology is the product or service," said Robert Dressel, executive vice president of United Banks of Colorado, Denver. Typical of many technology chiefs in this era of apparent good feeling, Mr. Dressel says he has no complaints about the attention and support, or lack thereof, that his area receives from the chief executive.

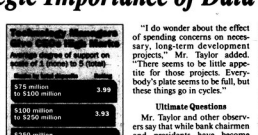
"At our bank," he said, "I think those old conflicts vanished 20 years ago, when the CEO at the time launched an effort to create a new data processing system and got everyone behind it. Other banks may not have been so fortunate, but today technology is certainly less controversial than it was several years ago."

Need for Big Decisions

The need to make major data processing choices is a common thread drawing CEOs into technology decision-making.

"For us it happened in 1983 and 1984, when we had to decide whether to continue running our data center in-house or moving to a service bureau," said Willard Bunn 3d, chairman and chief executive of Marine Corp. and Marine Bank of Springfield, Ill. "Staying in-house required an extensive systems upgrade, but we decided it was in our best interests to do it. To us it was important to control the computer resource."

Mr. Bunn says that resource allowed Marine to forge a reputation for automation far exceeding its $1 billion-asset size. Marine Bank is second only to Chase Manhattan, the second-largest money-center bank, in processing of automated clearing house transactions.



At Chase Manhattan Corp., "the top officers are totally there now," Michael Urkowitz said of their commitment to technology. He is president of Chase Information International, the company's wholesale services unit.

In a sign that times have changed, he said, Chase chairman Willard C. Butcher devoted a recent senior management meeting "specifically to our technology and how it stacked up against the competition."

With a few conspicuous exceptions such as Citicorp, where automation czar John S. Reed rose to chairman in 1984, the topic would have gotten short shrift in banking as recently as five years ago.

"The technology has become so critical to the business of banking, so strategic, that many of the decisions that have to be made must come from the top," said David Van L. Taylor, a group executive at the Bank Administration Institute who has extensively studied technology's rise through the management ranks.

"I do wonder about the effect of spending concerns on necessary, long-term development projects," Mr. Taylor added. "There seems to be little appetite for those projects. Everybody's plate seems to be full, but these things go in cycles."

Ultimate Questions

Mr. Taylor and other observers say that while bank chairmen and presidents have become more active in this area, they are just beginning to confront issues that could transform the back office even more radically during the 1990s.

"Bankers should be asking, What is the ultimate role we want technology to play?" said Diogo Teixeira, a McKinsey & Co. consultant and coauthor of "Technology in Banking," a 1990 report that won wide acclaim in the industry.

Mr. Teixeira predicted that as the analysis proceeds, many bankers will conclude that processing is not their business, or is just too burdensome. This would lead them to farm their processing out – sometimes called outsourcing – to vendors or service specialists. Some are already moving in that direction, with CEOs making the ultimate decision.

Old News at Small Banks

CEOs' close involvement is old news at many small banks. With managers few and organizational structures flat, their operations decisions have long been made at the top. Among institutions in the survey with $75 million to $250 million in deposits, 9% of CEOs manage technology directly and 85% have the senior technology official reporting to them.

But even as technology has grown in complexity, larger banks with far more elaborate management structures are endorsing close CEO oversight. More than 90% of banks above $250 million in deposits assign day-to-day technology management to a senior or executive vice president, and 70% have that manager reporting to the chief executive.

The big-bank CEOs' closer involvement picked up in the early 1980s.

Back-office machinery and personnel costs were major contributors to annual expense increases of 20% or more at some large banks in the early 1980s. CEOs took it upon themselves to rein those costs in, which required closer working relationships with the managers of those areas.

Cooperation and understanding were lacking. In a 1986 Coopers & Lybrand survey of senior management attitudes to technology in banking and financial services, one-fourth of CEO executives said they were not knowledgeable enough to make competent automation decisions.

The entreaties of consultants and in-house technologists notwithstanding, many top managers said they did not view technology investments as a route to competitive advantage. Hence the concentration on expense control, in which nontechnologists could wield considerable power.

Coinciding with the cost inflation was the beginning of the bank merger boom, which spurred senior-level strategists to identify the mutual benefits – known as synergies – in a combined organization. Invariably, operations budgets and centers were consolidated, with technology decisions increasingly centralized and put higher on the management ladder.

It stands to reason that the people responsible for these critical areas and their sizable budgets – hundreds of millions of dollars a year at the biggest banks – would gain prestige and influence in the management hierarchy. □

Plenty of Blame to Go Around For the Real Estate Collapse

Looking at the collapse in home prices and commercial construction and the impact on the value of bank mortgage loans for all kinds of real estate, I cannot help thinking of the man who trained his horse to live without food only to find to that just when the beast was getting the hang of it, it died.

That's pretty much what happened in home finance.

First, the regulators became extremely strict in evaluating the worth of loans for homes, shopping centers, office buildings, and the like. Then, the banks and thrifts curbed lending drastically to satisfy the regulators. That restraint has so curtailed real estate finance that prices have declined and the fears of the regulators have been realized.

In sum, the horse died.

Problem's Roots Go Deep

But to be fair, while much of the blame today is being placed on the regulators and lawmakers for being too strict on mortgage loans after a decade of being too lenient, the roots of the mortgage market collapse go deeper.

What are some of these roots?

• First, we must recognize that we are now paying for a decade of overbuilding of all types caused by a sympathetic Congress that wanted money readily available for housing in good years and bad, whether it was needed or not.

This was the basis for the legislative and regulatory favoritism that the thrifts experienced all through the 1980s. And it is the reason the commercial bankers complained they could not get a "level playing field" in the competition for funds. As money flooded into the thrifts, they lent it out, and we overbuilt the nation's real estate stock.

• Second, obsolete laws that keep banks from providing full financing for the public led to the growth of so-called nonbank banks and of foreign institutions' power. This forced U.S. banks to concentrate more resources in areas where they did have the power to operate, notably commercial real estate.

• Third, laws preventing geographic expansion of banks forced them to concentrate lending in their own regions and to forgo the comfort of diversifying geographical risk.

• Fourth, the inability of unit banks to generate large volumes of core deposits led to reliance on volatile purchased funds. This helped cause problems in states like Texas and Oklahoma. And it is ironical that because of unit banking laws intended to protect Texas from outsiders every major Texas bank now is owned by non-Texas interests!

• Fifth, the mania for going public that hit so many mutual thrifts in the 1980s left them with new capital burning holes in their pockets – capital that was put to work financing real estate ventures that otherwise might not have been built.

• And finally, as we try to see why real estate prices have collapsed, we find that much of the decline is merely a return to normal from an era of speculative fever. As prices pushed up, real estate owners felt their property was worth many times what they had paid for it.

When the bubble burst, it was impossible to recognize that a home was really salable at 80% or less of what we had thought it was worth. Similarly, Texas did beautifully on $2 oil, superbly on $35 oil, but then fell on its face with $18 oil.

Up to this point, one can conclude that it was restrictive laws and promotional legislation that skewed the nation's available funds and led to the overfinancing of construction. This, coupled with the overreaction to day, is causing our housing and commercial construction slump, many potential borrowers hold.

But one can look further.

Much of the financing that did take place was based on overoptimistic sales and price estimates. Builders decided that, if the banks would provide all the money, they would provide "sweat equity."

Banks Took Most Losses

The result: Banks that financed projects that turned sour took most of the losses.

On top of this, many homebuyers and other borrowers have hidden under the mantle of personal bankruptcy when their plans went awry.

The result is a far more cautious banking system.

So there are many roots to our housing collapse and the attendant depression for some banks. We cannot place all the blame on regulators. But we can learn the lesson the Soviet Union also is learning: Watch out when you take away allocation of funds from the free market and give it to government officials. □

COMMENT/ *By Jeffrey R. Weisman*

Build Relationships to Win New Middle-Market Clients

Lending officers, by definition, make loans. Now we're asking them to become marketers – to create new business relationships and to sell services.

Many banks offer sales training, but success is slow in coming. The bankers' basic skills are in lending and relationship maintenance. It's difficult for them to unlearn the old habits and adapt to the new selling ways of business.

In the business of getting new business from middle-market companies, one statement by the controller of a $12 million manufacturing company truly applies:

"Your opportunity to switch a company from one bank to yours only comes once – when his current bank screws up."

Windows of Opportunity

But when will that happen? And how does a bank position itself to be the one called or considered when the opportunity arises? In service businesses such as banking, clients don't run out of the service – as the consumer does with Tide and Crest.

There aren't frequent opportunities to win business. And experience in soliciting new business demonstrates that companies that appear most anxious to select a new bank are invariably the companies not very desirable as new clients.

Beyond Quarterly Thinking

What can a banker do to insure a steady flow of new business? First of all, the bank (and banker) must depart from quarterly thinking to longer-term, relationship thinking. New business is not won after one visit.

It takes eight or 11 or 14 months to land a new client. It requires building a relationship so that when the prospect's current bank "screws up" you and your bank are called as the replacement or to make a proposal.

Quarterly make-the-numbers thinking must be changed. Bankers need the time to develop relationships – and banks need to foster the atmosphere to develop them. This implies a system to measure new business development beyond just accounts signed up.

Give Credit for Activity

In manufacturing companies, work in process is measured or counted. The same can apply in service-company new-business efforts. As a relationship builds, it becomes more of an asset to the bank – since presumably the company will become a client at some point in the near future.

Bankers can receive credit for relationships in process – making initial contact, meeting in-person, developing a first-name relationship with the decision-makers and/or users, maintaining top-of-mind awareness, getting referrals, selling additional services.

Relationship-building goals can be applied to each level at the beginning of the year. Moreover, bankers will not become frustrated if a sale is not made – because there will always be prospects at varying stages in the pipeline.

Communications Tools

Bankers need to communicate with prospective customers. They need personalized letters and other sales aids – to make contacts, to get in the door, to leave behind, and to keep their name and the bank's name in front of the prospective customer. Bankers should have marketing-communications tools that recognize the value of relationship building. These sales tools should be personalized to the greatest extent possible.

Centralize and Localize

Bankers may be able to write proposals and financial reports but rarely persuasive business letters. So prepare their marketing communications tools centrally: letters, scripts, leave-behinds, attention getters.

Bankers will randomly uncover leads in their normal course of business, but a formal lead-generation program should be coordinated on a centralized basis. Buying a list, cleaning it, and running it against the bank's customer file is a task for marketing management, not line bankers.

Give the bankers the leads to pursue locally and individually. Besides professionally prepared marketing-communications tools, give them the capability to produce letters at the branch or commercial-center level. In this way, they control their marketing efforts while they identify, engage, and professional marketing standards of the bank remain high and consistent.

Decentralizing this part of the process will foster the individual style and success methods of the bankers that are needed to cultivate relationships.

Keep Track of Progress

Bankers can be evaluated from their performance with the leads. Performance evaluation calls for objective measures of relationship building. The sale is not the only thing, since it can take months to accomplish.

Who do leads belong to? In the brokerage business, leads traditionally belong to the brokers. Yet in banking, organized selling and relationship building remain relatively new concepts, so leads conceivably still belong to the bank.

By keeping track of progress, the continuity of contact will be maintained if a banker is reassigned. □

Power Surges, Outages Feared

Continued from *page 2*

among others.

"If you're operational, you'd much rather stay than move, because something unexpected could happen when you move," said Mr. Klemme of National Westminster.

After experiencing problems Thursday night when a back-up generator failed, J.P. Morgan & Co. reported operations were back to normal early Friday.

The back-up failed about 5 p.m. Thursday, prompting the firm to ask the Fed to keep Fed Wire open. The Fed declined, and the firm completed securities settlement by hand that night.

Power was restored by 9:15 p.m. Thursday, and systems were running by midnight, said a Morgan official. Morgan expects to remain on emergency power Monday.

Traders at several firms said they had been instructed to keep activity to a minimum because banks could not accurately assess their positions.

"When you have threats to the Fed Wire, you are a little reluctant to do too much trading because you have to look at the settlement risk – the capacity to trade is affected," the Morgan official said.

Bankers said payment systems were operating slowly on Friday. Volume on the Fed Wire and Chips – the Clearing House Interbank Payments System – was normal on Thursday, with Fed Wire handling $1.4 trillion and Chips about $850 billion. Fed Wire settled at 6:45 on Thursday night, the earliest time of the week.

During the week, vendors said eight commercial banks, including Citicorp, had moved into their disaster recovery sites. Other banks moved into facilities they own or used facilities of other banks for crucial functions.

Citicorp moved some of its processing to a SunGard site in Philadelphia. Six banks, including Manufacturers Hanover Trust Co. and Credit Lyonnais, moved some operations to Comdisco Disaster Recovery Services, Inc., Rockaway, N.J. Another bank moved operations overnight Monday to International Business Machines Corp.'s recovery site in Franklin Lakes, N.J. The vendors declined to disclose the names of the other banks.

Jed Horowitz in New York contributed to this article.

Ailing BNE Has Buyer for Unit

Continued from *page 2*

force bank holding companies to provide capital to their troubled subsidiaries.

Bank of New England said the buyer has offered to purchase all of the Providence unit's assets and most of its liabilities. The buyer was not identified, but analysts believe it is Commercial Financial Group Inc., a thrift unit of the Royal Bank of Scotland.

Citizens Financial officials could not be reached for comment.

Citizens has $2.2 billion in assets and about $222 million in equity capital.

Bank of New England admits the severity of its problems in its 10-Q filing.

"If the corporation is unsuccessful in addressing its current difficulties, it is likely that external assistance from third parties and/or regulatory authorities will be required," it said.

Bank of New England also disclosed that its flagship bank in Boston was under its call report with regulators for the 1989 third quarter, complying with a request from the Office of the Comptroller of the Currency.

Bank of New England Corp. and its subsidiaries are operating under consent cease-and-desist orders that place all major decisions under tight regulatory supervision. □

Regulators Reject FarWest Capital Plan

By TERESA CARSON

LOS ANGELES — FarWest Financial Corp. announced that regulators rejected the capital plan of its FarWest Savings and Loan Association, Newport Beach, Calif., and imposed operating restrictions.

FarWest, which is 57% owned by the Belzberg family of Canada, is appealing the decision by the Office of Thrift Supervision, according to Fred Zaninovich, holding company's chairman and chief executive officer. "We hope we are successful and we can get on with our capital plan," he said late last week.

More Capital than Belzbergs

The capital plan would have included a rights offering under the Belzbergs, would have been asked to put up more capital, FarWest has said.

FarWest also said it is in the middle of a regular examination by the OTS, the Federal Deposit Insurance Corp., and the California State Banking Commissioner's Office.

Analysts have said that the FDIC examiners are likely to take a tougher approach to savings and loans than prior examiners. FarWest's statement acknowledged that the company may have to bolster reserves as a result of the examination.

The OTS operating restrictions prevent the $3.7 billion-asset thrift from buying or selling assets or making new loans or commitments without approval of the federal thrift regulator.

The company lost $3.7 million in the second quarter due to a $16.9 million provision for losses on loans and investments.

A year earlier, FarWest earned $10.8 million in the second quarter. Its tangible net worth at June 30 was $37.7 million.

The FDIC rejected the capital plan because it would liquidate a unit into FarWest Savings.

The statement said that, if the company cannot proceed with the liquidation plan, its tangible capital on a regulatory basis would be a negative $23.6 million, which could be adjusted to as much as a $75 million deficit should accounting and tax issues not be favorably resolved. □

If your institution issued a million checks last year, you'd be doing O.K.

If you had issued them using our Official Checks you'd be doing about $650,000 better.

Here's why. With American Express® Official Checks, you earn commissions on 100% of your outstandings. And we reduce your back office labor costs. So altogether, you can earn an average of 65¢ more profit on every check you issue.*

Just think, your funds disbursement items including teller, loan, dividend and expense checks could actually improve your earnings.

Call us today at 1-800-458-8677. And make your bottom line look even better.

COMMUNITY RELATIONS

Some Florida Banks Take A Risk by Taking a Position

By KENNETH CLINE

Ever anxious to avoid antagonizing customers, banks are usually reluctant to get involved in contentious local political issues. But several banks in Sarasota, Fla., have stepped up to oppose a proposed two-year moratorium on construction.

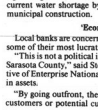
The referendum, which goes before the voters on Sept. 4, is designed to give Sarasota County time to come up with a solution to its current water shortage by halting all commercial, residential, and municipal construction.

'Economic Survival Issue'

Local banks are concerned that the moratorium would shut down some of their most lucrative lending activities for two years.

"This is not a political issue; this is an economic survival issue for Sarasota County," said Stephen E. Kunk, president and chief executive of Enterprise National Bank of Sarasota, which has $37 million in assets.

"By going outfront, there was the potential we could upset some customers or potential customers. But if we upset them, we could look them in the eye and tell them why we're doing it," Mr. Kunk added.



Dan H. Leroy

Mr. Kunk's bank joined most of the other banks in the county in contributing to Citizens for Responsible Solutions, an organization created to oppose the moratorium.

Citizens for Responsible Solutions, which has raised more than $300,000 in the past few months, is chaired by Dan H. Leroy, vice chairman of Barnett Banks of Southwest Florida, Sarasota, an affiliate of Jacksonville-based Barnett Banks Inc.

C. Frederick West, Barnett's president and chief executive in Sarasota, is on the speakers' list for the group. Barnett also has provided other assistance in the form of supplies and office space.

Jim Ford, president of Growth-Restraint and Environmental Organization (GEO), the pro-moratorium group, cites Barnett as one of his most effective adversaries. "I'm quite aware that Barnett has a position against the CEO initiative," Mr. Ford said.

Bank Promotes Political Action

Barnett Banks, which operates one of the largest Political Action Committees in the Southeast, "always encourages its people to be involved in every campaign — it doesn't matter whether it's a candidate or an issue that the company or PAC itself is promoting," Mr. Leroy said.

Among the county's smaller banks, Enterprise National took a prominent position by distributing 6,000 copies of a newsletter against the moratorium.

All Banks Against Moratorium

Banks that did not speak out publicly have privately expressed their desire to stop the moratorium effort.

"It's very obvious that all of [the banks] are opposing the moratorium. They just do not have people who are out on the [front line]," said Barnett's Mr. Leroy.

Despite the controversial nature of the building issue in Sarasota County, Mr. Kunk claims reaction from Enterprise National customers has been "100% positive" to its campaign to prevent a moratorium.

In Brooklyn, a Bank for the Neglected

Community Capital Bank, a Brooklyn institution founded to make capital available to underserved low- and middle-income New York neighborhoods, expects to open its doors in November.

The bank, the third of its kind in the country, recently announced that its $6 million public stock offering has been fully subscribed.

Forty-one religious organizations, representing many denominations, purchased a third of Community Capital's stock, a spokeswoman said. Another third of the offering was purchased by institutional investors, including Metropolitan Life, American Express Co., and Time Warner Inc. The remaining shares were bought by 189 individual investors.

Founder to Serve as Chairman

The bank, which will gather deposits at competitive rates, is chaired by its founder, Lyndon Comstock. Mr. Comstock has served as a lending officer in the New York offices of First Chicago National Bank and Wells Fargo Bank.

Day-to-day operations will be overseen by Community Capital's president, Stephen Laine, a banker who has been at the helm of many start-up institutions. □

MNC Aims to Double Card Business

Strategy Could Help Offset Realty Losses, Analysts Say

By BILL ATKINSON

WASHINGTON — Despite suffering heavy losses from real estate loans, MNC Financial Inc. is gearing for growth in its credit card operation, say industry analysts.

The Baltimore-based banking company expects the credit card unit, MBNA America, to nearly double in size to about $13 billion in assets over the next three years, according to analysts who toured the operation last week. If the economy enters a recession, the company will scale back its growth plan to a $10 billion-asset goal.

The unit has grown in the past by targeting "affinity groups," or people with a common interest or profession, and future advances are expected to come from a similar marketing strategy.

Inconsistency Seen

Some analysts who checked out the card operations were baffled by what they termed an inconsistency in MNC's management. Even though the credit card business is superbly managed, the real estate lending business is suffering and has been largely blamed for MNC's $74.4 million loss in the second quarter, they noted.

"It is night and day," said Gerard Cassidy, a bank analyst in Boston with Tucker Anthony Inc. "I was extremely impressed with the operations of MBNA, but what I find so ironic is how one side of their business can be run so expertly when the other side of the bank is such a disaster."

Analysts say it is unlikely that MNC is bolstering the credit card business to put it on the block.

If real estate loan losses continue to mount, the bank would rely heavily on its credit cards to pull it through the tough times, said Mr. Cassidy.

"I think this is what is going to prevent MNC from being the next Bank of New England," he added.

MBNA claims to be the country's fourth-largest of bank credit cards in loans outstanding and the nation's largest issuer of Gold MasterCards.

This year, MBNA expects to earn $160 million on assets of $6.5 billion. Last year it contributed more than 40% of the banking company's $212.6 million in net income.

"The numbers are just very impressive," said Richard Stillinger, a bank analyst at Keefe, Bruyette & WoodsInc. "Just from every angle, you get the feeling that they are on top of what they are doing."

Targeting Affinity Groups

MBNA's practice of targeting affinity groups for credit cards has proved extremely effective. The institution's chargeoffs are about 2%, compared with an industry average of 3.5% to 4%.

Anthony R. Davis, a bank analyst at Richmond, Va.-based Wheat, First Securities Inc., and Singer, contends MBNA has ample room to grow even in a down market.

"This is not helter-skelter growth, it is just continued plowing of the same field they have been in," he said. □

Law Capping Loan Rates May Cause Shell Shock

By PHIL ROOSEVELT

NEW YORK — For consumer bankers, volatile economic conditions may not be the only fallout from the conflict in the Persian Gulf.

Some lawyers and bankers are studying an obscure law that may require lenders to slash interest rates on loans to people who enter military service.

"It's a potentially serious issue," said an official at the Department of Veterans Affairs.

The law – a provision of the Soldiers' and Sailors' Civil Relief Act of 1940 – limits to 6% the interest rates that lenders may charge to borrowers who enter the service.

Originally intended to ensure that servicemen's rates did not rise too much, it could now force dramatic reductions in rates. That is because market rates have risen since the law was adapted, but the cap has never been raised.

Home mortgage rates are now about 10.2%, and personal loans are being offered at 17.3%.

Family members of some of the growing U.S. force in the Middle East already have been requesting rate cuts from lenders, said Laurence E. Platt, a mortgage banking specialist with the Washington law firm of Brownstein Zeidman & Schomer.

"Apparently, the word is floating around the military to go back to your lender and get a lower rate," he said. He added that lenders may well have to eat any losses resulting from such reductions.

He said the benefits apparently would be extended to any individuals with loans who either enlist in the military or are called from reserve status into active duty. People who incur debts after they enter the military do not get the lower rate, even if they are sent to combat.

How many loans might be affected is unclear. But President Bush is contemplating activating at least 50,000 members of the National Guard and reserves to boost the effort in Saudi Arabia.

The law did not surface as an issue during the Vietnam war, partly because many servicemen in that conflict were very young and did not own homes, a VA official said.

Mr. Platt said that lenders with loans subject to rate reductions under the law probably would recieve no government assistance to compensate for the lost revenue, though that could raise constitutional questions. □

NEW! Revised Safe Deposit Operations Software.
Call 1-800-456-2340 for a FREE 30-Day Trial.

SHESHUNOFF SOFTWARE TAKES COMMANDS.

1-800-456-2340

Sheshunoff...application software can make life easier in all parts of your bank. CEOs and CFOs can get a better handle on financial planning and budgeting, commercial loan officers can improve your portfolio by automating financial statement analysis, your safe deposit operation can become more efficient and profitable, and all your regulatory reporting can be done faster, easier and more accurately.

Banks throughout the country have counted on us to help them become more efficient and profitable since 1971. All our software is specially designed to help you make this happen in your bank.

- Call Report Software Service
- Financial Statement Analysis
- Bank Financial Planning & Budgeting
- Safe Deposit Operations
- other regulatory software services

We wrote the book on bank performance, and we've applied that same attention to detail to every piece of software we develop. It's all designed to be easy-to-use, even if you've never used a PC before. And each program comes with a clearly written User's Manual.

Best of all, behind every piece of Sheshunoff software is a staff of helpful, knowledgeable people. They're happy to answer any questions you might have, from how to install your PC to how to handle complex transactions. They'll even let you examine any program without obligation for 30 days.

To make your operations work better in every part of your bank, give our software a few simple commands. Call for your Sheshunoff application software today. 1-800-456-2340.

High Performance Banking

COMMENT

Loan Securitization: Can It Work in the Middle Market?

Continued from page 1

the originating bank? This would seem to preclude sale.

If he nevertheless buys the loan, is it because the seller is providing some sort of implied recourse which, if discovered, would lead to a capital charge against the seller, also precluding further sales? Or is the buyer taking the credit on pure faith, because he is the greater fool, a circumstance that also suggests a short-lived sales relationship and eventual market dissolution.

In the retail area, the process of loan sales or loan securitization is well-advanced and functions smoothly. But that is because of credit enhancements in order to get a triple-A rating for securities backed by, for example, auto loans, the issuing bank must get a letter of credit from the credit enhancer.

And in order to get that letter of credit, the bank must disclose enough information about the risks in its auto-loan portfolio to allow the credit enhancer to make a fair assessment of these risks. After analyzing the portfolio, the credit enhancer will reach an agreement with the issuing bank specifying the degree of protection it requires in order to issue the letter of credit.

The securitization process has thus helped to close the information gap between the borrower (the car buyer) and the ultimate investor (the public). But credit enhancers feel safe in warranting the receivables only because auto-loan losses are actually predictable.

Because of this element of predictability, the expectation of loss is already built into the pricing of the loans. The credit enhancer can have no such confidence in warranting a set of receivables backed by commercial loans. If he seeks to interpose himself between the bank or banks originating commercial loans and the public or bank investors in a securitized pool of these loans, the would-be credit enhancer confronts a situation in which loss experiences are so variable that pricing cannot cover loss contingencies.

The credit enhancer's task becomes twofold. He must assess the average probability of loan default. Then he must diversify the pool of loans in such a manner that actual losses come as close as possible to this mean or average probability.

There are problems with both tasks. Like the individual bank loan buyer, the credit enhancer suffers from an information asymmetry. How does he know that he isn't being asked to warrant a group of lemons?

Scope for Models

One approach already attempted by at least one unsuccessful commercial loan credit enhancer was to examine in detail the loan underwriting strengths of the banks contributing loans to the pool. This approach is probably far too laborintensive to be practical.

Another approach is to employ an unbiased credit model that will enable the credit enhancer to initially assess borrower creditworthiness and, more importantly, to subsequently monitor changes in that creditworthiness.

There are models that track changes in creditworthiness based on the behavior of such leading indicators as changes in stock prices or bond prices. But suppose, as will be true in most cases, the borrower is a private company with no publicly traded debt or equity.

Can the credit enhancer extract enough information from the changes in the debt and equity prices of publicly traded firms in the same business as the private borrower to be of use in monitoring the latter's fortunes? Some experts say that this can now be done.

The Uses of the Past

The second set of complexities concerns the diversification issue. The task is to gather portfolios of loans to companies whose business fortunes are as independent as possible from each other as possible. The degree of independence is measured by the correlation or covariance of loss experiences.

In this connection, an experiment on which this writer recently reported offers some hope. The experiment showed that a bank can use the historical correlation of industry bankruptcies as a guide to improved portfolio selection.

That is, if pairs of industries have shown relatively low correlations in the past, these correlations tended to remain negative. So by analyzing historic loss correlations and adjusting a portfolio to include more loans to pairs of industrial borrowers that were negatively correlated – whose bankruptcy experience varied inversely – one could improve the portfolio's future loss performance.

Size Is the Solvent

Unfortunately, only a small percentage of industries – about a 10th – exhibit negative loss correlations. The fortunes of most industries are positively linked. That's because most industries are tied to the vicissitudes of the national economy.

The trick is to lend to pairs of industries whose positive loss correlations are lower than those of other industry pairs. But suppose that two industries with a 20% correlated in the past (a 1% decline in the market value of the assets of one was associated with 0.2% decline in the value of the other's assets). Will they remain so weakly correlated in the future? In other words, the extent of correlation may not be particularly stable, and those that were 20% correlated in the past may now be 30% linked – a circumstance that presages more frequent loan defaults than are anticipated.

This problem may be solved by creating loan pools so large that the extent of loss correlations becomes almost irrelevant because actual losses will asymptotically approach expected losses. In like fashion, if one flips a coin enough times, the results will approach the average values of 50% heads and 50% tails.

Raising Return Per Unit of Risk

If the prospective credit enhancer can solve the problems posed by the agency issue and the correlation of losses, he can indeed securitize commercial loans for fun and profit. This type of securitization can make a key contribution to improving bank risk management by enabling regional and small banks to off-load their in-market risk concentrations.

Every bank failure in the United States in the '80s was a failure of imperfect diversification. If some way could be found to create pools of commercial loans and then allocate shares in that pool; it would solve the bank problem in the United States.

Quite conceivably, after contributing middle-market loans to the pool, these banks will buy back shares in the pool they helped to create. That should cost them some nominal yield, but another analysis to which this reporter has been privy indicates that if the pool is well-constructed, the reduction in risk, as measured by the standard deviation of that risk, will be greater percentagewise than is the reduction in return. Therefore, return per unit of risk should rise, which should increase stock prices and improve the viability of the commercial bank system. □

"Banks that would credit enhance middle-market loans face both the lemons problem and the loss-covariance issue."

Justice Says Long Arm of Law Reaching More S&L Cases

By BILL ATKINSON

WASHINGTON — Months after Justice Department officials were pilloried by Congress for not working fast enough to throw wayward savings and loan executives in jail, the agency is boasting of bigger and better numbers.

In a study compiled as of July 22 by the department, Justice estimates that 243 S&Ls have been "victimized" since Oct. 1, 1988, and that 328 people have been charged with crimes in thrifts.

In addition, 213 defendants have been convicted, only five have been acquitted, and prison sentences have reached a combined total of 415 years. Fines stand at nearly $1 million, and judges have ordered the convicted to cough up a total of $56.6 million in restitution, the study said.

Coordinator Is Upbeat

"The track record of federal investigators and prosecutors in financial-institution fraud investigations and prosecutions is impressive," said James G. Richmond, U.S. Attorney for the Northern District of Indiana and special counsel to coordinate federal enforcement of thrift-related crimes. "We are confident it will even get better in the years ahead."

Mr. Richmond made his comments last week before the Senate Judiciary Committee in Chicago.

Justice's numbers game comes several months after the agency was criticized by Rep. Doug Barnard, D-Ga., and other members of the House Government Operations subcommittee on commerce, consumer, and monetary affairs. Mr. Barnard complained that the department wasn't doing enough to prosecute crime at failed thrift institutions.

"Are we really trying to bring justice to bear in these criminal cases?" Mr. Barnard asked at the hearing last March.

In June, President Bush held what amounted to a pep rally for senior federal prosecutors.

He created a federal strike force to catch criminal activity at financial institutions, and said that the agency would "not rest until the cheats, the chiselers, and the charlatans spend a large chunk of their lives behind bars."

Justice aims to carry out the President's mandate. According to the agency, the number of federal financial institutions under investigation by the Federal Bureau of Investigation jumped 31% to 530 in February, up from 404 at the end of 1989. In 1986, the FBI launched probes into 206 financial institutions.

Lone Star Leader

Texas leads the nation in the number of FBI investigations into failed financial institutions, with a total of 198. It is followed by California with 41 investigations, Louisiana with 36, and Oklahoma with 32 investigations.

Although Mr. Richmond expects to find more evidence of fraud in the Northeast, as yet the region doesn't boast the Texas-size numbers. New York heads the pack with nine investigations, followed by New Jersey with four and New Hampshire with two.

Defending the Government

The agency has assembled a team of attorneys in the civil division to defend the federal government against suits that challenge certain provisions spelled out in last August's Financial Institutions Reform, Recovery, and Enforcement Act, Mr. Richmond said.

One of the most widely publicized cases challenged the appointment of M. Danny Wall as director of the Office of Thrift Supervision.

"Many other challenges to FIRREA are in litigation, and more are on the way," Mr. Richmond said.

Changed Rules?

For example, plaintiffs in 20 pending actions have alleged that new capital requirements under the reform act constitute an abrogation of previous contracts or forbearances the institutions entered into with regulators in 1988.

In those deals the government gave some thrift acquirers tax breaks, yield-maintenance agreements, and notes from the Federal Savings and Loan Insurance Corp. □

CRA Efforts to Be Probed In House Banking Hearing

By BARBARA A. REHM

WASHINGTON — The House Banking Committee said Thursday it will hold a field hearing Oct. 12 in Los Angeles to examine execution and enforcement of the Community Reinvestment Act.

"For too long, CRA has remained a low priority on the agenda of banks and the regulators to the detriment of local communities," said Rep. Henry B. Gonzalez, D-Tex., the committee chairman. "We intend to see that a new emphasis is placed on CRA, and the hearings in California will be part of [an] intensified oversight effort by the committee."

Ratings to Be Public

The 1989 thrift bailout law required federal regulators, as of July 1 this year, to make public the CRA ratings they assign to banks. The first ratings should be available in September, said Ken A. Quincy of the Federal Deposit Insurance Corp.'s supervision division.

The Los Angeles hearing's witness list is not final, but consumer groups, banks, local governments, and federal regulatory agencies are expected to be represented.

The committee also will hold a series of hearings in September on ways to reform the federal deposit insurance system.

Federal Reserve Board Chairman Alan Greenspan is to kick off the four-hearing series with testimony scheduled Sept. 13. The central bank chief is to be followed by Robert D. Reischauer, director of the Congressional Budget Office.

Bowsher, Seidman Scheduled

Charles A. Bowsher, comptroller general, is to give his views Sept. 19, and FDIC Chairman L. William Seidman will wrap up testimony Sept. 25.

The invitation letter to witnesses asks their opinions on issues such as merging the bank and thrift deposit insurance funds, assessing insurance premiums on the basis of risk, and shifting insurance responsibilities to the private sector.

On the "too-big-to-fail" issue, Rep. Gonzalez raised the prospect of ranking banks by size, then forcing all in a particular category to pay for losses caused by failure of any bank in that group. □

Gonzalez Seeking to Oust Brumbaugh

Continued from page 1

baugh's appearances in court cases as an expert witness against the regulator.

"To me, that renders him ineligible. He is already biased. There is no other conclusion that he can possibly come out with," Mr. Gonzalez said.

Mr. Brumbaugh expressed outrage at Mr. Gonzalez's remarks, terming them illogical and "McCarthyesque."

"This kind of insinuation, that one must use the government line in order to serve the public interest, is a chilling example of McCarthyesque techniques and is clearly an attempt to intimidate," the economist said in an interview on Friday. He added that such tactics "must not be allowed."

In Annunzio's Court

Mr. Brumbaugh accused the FDIC of pressuring Mr. Gonzalez to dismiss him. While Mr. Gonzalez, as committee chairman, could fire Mr. Brumbaugh, he is leaving the final decision to Rep. Frank Annunzio, D-Ill., who is chairman of the financial institutions subcommittee.

"It's really up to Mr. Annunzio what he wants to do, if anything," said Kelsay Meek, banking committee staff director.

It is well known that Mr. Gonzalez and Mr. Annunzio are not great friends. Mr. Gonzalez appears to be trying to pressure Mr. Annunzio to dump Mr. Brumbaugh. A spokesman for Mr. Annunzio refused to comment on whether Mr. Annunzio would agree to fire Mr. Brumbaugh.

Mr. Gonzalez's move may backfire because Mr. Annunzio could turn this around and criticize the chairman for trying to muzzle a messenger bearing bad news.

'Public Enemy No. 1'

"I'm public enemy No. 1 in the eyes of the bureaucrats at the FDIC, and they've attempted to punish me in this way," Mr. Brumbaugh said. "They'll deny that, but they have an incentive to attack me."

Mr. Gonzalez said he has not talked with FDIC Chairman L. William Seidman about Mr. Brumbaugh. Mr. Seidman was out of town Friday, but his deputy, John Bovenzi, said the FDIC has not tried to silence Mr. Brumbaugh. Mr. Bovenzi added, "Obviously we don't think he ought to be [involved in the study] since we don't think he is unbiased."

The study was commissioned last March by the financial institutions subcommittee.

The subcommittee hired Mr. Brumbaugh, a former Federal Home Loan Bank Board economist who is now affiliated with Stanford University's Center for Economic Policy Research, along with Brookings Institution economist Robert E. Litan and James R. Barth, former chief economist at the Bank Board and now a professor at Auburn University. Each was to be paid $15,000.

With a November deadline approaching for delivery of their report, Mr. Brumbaugh has been passionately and quite publicly claiming the FDIC has already gone bust.

On July 31, in a debate with Mr. Seidman on ABC News' "Nightline" program, Mr. Brumbaugh said the FDIC's existing and likely liabilities outstrip its resources. He also said several major banking companies – Chase, Chemical, Manufacturers Hanover, Citicorp, and BankAmerica – are on the brink of insolvency.

In the course of his study, he has accused the FDIC of withholding data from him to hide the fund's problems. Mr. Brumbaugh is battling the FDIC for access to individual bank examination reports and a list of the more than 1,000 banks on the FDIC's problem list. □

AMERICAN BANKER
Monday, August 20, 1990

WASHINGTON Monday

A weekly feature

THE WEEK ahead

MONDAY, AUGUST 20

The House and Senate are both in recess. The House returns Sept. 5, and the Senate reconvenes Sept. 10.

The Congressional Budget Office releases its latest assessment of the nation's economic outlook and the budget deficit.

The Supreme Court is in recess until Oct. 1.

TUESDAY, AUGUST 21

The Federal Open Market Committee meets to decide whether to alter Federal Reserve Board monetary policy. Most Fed-watchers had expected the FOMC to again let short-term interest rates fall in order to stimulate a flagging economy, but economic data released late last week showed a 0.9% increase in core inflation, far stronger than expected, with the prospect of worse to come.

Surging oil prices caused by the Iraqi invasion of Kuwait, and the subsequent boycott of the 4.4 million barrels a day of oil that those countries were producing, will raise the inflation rate to 5.2% for 1990 and reduce economic growth to 1.1% this year and 0.5% in 1991, said Donald Ratajczak, director of the Georgia State University economic forecasting center.

Economists say an easing is still expected but will be postponed by the FOMC events in the Middle East stabilize and the direction of oil prices becomes clear. 202-452-3000.

The Resolution Trust Corp. board holds an open meeting. Topics include affordable housing rules and revisions of its ethics rules. 202-416-7566.

WEDNESDAY, AUGUST 22

No significant events scheduled.

THURSDAY, AUGUST 23

Durable goods orders and shipments figures for July are to be released by the Commerce Department.

FRIDAY, AUGUST 24

The Federal Reserve Board releases the minutes of the Federal Open Market Committee's July 2-3 meeting, which will show whether it decided to change Fed monetary policy. 202-452-3000.

The first revision of real gross national product figures for the second quarter is to be announced by the Commerce Department.

Preliminary corporate profit figures for the second quarter are to be released by the Commerce Department.

PEOPLE

Wells Fargo Replaces Retiring Lobbyist

Craig G. Wolfson
He'll take over

The banking subsidiary of Wells Fargo & Co. will replace its retiring lobbyist **Jackson Schulte** with **Craig G. Wolfson** on Aug. 31.

Mr. Wolfson, 40, joined the San Francisco bank in April from the banking subsidiary of First Nationwide Financial Corp., also of San Francisco. He had run First Nationwide's government affairs office since September 1988. Before that, he was the thrift's acquisitions manager and, earlier, its corporate counsel. He holds a law degree from the University of Florida.

Mr. Schulte is staying with Wells Fargo under a three-year consulting contract for special government affairs projects.

Meanwhile, MNC Financial Inc., Baltimore, let go **Marguerite D. Ayers**, who had tracked Washington affairs for the $27 billion-asset banking company.

"Her function was eliminated as part of our consolidation process resulting from the merger with Equitable," said MNC spokesman **Daniel G. Finney**. "She was released with a severance package a couple of months ago."

Michael C. Middleton, MNC executive vice president, administration, remains top lobbyist.

Mr. Finney denied that MNC is cutting its lobbying effort by dropping Ms. Ayers. "The government relations function has been managed by an executive vice president of the holding company," he said. The company reported a $74.4 million second-quarter loss last month, as its nonperforming assets ballooned by 113%, to $757 million.

Gerald L. Jacobs is the Resolution Trust Corp.'s new special counsel, the top legal job at the thrift bailout agency. He replaces **Rex R. Veal**, who left the RTC Friday to return to private practice with Powell, Goldstein, Frazer & Murphy in Atlanta.

Mr. Jacobs, slated to start work Sept. 1, comes to the RTC from O'Connor, Cavanagh, Anderson, Westover, Killingsworth & Beshears, a Phoenix-based law firm where he has worked since 1963.

At its open meeting last week, the RTC settled a lingering question about whether the agency's legal office is separate from the Federal Deposit Insurance Corp.'s legal office. RTC lawyers will continue reporting to the FDIC general counsel, **Alfred J.T. Byrne**.

Mr. Byrne said in an interview last week that one general counsel makes the most sense because the FDIC and the RTC share boards of directors.

"Gerry Jacobs is an exceptional manager and a superb business and real estate lawyer," Mr. Byrne said. "He is someone I have known and respected for more than a decade."

Mr. Byrne worked with Mr. Jacobs in the late 1970s when he latter served as INA Corp., an insurance company where Mr. Byrne managed investments.

Mr. Jacobs holds a bachelor's degree in economics from Stanford University and a law degree from the University of Arizona.

Mr. Byrne said Mr. Jacobs was lured to the job by its challenge. "We are where the action is," he said.

Experts See West Handling Oil Shock If War Is Averted

By RICH MILLER
Reuter

WASHINGTON — The International Monetary Fund and World Bank expect the world economy to weather the latest oil shock without suffering a wrenching recession, monetary sources said.

The 40% rise in oil prices since Iraq's Aug. 2 invasion of Kuwait will modestly slow economic growth and moderately push up inflation, they said, but it's unlikely to trigger a recession, either in the United States or worldwide.

"This is not the end of the world," said a monetary source who declined to be identified. But he and others cautioned that all bets would be off if war broke out in the Middle East and oil supplies there were further disrupted.

> **"The longer-term fundamentals haven't changed."**
> Anthony Churchill
> *World Bank*

Economic policymakers from major nations have been in touch since Aug. 2, discussing the trade actions against Baghdad, the freeze of Iraqi and Kuwaiti assets, and the economic implications of the oil price rise.

Monetary sources said the possibility of holding a Group of Seven meeting to assess the situation has been discussed but that no final decision had been made. The group consists of Britain, Canada, France, Italy, Japan, the United States, and West Germany.

The word from within the International Monetary Fund and World Bank is that the world economy is better placed to ride out the latest oil shock than it was in the 1970s.

Industrialized Nations Have Improved Their Energy Efficiency

The United States uses about 25% less energy today for each dollar's worth of production than it did in 1973, when the first oil shock hit. Europe and Japan have improved their performance even more.

Oil-producing nations are more likely to spend the windfall profits from the latest oil price boom on Western goods now than they were in 1970s, when much of the money had to be "recycled" through commercial banks.

A World Bank official calculated that higher oil prices might reduce economic growth among the Group of Seven by about one-half to three-quarters of a percentage point and inflate consumer prices by about one percentage point.

Monetary Experts Believe U.S. Can Avoid Recession

The IMF's calculations for 1990 are not thought to be much different. In April, the IMF forecast economic growth in the major industrial countries of 2.9% in 1991 and an inflation rate of 3.6%.

"I don't think this is going to be a major hurdle for the world economy," a World Bank official said.

Even the United States, perhaps most vulnerable to a downturn, can probably avoid a recession, monetary sources said.

One World Bank official said U.S. economic growth might slow by one-quarter percentage point this year, from the 1.6% rate expected before the crisis. Growth in 1990 might come in at about 1.5%, instead of just under 2%.

Consumer Inflation Rate Is Likely to Top 5% Next Year

Consumer price inflation might be pushed up next year by about 0.75 point, to more than 5%, the official added. That might prevent U.S. interest rates from falling much, if at all.

The calculations assume that oil prices will fall back to about $20 a barrel by the middle of next year, from about $27 now.

The sources said both the IMF and World Bank seem hopeful that the spike in oil prices that came after the Iraqi invasion will not last, based on their further hope that the situation in the Persian Gulf does not deteriorate.

"The longer-term fundamentals haven't changed," said Anthony Churchill, director of the World Bank's industry and energy department.

Market Forces Expected to Push Oil Prices Down

Oil supplies were already ample before the Mideast crisis. Slower economic growth will put a crimp in demand and push prices back down, Mr. Churchill said.

Other World Bank officials see oil prices falling to about $22 a barrel in the fourth quarter, about $21 in the first quarter of 1991, and near $18 in the middle of next year.

European Commission President Jacques Delors proposed this month that finance ministers from the Group of Seven industrial countries meet quickly to coordinate strategy. "It's necessary for Western countries to show they are credible, that they are capable of handling the present situation," he said.

But some Group of Seven officials have questioned the usefulness of an early meeting. A British official said the ministers could do little before their next scheduled meeting, in Washington about the third week of September. Japanese Finance Minister Ryutaro Hashimoto will visit Europe Aug. 30 through Sept. 6, which would give the seven nations' ministers a chance to meet if they want to. □

U.S. Bancorp Planning Canada Unit

Company Aims to Expand Pacific Northwest Base

By SAM ZUCKERMAN

SAN FRANCISCO — Seeking to broaden its Pacific Northwest base, U.S. Bancorp of Portland plans to open a subsidiary bank in the Canadian province of British Columbia, company officials said.

The unit will be headquartered in Vancouver, the financial center of Canada's far west. U.S. Bancorp has discussed the expansion with Canadian authorities and "is on the verge of submitting an application," said Steven W. Driscoll, senior vice president in the company's international division.

Open in Six to 12 Months

It will take about six to twelve months before regulators can review the application and the bank can open for business, Mr. Driscoll estimated.

The unit would be a Schedule B bank under Canadian law, a category that permits 100% ownership and is the normal method for foreign banks to enter Canada.

Tentatively to be called U.S. Bank Canada, the bank will have its own board and operate as a subsidiary of the company's flagship unit, U.S. Bank of Oregon.

Geographic and Economic Ties

The expansion is a logical move for $17.7 billion-asset U.S. Bancorp, officials said, because British Columbia is geographically and economically tied to Oregon and Washington, the company's main markets. All three areas rely heavily on forest products, agriculture, tourism and Pacific-oriented foreign trade.

"There is a strong relationship between Portland, Seattle, and Vancouver," said Donald W. Magnusen, U.S. Bancorp executive vice president and merchant banking chief. "We need to bulldoze the border out."

> **"There is a strong relationship between Portland, Seattle, and Vancouver. We need to bulldoze the border out."**
> Donald W. Magnusen
> *U.S. Bancorp*

No Foreign Offices Since 1970s

Beyond that, the move into Vancouver represents an important expansion of U.S. Bancorp's fledgling international banking activities, analysts said. U.S. Bancorp has not had any foreign offices since closing its unprofitable Singapore operations in the mid-1970s.

"It's probably one of a series of small, strategic moves you are likely to see over the next few years to expand internationally" predicted Scott McAdams, an analyst with Ragen MacKenzie Inc., Seattle. "They are poised on the edge of the Pacific Rim. [Chairman and chief executive] Roger Breezley wants to be a player in that market."

U.S. Bank Canada, which will be capitalized at $10 million Canadian, or $8.4 million, will start on small scale, focusing on cross-border trade finance, Mr. Driscoll said. Cross-border business is expected to grow rapidly as a result of the free-trade agreement between the U.S. and Canada.

The bank will try to develop business from existing U.S. clients that have Canadian operations and Canadian firms that want to expand in the U.S. U.S. Bancorp also hopes to build relationships with Canadian companies in industries it knows well in the U.S., such as timber.

Company officials say they also want to establish merchant banking and private banking operations in Vancouver. That, Mr. McAdams noted, reflects the city's status as a major entry point for capital from Hong Kong, Taiwan and other parts Asia.

"They will try to position themselves as a conduit for Asian money to flow into merger and acquisition deals," he said.

Officials say U.S. Bancorp's commitment to Canada is not an experiment, but a strategic expansion. But they say the scale of the operation and the niches it occupies will depend on profit opportunities.

Hurdles to Success

It is hard for foreign banks to make money in Canada, they note, because raising funds is expensive without cheap retail or commercial deposits. Funds for U.S. Bank Canada will have to come mainly from the Canadian interbank market or through sale of commercial paper, Mr. Driscoll said.

"At the moment, we have no short-term plans" for opening offices outside Vancouver," Mr. Driscoll said. Nor does the company plan to enter the competitive Canadian retail banking business or expand into neighboring provinces. But those options could be reconsidered "down the line," he said. □

Leading Vienna Banker Dies of Heart Attack

By JAMES R. KRAUS

Gerhard Wagner, one of Austria's top bankers and chairman of Oesterreichische Landerbank AG, Vienna, died suddenly of a heart attack Thursday.

Mr. Wagner, 56, had been Landerbank's chairman since 1984 and chairman of the Vienna Stock Exchange since 1986, and had served on the boards of several large Austrian financial and industrial concerns.

Manfred Dreaning, deputy chairman of Landerbank, will assume Mr. Wagner's position until a new chairman is named by the Austrian government, a spokesman said Friday.

The government owns 53% of Landerbank and has majority control over most of Austria's big banks.

Viennese banking sources speculated that the chairmanship of Landerbank might fall to Gerhard Randa, deputy chairman of Creditanstalt-Bankverein, Austria's largest bank.

Before joining Landerbank, Mr. Wagner spent 20 years with Zentralsparkasse and Kommerzialbank, where he held top posts in the corporate and retail lending areas and served as chief credit officer.

Gerhard Wagner
Osterreichische Landerbank

Landerbank is Austria's third-largest bank, with $22.8 billion in assets at yearend 1989. As chairman, Mr. Wagner was instrumental in internationalizing the bank's operations.

Landerbank has expanded rapidly in the United States in recent years and is in the process of expanding its European network of offices, especially in Eastern Europe.

A close friend of Austrian Chancellor Franz Vranitzky, Mr. Wagner also played a key role in helping to deregulate Austria's capital markets and develop the Viennese stock exchange.

Interim Chairman Named

Mr. Randa, like Mr. Wagner, is a former credit chief of Zentralsparkasse and is affiliated with Austria's socialist party. □

DEALS: RJR Loan Flops in Syndication

Continued from page 1

points per allocation, but agents received a fixed fee of $5.25 million. Based on allocation levels, the agents received $8.25 million, or an effective fee of 8%, one lender said.

But in the secondary syndicate, the fees being offered are half a point to one point – which some say is why it failed.

"That kind of turns off participants," he said.

The purpose of the facility were the banking units of Bankers Trust New York Corp., Chase Manhattan Corp., Citicorp, Fuji Bank Ltd., Long-Term Credit Bank of Japan, Manufacturers Hanover Corp., and Security Pacific Corp. Each extended roughly $110 million in new loans.

Cues from Underwriters

One lender said some underwriting banks wink at potential participants to "wait until the selldown's over," and then resell loans afterward at a higher fee. "People hold out, and line up things on the side," one banker admitted.

Some bankers expected the fees to increase after the selldown as banks seek to reduce their exposure to the loans by reoffering more of the fees to potential lenders.

After the syndication, "it's going to be a free-for-all,' said one source, especially when the loans are competing with RJR's existing loans.

The existing RJR loans, which pay the London interbank offered rate plus 250 basis points, trade in the secondary market at up-front fees of 2 basis points to 2.5 points. The new loans carry lower fees in the secondary market but higher interest rates of Libor plus 350 basis points.

A Positive Side

There is a positive to the failed syndicate, however. While banks are not looking to increase their exposure to HLTs, the fact that the new loans pay a very high 350 basis points over Libor at least boosts net interest margins of banks.

When agent banks were raising a primary syndicate, they received a whopping $7 billion in commitments. But bankers say many of the commitments were "lobbed in" after it was clear that RJR had more than the $2.25 billion. There were supposedly two reasons for this strategy: the deal requires cash, and the desire to impress Kohlberg Kravis Roberts & Co., the most prolific borrower in Corporate America. □

By ANDREW REINBACH

The New Jersey Casino Control Commission is expected to approve a $65 million loan intended to rescue Donald J. Trump's financial future, despite the agency's doubts that the Trump empire's future empire can support the restructured debtload.

Under the laws of the state, the gaming commission has to approve the bank loans because they would affect Trump's casino and hotel holdings in Atlantic City.

According to documents released by the commission, Mr. Trump plans to surrender a deed to one of the lenders, Marine Midland Bank. He has also proposed selling or refinancing properties, and slashing operating expenses.

But survival of the Trump Organization may be in doubt with or without these measures, according to a report the commission received from the division of gaming enforcement of the New Jersey attorney general's office.

"The ultimate success of the casino properties is based upon their ability to generate ever-increasing cash at a time when the trend is otherwise," the commission said.

"It appears the real opportunity afforded by these agreements [for the bridge loan] is Trump's ego trip that it makes economic sense to break up the organization, sell off parts of the business that are more valuable outside the company, shrink overhead, and refocus its energies on a few core operations," the report said.

Some True Believers Remain

Some participants in the debt-restructuring negotiations, though, think the plan has a chance of success.

"The whole thing depends on what happens with the casinos in the next 90 days," said Stan Ross, the nonmanaging partner of Kenneth Leventhal & Co., who is managing the restructuring. The casinos are the wild card. If they do well, there's a chance."

Despite the bankers' guarded optimism, Thomas N. Auriemma, deputy attorney general in the New Jersey Division of Gaming Enforcement, announced Friday: "We reluctantly" recommended approval of the bank agreements to the casino commission – subject to a list of conditions – "because there were no options."

Commission's Conditions

Among the conditions was that no bank foreclose on Trump equity without commission approval, that no cash from the casinos be distributed by Trump without commission approval, and that Trump come up with a plan within three weeks to pay interest due to holders of Trump Taj Mahal Hotel and Casino bonds.

First Executive Life Insurance Co. has organized a bondholders' suit on the casino bonds that observers think might prove the undoing of the overall plan.

In the filing to the commission, Mr. Trump said he would surrender the deed to his West Palm Beach condominiums to Marine Midland, a unit of Hongkong and Shanghai Banking Corp., in lieu of foreclosure on a $27.1 million mortgage due this October.

Barriers to Survival

Even if he survives the cash crunch on his $3.365 billion in debt, Mr. Trump will be up against a projected $23.5 million cash shortfall by April 1991, $402.48 million in mechanics' liens, and 112 lawsuits.

Mr. Trump also owes a total of $195 million on unsecured loans held by units of Bankers Trust New York Corp., the Boston Co.'s Boston Safe Deposit and Trust Co., Chase Manhattan Corp., Citicorp, and National Westminster Bank. Bankers Trust, owed $104 million by Trump, is the largest unsecured bank lender. □

CREDIT CARD PORTFOLIOS.

We are Rocky Mountain BankCard System, a sizeable bankcard processor of Visa and MasterCard cardholder and merchant services, seeking *to purchase large and small credit card portfolios* from any financial organization in the country.

What we are offering is a competitive premium dollar for your accounts. D. Dale Browning, President of Rocky Mountain BankCard System, has made quality customer service a hallmark of the organization. You will have our assurances that your credit card customers will continue to receive this high level of quality customer service.

Please Call: Gary Upson, Vice President, at 303-620-7385 for additional information.

Greenwald Goes to Japan on Quest For Financing of UAL Buyout Bid

By WILLIAM GOODWIN

In an effort to drum up Japanese financial support for the proposed management buyout of UAL Corp., Gerald Greenwald, the buyout group's leader, is scheduled to meet this week with a number of top bank officials in Tokyo.

Among the banks on Mr. Greenwald's itinerary are Long-Term Credit Bank of Japan, Fuji Bank, and Mitsubishi Trust and Banking Corp.

A spokesman for the buyout group would not comment on the trip, but several Japanese bankers stationed in the United States said the Tokyo meetings probably won't amount to much more than courtesy calls.

Major Issues Unresolved

An official in the U.S. branch of one of the banks on Mr. Greenwald's list said it is "too premature" for detailed discussions, because major issues relating to the proposed $4.4 billion transaction remain unresolved.

"We are still waiting for real equity coming in," the banker said. "We still have not got a real strong core group" of U.S. banks participating in the deal, he added.

The core group comprises the banking units of Bankers Trust New York Corp., Manufacturers Hanover Corp., and Security Pacific Corp.

Security Pacific joined the group after the withdrawal last month of Citicorp, Chase Manhattan Corp., and Chemical Banking Corp.

Mr. Greenwald's Tokyo trip was apparently timed to take advantage of a lull in activity here at home. At least members of the key American bankers working on the deal are off on late-summer vacations.

Indeed, little substantive progress on financing the buyout is expected until after Labor Day, banking sources said.

UAL's board of directors gave the buyout group an additional 60 days – until Oct. 9 – to obtain financing, and the group is expected to use all of that time.

The amount of financing the core banks are seeking to raise has been scaled back to about $2.5 billion from $4 billion.

The buyout group has been trying to raise the difference from UAL's outside suppliers. It's also possible that the $201-a-share buyout proposal will be restructured to involve less cash for shareholders, and more "cramdown" paper. □

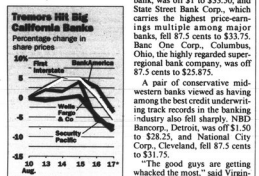
Fed Quandary, Gulf Crisis Spur Selling Frenzy

By GORDON MATTHEWS

NEW YORK — Major banks stocks were clobbered again Friday as the stock market sold off sharply for a second straight day on concerns that rising inflation and weak real estate markets have put the Federal Reserve Board in a no-win position to manage the economy.

Among the factors hurting banks was the decision by analysts at Salomon Brothers Inc., to cut earnings estimates for nearly two dozen banks, including all the major California institutions.

The *American Banker* index of the nation's 225 largest publicly traded banks fell for the 10th straight week. The index now stands 32.8% below the high point it reached last Oct. 9.



The worries of investors include the meeting this week of the Federal Open Market Committee, the Fed's monetary policy steering unit. One analyst said, "There is a degree of uncertainty and fear on what the Fed will or even can do at this point, since fighting inflation and handling a recession involve going in different directions on interest rates."

Jitters About California

Among banks, major California institutions led the way down on the renewed worries about a slowdown in the country's most populous and economically important state.

The latest round of nervousness began last Wednesday when Security Pacific Corp. disclosed in a Securities and Exchange Commission filing that it will increase loan-loss reserves. The Salomon Brothers action came a day later and was fully disclosed on Friday.

Thomas Hanley, the firm's chief banking analyst, said the action was taken "in view of sharply moderating real economic growth in the U.S., including the possibility of a recessionary environment through the middle of 1991."

Regarding California, he said there is "no question that employment trends might deteriorate even faster than the national economy." But he said the concern "does not extend to the housing sector, where demographic trends should continue to provide some cushion against serious credit difficulties."

First Interstate Bancorp. fell $1.50 to $29.75, while Wells Fargo & Co. declined $1.625 to $58 and BankAmerica Corp. slumped $1.50 to $22. Security Pacific fell 37.5 cents to $28.375.

Thrifts Also Decline

Several major California thrift stocks also were weaker. Golden West Financial Corp. was unchanged at $25.375, and Great Western Financial Corp., Beverly Hills, was off 37.5 cents to $14.625. H.F. Ahmanson & Co. was up 25 cents to $17.125.

The California tremors helped set the tone for many other banks stocks. Worst hurt were better-known banks whose shares had until recently weathered the slide in bank equities better than many others.

J.P. Morgan & Co., the nation's premier money-center bank, was off $1 to $33.50, and State Street Bank Corp., which carries the highest price-earnings multiple among major banks, fell 87.5 cents to $33.75. Banc One Corp., Columbus, Ohio, the highly regarded superregional bank company, was off $7.5 cents to $25.875.

A pair of conservative midwestern banks viewed as having among the highest credit underwriting track records in the banking industry also fell sharply. NBD Bancorp., Detroit, was off $1.50 to $28.25, and National City Corp., Cleveland, fell 87.5 cents to $31.75.

"The good guys are getting whacked the most," said Virginia A. Adair, a banking analyst at Merrill Lynch Capital Markets Group. "The reasons are both profit taking and fear.

"Investors are scared that the Middle East situation will begin unwinding in a way that is unfavorable to the banks in particular and the stock market in general," she said. □

CAPITAL

Dai-Ichi Kangyo Cuts Capital-Raising Cost

Continued from *page 1*

Sumitomo Bank Ltd. to issue 10-year subordinated bonds in the United States and Europe. But with the latest indications from the ministry, it now appears the Sumitomo offering may be the last from a Japanese bank for sogne time.

Bond Market Cheaper

Japanese city banks would like to issue subordinated bonds because the volatility in the Japanese stock market is making it hard for them to raise capital there. And they could issue bonds at a lower rate than they must pay on private loans.

Such bond issuance could have been done anywhere in the world, but most of it would likely have been in the United States, which has the most developed market for subordinated debt.

Long-term credit banks, however, which had been the only Japanese banks authorized to issue long-term bonds, have reportedly objected to the new powers for city banks. In response, the Ministry of Finance has apparently decided to reconsider the latest authorization.

Wait Until Next Year

"The sense I am getting is that they don't want banks to do these deals until next year," said Jeffrey Bell, managing director and head of the financial institutions group at Merrill Lynch Capital Markets. "I think they're trying to get a couple of these insurance-company, subordinated-loan deals done."

Japanese city banks have funded themselves in the past with deposits, short-term borrowings, and equity.

Dai-Ichi Kangyo became the first city bank to place subordinated debt since the ministry's latest regulations regarding subordinated borrowing.

Dai-Ichi's London branch placed a 10-year, $400 million subordinated loan with J.P. Morgan GmbH, Morgan's German subsidiary. That subsidiary then issued $500 million in 10-year subordinated floating rate loan participation certificates. Proceeds from the offering are used to fund the loan, a Euro-market source said.

While its balance sheet shows that it issued a subordinated loan, Dai-Ichi's costs are nearer those for subordinated bonds.

A Bond-Priced Loan

But while its balance sheet shows that it issued a subordinated loan, Dai-Ichi's costs are closer to the level appropriate for subordinated bonds. And the structure of the offering could prove to be a model for other city banks seeking to minimize their capital-raising costs.

The certificates carry a coupon of 25 basis points over the three-month London interbank offered rate for the first five years and Libor plus 35 basis points for the last five years.

A Morgan official declined to comment on the rate being paid by Dai-Ichi to Morgan, but it is likely to be equal to or only slightly higher than the rate Morgan is paying on its certificates.

"Economically, they're better off pursuing something in the public markets or something like this because it's less expensive than a subordinated loan," said the investment banker.

Implicit Approval

Ministry of Finance officials could not be reached to comment on the suitability of the Dai-Ichi structure. But the investment banker said Dai-Ichi almost certainly got ministry approval before completing the transaction.

"At this time, when it's very clear the ministry is reconsidering how the stuff is done, these banks would be pretty careful about what they are doing," he said.

Because Dai-Ichi's balance sheet shows it issued a subordinated loan, the Euromarket source expressed optimism that the ministry of Finance would allow the structure of its transaction to be copied by other Japanese city banks. But it is not likely to allow a flood of issues until it becomes more comfortable with city banks' long-term subordinated borrowing.

"I think the Ministry of Finance will continue to allow this," the source said, "but it won't allow an issue every week."

MARKET MONITOR

The Federal Reserve added temporary system reserves to the fed funds market Friday, seeking to offset the high fed funds rates that have prevailed since a power outage in lower Manhattan last Monday.

Fed funds traders said the rate went as high as 15% Thursday before closing at about 10%. The Federal Reserve's target rate is 8%.

Security Pacific Corp. issued $100 million in three-year noncallable senior notes with a coupon of 8.85%. The offering was comanaged by Lehman Brothers and Salomon Brothers Inc. □

Is New Wrinkle In Loan Sales Doomed to Fail?

By WILLIAM GOODWIN

As the agent banks on a $2.25 billion credit for RJR Nabisco Inc. wrap up an unsuccessful effort to sell down $1.4 billion of the loan-in the secondary market, the lead banks on a $1.75 billion facility for Lin Broadcasting Corp. are gearing up for what some bankers are saying will be a similarly unsuccessful effort.

Like the RJR bankers, the three coagents on the Lin credit – Morgan Guaranty Trust Co., Toronto Dominion Bank, and Citibank – will seek to sell a portion of the loan in the secondary market through what is known as a pooled or controlled syndication. Under the arrangement of a pooled syndication, members of a primary bank syndicate pool the unwanted amounts of their loan holdings, which are then sold to buyers in the secondary market through the agent banks.

All sales reduce the share of all members' exposure on a pro rata basis. If one bank finds a $100 million buyer, for instance, that sale is spread out for all members shares to be reduced rather than the one bank receiving a $100 million reduction in its share.

Averting a Price War

The aim of the process is to avert a price war in the secondary market by keeping a lid on the fees offered to buyers, and to avoid a free-for-all in the secondary market.

Controlled selldowns also allow smaller banks in the primary syndicate to benefit from the distribution capabilities of the larger agent banks.

In theory, so-called controlled selldowns are supposed to promote the orderly sale of bank loans in the secondary market.

But, in practice, a growing number of bankers say, the process is anticompetitive, fraught with chicanery and almost always unsuccessful.

"Pools are what we call formulas for failure," said the head of loan sales in the New York office of a major foreign bank.

Few Sales Produced

In reality, bankers admit that controlled selldowns produce few sales, largely because buyers believe they will get a better deal once the pool is terminated.

Pools are always priced at the lowest tier of the primary syndicate, creating a "built-in pricing problem," one banker noted.

Moreover, the process is often

Report Sees 19% Drop in Core Profits

By GORDON MATTHEWS

NEW YORK — A Salomon Brothers Inc. report that drove down the price of bank stocks last Friday provides a gloomy outlook for the nation's largest institutions, including a projected 19% drop in core earnings this year.

The pall continued to hang over the stocks Monday, as the shares of most big banks fell for the third straight day despite a rebound in the overall market.

Salomon Brothers sliced profit estimates for most of the banks it follows after revising a composite earnings model. It indicated the banks' operating net income will fall nearly 20% from 1989 levels.

Highlights of Report

That and several other factors caused bank stocks to resume their long downward drift. Banks' shares had been trading in place with the rest of the market, which was awaiting further developments in the Mideast.

In the new report, Salomon Brothers' bank analysts said their earnings model for 35 major banks will be revised quarter-

Acquirers Learn to Rack Up Savings With Artful Merging of Operations

By JEFFREY MARSHALL
Second of a Series

For years, banks have labored to shave operations costs in areas that become redundant after a merger. The process is still more art than science, but there is evidence that bankers are getting better at it.

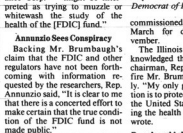
Institutions that have gone through a merger in the past two years said they managed to save, on average, 15% of their combined operations budget, according to the *American Banker*'s 1990 technology survey. That figure is well above the 11% reported last year.

More Bang for the Buck

While bigger banks are more likely to be involved in mergers, community banks are often believing greater proportional savings. Twenty-five percent of the responding banks in the $75 million to $100 million deposit range said they had effected savings of more than 20% after a merger. The same level of savings was achieved by 18% of those with more than $2 billion in deposits.

The data come from *American Banker*'s fourth annual technology survey, which was conducted in conjunction with

Postmerger Savings Vary by Bank Size
Average reduction in combined annual operating expenses



Trans Data Corp., the newspaper's research affiliate in Wayne, Pa. Last March and April, Trans Data polled 333 senior executives responsible for operations at commercial banks with $75 million or more in deposits.

A magazine containing results of the survey has been sent to *American Banker* subscribers.

Economies of scale used to offer large banks the biggest savings. But smaller banks have

Annunzio Opposes Bid To Fire FDIC Critic

By BARBARA A. REHM

WASHINGTON — Rep. Frank Annunzio is opposing efforts by House Banking Committee Chairman Henry B. Gonzalez to fire researcher R. Dan Brumbaugh, who is working on a study of the bank insurance fund.

In an escalating dispute between the committee's two highest-ranking members, Rep. Annunzio said that dismissing Mr. Brumbaugh – an outspoken critic of the Federal Deposit Insurance Corp. – "might be interpreted as trying to muzzle or whitewash the study of the health of the [FDIC] fund."

Annunzio Sees Conspiracy

Backing Mr. Brumbaugh's claim that the FDIC and other regulators have not been forthcoming with information requested by the researchers, Rep. Annunzio said, "It is clear to me that there is a concerted effort to make certain that the true condition of the FDIC fund is not made public."

Rep. Annunzio, D-Ill., made his accusation in a letter dated Friday to Rep. Gonzalez, D-Tex. Rep. Annunzio is chairman of the House financial institutions subcommittee, which

Rep. Frank Annunzio
Democrat of Illinois

commissioned the study last March for delivery in November.

The Illinois congressman acknowledged that, as committee chairman, Rep. Gonzalez could fire Mr. Brumbaugh unilaterally. "My only goal in this situation is to protect the taxpayers of the United States by determining the health of the" FDIC, he wrote.

Brumbaugh's Expert Testimony

Rep. Annunzio was responding to an earlier note from Rep. Gonzalez, who said Mr. Brumbaugh's "activities are inconsis-

Idaho Will Try To Block Entry Of U.S. Bancorp

By SAM ZUCKERMAN

Idaho banking authorities say they are exploring legal options to block an expansion move by U.S. Bancorp to enter the state by moving the headquarters of a Washington subsidiary across the border.

"The whole thing is a way of getting around state law that prohibits de novo entry for bank holding companies," said Belton J. Patty, director of Idaho's Department of Finance.

Tried to Enter Idaho Twice

Portland, Ore.-based U.S. Bancorp proposed the main office relocation plan last spring after two failed attempts to enter Idaho through acquisitions. The maneuver would involve transferring the headquarters of First National Bank in Spokane to Coeur d'Alene, Idaho, a move of about 30 miles. The bank's name would be changed to U.S. Bank of Idaho, company officials said.

If regulators approve the move, First National Bank would operate only in Idaho and have no remaining offices in

Basham Juggles Full Plate Of Chores at the Treasury

By LINDA CORMAN

While Michael E. Basham was mulling an offer last August from Dai-Ichi Kangyo Bank to become a senior executive at its securities subsidiary in New York, he got a call from the Treasury Department.

Robert E. Glauber, under secretary for finance, offered Mr. Basham the opportunity to come to Washington for far less money to oversee the government's debt management policy.

A friend advised Mr. Basham to take the Treasury job – deputy assistant secretary for federal finance – unless the Japanese offered him $1 million or more.

Called on to Review the GSEs

Mr. Basham, 40, took the friend's advice and soon found himself enmeshed in a review of a passel of organizations with disarmingly friendly nicknames like Freddie and Farmer Mac, Sallie and Fannie Mae – the so-called government sponsored enterprises, or GSEs.

Besides overseeing the entire government's debt management policy, Mr. Basham was handed the job of conducting a study of the seven GSEs, quasigovernmental agencies that together have assets of nearly $1 trillion.

Congress mandated the study in the 1989 thrift-bailout bill to determine what liability the government might have and what might be done to reduce it at the Federal National Mortgage Association (Fannie Mae), the Federal Home Loan Mortage Corp. (Freddie Mac), the Federal Agricultural Mortage Corp. (Farmer Mac), and the Student Loan Marketing Association (Sallie Mae).

Mr. Basham points to the study, issued in May, as one of the major accomplishments of his first 11 months on the job.

Study Was Well Received

Organizing the massive study alone "was quite an endeavor" and was "very well received," including by academic journals, he said.

"If legislation results from it, it will be a significant accomplishment."

The White House is pressing to have the study's recommendations included as part of the budget agreement the administration and Congress are struggling to reach.

Among the recommendations is that the GSEs be required to obtain triple-A ratings from two prominent private credit rating agencies. The proposal was criticized by top officials of the agencies, who said it was likely to raise the costs of their financing programs.

The study also urged that GSEs be required to meet tougher capital standards and that each GSE's regulator be separate from the government agency that insures its safety and soundness.

Selling Refcorp Bonds Posed Big Challenge

Since coming to Washington, Mr. Basham has also faced the task of setting up the Resolution Funding Corp. to provide the working capital for the Resolution Trust Corp., which is liquidating the government's inventory of insolvent thrifts. Persuading investors to accept the Refcorp bonds was also a notable achievement, he said.

Also, Mr. Basham has been overseeing all decisions on government debt financing, which he said had been on "automatic pilot."

Though is pleased with his decision to join the government, he had not long planned on such a course. He majored in political science at the Air Force Academy and then the University of Southern Mississippi, but he did not contemplate a public-sector career.

After earning an MBA at the University of South Carolina in 1976, he worked in the government-bond business, most recently as a vice president of Wertheim Schroder & Co. in New York. □

2d Quarter S&L Earnings Skewed

By TERESA CARSON

LOS ANGELES — Thrift earnings were widely skewed in the second quarter, with some thrifts posting big losses because they set aside massive provisions for loan problems as real estate markets around the country slumped.

Among the nine largest institutions that released their quarterly earnings (privately held Irvine, Calif.-based American Savings does not), five reported profits and four reported losses. But the losses of CalFed Inc., HomeFed Corp., Great American Bank and Meritor Savings Bank totaled $405.9 million, overwhelming the $253.2 million in profits earned by H.F. Ahmanson & Co., Great Western Financial Corp., Glenfed Inc., Ford Motor Co.'s First National Bank and Golden West Financial Corp.

The 22 thrifts followed by Salomon Brothers had an overall drop of 22% in earnings from the year ago second quarter.

Problems Universal

"Generally everyone is having earnings problems," says Bruce Harting, thrift analyst with Salomon Brothers Inc., New York. Thrifts that had to take the big provisions in the second quarter were generally more heavily involved in commercial real estate or consumer lending. Single-family housing lenders fared better.

Those thrifts that made loans in the most depressed markets were hit the hardest.

Nonperforming thrift earnings reports "were all over the map. Some were up, some were down, some were deep in the red," said David Smith, president of the consulting firm Kaplan and Smith Inc., Glendale, Calif.

Erratic Earnings To Continue

These widely varying earnings reports will continue for at least several more quarters, analysts said. "The earnings over the next quarters will be determined by the loss reserve the thrifts have to take," said Henry Peltz, of Keefe, Bruyette & Woods Inc., New York.

"The $64,000 question is: Have the ones with the real estate problems gotten those problems behind them?" said J. Noel Fahey, director of research, for the U.S. League of Savings Institutions. "One would hope this is a one-time affair."

But that seems unlikely as the real estate markets seem to continue to deteriorate.

Flexibility Most Important Now

And the core meltdown in real estate is happening just at the time thrifts need financial flexibility the most. Many are struggling to conform to the new rules and higher capital requirements mandated under the Financial Institutions Reform, Recovery and Enforcement Act. Some are trying to write off goodwill, sell junk bonds and off-load commercial real estate.

"These dings in earnings are making it difficult for many thrifts to reach the phased-in capital requirements," says Campbell C. Chaney, thrift analyst at Sutro & Co., San Francisco.

Real estate woes pushed nonperforming loans up at most thrifts. HomeFed probably had among the most spectacular runups, jumping 56%, from $454 million to $708 million June 30. Philadelphia's Meritor Savings Bank saw nonperformers rise 11% to $359.4 million from $323.3 million at yearend.

But it was not bad news for all institutions. Glenfed, Glendale Calif., shaved $20 million off its nonperforming loans, which dipped to $449.4 million.

Market Value Vaporized

The thrifts paid dearly in the stock markets for their poor results. "The market value of these stocks has vaporized," said Robert Hottenson, an analyst at Goldman Sachs & Co. HomeFed's stock plummeted from $28.50 March 30 to about $8.25. CalFed Inc., Los Angeles, fell from $18.25 on March 30 to about $8.50. In late trading yesterday, the stock was off 50 cents to $7.875 and CalFed was unchanged at $8.50. On a brighter note, Sutro's Mr. Chaney pointed out that "from a core standpoint, many thrifts are making money. It is these provisions that are getting in the way."

Wider Margins Some Help

Indeed, most thrifts benefited from wider margins in the second quarter. "Since midyear

NEWS *briefs*

First Interstate Suspends Sales of Discounted Stock

LOS ANGELES — First Interstate Bancorp said it had suspended a dividend reinvestment program designed to help it raise capital without a formal public offering.

A spokesman for First Interstate said the company's stock price was too low to justify continuation of the program. The stock was off 50 cents, to $28.875 a share, in late trading, well below the company's book value of $37.81 a share.

By offering stockholders a chance to use dividends to buy shares at a discount, the company had hoped to raise needed capital gradually. It had tried to raise capital in a formal offering this year but had trouble selling all the shares. — Reuters

Northeast Bancorp to Alter Lawsuit Naming Bank of NY

NEW YORK — Northeast Bancorp said it will file an amended complaint against Bank of New York Co., accusing it of breaching its contract with Northeast by failing to maintain its capital position in accordance with Federal Reserve requirements.

Northeast, based in Stamford, Conn., also said that this alleged failure led directly to the Fed's denial of Bank of New York's application to acquire the Connecticut holding company. The Fed cited insufficient capital, but Northeast charged that the merger application was incomplete. — Reuters

Artfully Done Back-Office Mergers Bring Promised Savings

Continued from *page* 1

boosted their savings opportunities in recent years with better systems, which are geared to low-volume users, and they have gotten more sophisticated than ever in weighing alternatives, said consultant Jerry Cox. Mr. Cox is vice president of Charles Brooks & Associates in Charlotte, N.C.

Stellar Savers

While 20% savings may be a daunting goal for many banks, a few skilled hands have far surpassed it. Security Pacific Corp. has saved as much as 44% of expenses after centralizing certain operations, chief operating officer John Singleton told the American Bankers Association's national operations and automation conference in May.

Banking companies that have made a string of acquisitions are the most practiced at wringing out operations savings. Banc One Corp. has been lionized for its skill in this area. Charlotte, N.C.-based NCNB Corp. is pulling hard to rein in postmerger costs. The company said in May that it is merging multiple data and telecommunications systems into a centralized computing facility in Dallas, hoping to save 15% of its expenses in those areas.

But a lot of smaller companies are also proving adept at technology cost cutting.

Small Player's Game

Take First Colonial Bankshares Corp. in Chicago. With $1.6 billion in deposits, it is fleasized compared with Banc One or NCNB. But First Colonial has been a busy buyer, building a chain of 15 banks in Chicago and its suburbs over the past few years. It has added four banks just this year.

First Colonial appreciates postacquisition consolidation with a firm game plan, said president Robert Sherman.

"When we go into the bank, we have learned to move fairly quickly on those generic activities" like data processing and accounting, he said. "When we take over a back room, it's important to us to put them on the same data processing system.

"We don't tolerate lots of different systems," he added. "If it's an expense to get that done, so be it. In the long run, we feel it will be worth it."

Savings Outrun Projections

First Colonial's operations are actually performed by a wholly owned, profitable subsidiary, BankersTech Inc. Its president, Jon Knutsen, said that the savings realized from consolidated operations have exceeded projections. "We have more volume leveraged over the same cost," he said.

> **When operations managers address consolidation, they try to reduce the number of hardware and software vendors.**

Summit Bancorp., a successful regional company in New Jersey, has a somewhat different approach to cost containment. A few of Summit's eight banks still use service bureaus for item processing, but Summit keeps urging those banks to use its own data processing staff and software.

"We try to sell them on the idea that this will provide them with a better product line. And we charge them the same basic price as the service bureaus do," said executive vice president Eugene E. Schwarzenbek.

American Banker's survey found that bankers in mergers tend to identify similar systems targets for consolidation. Data processing, data communications, and programming and systems were the top three priorities for combining operations, just as they were last year. This year, 95%, 89%, and 87% of respondents cited those areas, respectively, as functions they had already combined or were planning to combine by the end of 1990.

"Data and item processing is a major issue. That's a piece that we try to address as soon as possible" after a merger, said Brent Thompson, a vice president at Fourth Financial Corp., the largest banking company in Kansas.

After item processing comes accounting, said Mr. Schwarzenbek of Summit. "That allows us to efficiently manage our consolidated financial picture," he said.

When operations managers address consolidation, they try to reduce the number of hardware and software vendors to a minimum. "We want to operate in a common technical environment in a common facility and deliver a common computer utility nationwide," said O. Darrell Hale, president of NCNB Support Services Inc.

A Single Vendor

Fourth Financial converted to a single systems vendor, the Kirchman Corp., in the past year, said Mr. Thompson. Instead of wrestling with multiple application systems, it is now able to bring acquired institutions quickly onto a company-wide standard.

Mr. Sherman of First Colonial said his company encountered a handful of different vendors as it acquired its network of banks, but unification "hasn't been the kind of challenge one might expect." Some of the acquirees had nice franchises in a position of leadership, he said.

> **Some bankers are convinced that outsourcing is best; others worry about losing control.**

"Some bankers are convinced that outsourcing is best; others worry about losing control," said Richard Eichhorn, a senior vice president for corporate development at U.S. Bancorp. "There's a natural reluctance."

"Our goal is to keep everything in-house, to keep our control," said Mr. Schwarzenbek of Summit.

But First Colonial, which has effectively outsourced to its own company, believes it made the right move.

"We knew that we were going to be acquirers and that we needed the muscle of a much larger data processing and systems operation," said Mr. Sherman. "We chose to be serviced by someone else. We never wanted to find ourselves in a position where we wanted to make an acquisition but the data processing function was holding us back." □

COMMENT/ *By Sanford Rose*

Why Banking Is A Zero-Sum Game

It is now widely understood that some bank businesses create shareholder value while others destroy it. However, the precise identity of the winning and losing businesses is not generally known to bank managements. And even if the identities are familiar, the magnitude of the gains and losses are not.

Recently, First Manhattan Consulting Group undertook an exercise to measure the amount

"Sadly, banking earns an ROE that is just about equal to the cost of equity capital."

of value creation and destruction by type of business. The analysis was based on a dissection of line-of-business profitability for some 15 large banking companies, with the findings extrapolated to the industry as a whole.

The results show that the average U.S. bank is creating a substantial amount of value in the branch-delivery system: somewhat less value in trust and securities processing, in commercial real estate (despite the current problems), and in credit cards; and still less value in middle-market lending, miscellaneous fee-based businesses, corporate finance, cash management, and capital-market activities.

It is, however, destroying substantial shareholder value in large corporate lending and somewhat less value in international corporate banking, on-balance-sheet mortgage lending, and in consumer lending other than credit card.

A Sizable Variance

It should be noted, of course, that what is true on average may not apply to individual institutions. There is considerable variability of returns among banks. Thus, while some banks may be generating ample value in the trust business, others may be running a trust operation that helps to impoverish the shareholder.

Equally, while the average bank should exit the business of direct and indirect installment lending – especially the indirect component, which is almost universally a loser – a few institutions seem to be making enough to justify continued activity.

Satisfying the Shareholder

What determines whether shareholder value is being created or destroyed? The short answer to this question is that if the business fetches a risk-adjusted, match-funded, fully expense-loaded return on equity that is greater than the opportunity cost of that equity – that is, the return that can be earned in other businesses of comparable riskiness – it is building shareholder value. If returns are less than the cost of equity, the business is erasing shareholder value.

More formally stated, if the discounted present value of its future net cash flows exceeds the amount of equity needed to support it, the business is throwing off free cash to the investor and thus increasing his wealth. If such discounted cash flows fall short of the amount of needed equity, the business is a loser.

EPS Doesn't Count

This doesn't mean that the business is actually losing money. It may in fact be making a fair chunk of money, contributing to the growth of corporate earnings per share. But it isn't making enough, relative to the amount of invested equity, to satisfy the shareholder's minimum requirements.

Hence, if the average of a bank's businesses had such a rate-of-return profile, the share price of the bank would slip be-

"The credit card business generates more value-added than does middle-market lending."

low book value, regardless of what was happening to earnings per share, as owners hastened to sell out in order to reinvest in companies whose mix of activities produced, on average, an acceptable return.

According to First Manhattan Consulting's calculations, the amount of equity needed to support the branch-delivery systems of U.S. banks amounted to some $35 billion at yearend 1989. And the net present value of the future cash flows – basically the returns on consumer and small-business deposits, net of their interest and noninterest costs, and discounted by what the consulting firm regards as the appropriate hurdle rate – came to some $75 billion.

Therefore, the much-maligned branch-delivery system is still a winner. As has been noted, however, the variability of returns among banks is substantial, amounting in this business to about 40 percentage points of ROE. That is, some delivery nets can be making no return or a subnormal return of 5%, while others could be garnering up to 45%.

A Third of Total Value

The figure for the net present value of delivery networks implies that if the sole business of banks consisted of branch delivery or deposit gathering, the market capitalization of the industry would equal $75 billion. In point of fact, the market capitalization of U.S. banks totaled around $205 billion at yearend 1989. So, according to this reckoning, branch-delivery systems accounted for more than a third of the value of bank stocks.

The deposit-gathering function is the largest absolute generator of shareholder value, adding some $40 billion. It is not, however, the most productive generator. That title belongs to the trust and securities processing business, which produced a net present value of $20 billion, or nearly a tenth of share values, on an invested capital base of only $5 billion. That is, the amount of value added is three times the amount of needed equity, although because trust is not an asset-based business, the computation of equity needed to support the activity becomes devilishly tricky. Here again, returns are quite volatile among banks; their range amounts to some 50 percentage points of ROE.

The credit card business is also a productive generator of wealth, accounting for some $15 billion of net present value – or approximately 8% of share worth – on an imputed equity of $5 billion. Reflecting the scale-sensitive nature of this business, the range of returns is almost as wide as in the branch-delivery business.

Overvaluing the Middle Market

By contrast, the full relationship middle-market business is not terribly productive at all. It generates an estimated $35 billion of value, but requires some $27 billion of equity support. In First Manhattan Consulting's view, nearly every bank overestimates its net returns in the middle market, perhaps because of the failure to adequately risk-adjust these returns.

Those businesses that destroy shareholder value – whose net present value is less than the amount of needed capital – include large corporate (loans and lines of credit), which wipes out an estimated $25 billion, residential real estate (on-balance-sheet mortgage lending) and international corporate banking, each of which destroys some $15 billion, and other consumer lending (basically direct and indirect installment), which erases some $5 billion.

There is, moreover, less volatility in the returns from these benighted activities than from other businesses. In other words, even if a bank is much more efficient than the average market participant, it is unlikely to earn a decent profit in, say, large corporate lending or in residential real estate.

The Industry Is a Wash

According to First Manhattan Consulting's analysis, the amount of shareholder value created in businesses that are on average viable is almost precisely counterbalanced by the amount of shareholder value destroyed in the nonviable businesses.

This reflects the fact that, in the aggregate, the U.S. banking industry earns an ROE that is just about equal to its shareholders' cost of equity. To become a net-value creator, the industry will have to drastically alter the mix of its businesses, abandoning those whose increasingly commoditized nature makes it difficult to earn a return attractive to the long-suffering bank equity owner. □

LETTERS *to the editor*

Freeze Urged on 'Ill-Gotten Gains' Of Big Bankers Under Indictment

To the Editor:

The FDIC's proposal to increase deposit insurance premiums should trigger a demand to end the agency's carte blanche benevolence that greatly reduces the cost of coverage for certain favored classes of banks.

The "too-big-to-fail" umbrella has holes in it. The holes were caused by reckless and greedy policies commonplace during this past decade, particularly among banks in that category. The holes were also caused by extending coverage to foreign deposits and to deposits in excess of $100,000 on which not one cent of premium was ever paid. The FDIC can change this. The FDIC *should* change this.

Increases Would Fall Unfairly

Ironically, the increases would come mostly from banks who suffer from, rather than benefit from, this "too-big-to-fail" policy of federal regulators.

Finally, it is time a way is found to put a stop to the gross display of garish opulence and arrogance by high-profile hot dogs who treat federal indictments against them as something akin to parking tickets on their limousines.

Tie Up the Parachutes

To the public and to honest and conscientious operators of the nation's mostly well-run financial institutions, it would seem reasonable for assets of those under indictment, including golden parachutes, to be frozen while a case is heard.

And it does *not* seem reasonable that they be allowed to bankroll their defense with ill-gotten gains. Unless these abuses are stopped, it is safe to predict more premium increases. And the public will end up paying for them, either directly or indirectly.

If you don't know who your market is, how can you show you're meeting its credit needs?

You will be examined for CRA compliance, no question about it. And the first thing the regulators will look for is a map delineating your local community — just check item #4 of the OCC's January 12, 1990 Banking Bulletin.

It's one of the few things about the CRA that you can act on with certainty.

If you don't take this first step, you're going to have a tough time convincing your regulator that you're trying to comply with the CRA requirements. We can help make sure you do it right.

The *Sheshunoff™ CRA Market Definition Service* will give you maps that meet CRA standards. And we'll supply demographic information designed to show you who your market is — by age, income, and ethnic background. There's even data on home ownership, deposits and investments, and growth trends. So you can establish and evaluate credit and community development programs for your local markets that make sense.

Best of all, as CRA compliance becomes more standardized and specific, we'll continue to help you conform.

We've been helping banks stay profitable and in compliance since 1971. So we know how to help you start meeting the minimum standards without spending a penny more than you have to.

Take step one. To get your maps and reports today, call us. 1-800-456-2340.

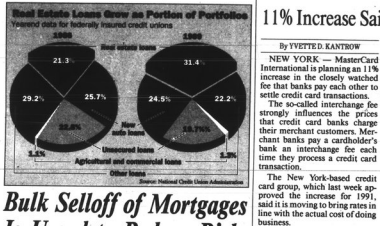
CREDIT UNIONS



Bulk Selloff of Mortgages Is Urged to Reduce Risk

By BILL ATKINSON

WASHINGTON — Regulators and industry experts are encouraging credit unions to package and sell some of the large mortgage portfolios they have amassed in the past few years.

Unloading these loans in the secondary market to reduce interest rate risk is a relatively new practice for many of these institutions.

Credit unions traditionally made small consumer loans, such as auto credits. But they jumped into the mortgage business with a vengeance in the mid-1980s. To help reduce risk, they often made adjustable rate loans with terms of 20 years or less.

"Credit unions are getting heavier into mortgages," said Charles H. Bradford, chief economist with the National Credit Union Administration, the industry's chief regulator. "We are particularly concerned about interest rate risk. They should be able to prepare to sell those mortgages."

More Loans in Mortgages

Federally insured credit unions had 31% of their loans in mortgages at the end of 1989, up from 21% at the end of 1986, according to the agency. Although growth has slowed in the first half of 1990, mortgages represented 22% of credit union assets at yearend, up about from about 5% in the early 1980s.

With the high mortgage concentration at credit unions, the NCUA is urging institutions to package and sell loans to big buyers such as the Federal National Mortgage Association and the Federal Home Loan Mortgage Corp.

"The concern most credit unions have is how to service the loans," said Louis Jennings, director of secondary marketing, Navy Federal Credit Union. "Being small it is difficult to do, but the positive aspects outweigh the negatives."

In May, the NCUA published a guide to the secondary mortgage market, explaining basics about servicing loans that are sold, the qualifications for selling loans, the role of Fannie Mae and Freddie Mac, the cost of a full-blown program.

Also touting the advantages of participation in the secondary market is the Credit Union National Association, a Madison, Wis.-based trade group.

Boosting Liquidity, Cutting Risk

Selling loans increases liquidity and reduces risk by passing it into the market, said Brad Murphy, president of the affiliate CUNA Mortgage Corp. Credit unions also may become better underwriters because Freddie Mac and Fannie Mae have strict standards for loans they purchase, he said.

CUNA Mortgage offers training programs to assist credit unions in the secondary market. It also maintains a $1.1 billion servicing portfolio of loans generated by credit unions.

Mr. Murphy said the servicing portfolio was begun in 1986 and has not yet turned a profit. But this year, it is close to breaking even, he said.

Rockwell Federal Credit Union, a $256 million-asset institution in Downey, Calif., has been selling in the secondary mortgage market for nearly 18 months and plans to increase its volume over the next two years. It expects to package and sell $35 million to $45 million in mortgages this year, and $50 million to $60 million in 1991.

"It allows us to become a little more sophisticated," said Bill Walker, real estate loan manager with Rockwell. The institution sells directly to Freddie Mac as well as banks and thrifts, he said.

One of the credit unions with the heaviest involvement in the secondary market is the Merrifield, Va.-based Navy Federal Credit Union, which has about $4 billion in assets.

Navy Federal expects to sell $400 million of mortgages into the secondary market this year, compared with about $300 million last year, Mr. Jennings said. "It has been a part of our philosophy since we got into the mortgage business 12 years ago," he said.

Navy Federal retains the servicing rights on mortgages that it sells.

"If the member has a problem with the mortgage, the member calls us. He doesn't call some servicer in Utah," Mr. Jennings said. "That is a big selling point for a lot of our members." □

MasterCard to Raise Interchange Fee

11% Increase Said to Reflect Cost of Doing Business

By YVETTE D. KANTROW

NEW YORK — MasterCard International is planning an 11% increase in the closely watched fee that banks pay each other to settle credit card transactions.

The so-called interchange fee strongly influences the prices that credit card banks charge their merchant customers. Merchant banks pay a cardholder's bank an interchange fee each time they process a credit card transaction.

The New York-based credit card group, which last week approved the increase for 1991, said it is moving to bring rates in line with the actual cost of doing business.

Rate Structure Intact

Although MasterCard had previously said it would vary prices by merchant type, the association elected to stick with its existing rate structure. Daniel F. Fox, a MasterCard senior vice president, said the association's executive board concluded that one pricing scale would make merchant processing less complicated.

Some executives in the card industry agreed. "The business is so complex that any attempt to keep the business simple is a step in the right direction," said William D. Kinard, an executive vice president for National Data Corp. in Atlanta.

Visa U.S.A. took its first major step toward variable merchant pricing in 1989. It now offers segmented fees to airlines, hotels, automobile rental companies, and direct marketing firms.

Visa Fees Will Also Rise

San Mateo, Calif.-based Visa also will raise its interchange rates for 1991. Earlier this year, it approved about a 20% increase in fees for electronic transactions and a 6% increase in fees for standard transactions.

The association concluded that one pricing scale would make merchant processing less complicated.

Mr. Fox called MasterCard's planned increases modest – a characterization with which Mr. Kinard agreed. The new domestic interchange fees will take effect April 1, 1991.

The MasterCard schedule has four separate rates. The standard rate is 2.08% of a transaction amount plus 8 cents, or about $1.43 on a $65 credit card sale. Merchant banks now pay a standard rate of 1.95% plus 7 cents.

Merit Rates

The three other sets, called merit rates, are designed to encourage retailers to use automated systems for authorizing and processing transactions.

The merit fees for 1991 range from 1.3% of a transaction amount for the most automated transaction to 1.6% plus 7 cents.

On a $65 credit card sale, fees would be about 85 cents at the lowest merit rate and $1.11 for the highest.

Under the current pay schedule, merit fees start at 1.15% of the transaction amount and rise to 1.55% plus 6 cents.

Electronic Edge

New rates at Visa, which are also structured to encourage electronic authorizations, will take effect April 1.

On a $65 sale, they range from about 98 cents for the most automated to $1.35 for a more standard transaction.

Changes in systems to accommodate the card associations' different pricing schedules will not be too burdensome, Mr. Kinard said.

"It's not the first time the card associations haven't been in sync," he said.

Merchant Value Program

With its interchange fees, MasterCard also announced progress in its Merchant Value Program to tailor services for different types of merchants.

MasterCard initially targeted the travel industry, but it is now adding services for the mail and telephone-order businesses and the restaurant and food service industries. □

Home Mortgage Rates Decline Slightly After Surge

NEW YORK — Interest rates on home mortgages, which soared earlier this month as the Persian Gulf crisis developed, declined slightly last week.

Lenders were offering 30-year fixed-rate mortgages at 10.14%, down from 10.17% in the week ended Aug. 10, according to HSH Associates, a Butler, N.J., mortgage research concern.

The company predicted "relatively stable" rates for the next several weeks, with weakness in the economy offsetting upward pressure on rates.

The Federal Home Loan Mortgage Corp., or Freddie Mac, also reported a drop in mortgage rates last week. But the agency said the uncertainty in the Middle East is likely to hurt home building and homebuying.

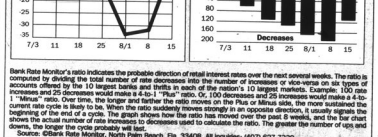
Mortgage-Backed Securities

Meanwhile, lenders have been helped by strong demand for mortgage-backed securities by Wall Street firms assembling collateralized mortgage obligations.

A report by Goldman, Sachs & Co. noted that the yield spread of Federal National Mortgage Association securities over 10-year Treasury securities diminished last week to the unusually low level of 101 basis points. The spread was to 107 basis points as recently as August 9. □

AMERICAN BANKER /Bank Rate Monitor's™

Consumer Money Index Latest rate trend: Ratio suddenly weakens



Bank Rate Monitor's ratio indicates the probable direction of retail interest rates over the next several weeks. The ratio is computed by dividing the total number of rate decreases into the number of increases or vice-versa on six types of accounts offered by the 10 largest banks and thrifts in each of the nation's 10 largest markets. Example: 100 rate increases and 25 decreases would make a 4-to-1 "Plus" ratio. Or, 100 decreases and 25 increases would make a 4-to-1 "Minus" ratio. Over time, the longer and farther the ratio moves on the Plus or Minus side, the more sustained the current rate cycle is likely to be. When the ratio suddenly moves strongly in an opposite direction, it usually signals the beginning of the end of a cycle. The graph shows how the ratio has moved over the past 9 weeks, and the bar chart shows the actual number of rate increases to decreases used to calculate the ratio. The greater the number of ups and downs, the longer the cycle probably will last.

EXECUTIVE *changes*

Loan Officers Pick Warren For Top Post

James W. Warren 3d, senior executive vice president of **First Florida Banks Inc.** and **First Florida Bank**, Tampa, is the newly elected president of **Robert Morris Associates.**

He will begin his one year term on Sept. 1.

The group, which has its headquarters in Philadelphia, is the national association of bank loan and credit officers.

Robert E. Greene, executive vice president and chief credit officer, **First Interstate Bancorp**, Los Angeles, has been elected the association's first vice president. **William J. Rossman,** president and chief executive officer of **Mid-State Bank and Trust** Co. Altoona, Pa., has been elected second vice president.

J. W. Warren 3d

Mr. Greene and Mr. Rossman will also serve one-year terms.

In addition, five new directors were elected to the board for three-year terms.

They are **C. Scott Bartlett Jr.,** executive vice president, **National Westminster Bank USA,** New York; **David L. Eyles,** vice chairman, **Mellon Bank,** Pittsburgh; **Carolyn Day O'Leary,** vice president, **First American Bankshares Inc.,** Washington, D. C.; **Warren J. Stell,** senior vice president, **City National Bank,** Los Angeles, and **Martin J. Strischek,** senior vice president, **Barnett Bank** of Palm Beach County, West Palm Beach, Fla.

Mr. Warren, who served on the association's board since 1985, is a past president of the association's Florida Chapter. He joined the association in 1971.

NEW ENGLAND

Chittenden Corp., Burlington, Vt., has named **Paul A. Perrault** as president and chief executive officer of the holding company and its principal subsidiary, Chittenden Bank. He succeeds **William H. Brnett Jr.,** who resigned in April.

Mr. Perrault formerly was president of Old Colony Bank in Rhode Island, Providence, a subsidiary of Bank of New England Corp, Boston.

MIDWEST

The Federal Home Loan Bank of Chicago has appointed **Gwendolyn J. Jordan** as a public interest director on its board for a term ending Dec. 31, 1993.

Ms. Jordan is currently director of the community development division of the Community Renewal Society.

PrimeBank, Grand Rapids, Mich., a new affiliate of First of America Bank Corp., has named **Kenneth J. Hoexum** as president and chief executive officer.

He previously served as executive vice president and chief operating officer of the bank.

Relative to PrimeBank's merger with First of America, Mr. Hoexum commented, "the bank will be able to expand its operations significantly in the western Michigan market, and continue to have a strong presence in the community."

Norwest Bank Nebraska, Omaha, has named **James A. Fougeron** to executive vice president, senior regional credit officer.

He had been senior vice president for special loan administration.

Mercantile Bank of St. Louis, the lead bank of **Mercantile Bancorp Inc.** has elected **Gary S. Martin** and **Donald W. Wiliams** as senior vice presidents in the corporate banking department.

Manufacturers National Corp., Detroit, has appointed **Gail L. Warden** to the board of directors of the corporation and of its principal subsidiary, Manufacturers National Bank of Detroit.

The Federal Reserve Bank of Chicago has named **Steven Strongin** to vice president and economic adviser, **Robert Schnorbus** to senior business economist and research officer, and **William Testa** to senior regional economist and research officer.

SOUTHEAST

AmeriFirst Bank, Miami, said **Dr. Laurence B. Brody,** a director since the spring of 1989, has been elected chairman. He is founder of the Cigna Dental Health Plan.

Dr. Brody started a software company as well as a management consulting company. He is currently spearheading the conversion of AmeriFirst's multicomputer systems into one.

WEST

Bank of America, San Francisco, a subsidiary of **BankAmerica Corp.,** said **Erick Goodbody,** regional director of the Orange County/San Diego region of the real estate industries division, has been named executive vice president.

Eric Goodbody

He is responsible for business development, new loan production, portfolio management, and personnel for the division's Orange County/San Diego region.

In addition, Mr. Goodbody is responsible for developing a long-term strategy for construction lending in Arizona as well as for **BankAmerica Sutter Mortgage Corp.**

Bank of California, San Francisco, has named **John C. Kaufman** to public relations manager in Los Angeles for its Southern California region.

Mr. Kaufman formerly served for two years as chief media spokesman for California Federal Bank in Los Angeles.

— **Franklin Smith**

AmSouth Names President

BIRMINGHAM, Ala. — AmSouth Bancorp's board elected John Woods, currently chairman and chief executive officer, to the additional position of president.

The slot opened recently when Dan Hendley resigned to pursue other business interests. □

We'd like to shed some light on commercial banking law.

Commercial banking law. You've got to comply with it- but first, you've got to understand it.

Bank Officer's Handbook of Commercial Banking Law sheds light on this very complex and often confusing aspect of banking.

Combining historical banking material with recent changes in UCC codes and consumer protection statutes, the **Handbook** offers quick answers to the legal questions that arise in your day-to-day operations. It's an excellent overview of all commercial banking law in one comprehensive volume- concise, readable, and well-organized. And when you require further information, special footnotes lead you to specific sources of in-depth detail on the subject.

If you're a bank officer in a supervisory or decision-making position, you can't afford to be in the dark about commercial banking law. Get your copy of the **Handbook** today!

Call now and try **Bank Officer's Handbook of Commercial Banking Law** -FREE for 30 days.

Demographics Dim the Prospects for Workouts in 1990s

By ANDREW REINBACH

Though banks are beginning to acknowledge that much of their late-1980s real estate lending is coming back to haunt them, many still hope the workouts will resemble the recovery from such debacles as the Real Estate Investment Trust crash in the 1970s.

But some say the factors now creating a virjual depression in real estate development will also work against successful loan workouts for banks in the 1990s.

Inflation and demographics bailed us out of the 1970s, but it won't be there for us now," said John Koskinen, president of of the Palmieri Co., a Washington-based workout firm.

"The '70s were kid's play. I think this will be the worst time for real estate that we've had in 60 years – since the 1930s."

19.2% Vacancy Rate

Some 637 million square feet of office space is now vacant or under construction, according to TCW Realty Advisors, based in Los Angeles. Vacancy rates soared from a low of 3.3% in 1982 to 19.2% at the beginning of this year.

"Leases expiring now are already above market, and we expect to get less as time goes on," said Thomas Yamin, an executive vice president at Eastdil Realty Inc., based in New York. "Rents got too high, so now they're seeking a market level."

This has already happened in Manhattan. Asking rents in the Times Square area are listed by the Edward S. Gordon Co. at $38.12 a year per square foot, down from $40.90 a year ago. But the actual market is widely said to be only $28 a year per square foot, plus a one-time $50 per square foot – the so-called "work letter" – to modify the space for the tenant.

Vision of Decline

If half the $350.4 billion face value of commercial real estate loans held by U.S. banks fell into some sort of adjustment – anything from a renegotiation to a foreclosure – and the overall loss in value in those transactions were only 25%, the reduction from book value would be $43.8 billion.

But things might get even worse.

"Banks often lent 100% of value on a project, while we only lend 75% of value," said Frank B. McDougal, president of Prudential Mortgage Capital Corp. Thus Prudential has "a 25% cushion on top of the cash flow," he said.

"Our typical loss in a foreclosure is 15% to 20% – so theoretically, banks could lose 45% of loan value."

A 45% loss of value on half the national banks' commercial real estate loans would total $78.8 billion.

Hidden Costs

The real costs of foreclosures are often higher – and hidden.

"It costs 10% of value a year just to carry a building, so the real costs of your average workout, all told, could be 40% of value," said T. J. Winiarski, a senior vice president at Manufacturers National Bank of Detroit. "There are tremendous carrying costs involved, and a lot of the accounting doesn't show them, because the fees associated with ownership are listed as expenses."

Office Vacancy Rates Soar in Top Markets

Vacancy rates as a percentage of total office space in 55 largest markets.

Even if banks and developers avoid workouts or foreclosures, lenders still face the prospect of losses that might reach 25% of face value. The reasons:

• Many current commercial mortgages are essentially renamed construction loans – the loan amounts are for the full cost of construction.

• New mortgages, however, will be underwritten on a strictly cash-flow basis.

• Therefore, loans maturing in coming years will often be replaced by smaller ones, even if the building is fully leased.

This change alone will create losses for banks.

Demographics will also be a problem

In the 1970s, the number of office-based jobs in the United States increased by 15 million, according to the U.S. Bureau of Labor Statistics, while 1.994 billion square feet of office space was built.

At a rule-of-thumb allocation of 200 square feet per employee, this meant that by 1979, surplus demand for office space totaled about 1 billion square feet of space.

It was this surplus demand, combined with the corollary demand for other types of real estate projects also created by the maturing of the postwar generation, that touched off the real estate boom of the 1980s.

But according to the U.S. Census Bureau, in the 1990s only 10 million net new employees will enter the job market. And no more than 50% of them will be employed in offices, if normal employment trends continue.

At the same allocation of space per worker, this means incremental demand for office space in the next 10 years will be only about 350 million square feet for the entire country. That is about 600,000 square feet of space per year for each of the nation's 55 top markets.

Compared to the building pace of the 1980s, this is almost no building at all.

Inflation May Not Help

Though demand for new space will disappear, demand for employees will grow. The U.S. Bureau of Labor Statistics projects that if growth is moderate, more than 12 million office jobs will be created through the decade of the 1990s.

Some believe this shortage of office workers will create wage inflation as employers compete for workers in the 90s.

Since real estate has historically tracked inflation, this should be good news for the industry.

But not this time.

For the first time in memory, in fact, real estate values may lag behind inflation, according to Salomon Brothers Inc.

"In the tough real estate operating environment we are now in, landlords will find that the significant oversupply in many major U.S. markets makes it difficult to increase rents, even if inflation surges. So the income component of real estate returns is unlikely to rise with inflation," said a recent Salomon study. "In addition, values may decline if unanticipated increases in inflation cause investors to apply higher discount rates to real estate cash flows."

In a property bid based on cash flow, investors calculate the price they are willing to pay by dividing the building's net operating income by a discount rate that is generally 250 basis points higher than prevailing five-year or seven-year Treasury bills. The time period referred to is determined by the amount of time investors expect to hold the property.

These discouraging considerations will not apply to every building in a metropolis. Some projects, built to the specification of tenants that will occupy the entire building, will be built and will prosper. This will encourage some origination of new construction loans and support a low level of building construction, nourishing the belief that the business of real estate development is not dead.

But in terms of the market as a whole, such building will only aggravate the situation. Every new building or lease in a new building means that another building or space is left vacant.

It seems likely that as high vacancy rates persist, rental income on the buildings banks financed in the 1980s will be flat, at best, and will lose ground to inflation, even if the buildings are fully leased. And rents may well continue to decline, as is occurring today.

Foreclosures Foreseen

As rental income falls, workout negotiations will naturally ensue on many commercial mortgages. And as matters proceed and the property's real economic condition becomes clear, such negotiations may often lead to foreclosure.

"Take your lumps, put it behind you, and go on to other things."

T. J. Winiarski
Manufacturers National Bank of Detroit

"There's an awful lot that gets uncovered when you read the leases and contracts that otherwise isn't known," said Ivan Fagan, director of the real estate practice at Arthur Andersen & Co. "There may be a land lease that includes participation in cash flow down the road – which the lender may not know about, since many loans didn't have enough due diligence done on them."

Banks hesitate to recognize mortgage problems, some observers say, but the facts may eventually force them to do so.

"They are beginning to take a hard look at reality and deciding which borrowers are so whacked out" that the bank should take over the property, said Henry Gallin, owner of Gallin Realty Co. in New York.

This may ultimately be the best course, old-timers say.

"Take your lumps, put it behind you, and go on to other things," advises Mr. Winiarski of Manufacturers National, who has 30 years' credit experience.

"The market can create a further loss of value, and it could become a dramatic loss of value, so you're often better off moving quickly and taking the property," he observes.

"The important thing to remember is that preventive action is better than remedial action." □

UNSOLD SHARES

MARKETING ■ MANAGEMENT

As a banker, you have come to realize the necessity of foreclosing on unsold shares that sponsors and owners have been unable to sustain. Now that you own the property, you must also deal with marketing and managing the property's unsold shares.

Alexander Brett, Inc. has grown to be the preeminent property management company addressing the issue of unsold shares by successfully marketing and managing thousands of unsold shares throughout the metropolitan area.

Our team of real estate professionals has the expertise to tailor a management and marketing plan for your unique portfolio of properties.

For more information, contact Bob Cicchillo at (212) 883-0300 for details.

ALEXANDER BRETT, INC.
REAL ESTATE SERVICES

SPECIAL SEMINAR ANNOUNCEMENT
UNSOLD SHARES: MANAGEMENT AND MARKETING INTO THE 1990S
Real estate industry professionals will address the issue of unsold shares, including effective marketing and management techniques as well as legislative and tax implications.
Tuesday, October 2, 1990
Seating is limited. Please call Amy Lorowitz immediately at (212) 883-0300 for reservations.

Texas Real Estate Market Recovering, but Worries Abound

By JEFF FRANKS
Reuters

HOUSTON — Slowly but surely, the real estate market in Texas, epicenter of the depression that has afflicted the nation's oil-producing states since the mid-1980s, is emerging from a morass of overbuilding.

Skyscrapers in Houston and Dallas are finally finding tenants, and houses that sat empty as job seekers left the state are selling once again, although at lower prices.

"I think we've hit bottom and turned upward," said Jack Friedman, real estate professor at Texas A&M University.

Property Values Face Threat

But the massive amount of real estate held by failed thrifts and controlled by the government hangs like a threat over the market, since any big sell-off would send property values crashing once again.

Texas' real estate problems were rooted in the 1980s when the state's economy was booming. Thrifts and banks, savoring less regulation and flush with money reaped from rising oil prices, lent freely for real estate projects in the belief that economic growth would continue unchecked.

"I think we've hit bottom and turned upward."

Jack Friedman
Texas A&M University

But when oil prices fell in the mid-1980s, the energy-dependent economy collapsed, leaving developers with buildings they could neither fill nor pay off. The state's banks and thrifts, stuck with bad energy and real estate loans, were devastated. All but one of the 10 largest banks were recapitalized or bailed out by the government.

Louisiana and Oklahoma also suffered, but not as much as Texas.

Victim of Ego, Promotion

"Texas has that attitude that we're a great state and we can never do anything wrong. We were a victim of our own promotion and ego," Friedman said.

Oil prices, which plummeted to $10 a barrel in 1986, had recovered to around $20 a barrel before the recent jump, and the state's economy has inched back.

The unemployment rate, for example, has dropped from a peak of 10% in 1986 to 5.3%, according to the Texas Employment Commission.

As the economy has recovered, office building vacancy rates have fallen from around 30% two years ago to about 25% statewide, experts said.

Rents have risen as a result, although they remain far below previous levels. According to the Coldwell Banker realty company, June rates for first-class office space in downtown Houston were $15.70 a square foot, up from $11 two years ago but well below the $23.41 price in 1986 before oil prices collapsed.

Housing Recovers Somewhat

The state's housing market shows a similar pattern. According to the Texas Association of Realtors, 1990 home sales through real estate brokerage services were up slightly, with 36,358 units sold through May, compared with 31,853 for the same period in 1989.

But housing prices still remain low, with the median price for May sales at $67,000 versus the national median price of $95,300.

Uncertainty about the state's future appears to be preventing the influx of capital needed for a full-scale recovery. Even though Texas real estate is selling at bargain basement prices – a Houston office building can be bought for $40 a square foot, or about the same amount that space is renting for in New York City – investors are still cautious about the state, said Friedman.

Even though Texas real estate is selling at bargain basement prices, investors are still cautious about the state.

RTC Holdings Worry Investors

Investors' main concern, he said, surrounds the Resolution Trust Corp., which has acquired a large chunk of Texas since it was created by the government last year to oversee the bailout of the nation's failed thrifts.

"A lot of people are hesitant about buying because they're afraid the RTC will unload its properties and they'll lose the value of their investment," he said.

The RTC has repeatedly said it plans to dispose of the real estate taken over from Texas' failed banks and thrifts in a way that will not harm the market.

But investor skepticism is rooted in the vastness of its holdings.

According to an RTC spokeswoman, the agency has 20,000 properties worth $7.7 billion in Texas, which amounts to more than half of its nationwide total of 35,900 properties worth $14.9 billion.

Part of the problem keeping investors at bay is that returns on real estate, although recovering, are minuscule. Institutional real estate investors earned only 0.44% on their Texas holdings in 1989, far below the national average of 6.02%, according to a study by the National Council of Real Estate Investment Fiduciaries.

Still, Friedman said he believes that the state's problems are short-term. □

DON'T FIND OUT THE HARD WAY.

Compliance Examinations Update

Last year, over 55,000 banks were cited in violation of regulations. Not deliberate malfeasance, but simply overlooked technicalities– costing hours of documentation time and a fortune in penalties.

Are you in complete compliance with all of the legislation and regulation pertaining to your financial institution?

The fact is, you may never know until it's too late. Unless you protect yourself. ***Compliance Examinations Update For Financial Institutions*** is exactly the kind of "early warning system" you need to assist in rapid, safe, cost-efficient compliance. Our editors regularly search out what regulators are looking for–and what they're finding–as well as the very latest developments in legislation. Twice a month, this dependable service gives you practical, on-going guidance on how to detect and resolve these complex problems in your operations–*before* they become violations.

The next twelve months will see thousands of banks cited or sued for failing to comply with Federal consumer protection laws. Make sure you're not one of them with ***Compliance Examinations Update.***

Take advantage of this special opportunity to receive ***Compliance Examinations Update*** FREE for 30 days. Call now–and start protecting yourself today!

INDEX *of top stories*

The following is a selective index, arranged by subject, of the top stories in the *American Banker* last week. The date of appearance precedes each item. This column was compiled by Matt Barthel.

COMMERCIAL REAL ESTATE

8/14 With commercial real estate lending all but dead, some banks are moving lending officers to real estate investment banking services. Fee income and comparatively low risks have convinced many large banks to reallocate resources to advisory work. *Page 1*

COMPETITION / BANK

8/14 Walk into any one of Golden West Financial Corp.'s more than 200 branches, and you'll find a lobby carefully designed to minimize clutter. What you will not find, inside or out, is a single automated teller machine. *Page 1*

8/15 Plagued with rising credit problems and worldwide concern about the health of the U.S. banking industry, American banks staged a major retreat from international credit activities in the first quarter, according to the Bank for International Settlements. *Page 1*

8/16 With the deadline to reduce check-hold times rapidly approaching, several large banks plan to begin processing each other's checks this month through a new nationwide clearing house that will use electronic information to speed operations. *Page 1*

8/16 Alan Greenspan conceded that U.S. banks' competitiveness overseas will be further eroded in the short run if they must raise more capital, as the Fed has recommended. *Page 2*

8/17 Manufacturers Hanover Trust Co. announced that it is closing its branches in Switzerland and Sweden as part of a global restructuring of its wholesale banking business. *Page 1*

CONSUMER SERVICES

8/13 Credit card debt will continue to outpace other forms of consumer debt this year, according to H. Spencer Nilson, an industry observer. *Page 6*

8/15 The Cirrus and Plus networks can proceed with plans to share automated teller machines without fear of antitrust litigation – at least for now. *Page 8*

8/16 Cirrus System Inc. approved Valley Bank of Nevada's application to accept ATM cards with the Cirrus logo, even though Valley imposes usage surcharges on other banks' customers. *Page 6*

8/17 Citibank scrambled to update customers' accounts after last week's New York City power outage; it brought in additional generators to restore back-office computer systems at its city branches. *Page 1*

8/17 British consumers will make more payments with debit cards than checks before the year 2000, a trade group predicts. *Page 8*

CREDIT UNIONS

8/14 The credit union industry put its 1989 performance out for review last week and braced to pay higher fees to its regulatory agency in 1991. *Page 6*

DEPOSIT INSURANCE

8/13 Some conservative economists argue that bank runs may serve a useful purpose by weeding out weak institutions. *Page 8*

8/15 Moving to replenish its dwindling bank insurance fund, the Federal Deposit Insurance Corp. board voted to raise premiums next year by a record 63%. *Page 1*

8/16 Bankers around the country rallied behind the Federal Deposit Insurance Corp.'s proposal for an unprecedented insurance premium increase, conceding it is better to take the bitter medicine now than risk a government bailout later. *Page 1*

EARNINGS

8/13 The Southwest banking rebound dissolved into a sloshy mess during the second quarter as portfolio problems and tough federal examinations hurt a number of institutions. *Page 1*

8/14 Midwest bank earnings were generally lower in the second quarter than in the year-earlier period. *Page 2*

FAILURES

8/14 In a move signaling a likely increase in bank failures in New England, the Federal Deposit Insurance Corp. is planning to open an asset liquidation office in the Boston area and will staff it with as many as 460 employees. *Page 1*

FINANCE

8/13 The Ministry of Finance in Tokyo is not likely to approve further overseas issues of subordinated bonds by Japanese banks. *Page 14*

8/13 Shares of Sovran Financial Corp. and Citizens and Southern Corp. have weakened recently, despite analysts' enthusiasm about the companies' imminent merger. *Page 16*

8/14 A prominent savings and loan stock analyst has plucked his last few healthy thrifts off the buy list until regulators finish working them over in upcoming examinations. Given the possibility of increased loan-loss reserves, the exam results may not

INDEX *of top stories*

Continued from *page 10*

be pretty. *Page 20*

8/14 A Guinness Peat Aviation official confirmed that his company has discussed a saleleaseback transaction with the union-led UAL Corp. buyout group "in the range of $500 million." *Page 18*

8/15 In an attempt to bolster their stock prices and allocate capital more effectively, major banks are building sophisticated information systems to measure the profitability of products, customers, and lines of business. *Page 1*

8/15 The spike in rates on government securities could hold for a while, and a debate is emerging over whether this rate increase and the concomitant plunge in prices has further wounded the already limping banking industry. *Page 24*

8/15 Citicorp, First Chicago, and Bank of Boston, among other secured lenders, are expected to look long and hard before agreeing to a plan by Atlanta developer John C. Portman to give his unsecured lenders a security lien. *Page 22*

8/16 Doubts have arisen whether First Maryland will keep pursuing Baltimore Bancorp. in light of the decline in bank stock prices and weakness in the local real estate market. *Page 24*

8/17 California bank stocks were hammered lower earnings were estimated for Security Pacific Corp. A Merrill Lynch analyst precipitated the slide by reducing her 1990 earnings estimate to $5.70 a share, from $6.35. *Page 16*

8/17 American Stores Co. closed a $75 million loan this week whose sole agent was a relatively unknown Japanese institution, Bank of Yokohama Ltd., and which was syndicated exclusively to regional Japanese lenders. *Page 14*

HOME MORTGAGES

8/17 Opposition from member thrifts of the Federal Home Loan Bank of New York derailed its plan to invest in jumbo mortgages. *Page 2*

8/17 The top 25 mortgage lenders accounted for 34.7% of all originations last year, up from 31% in 1988, according to a study by SMR Research. *Page 6*

8/17 A proposed sale of one of the Resolution Trust Corp.'s largest mortgage-servicing portfolios has fallen into limbo, with a member of the buyer group coming under pressure to exit. *Page 13*

INTERNATIONAL

8/13 The industrial world's banks, led by those based in Japan, are rapidly reducing their Persian Gulf business, including important interbank credit lines. *Page 10*

8/14 Dai-Ichi Kangyo Bank and Fuji Bank, the world's biggest and third-biggest in terms of assets, have lost their triple-A debt ratings from Moody's Investors Service. *Page 12*

8/15 Bank of Montreal caught industry analysts and money market participants off guard when it cut its prime rate to 14.25% from 14.75%. *Page 14*

8/16 Bayerische Vereinsbank, Germany's sixth-largest, will close agency offices in Atlanta and Cleveland as part of a reorganization of its U.S. operations. *Page 10*

8/17 Thomas Cook Group, a unit of Britain's Midland Bank, got Fed approval to acquire the U.S. retail foreign exchange operations of Deak International from Jarden Morgan Ltd., a New Zealand-based financial services company. *Page 7*

LEGAL / CRIME

8/13 James G. Richmond, coordinator of the Justice Department's investigations of bank and thrift crimes, said New England could be the next hot spot for fraud and management-abuse cases. *Page 13*

LEGISLATION / REGULATION

8/13 Shawmut National Corp., with joint headquarters in Boston and Hartford, Conn., said it has agreed with federal regulators to improve its lending practices, credit review, liquidity planning, and management information systems. *Page 1*

8/15 Moving to replenish its dwindling bank insurance fund, the Federal Deposit Insurance Corp. board voted to raise premiums next year by a record 63%. *Page 1*

8/15 Federal Reserve Board officials insist most banks have little reason to contest its most recent minimum capital requirement, known as the 3% leverage ratio. But some bankers contest the usefulness of this method of measuring capital. *Page 1*

8/15 The Resolution Trust Corp. decided to extend to all investors the quality guarantees on mortgage-related assets that it gives the government-sponsored secondary-market agencies. *Page 2*

8/16 The Federal Home Loan Bank Board's controversial 1988 sales of more than 200 failed thrift institutions cost taxpayers $4.6 billion in 1989, according to a report obtained by the *American Banker* from the Federal Deposit Insurance Corp. *Page 1*

8/16 Rosemary Stewart resigned as enforcement chief of the Office of Thrift Supervision after weathering congressional rage over handling of the Lincoln Savings and Loan failure by the OTS' predecessor agency. *Page 2*

MANAGEMENT / HUMAN RESOURCES

8/13 First Fidelity Bancorp. is close to signing a contract to turn over management of its $100 million technology operation to a third party, EDS Corp., according to industry sources. *Page 1*

8/16 Sovran saved $2 million last year by following the advice of its own employees on ways to improve efficiency. *Page 8*

8/17 Ameritrust Corp. announced it will reduce its staff by 11.5%, or 780 employees, and take a charge of as much as $18 million against third-quarter earnings. *Page 1*

Brazil Won't Make Payments in '90

Reuters

SAO PAULO — Brazil is not planning on making payments on its foreign bank debt this year, Economy Minister Zelia Cardoso de Mello said in an interview.

"At this moment, we are not thinking about it," Ms. Cardoso said when asked if Brazil envisions making interest payments this year on commercial medium and long-term bank debt of $56.7 billion.

Negotiations with commercial banks will come after a pact is reached with the International Monetary Fund, she said.

Ms. Cardoso predicted an agreement will be reached with the Fund in early October.

"In principle, negotiations would be in that order" with the IMF first, followed by the Paris Club and next foreign bank creditors, the minister said. However, she did not rule out a change from this order.

Payments Skipped Since July 1989

Commercial banks have been demanding that Brazil begin negotiations and start making payments on the longer-term debt. Most payments have been skipped since July 1989 and arrears now total about $6 billion on the bank debt alone, Brazilian officials said recently.

In retaliation, Brazil effectively has lost $3 billion in vital short-term trade and interbank lines because of its failure to honor debt agreements, John Reed, Citicorp's chairman and chief executive officer, said recently.

"This is a normal reaction of bankers" to cut back these lines, Reed said. Citicorp has maintained its short-term lines at $630 million without change since July 1989, he said.

Brazil has continued paying interest on the credits because they are essential for financing exports and imports.

The decision on whether the government will allow debt swaps into equity of the companies being privatized will be made during the next two months, she said. □

Dollar No Haven in Mideast Crisis

Mark, Yen Gain on U.S. Currency Since Iraqi Strike

By JOHN EVANS

LONDON — The dollar's sharp decline against the German mark and Japanese yen since Iraq invaded Kuwait signals that the U.S. currency's longtime role as a safe haven in times of crisis is waning, analysts said.

Since the Mideast crisis erupted Aug. 2, the dollar has hit record postwar lows against the mark – Europe's key currency and the one that sets most currency exchange rates in the industrial world, analysts said.

In the past two weeks, the greenback has lost 6% of its value against the German currency, hitting a low of 1.5530 marks. It steadied Monday in Europe at 1.5585 marks.

Mark Outperforms Yen

In the same period, the dollar has fallen against the yen by about 3%, to 146.50. The Japanese currency, reflecting the Asian nation's substantial dependence on imported oil, hasn't benefited as much as the mark from the Iraq crisis.

One exchange rate analyst on banks from a falling dollar is a ballooning in the value of their assets denominated in foreign currencies. That would require putting more dollar-based core capital behind their business to comply with international capital adequacy requirements.

However, U.S. banks have already been scaling back their overseas assets, and unless the dollar continues to fall steeply, the balance-sheet impact will be "relatively small," said analyst Robert Law of Lehman Brothers International Ltd.

Use of Dollar Shrinks

The dollar already takes a shrinking share of international bank lending.

The Bank for International Settlements has reported that currencies like the mark, French

> **An "uncertainty premium" no longer seems built into the dollar.**
>
> **Mark Houghton-Berry**
> *Goldman Sachs International*

franc, and British pound were used increasingly as substitutes for the dollar in international lending during the first quarter of 1990. The Basel, Switzerland-based bank linked this trend to a simultaneous decline in cross-border activities by U.S. banks.

Dollar-denominated international bank lending grew only $22 billion in the quarter, but such lending in other currencies expanded by more than $129 billion. Total outstanding loans in foreign currencies, at $2.4 trillion, are nearing the dollar's total of $2.8 trillion, the BIS said.

Economists agreed that the dollar's traditional role as a haven in crisis has been based on a belief that the United States would be the last country to succumb if a regional conflict escalated into a superpower clash.

Old Rules Don't Apply

Now, "there doesn't seem to be any uncertainty premium built into the dollar," said Mark Houghton-Berry, analyst at Goldman Sachs International.

Frederick Gubler of Citicorp in Zurich said that, for the dollar, "the safe haven [concept] was created with the tension in Poland 10 years ago and the feeling that any crisis would be in Europe."

Apart from ebbing superpower tensions, another factor behind the dollar's weakness is the view that the United States could cut interest rates to prevent higher oil prices from tipping its sluggish economy into recession, thereby reducing foreign investors' return on dollar-denominated assets.

As a result, high-yielding currencies, such as Britain's pound and the Australian and Canadian dollars, have emerged as key beneficiaries of Mideast tensions. These currencies offer annual interest rates and investment yields of up to 20%.

Foreign exchange dealers still won't write off the dollar, noting its status as the single most widely used currency in international banking and commerce. As such, it has great liquidity and acceptability worldwide, reflecting the underlying strength of the U.S. economy. □

British Banks Stuck with 675 Tons of Unpopular Coin

By JOHN EVANS

LONDON — Britain's big banks have an unusual problem – they can't get rid of some of their money. And it's costing them a fortune.

This embarrassing banking blunder centers on Britain's 50-pence coin, worth about 95 cents.

Burning Holes in Pockets

Banks are now sitting on 50 million of the coins – a mountain of pocket change weighing 675 tons – because the British just don't like the heavy, seven-sided coin. It rapidly wears holes in trouser pockets and purses, consumers complain.

The 50-pence coin is being killed off by the new one-pound ($1.90) and five-pence (9.5 cents) pieces, which are being used as alternatives in change and vending machines.

The banks' hoard of 50-pence pieces, meanwhile, is proving costly. Nearly $7.5 million at an annual rate is being lost in missed interest on the piles of coins, which are worth more than $45 million but sit idle in bank vaults, according to the British Bankers Association.

The problem first emerged a year ago when banks found that, however hard they tried to distribute 50-pence coins, more were being paid back in.

The bankers association, principal trade group for big banks, said the problem is proving so intractable that it will write the government to urge a solution.

But despite earlier pleas by banks for help, Britain's Treasury and Royal Mint have refused to take the coins back, saying that it's the banks' own fault for overordering 50-pence pieces. A Treasury spokesman sniffed: "The Mint simply does not operate on a sale-or-return basis." □

Finance Chief Named At Houston Thrift

NEW YORK — Anthony J. Nocella, formerly chief financial officer at Meritor Savings Bank, has been hired for a similar post at United Savings Association of Texas, a Houston thrift led by mortgage-securities pioneer Lewis S. Ranieri.

United announced on Friday that Mr. Nocella will serve as executive vice president and chief financial officer. He left Meritor in December 1987 and has since been president of his own management firm, specializing in asset and liability management for financial institutions.

He is considered an innovator in mortgage and credit card securitization.

Confirming earlier reports, United also named George Bender executive vice president of mortgage banking operations. Mr. Bender had led the mortgage unit of Centrust Bank, Miami, a thrift that is now under federal control. □

Idaho Seeks to Block Entry of U.S. Bancorp

Continued from page 1

Washington. U.S. Bancorp would stay in the Evergreen State through another subsidiary, U.S. Bank of Washington, the state's third-largest commercial bank.

The U.S. Bancorp Idaho application is under review by the legal division of the Office of the Comptroller of the Currency. Officials said no decision would be made before autumn.

Mr. Patty petitioned the OCC and the Federal Reserve Bank of San Francisco to stop the relocation shortly after U.S. Bancorp submitted applications to the two agencies.

U.S. Bancorp said headquarters relocations across state lines are permitted under national banking laws. Michael W. Meltzer, a Portland attorney representing the company, said the move into Idaho represents "the exercise of a permitted banking power [that the] OCC has approved in half a dozen cases."

A 1959 amendment to the National Banking Act allows nationally chartered banks to move main offices "to any ... location" within 30 miles of its existing headquarters city, with the permission of the OCC. The amendment does not restrict transferring offices across state borders.

Since 1985, when Mark Twain Bancshares, St. Louis, moved the headquarters of a subsidiary from Missouri to Kansas, the OCC and the Federal Reserve Board have approved a handful of cross-border main office relocations.

State Regulators Complain

Bank regulators in several states where such moves have taken place have objected, see-

Bank regulators in several states view the relocations as infringements of state authority.

ing the relocations as infringements of state authority.

But courts generally have upheld the supremacy of federal law. In a precedent-setting 1986 case, a Pennsylvania federal court denied a petition by the state's banking authorities to halt the relocation of the bank of New Jersey's main office from New Jersey to Pennsylvania.

The second relocation, South Trust National Bank move from Alabama to Georgia, is on appeal in a District of Columbia federal court after a Georgia bank petitioned to overturn federal approval. Georgia banking authorities at first opposed the headquarters move, but withdrew their objections when South Trust agreed to dispose of its Alabama branches.

Amendment Called Loophole

The 1959 amendment "is a loophole," said William S. Eckland, an attorney with Morrison & Foerster in Washington, D.C. "I think [U.S. Bancorp] will win. Idaho's pleas will fall on deaf ears."

U.S. Bancorp proposes to use a main office relocation after coming up short on attempts to buy two Idaho financial institutions last year. The company was outbid on Norban Financial Group Inc. and Mountain Peak Savings Bank, both of Coeur d'Alene, by WTB Financial Corp., Spokane, and Security Pacific Corp., Los Angeles respectively.

Should the relocation maneuver succeed, U.S. Bancorp officials say they will quickly move to expand full-service banking into Boise, the state's largest metropolitan area. □

Former Jersey Banker Indicted on Fraud

Reuters

CAMDEN, N.J. — A former executive vice president of Montgomery National Bank has been indicted in connection with an alleged $10 million fraud that forced the New Jersey bank into receivership in June, U.S. Attorney Michael Chertoff said.

Michael Schneiderman, 46, was charged with conspiracy, bank fraud, misappropriation of funds, and creation of false bank obligations. Maximum penalties on the charges total 45 years' imprisonment and $2 million in fines.

"These charges forcefully illustrate how corrupt and fraudulent conduct by senior officers can undermine the vitality of a financial institution," said Mr. Chertoff, who is based in Newark.

The U.S. attorney's office also said that former New Jersey savings and loan executive Eugene Unger pleaded guilty to embezzling $6 million.

Mr. Chertoff said Mr. Unger, 63, previously a vice president of Fidelity Mutual Savings and Loan in Westmont, N.J., embezzled the money between 1974 and 1990. Mr. Unger faces a maximum of 20 years in jail and $12 million in fines.

Mr. Chertoff said the Montgomery Bank scheme was allegedly conducted by Mr. Schneiderman and co-conspirator James Fredericks, a former senior bank officer who has pleaded guilty to federal charges.

The nine-count indictment by a federal grand jury against Mr. Schneiderman said the scheme precipitated Montgomery's insolvency and takeover by federal regulators in June. It has since reopened as part of Amboy National Bank.

The indictment charged that Mr. Schneiderman and Mr. Fredericks took money from customers for the Rocky Hill-based bank's repurchase agreements, or repos, which are interest-bearing accounts similar to certificates of deposit.

Instead of depositing the funds, Mr. Schneiderman and Mr. Fredericks gave customers fraudulent letters confirming the repurchase agreements and then used the money for other purposes, the indictment said. □

FHA Chief, at Odds with HUD Hierarchy, Resigns

By DEBRA COPE

WASHINGTON — Former investment banker Austin Fitts abruptly resigned late last week as the federal housing commissioner, after months of butting heads with her superiors at the Department of Housing and Urban Development.

Ms. Fitts, 40, joined HUD in May 1989 after 11 years with the investment banking firm Dillon Read & Co. She was a protege of Treasury Secretary Nicholas Brady, Dillon Read's chairman and chief executive until September 1988.

Arthur J. Hill, president of HUD's Government National Mortgage Association, or Ginnie Mae, will be nominated to succeed Ms. Fitts and face Senate confirmation. No successor to Mr. Hill has been named.

Good First Impression

Brash and confident, Ms. Fitts initially earned plaudits for bringing a marketwise approach to the Federal Housing Administration, HUD's floundering flagship program in homeownership. One of her goals was to reduce big banks' role in delivering home loans by overhauling FHA's coinsurance program.

But sources said she sparred with HUD Secretary Jack Kemp and Under Secretary Alfred A. Delli Bovi on matters of substance and style.

"It was a complete personality conflict," said one source. When Ms. Fitts was frozen out of the policy debate on restructuring the FHA that has dominated HUD's agenda for the past six months, the handwriting was on the wall, this source added.

Observers called her well meaning and a straight shooter but complained that she never learned the fundamentals of the FHA program. □

U.S. Sues Keating to Obtain a Financial Accounting

Reuters

WASHINGTON — On behalf of the Office of Thrift Supervision, the Justice Department last week sued Charles H. Keating Jr., who had headed the failed Lincoln Savings and Loan Association.

The federal lawsuit seeks to enforce an Aug. 9 order by the thrift regulatory agency to obtain an accounting of Mr. Keating's financial affairs. The embattled executive has claimed he is short of cash, but the OTS alleges he is maintaining an expensive lifestyle.

Profiteering Alleged

OTS Director T. Timothy Ryan Jr. has charged that Mr. Keating and five business associates at Irvine, Calif.-based Lincoln and its parent, American Continental Corp., Phoenix, profited from improper use of depositors' funds.

The OTS order required Mr. Keating, who remains chairman of American Continental, to provide financial statements listing all his assets, barred him from engaging in any aspect of the country, and required him to notify the regulator in advance of any transaction in excess of $5,000. The agency also sought restitution of $40.9 million.

Keating Hasn't Complied

The Justice Department said government officials have been unable to convince Mr. Keating to comply with the OTS order. In its lawsuit, the department sought immediate compliance. A hearing date has not been set.

Stephen Neal, an attorney for Mr. Keating, said, "It's another agency seeking to litigate issues, which a different government agency is already litigating exhaustively in Arizona."

"It's a total waste of taxpayers' money," said a spokesman for American Continental. □

Sunwest to Agrees to Notify Fed Bank of Dividend Plans

By STEVE KLINKERMAN

DALLAS — Sunwest Financial Services Inc. said it had agreed not to declare dividends without first giving written notice to the Federal Reserve Bank of Kansas City.

The agreement with the Fed covers dividends from Sunwest member banks to the parent company, and parent company dividends to shareholders, the company said.

Sunwest, the largest bank holding company in New Mexico, is current on its 28 cents per share dividend payments to shareholders, Sunwest said.

Sunwest's common stock trades at between $16 and $17 a share, roughly 25% below its book value.

The commencement of federal oversight on dividend payments caps a rough six months for Sunwest, which underwent back-to-back examinations by the Federal Reserve Bank of Kansas City and the Comptroller of the Currency.

Once renowned by analysts for its aggressive commercial real estate lending strategy, Sunwest racked up a 75% increase in average domestic real estate loans between 1986 and 1989, according to Ferguson & Co. But during the same period, its average caseload of delinquent and defaulted real estate loans increased by 122%.

Sunwest suffered additional portfolio deterioration this year. The company reported a 38.4% increase in nonperforming assets during the six months that June 30. It finished the period with $121 million of problem assets — equal to 7.2% of gross loans. □

OTS Backs Perpetual's Plan to Narrow Focus

VIENNA, Va. — Perpetual Financial Corp. said Friday it has entered into an agreement with the Office of Thrift Supervision that permits it to continue with a previously announced business plan to concentrate on retail banking and mortgages.

The parent of Perpetual Savings Bank said the agreement and the plan call for reduced nonperforming assets, its investment in service corporation subsidiaries, and the level of corporate and commercial real estate loans. Perpetual said it has agreed to review various policies and procedures and revise them where appropriate.

"We are pleased that our regulators considered it appropriate to build our agreement around

The plan is to concentrate on retail banking and mortgages.

Perpetual's business plan," said chairman Thomas J. Owen. He called the regulatory accord "a positive step for the bank."

9-Month Loss Hits $67.3 Million

Also on Friday, Perpetual reported a net loss of $5.3 million, or 45 cents per primary share, for its third fiscal quarter, which ended July 31, 1990. Its nine-month net deficit has mounted to $67.3 million, or $5.09 a share.

The $5.4 million-asset company earned $5 million or 29 cents a share in the comparable period of 1989, and $16.1 million or 96 cents a share in the first nine months of that fiscal year.

Perpetual said it continues to suffer from a soft economy and real estate market in the Washington area. Nonperforming assets rose by $91 million from April 30 to $334 million, or 6.14% of total assets, on July 31. But the company said it successfully resolved $41 million of problem assets in the latest quarter.

Perpetual took $11 million in loan-loss provisions during the third quarter, bringing total provisions for the year to $76 million – 10 times more than in the 1989 fiscal year – and total reserves to $72.2 million or 3.35% of total loans excluding residential mortgages. Including those mortgages, the coverage was 1.95% on July 31.

Downsizing Strategy

Reflecting a downsizing strategy, assets fell 4% from their July 1989 level, and deposits dropped 12% to $3.9 billion. Wholesale deposits were reduced for virtually all of that decline.

"We are on target with our business plan, but its early success, particularly in the area of asset quality and our ability to phase out real estate joint ventures, will be highly dependent on the duration of the current softness of the economy and real estate markets, and other factors beyond our control," Mr. Owen said. □

Earnings

Continued from page 2

1989, short-term interest rates have fallen 100 basis points, loan and deposit pricing has returned to normal." Joseph A. Jolson, thrift analyst at Montgomery Securities Inc., wrote in recent report.

For example, the margin at Golden West Financial Corp., Oakland, Calif., widened to 2.47% from the 2.30% in the 1989 second quarter.

"The $64,000 question is: Have the ones with the real estate problems gotten those problems behind them?"

J. Noel Fahey
U.S. League of Savings Institutions

Volume was up for some of the thrifts. But many continue to shrink in size to better meet the higher capital requirements being phased in under the thrift bailout law. Slower home sales also hurt volume.

Glendale Federal Bank, Glendale Calif., Beverly Hills, Calif., reported new loans in the second quarter amounted to $3.6 billion, up 6% from $3.4 billion a year ago. Glenfed wrote $1.57 billion in new loans, off from the $1.63 billion in the year earlier quarter.

"The longer they resist, the more inescapable it is that they have something they don't want revealed."

R. Dan Brumbaugh
Center for Economic Policy Research

FDIC Critic Defended Against Gonzalez Attack

Continued from page 1

tent with the needs of the committee." The chairman was particularly perturbed by Mr. Brumbaugh's appearances as a witness. "Expert witness in court on behalf of thrift executives against the FDIC:

"To me, that renders him ineligible," Rep. Gonzalez said in an interview last week. "He is already biased."

Mr. Brumbaugh is a senior research scholar at Stanford University's Center for Economic Policy Research. As an economist with the Federal Home Loan Bank Board in 1984, he accurately predicted the collapse of the Federal Savings and Loan Insurance Corp.

FDIC Called Insolvent

In recent appearances on national television, Mr. Brumbaugh has pronounced the FDIC insolvent and accused the agency of covering up the true condition of its insurance fund and of some large banks.

The controversial economist, in an interview Monday, accused the FDIC of using "bait-and-switch" tactics to keep him from getting confidential data on individual asks.

The FDIC strongly denied Mr. Brumbaugh's allegation. But there is no denying that the FDIC is at the weakest point in its 57-year history. It is forecasting a $2 billion net loss from its reserve fund in 1990, to a projected $11 billion at yearend.

Dramatic Rise In Premium

Aug. 14, the FDIC board proposed raising the premiums banks pay for deposit insurance a dramatic 63%, from the current 12 cents to 19.5 cents for every $100 insured.

"The longer they resist [in turning over the data], the more inescapable it is that they have something they don't want revealed," Mr. Brumbaugh said of the insurance agency.

The banking committee's ranking members have long been at odds, but their most recent tussle started last week when Rep. Gonzalez sent Rep. Annunzio the letter accusing Mr. Brumbaugh of bias and seeking his removal from the project sanctioned by the financial institutions subcommittee.

Rep. Annunzio was not budging.

Giving Taxpayers the Truth

"There are those among the regulators and within the banking community who want to silence Mr. Brumbaugh," Rep. Annunzio wrote. "As members of Congress, we owe it to the taxpayers to give them the truth."

Mr. Brumbaugh wants access to individual bank examination reports and the FDIC's list of

See ANNUNZIO page 18

Text of Gonzalez and Annunzio Letters on Brumbaugh

Henry B. Gonzalez, chairman of the House Banking Committee, sent the following letter, dated Aug. 16, to Rep. Frank Annunzio, chairman of the House Banking subcommittee on financial institutions.

Dear Frank:

Preserving or if need be, restoring the soundness of the deposit insurance system has been the major focus of your efforts and mine, throughout this Congress. I supported the study you proposed on the FDIC's soundness in the expectation that this would be a significant addition to the Committee's information on the problem. I am concerned, however, that the credibility of the study will be undermined by the actions of at least one of the contractors.

While Mr. Dan Brumbaugh comes with excellent credentials, he has also served as an expert witness in the defense of at least three management groups being sued by FDIC for improper actions. While there is nothing wrong per se with providing expert testimony to defendants in savings and loan liability suits, it is inconsistent for a contractor to argue that imprudent actions of such defendants were justified because regulatory attitudes did not discourage such actions, to be portrayed as a defender of the public interest. One can either accept employment defending highfliers, or providing expertise in the public interest, but it is difficult to do both and maintain the kind of credibility the Committee requires. The subject is simply too important to risk having it turn into a debate about motives.

I am sorry that you have not been aware of Mr. Brumbaugh's activities in the field of savings and loan defendants. I think you would agree that such activities are inconsistent with the needs of the Committee.

With best wishes.

Sincerely,

Henry B. Gonzalez
Chairman
Committee on Banking, Finance, and Urban Affairs

Rep. Annunzio responded to Rep. Gonzalez with the following letter, dated Aug. 17.

Dear Mr. Chairman:

Thank you for your letter of August 16 concerning the study of the soundness of the Bank Insurance Fund of the Federal Deposit Insurance Corporation (FDIC), and one of the individuals hired to perform that study, Mr. Dan Brumbaugh.

I was deeply disturbed when my office received a phone call from a reporter from the *American Banker* who said that she had an interview with you in which you discussed Mr. Brumbaugh and the letter to me. I feel very strongly that common courtesy would have dictated that you discuss this matter with me, or at least given me an opportunity to receive your letter, before discussing it with the press. It is extremely awkward to be asked by a reporter to discuss a letter that I have not even seen.

I will be now get to the subject matter of your letter.

Mr. Brumbaugh, along with two other individuals, Mr. James Barth and Mr. Robert Litan, were hired under a contract dated April 20, 1990, to perform a study on the health of the Federal Deposit Insurance Corporation. These individuals, including Mr. Brumbaugh, were hired because they were among only a few individuals in the entire country who foresaw the savings and loan scandal and predicted it well before it happened.

Prior to entering into the contract, I asked each of the individuals to read the relevant interest rules regarding such contractual arrangements. All three individuals advised me that they had no conflicts of interest. In fact, Mr. Litan resigned a position with a law firm to avoid any appearance of a conflict of interest.

It is my understanding that Mr. Brumbaugh has in the past appeared as an expert witness for defendants in various civil lawsuits brought by the Federal

"The issue here is whether or not Mr. Brumbaugh is qualified to judge the health of the FDIC."

Savings and Loan Insurance Corporation (FSLIC) and its successors against directors of insolvent savings institutions. It is also my understanding that Mr. Brumbaugh has indicated that he would also appear as an expert witness for the United States government in such cases if asked to testify. I have also been informed that Mr. Brumbaugh, in a number of these cases, has testified that the directors failed in their duties.

The issue here is whether or not Mr. Brumbaugh is qualified to judge the health of the Federal Deposit Insurance Corporation. You apparently have some concerns, and it would have been appreciated if you had raised these concerns at the time the contract was written.

Mr. Brumbaugh may be outspoken in his belief that the FDIC is in bad shape. I am deeply concerned about the condition of that agency, and it should be noted that only this week the FDIC board voted to raise insurance premiums for banks by more than 60 percent. You immediately wrote to Chairman William Seidman suggesting that the premium increase was not great enough, and I applaud you for that action and strongly share your beliefs.

There are those among the regulators and within the banking community who want to silence Mr. Brumbaugh. My only interest is in finding out whether or not the FDIC fund is sound. The taxpayers are the ones that ultimately would have to pay for any bailout of the FDIC fund, as they are now paying for the FSLIC fund. As Members of Congress, we owe it to the taxpayers to give them the truth.

Unfortunately, the individuals conducting the study of the FDIC have been severely handicapped by their inability to receive information on the fund. For example, the FDIC said that it would provide all information about the fund to the contractors. That agency, along with the Comptroller of the Currency and the Federal Reserve Board, has refused to make examination reports and problem bank lists available to the contractors. It is my understanding that attempts are being made to secure the information reports and problem bank lists from the agencies.

I am confident that you have not been aware of Mr. Brumbaugh's activities in the field of savings and loan defendants. I think you would agree that such activities are inconsistent with the needs of the Committee.

With best wishes.

Sincerely,

Frank Annunzio
Chairman
Subcommittee on Financial Institution Supervision

DEALS

Are Controlled Selldowns, New Wrinkle in Loan Sales, Doomed to Fail?

Continued from *page 1*

undermined by the agent banks themselves, who reportedly cut side deals with buyers. No bank will rush to admit that, though.

The cheating is common-place, and almost impossible to prevent, bankers say.

Controlled selldowns have been a fixture of the loan sales market since the 1988 buyout of RJR Nabisco, which required more than $13 billion of bank loans.

Mixed Results at Best

The pooled selldown of a portion of the original RJR buyout loans met with mixed results at best, bankers recall.

Since then, very few pooled selldown have been successful, bankers say.

Bankers point to the controlled selldown of loans for McCaw Cellular Communication and Time-Warner as two of the more notable examples of such flops.

The pooled selldown of about $1.4 billion in new loans to RJR closes this Friday, and so far, a mere $200 million has been sold to buyers in the secondary market.

A syndication official at one of the coagent banks readily concedes that fees offered to buyers will rise as soon as the pool closes.

Little Buyer Interest Expected

Even before it gets under way, the controlled selldown of a portion of a new $1.75 billion loan to Lin Broadcasting is expected by at least one of the coagents to meet with little buyer interest in the secondary market.

"I'm much more of a believer in letting the market set the price," said a corporate finance official at Morgan Guaranty Trust, one of the coagents on the Lin credit.

"I don't know of a large syndicate where a controlled secondary has been that effective," he added.

Likely to Remain on Scene

Still, bankers say pooled selldowns are likely to remain a feature of the loan sales market, at least for the time being.

Despite the glaring lack of success, agent banks continue to attract participants in primary syndicates with the promise of an orderly selldown in the secondary market.

"Only fools believe in that theory," said a syndications official. But he added, "I think banks are in many times willing to waking up in these matters."

Controlled selldowns also allow the agent banks to "restrict normal competition" from other members of the primary syndicate, the syndication official said.

The process allows the agent banks to make contact with potential buyers in the secondary market, unfettered by competition from the syndicate members, bankers say. □

Annunzio Backs Expert's Work

Continued from *page 1*

problem banks. He said his two colleagues on the study – James R. Barth, former chief economist at the Bank Board, and now a professor at Auburn University, and Brookings Institution economist Robert E. Litan – met in mid-June with FDIC staffers and subcommittee aides to discuss how sensitive FDIC information could be turned over.

June 18, Mr. Brumbaugh said, he called his FDIC contact on the project, Charles V. Collier, and said that Mr. Barth were willing to sign a confidentiality agreement to get the data, complete with a list of participants to effect they divulged information.

FDIC Aide Taken Aback

Mr. Brumbaugh, reading from notes he took of that call, said Mr. Collier responded: "Excuse me if I'm gasping. We thought you didn't want confidential data after the meeting last week. I'll have to get back to you."

Finally, Mr. Brumbaugh said, he was told that the subcommittee would have to request the data.

Mr. Collier did not return a phone call, but FDIC spokesman Alan J. Whitney said: "I don't care [Mr. Barth, Brumbaugh] thinks he told Chuck Collier. It hasn't happened." Mr. Collier is assistant director of the FDIC's office of compliance and special activities.

The staff study stands, Mr. Whitney said, but he added that the subcommittee must respond to a letter FDIC Chairman L. William Seidman sent to Rep. Annunzio outlining conditions for releasing the information.

"Bait and switch is exactly what they did," said Mr. Brumbaugh. "This is a strategy to deny us the data."

Mr. Litan said he will not sign the confidentiality agreement but added that he does not need to see individual bank examiners because his part of the study is mainly an autopsy of past failures.

In the study, which is to be completed in November, Mr. Brumbaugh and Mr. Barth are trying to determine what would be the market valuation of banks if they lacked deposit insurance. □

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding. (As of June 30, 1990, the thrift market value cutoff for banks was $56.71 mil. and for thrifts $107.8 mil.) 52 Wk Hi/Lo the moving 52-week high and low prices for the stock. PE the price-earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for stock dividends/splits. Mkt. to book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for preferred stock, earnings and dividends. Chg.: The price at which the stock last traded on the previous day was subtracted from it. All Bank and Thrift Indexes are calculated as an average of the top 250 banks in market value and the top 50 thrifts in market value. The Weighted Average Index is a market value weighted index which gives more emphasis to large companies in price; and two volume indicators most shares traded and today's volume as a percentage of average shares traded daily over the past year.

Data sources: SNL SECURITIES, Charlottesville, VA, 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides DNL with the daily prices.

Salomon Report Sees 19% Drop In Core Profits

Continued from page 1

lyto "shed further light on developing trends." They highlighted the following points:

• Net operating income is expected to drop 19.4% in 1990, to $9.6 billion from $11.9 billion in 1989, though reported net income may more than double because of lower loss provisions against developing country debt. Next year, Salomon said, it expects net operating income to recover about to 1989 levels "but with most of the room for adjustment to the downside."

Salomon Brothers' Key Concerns On Banks
1990 versus 1989

- Operating net income declining by 19.4%
- Nonperforming assets increasing by 30.5%
- Net chargoffs rising by 27%
- Growth in earning assets slowing to 6.55% from 8.15%

Revised projections from comparable earnings model for institutions in the Salomon Brothers 30-Bank Index
Source: Salomon Brothers

LDC Nonperformers to Fall

• A $4.3 billion surge in nonperforming assets, to $47.5 billion, despite a $5.5 billion decline in developing country nonperformers. Commercial loan nonperformers may rise by $10 billion, the analysts said. Nonperformers must stabilize in 1991, however, partly because net loan chargeoffs may rise.

• Meanwhile, growth in earning assets may slow dramatically, to 6.5% this year and 4.0% in 1991, compared to an 8.1% increase in 1989, "as a result of both lender caution and a slowing economy," the report said.

1st-Half Predictions Too Rosy

The analysts – Thomas H. Hanley, John D. Leonard, and Diane E. Glossman – said they expectations for bank earnings in the first half of the year had been tempered by credit quality deterioration, particularly in the real estate area, and by slackening loan growth and falling income from fees for corporate restructurings and other leveraged transactions.

The further reduction in expected earnings, they said, "reflects the growing probability of an economic recession."

In addition, they said, third- and fourth-quarter bank results should include "large additional loan-loss provisions" as managements prepare for changes in dividend rules expected to take effect Jan. 1.

MONDAY'S MARKET

Shares of the nation's largest banking company, Citicorp, which briefly topped $20 a week ago, traded Monday afternoon at $18.50, down 37.5 cents on the day.

Meanwhile, Wells Fargo & Co., the highly regarded San Francisco bank, fell 12.5 cents, to $57.375, a 28% decline from just two months ago.

NCNB Corp., based in Charlotte, N.C., was among the relatively few stocks to show signs of strength Monday, rising 75 cents a share, to $34.625. Its cross-town rival, First Union Corp., was also up on the day, by 12.5 cents, to $15.75.

Other banks posted modest gains deemed by analysts to be technical reactions to recent weakness. NBD Bancorp. was up 62.5 cents a share, to $29; and State Street Boston Corp. was up 37.5 cents, to $34.125.

Most money-center bank stocks lost ground. Besides Citicorp, J.P. Morgan & Co. was off 25 cents, to $33.375; Chase Manhattan Corp. was off 25 cents, to $17.75; Bankers Trust New York Corp. was off 25 cents, to $36.625; and Chemical Banking Corp. was off 37.5 cents, to $22.75.

Also falling again Monday were the major California banks. In addition to Wells Fargo, BankAmerica Corp., San Francisco, was off 37.5 cents, to $21.50; Security Pacific Corp., Los Angeles, was off 37.5 cents, to $28; and First Interstate Bancorp., Los Angeles was off 50 cents, to $28.875.

First Interstate said that it was suspending both the discount and optional cash purchase components of its dividend reinvestment program. □

CAPITAL

Atlanta Group Proposing to Start Bank

By FRED VOGELSTEIN

Most say there are too many banks in the country, but in suburban Atlanta some entrepreneurs believe there are not enough and are proposing to raise between $5.25 million and $7.5 million to start their own.

To be called the The Southern Bank, the institution would be based in Douglasville, an upper-middle class community with a population of 15,000. Organizers expect it to open in December or January, although its registration statement has not yet been approved.

The Southern Bank At a Glance

Shares to be issued:	525,000 – 750,000
Price:	$10 a share
Underwriter:	None. Shares to be sold directly by directors and officers. They have agreed to purchase 21.24% of the offering and as much as 100%

Source: Documents filed with the Securities and Exchange Commission

Proposes Shares at $10 Each

The bank's parent, SB Holdings Inc., is proposing to offer the shares at $10 each, according to its Securities and Exchange Commission filing. The 10 organizers plan not to use an underwriter, instead they have agreed as a group to buy 21.24% of the shares and market the remainder themselves. The group has agreed to purchase the entire offering if necessary.

The anticipated consolidation of the largest community bank in the area sparked the move to form the bank, according to Scott Watson, The Southern Bank president and chief executive officer-elect.

He said $5.1 billion Bank-South Corp.'s plans to acquire The Commercial Bank would, if successful, cause an erosion in service that The Southern Bank can exploit.

An Opportunity Seen

Watson has agreed to purchase at least 25,000 shares. But while the proposed BankSouth acquisition was the spark, Watson said that even if the merger does not succeed, a new bank in the area is needed.

He said the current turmoil in the banking industry will actually help the bank grow because "while most banks in the area will be focusing on their problem assets, we'll be focusing on their good customers who they might be neglecting."

Growth in Area

Also, Watson also said that the area is growing.

No current population or deposit growth figures were available. June 1989 figures in the SEC filing show deposits in Douglas County grew $46 million to $417 million, or 12.4%, from June 1988.

Population figures for 1989 show a 44.9% growth rate from 1980, rising from 54,000 to 79,000 people. Per capita income for the area doubled from 1980 to 1989, rising from $21,000 to $42,000.

A Big Challenge

Still, other banking experts say he's got a big challenge ahead of him.

"What the industry has is overcapacity. We don't need any more banks," said George Bicher, senior vice president of the financial institutions group at Kidder Peabody & Co. He said bankers, particularly in Georgia, tell him that there is a "dearth of good lending opportunities even at the small bank level."

The Commercial Bank, with assets of $160 million, has the largest presence in the area.

The Competition

Trust Co. of Georgia, a subsidiary of $31.2 billion SunTrust Banks Inc. has two branches in Douglasville and two others in neighboring towns. There are two other community banks in Douglasville with roughly $30 million in assets each.

Still, Watson, 53, is hardly a rookie to the Atlanta community banking scene. In his 20 years in the area he has run four community banks and overseen their acquisition by and integration with larger competitors.

He was hired in late 1989 to run the institution he hopes his bank will supplant, The Commercial Bank. He resigned when the owners decided to sell to BankSouth but said his experience convinced him that a new bank in the area could be viable.

MARKET MONITOR

Standard Credit Card Trust 1990-7, a unit of Citicorp, said Monday that it issued $1.405 billion of credit card-backed securities backed by Citicorp-provided Visa and MasterCard credit cards.

The issue was in two parts. Series A totaled $1.25 billion with an 8.875% coupon. They were priced at 99.91 to yield 8.911% or 63 basis points over the three-year Treasury note.

Series B totaled $155 million with 9.125% coupon. They were priced at 99.85 to yield 9.182% or 90 basis points over the three-year Treasury note.

Citicorp was lead manager and Merrill Lynch Capital Markets was co-manager for both tranches. Goldman, Sachs & Co. also co-managed Series B. □

The Pullback From Dividend Investment Plans

By KELLEY HOLLAND

When First Interstate Bancorp announced on Monday that it would suspend its discount dividend reinvestment program, it became the latest in a series of banks to show themselves unwilling to endure the shareholder dilution created by such offerings.

With many bank stock prices at new 52-week lows, other banks with no immediate need to raise capital could well consider following suit, some analysts said, especially because arbitragers are putting downward pressure on stocks that use a discount program. Already a number of large banks have suspended down or terminated such programs.

Nevertheless, analysts and bankers alike say discount dividend reinvestment programs are likely to remain in force at a number of banks concerned about the prospect of higher capital requirements and unwilling to publicly issue new equity in today's hostile market.

"This may be an expensive way to raise capital, but I don't think a lot of banks are going to move away from it," said Judah Kraushaar, an analyst at Merrill Lynch Capital Markets.

Long-Established Program

Some institutions have had dividend reinvestment programs for years. They let investors buy shares at a percentage discount – typically around 2.5% to 5% – off market price.

Such discount programs are more effective than market-value reinvestment programs because more investors participate and more equity is issued.

Banks find the programs effective because they make it possible to raise capital without having to overtly tap the capital markets. Instead, banks raise capital in small increments by issuing stock to program participants.

But when stock prices are low, discount dividend reinvestment programs become painfully costly. In recent months, banks have found themselves issuing new shares at sharp discounts to book value, dramatically diluting the holdings of shareholders.

Bait for Arbitragers

Moreover, dividend reinvestment programs are bait for arbitragers. It is easy for arbs to bid down the price of a bank's stock during the pricing period so they can buy at a discount to an artificially low price. Chase Manhat-

Tech Execs Say They Put Banks' Strategic Goals First

By ROBERT M. GARSSON
Third of a Series

Ask bankers to describe the benefits of technology, and they will often say it improves efficiency or reduces operating costs.

Ask bank technology managers the same question, and the answers might surprise. According to an *American Banker* survey, operations managers consider such strategic objectives as service quality, image enhancement, and marketing capabilities to be comparable in importance to hard-dollar payback – or even more important.

Technology Goals

Percentage of technology experts rating each objective as very important or extremely important

Improve customer service	90%
Reduce costs	72%
Improve bank's image	71%
Increase marketing capability	67%
Speed product introductions	61%
Reduce staff	47%

Source: American Banker Technology Survey

Cost Centers

Perhaps because the returns on technology investments are difficult to identify or measure, the vast majority of the 333 banks in the *American Banker* 1990 technology survey regard their operations areas as cost centers that support the various lines of business.

Only about 19% of the banks with more than $250 million in deposits treat any of their back-office functions as profit centers capable of paying their own way with revenues.

Therefore, when banking technologists think about return on investment, they are as likely to think of better service or improved marketing capability as of cost or staff cuts.

The technology survey was conducted in conjunction with Trans Data Corp., the newspaper's research affiliate in Wayne, Pa. A magazine describing the findings has been sent to *American Banker* subscribers.

Service Is Paramount

Staff reduction was deemed the least important of six strategic objectives measured in the

Comptroller, FDIC Lower The Floor for Appraisals

By BILL ATKINSON

WASHINGTON — Two federal bank regulators have agreed on a new standard for real estate appraisals that is at odds with a previously adopted Federal Reserve Board rule vigorously opposed by the appraisal industry.

The Federal Deposit Insurance Corp. published a final rule Monday that would require banks to employ licensed or certified appraisers on all real estate loans of at least $50,000. The Office of the Comptroller of the Currency completed a similar rule Tuesday and will publish it Friday in the Federal Register.

Fed's $100,000 Minimum

Earlier this summer, the Fed set a $100,000 minimum for residential loans requiring a licensed or certified appraiser, although properties involved in smaller loans would still have to be appraised.

While there are other, technical differences between the Fed's approach and that followed by

Show Must Always Go On For Fed Wire

NEW YORK — Just before 5 a.m. on Sunday, Israel Sendrovic was awakened by a phone call at his home in Queens with bad news. A hose feeding a backup generator had cracked at the Federal Reserve Bank of New York's main building in Manhattan.

The Fed executive vice president, who is responsible for computer operations and telecommunications, called New York Fed President E. Gerald Corrigan and rushed into the city.

Move or Stay Put?

The Fed Wire, which is the nation's largest funds transfer system, was scheduled to begin daily operations at 8:30 a.m. And banks across the country rely on Fed Wire to make $1 trillion in daily payments.

The New York Fed had to decide whether to shift operations to a contingency site or attempt to repairs on the

Top Corporate Lender Resigns From Beleaguered Bank of Boston

By JED HORWITZ

T. Lincoln Morrison Jr., the longtime head of commercial lending at Bank of Boston Corp., has resigned unexpectedly.

Mr. Morrison, a 25-year veteran of the bank, said his decision to leave was voluntary.

Some colleagues and analysts speculated that the pressures of overseeing a deteriorating portfolio may have contributed to the decision. At the end of June, 6.7% of the bank's $4.2 billion in loans to finance highly leveraged transactions were not accruing interest.

Bank of Boston's HLT Exposure

	2nd Q	1st Q
Highly leveraged transactions (HLTs)	$4.2 billion	$4.8 billion
Nonperforming HLTs	$281 million	$236 million
HLTs/equity	200%	226.6%

Source: Company Reports, Goldman Sachs & Co.

Troubled Real Estate Book

Just last March, Mr. Morison, 50, assumed oversight of the company's faltering $5.3 billion portfolio of domestic commercial real estate assets. At mid-year, 24% of that portfolio was nonaccruing.

Mr. Morison's resignation comes on the heels of a similar announcement by William Diercks, the chief lending officer of the much smaller Boston-based Neworld Bancorp, who also is leaving at the end of the month.

James Moynihan, an analyst for Advest Group, suggested that senior bankers throughout New England are having difficulty complying with increased regulatory constraints.

"Bankers say that regulators have come down so hard and are demanding so much more documentation than they are used to that their life as a lender is not as much fun as it was even one year ago," he said.

Reached at his office on Tuesday as he "filled wastebaskets with things I should have read over 25 years," Mr. Morison denied that he was pressured to go.

"It's a tremendously challenging time for banking in general, but I have the energy and the desire and capacity to look and think about some other things,"

See MORISON page 30

GRAPEVINE / By Jed Horowitz

Recycling the Lenders

As if anyone needed proof that commercial real estate lending has nearly ground to a halt in most markets, former lenders are now becoming workout specialists.

Out of about 500 people who once worked in Chase Manhattan Bank's real estate department, about 80 are now toiling at workouts, said an analyst who recently studied the group.

At the end of the second quarter, Chase had $1.3 billion of nonaccrual domestic real estate loans on its books, up from $884 million at the end of the first quarter. The total represents more than 13% of Chase's domestic real estate portfolio.

A Chase spokesman would not confirm how many people are devoted to workouts, but he conceded that "many of our professionals" are working on problem assets.

"There is a paucity of origination opportunities in the real estate business," he said with self-acknowledged understatement.

* * *

Congealing the Junk

Citibank has reunited its sales teams in unrated loans and unrated securities into one unit, in a consolidation that is part of Michael Callen's effort to streamline businesses in his investment and commercial banking sector for customers in Japan, Europe, and North America.

The combined distribution unit is being headed by Nancy Teachout, who most recently headed the Citicorp subsidiary's "institutional recovery management group," more commonly known as the workout unit.

Citibank officials did not return calls to explain the change, but some insiders said it is meant to eliminate administrative jobs. "They're tweaking here and fine-tuning there," one source said.

Reporting to Ms. Teachout is Robert Lawrence, head of the noninvestment securities distribution unit, which includes the bank's fledgling efforts to underwrite junk bonds.

Ms. Teachout will run the unrated loan distribution area directly.

Robert Woods, a 20-year veteran who had headed the syndication and distribution unit for about five years, will be reassigned, sources said. He was on vacation, and could not be reached for comment.

Iraq Means Swaps

The Middle East crisis and its inflationary consequences are bad news for most banks. But at a few banks, the relatively new area of commodity swaps – in which banks or Wall Street firms arrange deals allowing producers and users of oil and other commodities to lock in prices – is thriving, said a lender at First Chicago Corp. and spokesmen at Bankers Trust New York Corp. and J.P. Morgan & Co.

Other bank companies active in arranging such swaps in the past two years include Chase Manhattan Corp., which helped pioneer the commodity swap concept, and Chemical Banking Corp. Citicorp has arranged swaps for precious metals but not for oil.

* * *

Private Business

Though the new Securities and Exchange Commission rule that permit secondary market trading of private placements has not led to a flood of deals, J.P. Morgan & Co. has set up a special unit devoted to drumming up the quasi-public transactions.

Two members of the private placement desk at J.P. Morgan Securities shifted to the unit's capital markets and syndication desk about three months ago to form a so-called 144-A unit and solicit business from well-known companies, sources confirmed.

The two have not yet landed a deal but are believed to be negotiating for an asset-backed receivables deal.

They are working closely with Morgan's new corporate bond desk, which scored a coup last week by winning one of three underwriting slots for Banc One Corp.'s $200 million debt issue.

* * *

The Cost of Service

Wells Fargo & Co. scored consumer banking bragging points when it beat out Security Pacific Corp. this year with extended branch hours on Saturday. But Wells Fargo revealed in its latest 10-Q filing that cost was high.

Salary expenses grew 9%, to $329.6 million, in the first half of the year, in part because Wells hired about 500 people for the extra hours, the document said.

Strife at BT?

What was behind the walkout by about 25 employees in Bankers Trust Co.'s leveraged leasing and equity investment groups two weeks ago?

Former employees say the group that left – led by Charles Hill, the veteran boss of leasing – was particularly frustrated with Bankers Trust's continuing bonus-rewarded push for highly leveraged debts and big-money transactions over more annuity-like middle-market bank deals.

However, some sources say the group was losing power because revenues were down due to business conditions and Bankers Trust's inability to use tax shelters associated with leasing.

Nevertheless, the departures left a bitter taste for Bankers Trust chairman Charles Sanford. Recalling the departure earlier this year of the bank's respected head of European corporate finance, Mr. Sanford said in an internal memo to senior executives:

"We proved in the somewhat similar situation involving Alan Wheat that our franchise is more than strong enough to withstand an occasional defection of individuals or groups who cannot adjust to our chosen style of partnership." □

Western Banks Review Ties To Persian Gulf Institutions

Most Still Keep Credit Lines Open

By PIERRE THAN
Reuters

LONDON — Western banks are reviewing their relationship with Arab banks in the Gulf in the light of the Kuwaiti crisis, with most keeping credit lines to Gulf institutions open, bankers said in London.

"Not many [Western banks] will have rescinded their lines. . . . Once that happens, it gets around," said one Gulf banker who declined to be identified.

However, Japanese banks, normally big borrowers of dollars from Arab houses, have virtually disappeared from the Middle East scene, said Gulf bankers.

A Dependence on Foreign Banks

Some Gulf banks, notably the offshore banking units in Bahrain, have few retail customers for raising funds and rely on the interbank market.

They are heavily dependent on foreign banks' willingness to act as counterparties in trading instruments such as forward rate agreements (FRAs), currency and interest rate swaps, and foreign exchange deals.

"The stock answer by most banks is that we are continuing to trade normally within our limits, but not outside," one Gulf banker said.

However, some Western banks are already reducing their lines to Gulf institutions or asking a premium.

Smaller Banks Most Affected

The biggest banks, such as National Commercial and Riyad Bank, are probably raising funds without difficulty as they are backed by the Saudi Arabian Monetary Agency (SAMA). But smaller Gulf houses are likely to be using established banking links to do business, he added.

Another Gulf banker said Western banks are testing the defenses of Arab houses to evaluate their ability to trade.

Some Western banks are contacting dealing rooms of Arab institutions, known to be safely conservative, asking for forward positions and prices of various instruments to test their liquidity before committing themselves, the banker said.

Western Banks Face Stalemate

In the absence of decisive news from the Gulf, Western banks face a stalemate and are forced to wait and watch before deciding where their long term interests lie.

Some Gulf banks have few retail customers for raising funds and rely on the interbank market.

"We have been pleasantly surprised by the attitude of some [Western] banks who say they are keen to maintain their long-term relationship," a senior Gulf banker said.

Other banks say they will do the minimum but warn not to expect favors. However, some Japanese banks have largely closed their lines and no longer borrow funds from the region.

"It's amazing the speed with which they disappeared," the banker added.

Japanese Split on Approach

Toru Ishihara, joint general manager at Fuji Bank Ltd, said there have been rumours some

Gulf Turmoil Threatens Sale Of Junk Bonds

Reuters

LOS ANGELES — Columbia Savings and Loan Association's planned sale of its $2.7 billion in junk bonds to a unit of Toronto-based Gordon-Investments Corp. could hinge on developments in the Middle East related to Iraq's Aug. 2 takeover of Kuwait.

In its most recent 10-Q filing with the Office of Thrift Supervision, Columbia noted, among other things, that "Gordon's option to withdraw from the transaction is triggered by . . . the commencement of hostilities involving the U.S. or Canada."

Officials at Columbia and Gordon were not available to comment.

Plans Could Be Jeopardized

Any problem in completing the sale could jeopardize efforts by Edward Harshfield, the thrift's chief executive officer, to keep Columbia from being seized by federal regulators. Mr. Harshfield's strategic plan calls for a renewed commitment to traditional consumer banking and mortgage lending.

A sharp fall in the junk bond market late last year and early this year contributed to Columbia's problems; because the thrift had built up that portfolio as it turned away from the traditional business of a savings and loan.

The market has stabilized in recent months, but investors are now more prone to sell issues they believe are particularly vulnerable to an economic downturn.

Economists have noted that the U.S. economy was beginning to slow even before Iraq moved into Kuwait. But that action, and the growing hostilities in the area, sent oil prices soaring, fanning talk of higher inflation and

TECHNOLOGY/OPERATIONS NEWS

Technologists Have Strategic Goals In Mind When Planning Outlays

Continued from page 1

survey. The most important was quality of customer service, which was rated very important or extremely important by 90% of the technology managers polled.

Three other strategic objectives of technology were on a par, falling within the survey's five-point scale's margin of error. Cost reduction was cited by 72%, improving the bank's image by 71%, and increasing marketing capabilities by 67%.

Those objectives were followed by the ability to introduce new products quickly, at 61%, and staff reduction, at 47%.

The question was then posed a little differently. Technologists were asked to rate the objectives on a scale of 1 to 5, with 5 signifying the most importance and 1 the least. On that scale, quality of customer service rated a 4.48, improving image 4.03, cost reduction 3.95, increasing marketing capabilities 3.87, quick product introductions 3.77, and staff reduction 3.35.

"If you had to do a forced ranking, it would be the same at each bank. They would all rank high," said Michael Simmons, executive vice president and chief technology officer at Bank of Boston Corp.

Pressed for his own criteria, he said service quality would be No. 1 and cost reduction No. 2, with the rest following closely behind. That puts Bank of Boston in the mainstream.

"Justification for technology improvements is more rigorously managed than it used to be, and service quality is clearly No. 1," said Robert Dressel, executive vice president at United Banks of Colorado, Denver. "The ability to add products, features, and quality to our delivery system is of paramount importance from senior management on down."

"Bankers are always willing to invest where they can improve the quality of customer service," said John Shain, president of Littlewood, Shain & Co., Exton, Pa.

The survey showed some differences in how institutions of different sizes view technology investments.

The differences were most dramatic on the question of cost-justification capability. Among banks with more than $2 billion in deposits, 79% said that objective was an important reason for investing in technology. But among the smallest institutions, those with $75 million to $100 million in deposits, only 51% said that objective was an important.

Somewhat less dramatically, larger institutions – those with more than $750 million in deposits – were more likely to cite cost reduction than any other group. Among institutions in the $2 billion-and-up category, 76% said cost reduction was extremely or very important. That was the response from 80% of companies in the $750 million to $2 billion range and 68% of those between $250 million and $750 million.

Among institutions with less than $250 million in deposits, just 60% said cost reduction was extremely important by 70% of the respondents.

Staff Reduction

Similarly, larger banks were more likely to cite staff reduction as a reason for investment. Among institutions with more than $2 billion in deposits, 62% said staff reduction was extremely or very important. Only 34% of those with $100 million to $250 million said staff reduction is an objective, as did 42% of those with $75 million to $100 million.

But when asked about improvements in customer service, banks of each size were within a few percentage points of each other. □

Advanced Systems Bring In Fees

Northern Enhances Corporate Investment Service

By JEANNE IIDA

NEW YORK Northern Trust Co. is bringing together several advanced technologies and balance a corporate investment service that generates low-risk fee income for the Chicago bank.

Under the service, a corporation provides employees and retirees with high-interest accounts while the company gains access to inexpensive short-term funds. Account holders have minimum balance requirements and check amounts, and they use the accounts to make big-ticket payments such as mortgages.

Northern Trust manages the accounts, which are deemed low risk because the funds are not guaranteed by the bank. Only a handful of institutions, including State Street Bank and Trust Co., Boston, offer a similar service.

Two Big Companies Signed Up

Northern Trust has two large corporations, totaling some 187,000 accounts, using the service, which was introduced a year and a half ago. One of those companies was added in January, after the bank beefed up its customer service through advanced technologies.

The bank is now evaluating bids from two vendors on a project to link incoming telephone calls with a computer data base, so that a profile of the customer will be automatically generated by a call. Few companies now have this advanced capability, called integrated services digital network, or ISDN. Northern Trust aims to have the ability by yearend.

Customer assistance is a large component of the corporate service. Northern Trust said it receives about 50,000 inquiries each month on the accounts. Because of improvements it has made in tracking and service, more customers reach representatives and their questions are answered more quickly, the bank said.

Strategic Importance

More than $500,000 has been invested in technologies for the service.

"We view it strategically as an important piece of business that brings in a lot of revenue for us," said Anna Quinlan, vice president of demand account services at Northern Trust.

Northern Trust has signed up two large corporations, totaling some 187,000 accounts.

"We've married the telephonic technology and the image technology to service our customers," she added. "That's the only way you can survive in this business."

Automatic Transfers

The bank automatically distributes calls to the next available operator, compiles detailed reports of how long it takes a representative to answer a call, and tracks peak calling times.

More than 50% of customer calls are now answered within 10 seconds. "We couldn't measure how long it took to answer customers before," said Juan Sistachs, vice president of cash management at Northern.

With the service improvements, the portion of customers who hang up the telephone before reaching a representative has declined to 1% from almost 4%, the bank said.

In the system, a customer calls an 800 number and is given the choice of speaking to a human or computerized operator. If using a touch-tone phone, the customer can key in account and social security numbers and get a series of options.

If the customer chooses to talk with a human operator, the representative then calls up a profile of the customer on his computer screen. If the question involves further research, the representative can look at the original application for the account and any supporting documents that are stored on the document image processing system.

ISDN capabilities would further reduce the time taken to answer calls. With the addition, the customer profile would pop up on the customer representative's screen as soon as the caller keys in the account number.

Privacy Is a Concern

Although the bank plans to install ISDN technology, it expects to move cautiously because of privacy concerns. Several states have ruled that recipients of telephone calls do not have the right to know who is calling them and that such knowledge is an invasion of privacy.

Northern Trust says it is treading carefully in this territory. When customers called from their home telephones, the bank's computers could identify them by the phone number, using ISDN.

But Northern Trust is wary of using that capability – at least for now. Instead, it will have customers continue to key in their account numbers.

"We're not pursuing that because of questions about privacy," Ms. Quinlan said about the caller identification capability. □

U.S. Acts to Tighten Credit In the Face of a Recession

The government may regret the credit contraction, but it is also helping it along. Under the press of deficits, it is scaling back on guarantees, demanding more real capital from its citizen borrowers, and generally doing the opposite of what Lord Keynes would have it do in a recession.

Alan Greenspan is talking about a higher capital standard for banks, and the Treasury Department is proposing a higher capital standard for the Federal National Mortgage Association, better known as Fannie Mae.

L. William Seidman is asking for higher deposit insurance premiums for banks, and the Senate has voted to raise up-front premiums on loans provided by the Federal Housing Administration.

A million miles from here, Japanese bankers are expressing anxiety about the capital standards laid down by the Bank for International Settlements for implementation in 1992. In view of the local bear markets in stocks and bonds, they wonder if they will be able to meet the letter of the law. (The minimum ratio of capital to assets will be 8%.)

Distant as Japan may be in terms of space, it is around the corner in terms of money. It is, in fact, the pivotal provider of bank credit to the world, so the capitalization of its banks is of immediate and urgent concern to the rest of us.

Stock Issues Curtailed

Thus, the latest from the Home Islands – that the Ministry of Finance is refusing to let the banks issue new stock in the vast quantities required – is news in every hemisphere.

From the Aug. 11 *Japan Economic Journal*:

"While corporations generally raise funds in lots of $200 mil-

Mr. Grant is editor of *Grant's Interest Rate Observer*, a biweekly newsletter. This article appeared in the Aug. 17 issue.

lion to $300 million, it is expected that various banks would attempt to market issues in the range of $1 billion to $2 billion each to achieve the capital adequacy standards being imposed by the BIS.

"They [banks] will have to wait for the traffic jam to be eased," the Ministry of Finance official said.

"The bankers are citing an immediate need to raise their capital adequacy ratio, saying those ratios have fallen significantly recently due to decreasing latent profits resulting from the stock market plunge earlier this year and sharply increased overseas assets."

"Opinion aside, the tide of credit is turning in this country and Japan, and the weight of public policy is on the side of contraction."

"Latent assets" is another name for "hidden reserves." They are unrealized stock market gains, and the Japanese banks may count 45% of them toward capital. Thus, in Japan, a rising market is extra-bullish. Banks, taking a fraction of their paper gains into capital, may step up their lending, thereby exaggerating the rise.

By the same token, a decline is extra-bearish. Banks, feeling the loss of capital, must raise new equity or shed existing assets at the very worst time.

"Some observers," the *Japan Economic Journal* also reported, "have expressed concern that bankers will resort to selling bonds from their portfolios to meet the BIS standards, which will only compound current fears on the Tokyo financial markets."

Not to mention the New York markets. Moody's last week downgraded a pair of heretofore triple-A-rated Japanese banks, Fuji Bank and the mighty Daiichi Kangyo Bank, each to Aa1. The agency cited the slump in real estate, the rise in funding costs, and the reduced prospects for so-called core earnings.

After the latest action, we called Moody's to ask if a fundamental review might (at long last) be under way. "In light of the changing environment," the man at the other end of the phone replied, "we are looking at the ratings carefully."

Promises, Promises

The same tendencies are visible at home, but different causes produce them. If the federal government's credit were even under the cachet that it was passed. What made the 1980s unforgettable was the substitution of promises to pay money (frequently by the government) for money itself.

There was a boom in chits: standby letters of credit and payment-in-kind securities in the private sector, deposit insurance and loan guarantees in the public sector.

When the outstanding promised deal dead end, but the government's income-statement is not the main issue.

At the heart of the matter are the footnotes attached to the balance sheet that detail the government's contingent liabilities. These, especially deposit insurance, have fallen due in a clump. Granted, the government can raise taxes, but it may not want to. It may want to issue three-year notes, not 30-year bonds instead.

And it may wish to foreclose the possibility of another serious call on its outstanding promises. Thus, the Treasury has proposed that the so-called government-sponsored enterprises (GSEs) be made to pass muster with Moody's, Standard & Poor's, or Fitch as triple-A credits.

Bills in the Senate and House would require that homebuyers using the Federal Housing Administration put down more money at closing. Both proposals (FHA and Fannie Mae) are riding the political conveyor belt, and each has attracted fierce opposition from the housing lobby.

"If Fannie Mae were held to a triple-A rating, there would be no way to raise money except to slow or stop business and sell assets," said David R. Jeffers, vice president for corporate relations at the mortgage agency.

Mr. Jeffers condemned the atmosphere of budgetary crisis in which the AAA mandate is being discussed: "It's bribery," he said of having his employer's fate being decided at the budget summit rather than through congressional debate. "It's outrageous; it borders on being irresponsible." Checking around, we listened to similar condemnations of the Senate proposal to boost the amount of cash required to obtain an FHA loan.

Opinion aside, the tide of credit is turning in this country and Japan, and the weight of public policy is on the side of contraction. We happen to be fatalistic on the processes now under way. For whatever reason or reasons, the marginal debtor will find it more and more difficult to find accommodation. (On the simple fact, we think, financial events will increasingly turn.) □

COMMENT/ *By Roger Powell*

Crunch or Pinch? Whatever, Jawboning Played a Role

"Jawboning," known in economics as moral suasion, has never been held in high regard as a method of influencing the economy. However, the jawbone is now being used in a fashion that hasn't been seen since Samson slew Philistines with the jawbone of an ass. The difference is the source and method of this episode.

The source is not distant from the banker. It is as close as an examiner of the Office of the Comptroller of the Currency – the national bank regulator. Its suggestions, unlike those of the Congress or the Administration or even the Federal Reserve Board of Governors, are translated directly into loan loss reserves and increased underwriting discipline.

The example made by New England bank examinations was not lost on bankers in other areas of the country. And so it is that "jawboning" comes into its own.

Is this episode a credit crunch? Does effective jawboning, persuading bankers to more conservatively reflect risk on their balance sheets and extend less credit, constitute a credit crunch? The answer depends on which definition of credit crunch you care to use.

If credit crunch is the lack of available credit at a reasonable price, for reasonable business purposes, then it appears that technically there is no credit crunch.

However, if one defines a credit crunch as a reduction in the total available credit from the banking system to the economy, then the case may be made that we are entering such a period.

Few would argue that bankers have renewed underwriting discipline; fewer still would say that real estate credit was not likely to contract. The expected impact on the economy is much the same, although we may not have a technical credit crunch.

What is the expected economic impact? We presume that bank credit is still the most widely used lubricant of our economic machine.

So reduced bank credit implies a stickier economic machine, all other things equal. We also presume that appreciation in real estate prices was fueled by increased liquidity as transactions accelerated with favorable financing terms. Loss of bank credit implies reduced prices as fewer bidders are available for each property.

This reduced liquidity premium in real estate combines with other, more fundamental, factors slowing the sector and economy and acting on real estate.

These factors include prices, demographics, reduced inflation expectations, and changes in the tax law. Last-minute inventory methods, which reduce stocks required at intermediate levels in the production process, is another factor. Finally, there has been a slowdown in construction expenditures caused by the lack of demand, indeed, an oversupply, for improved real estate in many markets.

A credit crunch? Perhaps not, but it's not clear that it matters whether or not a technical crunch exists. The positive impact of an expanding loan portfolio in the banking system on transaction volumes and asset prices is being taken away from the domestic economy. Watch out for the credit crunch that isn't here. □

COMMENT/ *By Irvine Sprague*

Finger-Pointers Rewriting History of the S&L Crisis

WASHINGTON — Beware. Revisionists are on the loose, attempting to rewrite the history of the savings and loan scandals in order to pin their tale on the elephant or the donkey.

Already I have had requests for background information from the staffs of both Democratic and Republican senators and congressmen. And from my service in the White House, I am certain that President Bush has a group working on a revised record to prove that he never once moved his lips during the entire debacle.

Tracing Slide to Disaster

The challenge is daunting for those who try to remove themselves from the record. Although written documentation is sparse, it is possible to spell out the history of the slow but steadyslide into disaster for taxpayers and to show who was involved. Understandably, memories differ 10 years after the fact.

The stakes are high for the politicians. The public has not yet really awakened. Yes, there have been many stories about the enormous cost of the savings

"Joe Public has not yet been personally hit. Watch out for the eruption when this happens."

and loan bailouts; the press has become increasingly wavolved with reports about the questionable deals to sell bankrupt institutions in the 1980s. The accounts of the looting that was widespread have made people mad.

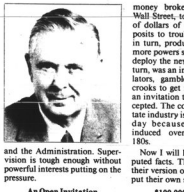
But Joe Public has not yet been personally hit. Watch out for the eruption when this happens.

Hasn't Hit Home Yet

Mention $300 billion and you get a big yawn. Talk about $100 and the ears prick up. Multiply this a few times and you really get attention. I say he, the average American, has not yet been hit, but he will be, for sure, when the budget deliberations are over and we have a combination of income tax increases, taxes on Middle America necessities like gasoline and beer, and sweeping cuts in vital services we all have been taking for granted. In the alternative we will get the devastation of Gramm-Rudman cuts, which would be worse.

To write or rewrite the history an author must address four key elements: deposit insurance was upped to $100,000, a figure at which interest rates were not controlled; the Federal government and the states joined in a frenzy of deregulation; supervision was cut back by an administration committed to "keeping the government off our backs"; and the cost was escalated by the Reagan-Bush policy of delaying addressing the problem until after the 1988 election returns were in.

Once the process was under way, it was interfered with by the Keating Five, Speaker Wright, lobbyists and no doubt many others from the Congress and the Administration. Supervision is tough enough without powerful interests putting on the pressure.



An Open Invitation

Let's take the elements in order, the insurance first because this was the catalyst that made it all happen. The $100,000 federal insurance opened the door for money brokers, mainly from Wall Street, to bring in billions of dollars of above-market deposits to troubled thrifts. This, in turn, produced pressures for more powers so the thrifts could deploy the new money. This, in turn, was an invitation to speculators, gamblers and outright crooks to get into the business, an invitation that was gladly accepted. The commercial real estate industry is in a depression today because of the thrift-induced overbuilding in the 1980s.

Now I will lay out the undisputed facts. Then those writing their version of history can each put their own spin on the story.

$100,000 Insurance

The banking bill of 1980 (PL 96-221) signed into law by President Carter on March 31, had a long, tortuous history. The House originally passed legislation in September 19 to allow banks to offer interest-bearing checking accounts. There was no mention of deposit insurance or deregulation.

In November 1979 the Senate amended the House measure, adding provisions to phase out interest rate limits on deposits and to begin deregulation by permitting limited lending powers to savings institutions. Deposit insurance was addressed for the first time when the Senate by voice vote upped the insurance from $40,000 to $50,000 on a motion by Senator Cranston of California.

During the Floor debate Senator Proxmire mentioned the $100,000 figure as being discussed as early as 1979. Senator Garn said he agreed with the Senator from Wisconsin that "we now need to move to make

OUTSOURCING.

Takes the data processing burden off your back.

Increased regulation and the necessity for reduced costs are causing bankers to look at their most significant non-income producing asset — their large data center operations.

Operating a major data center is a business in itself — distinct from banking. It adds to overhead costs, requires skilled personnel and takes management time.

The bottom line is that, for many banks, operating a data center detracts from bank management time and from profits.

That's why, since 1979, banks have been coming to Citicorp Information Resources for outsourcing solutions. An industry leader and a data processing method that is most advantageous to its own situation from Citicorp's menu of outsourcing options:

- ***Resource Manager™*** *— your proprietary software is operated on a dedicated virtual computer at a Citicorp data processing center. You customize the service arrangement to your needs.*
- ***Facilities Management™*** *— assumes operation of your own software and data center, furnishing management, operations personnel and enhanced operational techniques at a fixed, pre-determined cost.*
- ***National Service Product™*** *— an on-line service bureau with distributed data processing capabilities for your branch offices.*

No matter which Citicorp Information Resources service you choose, you design the solution that best fits your needs, and you benefit from the economies of scale achieved by a company that services more than 700 financial institutions.

To learn more, contact Joan Skimmons, Citicorp Information Resources, Twelfth Floor, Four Stamford Forum, Stamford, Connecticut 06901, telephone 800-243-4222 or 203-351-4900.

We make outsourcing a viable solution.™

PRIVATE BANKING

Morgan Follows the Money To Ever-Popular California

By MAUREEN NEVIN DUFFY
Special to the American Banker

J.P. Morgan & Co. has established a California trust company, enabling it to aggressively mine the fertile vein of affluent clients in the state.

As a New York trust company, Morgan previously could not act as a California fiduciary. The new unit, J.P. Morgan California, "shows our commitment to the market," said George W. Rowe, managing director of Morgan's California private banking group.

Morgan aims to devise specific products in investment management, trust, and lending for the California client. "We already do some entertainment industry financing," said Mr. Rowe. "The purpose of our being on the ground out there is to design products to fit that market."

Morgan also has hired another managing director to the California private banking group. Owen H. Harper, 52, assumes responsibility for developing client relationships in Los Angeles and San Francisco and will divide his time between those cities.

A Former Consultant with Banking Experience

Mr. Harper, formerly a consultant, is the fifth appointment this year to the California private banking group and the first from outside the banking company.

Before becoming a consultant, Mr. Harper was an executive vice president with Crocker National Bank. At Morgan he reports to Mr. Rowe.

> **"We wanted to increase our presence in California."**
>
> **George W. Rowe**
> *J.P. Morgan California*

Industry observers say the attention being paid to California is part of a logical progression, with bankers following the aging baby boomers to major population centers; such as New York, Florida, and California.

"We're seeing this across the board. I think they all went to the same seminar about two years ago," said John Laurino, managing director of Westport Consulting Group Inc., Westport, Conn., which performs product and development work for the financial services industry.

California is home to "an incredibly affluent group," Mr. Laurino said. "Couple that with the shrinking margins in other banking areas over the last 10 years and you have the increased interest in extending private bank services beyond home-based markets. They're going where the wealth is still being created. The California-based private banks are doing the same in New York."

Mining the Coasts for Business

San Francisco-based Bank of America has private bank offices in New York. Conversely, Citibank has offices in San Francisco and Los Angeles exclusively for private bank operations.

"We wanted to increase our presence in California, and we needed a business on which to base that presence – and that was private banking," said Mr. Rowe, who transferred to San Francisco in January from Morgan's corporate finance operations in London. Mr. Rowe, who ran Morgan's private bank operation at Fifth Avenue and 44th Street in New York City during the 1970s, reports to David Hopkins, head of private banking for Morgan.

Mr. Rowe cited the wine, entertainment, biotechnology, and high-tech industries as well as the agricultural and real estate wealth as attractions of the California market. The operation also will serve international private bank clients from the Orient, Europe, and Latin America, he said.

Ads Merge Concepts of Global and Local

Morgan is using the advertising agency of Backer Spielvogel Bates to introduce itself to the California market. Ads using the slogan "Global bank with the local touch" will appear in the local press, the western addition of *The Wall Street Journal*, the *Los Angeles Times*, and the *San Francisco Chronicle*. Morgan also plans to support certain charitable events on the West Coast as part of its promotional efforts.

Another recent appointment in the California unit is Richard Jones, vice president, who will direct private banking services for Southern California out of the Los Angeles office. Mr. Jones joined the bank in 1983 and previously worked with Morgan Guaranty private bank clients in New York.

Deirdre Atkin assumed responsibility in July for the private bank operations in San Francisco. Previously, she worked in the corporate finance operations of J.P. Morgan in Florida and Georgia. Nancy London, who formerly worked in the Tokyo branch of Morgan Guaranty, took over the West Coast real estate advisory business for the private banking group in July.

Ms. Duffy is a freelance banking reporter based in New York.

Fleet Launches ATM Promotion

$100,000 Is Grand Prize in Scratch-Off Card Game

By TOM LEANDER

Taking a cue from major automated teller machine networks, Fleet/Norstar Financial Group Inc. is rolling out a splashy promotional campaign to promote its own machines.

The Providence, R.I., banking company is distributing a scratch-off game card to anyone who signs up for a new ATM card and to current cardholders who present a transaction receipt from any of the company's 315 ATMs.

Three Matches Win

Using a thumbnail or a penny, a player uncovers the six boxes, which contain dollar amounts ranging from $1 to $1,000. If three of the dollar amounts match, the customer wins.

Fleet also will hold a $100,000 grand prize drawing for ATM customers in early October. Customers automatically qualify when they use a Fleet ATM for a deposit, payment, or cash withdrawal. They also can enter by filling out the back of the game cards and dropping them off at boxes in bank branches.

Separately, the bank is distributing game cards to employees, but employees are not eligible for the grand prize.

"We have two reasons for launching the sweepstakes – to expand our ATM customer base and whip up awareness about electronic banking among our own employees," said Geoffrey Walters, vice president and product manager of electronic banking at Fleet/Norstar.

The ATM promotion, which began Monday and ends Oct. 5, targets cash-hungry customers during the summer vacation season, a time of high ATM use.

Timely Move

Analysts said the move was timely, given the economic downturn in the New England region, where Fleet ranks No. 2 overall.

"I was surprised that Fleet was doing this, but it makes sense," said Catherine Bond, a specialist in ATM marketing at C. Bond & Co. in Hartford.

"During a downturn, bank advertising is usually the first thing to go. Fleet could gain tremendous value from boosting its retail banking image now."

Using ATM sweepstakes is a relatively common marketing technique among large ATM networks. But the Cirrus national network recently chucked the idea of a sweepstakes, which it had used in previous years, in favor of a less expensive direct marketing campaign.

Only a handful of major banks have launched independent sweepstakes for their ATM networks, said Cindy Wilson, a spokeswoman for the Bank Marketing Association, Chicago. They include Seattle-First National Bank, National Bank of Detroit, and First American Bank in Washington.

Using game cards to attract business is also not unknown. Several supermarket networks have used the technique. And NCNB Corp., Charlotte, N.C., has used scratch-off game cards in the Southeast, offering loan customers lower interest rates as a prize. But Fleet is believed to be the first major bank holding company to use scratch-off cards for an ATM promotion.

"They're the lottery tickets," Mr. Walters said of Fleet's instant game cards. The odds of winning an instant prize are 1 in 100. The odds are skewed differently for employee cards, but the company declined to provide details.

Customers may collect prizes up to $20 immediately at the branch. To collect larger sums, they must mail wining cards to Fleet.

Ads supporting the campaign appear in several Rhode Island daily newspapers. Fleet is also using statement stuffers and posters in branches to alert customers to the sweepstakes. Fleet developed the campaign with the help of Promotional Marketing Corp., a consulting company in Westport, Conn. □

Visa Will Offer Travel Discounts

NEW YORK — Visa U.S.A. will offer savings on hotel stays, airline tickets, and car rentals to holders of its gold and business cards as part of a continuing effort to boost its presence in the travel and entertainment market.

The San Mateo, Calif.-based card association will begin distributing savings certificates next month. The certificates can be redeemed for discounts on Carnival Cruises, TWA and United Airlines, Avis and Hertz rental cars, and Marriott and Radisson hotels.

Visa will include the coupons in cardholder inserts each quarter. The program, called Exclusive Escapes, is scheduled to run until September 1992.

Next month all gold and business cardholders will receive certificates for Radisson Hotels. The hotel chain will provide consumers with a free Friday night stay when they present a Visa gold or business card along with Exclusive Escapes coupons upon check-in.

The promotion marks the fourth travel and entertainment program by Visa in the past nine months. In July, the association kicked off a sweepstakes aimed at getting more travel agents to guarantee hotel reservations with Visa cards.

Earlier this year, Visa announced a promotion that awards cardholders with a free gift whenever they use their cards to check in at more than 550 hotels nationwide. That promotion, called With Our Compliments, is set to run through summer. The association said the gift program has sparked a 25% increase in Visa hotel transactions.

Visa's first travel and entertainment incentive program was launched last December in conjunction with the Las Vegas Hilton. Through it, guests that paid with Visa received a special rate. □

Auto loan rates and fees

Here are the auto loan rates and fees being charged by selected large banks and thrifts nationwide on August 21. The rates are for a fixed-rate $9,000, new-car loan, with a 20% down payment and a 48-month term. The 8-week trend is based on the rates charged by the 10 largest banks and thrifts in each of the nation's 10 largest markets on the dates shown.

Regulators at Odds on Rules for Real-Estate Appraisals

Continued from *page 1*

the Comptroller and FDIC, the key point of contention is the dollar amount. The Fed is now expected to change, perhaps to the lower level set by the two other regulators.

"We definitely are considering reducing the *de minimis* level from the current $100,000," said Roger Cole, assistant director of the Fed's division of banking supervision and regulation.

The appraisal rules were mandated by the 1989 thrift-bailout legislation to guard against overvaluations.

Appraisers Oppose Fed

The $100,000 rule issued by the Fed in June was hotly contested by appraisers' associations, which feared much of their business would evaporate if less expensive properties did not require certified appraisals.

Bankers generally agreed with the Fed's reasoning that appraisal abuses, particularly inflated assessments of property values, were most likely to occur in the higher price ranges. Bankers also said less regulation of appraisals would lessen the cost of closing loans.

> **"The regulatory agencies caved in to the lobbying of the appraisers that was led by [Georgia Democratic Rep.] Doug Barnard."**
>
> **Kenneth A. Guenther**
> *Independent Bankers Association*

The Fed's rule stated that no residential transaction for less than $100,000 required an appraisal by a licensed or certified appraiser. The rule still required an appraisal.

FDIC, Comptroller Rules

Both the FDIC and Comptroller are requiring banks to either a licensed or a certified appraiser for any noncomplex, or nonresidential transaction valued at $50,000 to $250,000 and any noncomplex residential transaction worth $250,000 to $1 million.

Complex residential and nonresidential transactions from $250,000 to $1 million would require a certified appraiser, and any type of transaction of $1 million or more would require a certified appraiser, the two agencies' rules state.

Opponents Not Overjoyed

Banking and appraisal trade groups, which fought one another over the size of real estate loans that would require certified appraisals, expect the Fed to move in line with the other agencies. But neither side is overjoyed.

Bankers wanted to stick with the $100,000 as advocated by the Fed. By contrast, appraisers' representatives had argued for $15,000, as had been proposed by some regulators until the Fed raised the ante.

Mr. Cole of the Fed said he did not know when the central bank would reconsider the rule, and he was uncertain that it would adopt the $50,000 standard.

"We wanted consensus among the agencies," according to an FDIC staffer who requested anonymity. "We felt $50,000 is as good an amount as we can come up with.. We feel [the $50,000 level] meets safety and soundness standards."

> **"We wanted consensus among the agencies. We felt $50,000 is as good an amount as we can come up with," an FDIC staffer said. "We feel [the $50,000 level] meets safety and soundness standards."**

Trade Groups React

"The regulatory agencies caved in to the lobbying of the appraisers that was led by [Georgia Democratic congressman] Doug Barnard," said Kenneth A. Guenther, executive vice president of the Independent Bankers Association of America. "It is just another unnecessary regulation on banks. It is a slap in the face to every loan officer."

The American Bankers Association was just as vociferous, warning that the rule would mean extra costs for banks. "They are going to incur costs which are going to be passed on to the consumer," said James D. McLaughlin, ABA director of agency relations.

Donald E. Kelly, vice president and director of Washington operations of the Society of Real Estate Appraisers, took some consolation from the $50,000 figure. "Certainly, the [$50,000] is much better than the [$100,000]. One hundred would cut out more than half of the residential properties in the country needing appraisals." □

Show Must Always Go On

Continued from page 1

backup generator. The generator had been running virtually nonstop for two days as the Fed worked overtime to accommodate payments from other banks experiencing operations problems.

It would eventually decide to move to an alternate site for the first time.

The crisis at the Fed was precipitated by a fire the previous Monday at a substation owned by Consolidated Edison Co. of New York, which left much of the financial district in the dark. Power was restored the same day at many buildings, but the Fed and several other institutions had to resort to backup power for the rest of the week.

During the crisis, some Fed employees worked by flashlight in 12-hour shifts and others traveled by bus to its backup site.

Managers Get Chocolate

"There was a tremendous amount of camaraderie and spirit," said Mr. Sendrovic, recalling that his staff members bought Godiva chocolates for business managers who kept some systems running on personal computers at another Fed building across the street from the main headquarters.

The drama began Monday, Aug. 13, at 11:45 a.m. when the lights flickered at the Fed's downtown headquarters. Shortly after the lights went out completely at 1:15 p.m., Fed officers met for the first time that week to discuss moving to a contingency site it has owned since early 1987 in Pearl River, N.Y.

The backup site works continuously, exactly duplicating the processing done at the headquarters.

The Fed processes 15 payment messages a second, with each payment averaging $4 million to $5 million.

"No outage is acceptable," said Mr. Sendrovic.

But on Monday, the Fed decided not to move operations. "If your systems are running, you'd rather operate with a site and a backup, rather than operate at the backup and have nothing else," said Mr. Sendrovic.

Fed Wire operated smoothly on Monday and Tuesday. But Citicorp, which processes some $50 billion funds transfers daily, had problems with backup generators Tuesday at its nearby Wall Street office. They were resolved late in the afternoon, but caused the Fed Wire to settle late, at 10 p.m., instead of the usual 6 p.m.

Systems – and backup generators – had to keep running afterward for end-of-day processing, in which all transactions are posted and reconciled.

On Wednesday, the generators at the Fed were still working, but Citicorp lost one of six generators. The bank finally came up on Fed Wire at about 8:30 p.m. Settlement was delayed until 11:45 p.m.

Then end-of-day processing began. "The later we close, the less time we have to process end-of-day transactions," said Mr. Sendrovic. "We had finished end-of-day processing around 4 a.m. The hose to the generator went shortly before 5 a.m." Thursday.

At 6 a.m., Mr. Sendrovic arrived at the Fed and discussed the situation with the vice president in charge of the building, John Eighmy. "There was still a chance the hose could be repaired," said Mr. Sendrovic. When Mr. Corrigan arrived at the bank shortly thereafter, Mr. Sendrovic nevertheless recommended moving operations outside the city.

"Fortunately, this occurred during off-hours," Mr. Corrigan said in a statement to the press late Thursday. "It gave us ample time to consider various options."

Then, mr. Corrigan instructed the crew to prepare to move and at 9:30 started placing calls to the chairmen of the major clearing banks.

The Fed runs a three-shift, seven-day-a-week operation in both Manhattan and at its backup site in Rockland County, N.Y., which always has a staff of 20. While Mr. Corrigan spoke to the bankers, Mr. Sendrovic sent a busload of 50 people, both computer types and business people in the funds transfer area, to bolster the staff at the contingency site.

At 10:20, Mr. Sendrovic received premission to move operations.

The Fed started opening the Fed Wire for business at 10:25 via the remote location. It brought the first banks onto the securities wire at 11 and onto the funds wire at 11:15.

"We had full confidence that that would work," said Mr. Sendrovic. The Fed tests the contingency site about four times a year. The last time it had tested was spring, when about 30 banks logged onto the system and tested their encryption systems.

Peter Tytheri

HAPPY ENDING: "The thing we had never done before was to come back" to the New York site, said Fed executive vice president Israel Sendrovic.

"The most difficult thing was establishing communications with the banking community – activating the communications lines," Mr. Sendrovic said.

An instrumental player in the move was Cathy Minehan, head of Fed Wire, who postponed her vacation for a week to act as direct liaison with the banks.

By 3 o'clock, Fed processing was working smoothly, Fed officials said.

Later that day, the Fed sent out "a broadcast" to banks that it would operate from Pearl River on Friday. End-of-day processing on Thursday and Friday was normal.

Saturday was a "day of rest" for most, except for the building crew, which worked with Con Ed to restore power throughout the Manhattan headquarters. Power was back in the computer rooms at 12:15 p.m. Sunday.

Pastrami by Flashlight

Just after midnight Sunday – before calling Mr. Corrigan to inform him computers were up and running in Manhattan – four executive vice presidents sat in Mr. Sendrovic's office with the lights turned off, eating pastrami sandwiches and pickles by flashlight – for old times' sake.

"The thing we had never done before was to come back" to the New York site, Mr. Sendrovic said, apparently pleased with the outcome.

On Monday, the Fed Wire came up a little early, at 8 a.m., and settled normally that night.

The only operation the Fed had to discontinue throughout the ordeal, Mr. Sendrovic said, was currency verification. "You need light to do it," he said. □

18 Sacramento Supermarkets Test Credit Card System for Payments

By KAREN GULLO

Adding to the list of supermarkets accepting credit cards for payments, Raley's of Sacramento, Calif., has installed an electronic payment system that accepts Visa, MasterCard, or banks' automated teller machine cards.

The program is now installed at 18 stores in the Sacramento area, and Raley's expects to expand it to its 60 stores in California and Nevada by yearend.

Citicorp is servicing the bank card transactions as the acquiring financial institution. Banks have generally shied away from pursuing small-ticket merchants such as supermarkets, reasoning that profit margins and consumer appeal are too low.

Markets' Share of Payments

But a few big companies, including Citicorp and Bank-America Corp., have warmed up to supermarkets, which supply 10% to 15% of the payment business, according to industry sources.

"Research with our cardholders has documented their interest in greater card usage for day-to-day household necessities, including food purchases," said Meg Jacobson, senior vice president for MasterCard's U.S. merchant business unit.

MasterCard and Visa U.S.A. have begun a number of efforts designed to encourage customers to use credit cards with small merchants, which would make the market more attractive to member banks.

This summer, MasterCard began offering a high-speed authorization service for small-ticket businesses that authorizes charges of up to $25 within three seconds. Visa is also experimenting with quick authorizations for small transactions.

In another pilot program, Visa has teamed up with Bank-America and Safeway Inc. to study credit card acceptance at supermarkets. Safeway began accepting Visa cards for payments at 14 stores in California this summer.

The companies are tracking who uses credit cards in supermarkets and whether customers tend to buy more when they pay with a card. □

Rural Credit Markets Stabilized in 2d Quarter, Survey Finds

CHICAGO (UPI) — A survey of agricultural bankers in the seventh Federal Reserve district indicates conditions in rural credit markets were fairly steady during the second quarter, the Federal Reserve Bank of Chicago reported Monday.

Loan demand was strong, and banks had ample money available for lending to farmers in Illinois, Indiana, Iowa, Michigan, and Wisconsin.

Interest Rates Stabilize

Economist Peter Heffernan, writing in the bank's agricultural letter, said interest rates charged on farm loans stabilized following earlier declines, while the measure of repayment rates on loans to farmers dropped slightly from the high levels of earlier surveys.

Loan demand was strong, and banks had ample money for lending.

"Nevertheless, further improvements in the overall conditions of farm loan portfolios at banks in the district were noted," he said. "Those who responded to the survey expect farm lending at their institutions to continue expanding during the summer months, especially for operating funds and farm machinery purchases."

Thirty-six percent of the bankers reported an increase in farm-loan demand during the spring quarter, 18% reported a decline and the remainder said there was no change from year-ago levels.

Farm loan demand was greatest in Iowa and Indiana, Heffernan said, Wisconsin was average, and Illinois and Michigan bankers reported somewhat lower than average demand.

"The strengthening trend in farm loan demand that has been apparent from the survey during the last few years has coincided with rising loan-to-deposit ratios at the district's agricultural banks," he said. "At the end of the second quarter, the ratio of 56.5% was more than one percentage point higher than the previous three months."

Interest rates charged on loans to farmers were virtually unchanged from April through June. The average rates charged on feeder cattle and operating loans held at about 11.9% at the end of June and 11.1% on farm real estate loans.

"Agricultural banks in Iowa continued to report the lowest mortgage rates, averaging 10.9%," Heffernan said. "The rate was 11.3% in Indiana and 11.6% in Michigan, while Illinois and Wisconsin rates were near the average."

"Since the mid-1980s, higher levels of guaranteed lending have offset a portion of the declines in direct lending to farmers by the Farmers Home Administration."

Peter Heffernan
Economist

Problem Portfolios Down

He said the continuing improvement also was evident in the bankers' evaluations of the condition of their loan portfolios. The average proportion of farm portfolios with little or no repayment problems was just over 95%, up from 94% one year ago. Consequently, the proportion falling into more severe repayment categories continued to decline.

"Since the mid-1980s, higher levels of guaranteed lending have offset a portion of the declines in direct lending to farmers by the Farmers Home Administration," Heffernan said. "The survey indicates almost 70% of the respondents have farm loans secured by an FMHA guarantee with the proportion ranging from under 50% in Indiana to just over 90% in Iowa."

Bankers said the volume of farm lending, which has been trending upward the past few years, will likely show additional growth during the third quarter of 1990.

"More than one-fourth of the bankers expect operating loan volume to be above year-ago levels during the third quarter, while fewer than 17% foresee a decline," Heffernan said. □

Which branch automation company offers a single point of service and product management?

RTC Head Warns Of Fraud Danger

WASHINGTON — The potential for fraud is significant as the U.S. government tries to sell billions of dollars in real estate and other assets taken from failed savings and loans seized by the government, says Peter Monroe, president of the Resolution Trust Corp.

In a letter to the Senate Banking Committee, Mr. Monroe said the RTC Oversight Board will do what it can to protect against fraud and waste in the program.

"The Oversight Board is fully aware that fraud, waste, or misconduct could increase substantially the costs of the RTC's disposition of assets of failed savings associations," he wrote.

In a memo dated June 29 and released this week by the Senate Banking Committee, RTC Inspector General John Adair said his office will hire about 20 new staff to work with the RTC to help prevent waste, fraud, and abuse as it tries to sell properties.

Morgan Offers Debt Relief In Package for Philippines

Reuters

MANILA — New York-based J.P. Morgan & Co. is proposing itself as lead manager of a new debt-relief package for the Philippines, Finance Secretary Jesus Estanislao told reporters.

Under the proposal, the Philippines would float bonds, called temporary interest rate reduction bonds, to a syndicate of commercial banks headed by Morgan Guaranty Trust Co. The bonds will pay interest below the London interbank offered rate but carry payment guarantees.

The lower interest payment is a creditors' tradeoff for the guarantee, Mr. Estanislao explained.

Debt-Exchange Proposal to Philippines Confirmed by Morgan

A Morgan spokesman confirmed that the bank has proposed a debt-exchange plan to the Philippine government, but he would not comment on details. A source called it likely the proposal is similar to a plan Morgan unveiled several years ago on Mexican debt.

That Morgan plan, which guaranteed interest but not principal, was the forerunner of the so-called Brady plan of the U.S. government to reduce Third World debt burdens. Under its terms, Mexico guaranteed repayment of interest and principal on its bonds by purchasing zero-coupon U.S. government bonds.

The Philippine Senate and the House of Representatives have separately passed nonbinding resolutions asking President Corazon Aquino to negotiate a 30-month payment moratorium on repaying the country's $26 billion of foreign debt. Mrs. Aquino, as well as the Bankers' Association of the Philippines, oppose a moratorium.

U.S., Japan, Lending Agencies Commit Up to $1 Billion

Announcement of the Morgan proposal came after recent commitments by the International Monetary Fund, the World Bank, and the U.S. and Japanese governments to raise $800 million to $1 billion for Philippine debt relief.

The Morgan scheme is one of several being considered by Manila that use the debt-relief resources pledged by major creditors two weeks ago.

The Philippines paid off $1.34 billion of bank debt in January for only $650 million, using a 50% discount under a debt buyback program. Manila is now studying a proposal by the state-owned Philippine National Bank to cut the country's debt further under a similar buyback scheme. □

U.S. COUNCIL ON INTERNATIONAL BANKING, INC.
One World Trade Center Suite 1963
New York, New York 10048

The USCIB is a national association providing a professional operations forum for the global financial services community. The mission of the association is to provide a medium for global financial services issues, solve operational problems among members through the implementation of uniform methods and rules, sponsor seminars and other educational events and enhance the operational efficiency of the global financial services community.

ANNUAL CONFERENCE
The 1990s: Entering a New Decade of Opportunity — October 14th to October 19th
Sheraton Harbor Island Hotel, San Diego, California

Keynote:
"Philosophy for Success in Financial Services," Jim Miscoll, Vice Chairman, Bank of America.

Other sessions include:
- Improved Management of Transaction Processing Operations
- Issues and Directions in Trade Correspondent Banking
- Treasury Confirmations Present and Future
- Money Laundering
- EDI
- UCP 400
- Europe 1992: What Can Treasury Operations Expect?
- Recent Changes and Developments in the CHIPS System
- The Dynamics of the Global Economy
- The Role of the ICC Banking Commission
- Global Financial Outlook for the 1990s—Preparing Your Bank to Succeed, and
- Payment Systems and Letters of Credit: Review of Current Legal Issues and Developments

Membership
in the USCIB is open to depository financial institutions in the U.S. and its territories actively engaged in the business of global financial services.

Associate Membership
is open to related organizations including: legal, consulting, importers/exporters, broker dealers, accounting firms, insurance companies, securities dealers, travelers check issuers, export trading companies and freight expeditors.

Praise for Credit Suisse's Revamping

Analysts See Special Units as Key to Further Success

By JAMES R. KRAUS

NEW YORK — Like other big Swiss banks, Credit Suisse moved pell mell to expand operations abroad and strengthen business base at home in the 1980s.

The bank built up its investment banking activities in London, Tokyo, and New York; acquired other Swiss banks; and started a life insurance company. But as international securities markets soured and rising interest rates and deregulation squeezed profits in Switzerland, Credit Suisse is reorganizing.

Activities Decentralized

In a broad-ranging revamping, Credit Suisse last year split up its activities into commercial banking, investment banking, life insurance, financial services, and industrial holdings, and it put them under a single holding company, CS Holding.

This year, the bank went a step further by combining private banking activities of three subsidiaries, Bank Leu AG, Bank Hofmann AG, and Clariden Bank, with those of Credit Suisse.

Robert Jeker, president and chief executive of Credit Suisse and president of the executive board of CS Holding, said the structural changes take account of financial sectors' different natures.

Leading the Competition

"We have specialized products and need special units for them," Mr. Jeker said in a recent interview.

"We have specialized products and need special units for them."
Robert Jeker
Credit Suisse

The reorganization puts Credit Suisse, Switzerland's third-biggest bank with nearly $100 billion in assets, several steps ahead of its two big domestic competitors, Union Bank of Switzerland and Swiss Bank Corp., neither of which has a separate holding company.

"In terms of structure, they're way ahead of the others," said Rodney S. Schwartz, a banking analyst with Lehman Brothers International in London.

Analysts believe Credit Suisse's restructuring is not yet over and that the bank is contemplating a reorganization of its investment banking activities through Credit Suisse First Boston, parent of First Boston Corp.

First Boston Takeover?

Credit Suisse, which holds a grandfathered 45% stake in Credit Suisse First Boston, is barred from increasing its stake under the International Banking Act of 1978.

"The major next move for CS Holding will be to acquire majority control of CSFB," said Christopher Davis, an analyst with Barclays de Zoete Wedd in London. "It will give them more scope to integrate [CSFB] into the business of the group."

But the reorganization at Credit Suisse is broadly in line with what analysts called the shape of the future for so-called universal banks such as Credit Suisse, which can do both investment and commercial banking and engage in other businesses such as life insurance.

"An increasing number of organizations recognize that different businesses have to be run separately," said Timothy Schantz, a principal at Greenwich Associates, a Connecticut consulting firm.

Return on Equity Is Tops

"They split up a mass bank and segmented it according to their customer base," said Keith Brown, an analyst with Morgan Stanley & Co. in London.

Credit Suisse is still well ahead of Switzerland's other big banks in profits and has nothing to fear for its triple-A debt rating, Salomon Brothers Inc. said return on equity reached 10.10% in 1989, compared to 8.05% at Swiss Bank Corp. and 7.95% at Union Bank of Switzerland.

But streamlining operations is becoming increasingly urgent for Credit Suisse, which last month announced that second-half profits were down from their 1989 level. The bank does not break out half-year results, but analysts said they believe that poor earnings on securities activities and rising interest rates will squeeze Credit Suisse further this year.

Need Seen for More Changes

"They spent a fortune building up their international and investment banking businesses, but they have to get the international side, in general, and the investment banking side, in particular, into shape," said Mr. Davis.

For Credit Suisse, Mr. Jeker said, the reorganization means concentrating on return on equity and return on assets and focusing on specialized businesses.

"Competition in the different markets is getting fiercer," he said. "We have to concentrate on the products where we have an advantage." □

Brazil Says Capital Is Returning

Reuters

SAO PAULO, Brazil — **The nation's economic policies have caused citizens to repatriate capital, Economy Minister Zelia Cardoso de Mello said in an interview.**

"We have had a return of money to Brazil since the beginning of our economic plan," Ms. Cardoso said. She rejected an assertion by John Reed, chairman and chief executive officer of New York-based Citicorp, that Brazil is, in effect, financing capital flight.

"I think that his understanding is wrong," Ms. Cardoso said of Mr. Reed's view. "On the contrary, we have had a return of capital." However, she could not say how much.

Mr. Reed was recently quoted in the Brazilian newsweekly *Veja* as saying, "The Central Bank in fact is financing the flight of capital when it sells its gold reserves to artificially lower the price of the dollar in the parallel market."

The administration of President Fernando Collor de Mello has dropped a long-standing Brazilian policy of setting foreign exchange rates by Central Bank edict and is allowing rates to be set by supply and demand.

Japanese Interest Rates May Rise Above Those in the U.S.

By J. TERENCE GALLAGHER
Reuters

TOKYO — Short-term Japanese interest rates could soon rise above U.S. rates for the first time since 1985, setting up a chain reaction that could reverse the flow of money across the Pacific, strengthen the yen and further depress the dollar.

Japanese rates have seldom moved ahead of their U.S. counterparts, kept down by low inflation and a high penchant for saving among the Japanese. This has given Japanese companies the chance to obtain capital at low cost in order to expand.

Economists say the change now would likely slow down or even reverse the flow of capital from cash-rich Japan to the deficit-ridden United States.

This in turn would push up the Japanese yen.

"A short-term rate reversal could . . . aid in changing market sentiment in favor of the yen," said a recent research report from Salomon Bros. Asia.

The interest rate trend has already affected the flow of capital from Japan to the U.S.

The last time short-term market rates in Japan rose above U.S. rates was September 1985, when the Group of Five -- the United States, Japan, Britain, West Germany and France -- wanted to give the yen a boost against the dollar.

Rise Seen as Inevitable

"It seems inevitable that Japanese short-term rates will soon exceed those in the U.S., especially if you consider the trends in the economies," said Richard Woodworth, analyst at Merrill Lynch Japan.

"The U.S. economy is extremely weak, while the economy here shows no signs of wanting to slow down," he said.

Bank of Japan officials said economic conditions do not warrant another rise in the official discount rate now at 5.25%, but many money dealers think an increase could come in September.

Bond Rates Narrowing

Long-term yield spreads between Japan and the United States have also been narrowing. The key Japanese 10-year bonds now trade at a yield of 8.03%, while 10-year U.S. Treasuries yield 8.81%.

"It would be more significant if long-term Japanese bond yields were to exceed those in the U.S. Then people would really sit up and take notice," said Woodworth.

The interest rate trend has already affected the flow of capital from Japan to the United States. Japanese portfolio investment abroad slowed to $17.6 billion in the first half of this year from $45.3 billion in the same period last year.

And foreign investors have been stepping up purchases of Japanese bonds since November.

"Foreign investors are already less ready to put funds into the U.S.," said Woodworth. "Once we get an inversion [in U.S.-Japanese rates], it will add more pressure to the yen-dollar rate."

The dollar is near its record low against the mark, which also reflects a change in investor outlook.

The dollar has dropped to 146 yen, down nearly 9 percent from its level four months ago. □

Here's a hint: It's not IBM.

EXECUTIVE *changes*

Bankers Trust Names Two To Head Group

Bankers Trust Co., New York, appointed **Alan Levinson** and **James Clayton** to head the bank's leveraged leasing group following the recent departure of about 20 veterans from the unit.

Mr. Levinson, a managing director who helped shepherd the bank into the thriving commodity swaps business, most recently was responsible for managing liquidity and market risk for the bank's own loan portfolios. Mr. Clayton, also a managing director, recently returned from Europe, where he headed Bankers Trust's merchant banking department for Eastern Europe, Middle East, and Africa.

A Bankers Trust spokesman said the lease department is being restaffed. The former leasing employees and others from the bank's equity investment group are forming their own boutique. The group includes former leasing department head **Charles Hill** and his comanagers, **Sharon Peterson** and **C. Wesley Reynolds.**

— **Franklin Smith**

Monogram Picks Nissen

David R. Nissen has been elected a director and named chairman of **Monogram Bank, USA**, the Cincinnati, Ohio-based credit card bank subsidiary of **GE Capital**, Stamford, Conn.

Mr. Nissen is responsible for the continued growth of the bank card business and the development of consumer-related business by GE Capital banking subsidiaries.

David R. Nissen

Ranked in the top 20 largest credit card operations, Monogram Bank USA has 1.5 million credit card accounts, with over $1 billion in outstandings.

"The focus is on private label credit cards with a select number of partners and providing quality service to our customers," Mr. Nissen said.

Monogram Bank has been in operations for three years and has a strong growth record.

Mr. Nissen previously was vice president and general manager of private label financing, GE Capital Retailer Financial Services. Under his direction, GE Capital Retailer Financial Services established itself as the leading supplier of private label credit cards.

MIDDLE ATLANTIC

Ampersand Corp., York, Pa., has appointed **Allen F. Hardin** as vice president-sales for this leading producer of branch automation software for financial institutions.

S.G. Warburg & Co. Inc., New York, has appointed **H. Nicholas Verey** as chairman of this U.S. arm of the leading international investment banking and asset management firm, S. G. Warburg Group PLC.

He succeeds **David Brooke**, who has retired.

Since 1987, Mr. Verey, has been a member of the board of the parent company and has had responsibility for corporate development and planning. He is a director of S.G. Warburg Securities, the firm's securities sales and trading arm of the group.

American Express Travel Related Services Co. Inc., a subsidiary of **American Express Co.**, New York, has named **Dennis J. Beckingham** to senior vice president and controller.

He will coordinate control and planning across all TRS business units. He formerly served as senior vice president and chief financial officer of the direct marketing and travelers cheque group.

Citibank, New York, said its fiduciary and information services division has appointed **Neil C. Craig Jr.** as assistant vice president responsible for sales to public funds.

Mr. Craig comes to Citibank from Aetna Capital Management Inc., where he marketed investment management and administrative services, and oversaw approximately $230 million in assets.

BSI-Banca della Svizzera Italiana has announced the executive appointments of **Yves Gaden, John K. Burgess, and Glenn B. MacPherson** at its New York branch office. BSI is headquartered in Lugano, Switzerland.

Mr. Gaden joins BSI as a senior vice president, heading up the corporate division. He will oversee banking activities in the real estate, trade finance and corporate areas. Mr. Gaden was previously the chief executive officer and director of Banque Indosuez's operations for Italy.

Mr. Burgess, first vice president, joins BSI to run the bank's treasury and trading division. Previously with **J.P. Morgan Inc.**, Mr. Burgess headed its U.S. dollar treasury group based in London.

Mr. MacPherson, first vice president, is now responsible for BSI-New York's operations accounting and office management functions. He was formerly with **Toronto Dominion Bank**, where he headed operations at its New York branch.

Long-Term Credit Bank of Japan Ltd., has named **Takashi Uehara** as general manager of its New York branch.

He succeeds **Koji Hirao**, who returns to Tokyo headquarters as director and general manager of the bank's treasury and securities group.

United States Trust Co., New York, has named **Anthony P. Marshall** a senior vice president. He will continue as manager of its estate planning department.

Safety Net Needs a Good Shrinking

This speech, here slightly abridged, was presented recently to the New York Association of Business Economists.

The gathering movement for financial reform in the United States is creating controversy. Expanding the powers of commercial banks raises complex questions for the potential legislative reworking of long-standing regulatory divisions between commercial banking and investment banking, banking and insurance, domestic and foreign financial institutions – even between banking and commerce.

Financial reform, however, cannot be viewed simply as an enlightened attempt to remove artificial restraints on the rational deployment of private capital across lines of business.

Over the past 60 years, depository institutions in the United States have become the beneficiaries of an expanding federal safety net that, in effect, has become a taxpayer-backed substitute for private capital, liquidity, and contractual arrangements to manage and resolve financial failure.

"We lose the power and the safeguards of the market if the safety net intervenes to absorb losses or the risk of losses."

To maintain the safety net as banks engage in a wider range of business lines creates inconsistent both with the lessons we are learning from the unraveling thrift industry and, more generally, with growing concerns about federal credit guarantee programs.

Ironically, dependence on the safety net and regulatory restrictions to protect depositors appear to have contributed to low capitalization and the competitive disadvantage of banks in considering new lines of business.

What I want to talk about today, therefore, is not where to redraw the lines between banking and other lines of business. Instead, I want to talk about the precondition for redrawing those lines.

The precondition should be a matching reform of the federal financial safety net currently serving as a backstop for the operations of banks and other depository institutions.

Reform will require clarification of the objectives of the safety net and how it relates to systemic risk.

Shrinking the existing safety net, instead of tailoring it to exclude new lines of business, would make financial reform possible.

For many economists, contemplating financial reform is synonymous with further financial deregulation that picks up where elimination of Regulation Q and crumbling barriers to interstate banking have left off.

Normally, we would expect that removing further artificial barriers to competition would enhance efficiency, as the allocation of financial and real resources more fully responds to the play of market signals.

In a free-market economy, property owners, operating within the social fabric of the law, would be able to use their financial property in whatever way their ingenuity or lack of it suggests – as long as they can expect to enjoy the profits and suffer the losses.

A market system involves both profits and losses. We lose the power and the safeguards of the market if the safety net intervenes to absorb losses or the risk of losses and passes them along to the taxpayer.

Patching up the system whenever trouble arises, rather than allowing market arrangements to prevent or cope with trouble, skews decisions toward more risk.

Expanding the lines of business that banks can enter extends the realm of the economy underwritten by the federal safety net. Federal Reserve Chairman Alan Greenspan, in a recent speech, put the significance of this federal underwriting in clear perspective:

"The driving force that has permitted equity capital-to-asset ratios in banking to go from a little less than 25% in 1890 to a little over 6% in 1990 is the set of statutory and regulatory changes that have drastically lowered the risk to depositors."

"The major factors reducing depositor risk premiums and permitting banks in the United States to operate with considerably less capital than free market models would imply [are] deposit insurance and access to the discount window and to Fed Wire."

I define the safety net to include deposit insurance and access to both the discount window and Fed Wire. Access to the safety net assures that,regardless of managerial imprudence or exogenous events, deposits are safe and overnight financing and

Safety Net Needs Good Shrinking

Continued from page 13

intraday financing are assured.

Deposit insurance often is rationalized as a legislative effort, made in reaction to experience that led to the bank holiday in 1933, to forestall bank runs.

But had the Federal Reserve discount window and open market operations been managed differently in the years between 1929 and 1933 (as in October 1987, for example), those bank runs probably would not have happened – and if they had, they would not have produced the tragic results that occurred.

Access to the discount window was designed in 1913 to provide elasticity to the currency under the gold standard. Today, the Federal Reserve provides elasticity to base money through open market operations. Adjustment borrowing mostly reflects Reserve Bank rules made necessary by a subsidy discount rate.

Access to Fed Wire, in a formal sense, is not part of the safety net, but it has become 100% payment insurance for Fed Wire payments through automatic access by banks to free credit during the day.

This component of the safety net originated inadvertently when telecommunications innovations outstripped the Fed's control of Reserve Bank credit.

The typical rationale for maintaining this set of federal programs now is that by protecting the individual depositor and the individual bank, they protect society against financial panic and collapse – against systemic risk.

> **"The safety net increases the very risk against which the safety net protects, and transfers exposures away from private market participants toward the taxpayer."**

Some minimal level of deposit insurance might be socially convenient just to protect unsophisticated holders of small deposits against credit risk. The discount window might be a convenient way to handle banks when they are unexpectedly short of funds at the end of a day, although reliance on the present penalty rate for overnight overdrafts might do the job just as well.

However, the specter of systemic risk seems to be the principal rationale for the current expanded safety net.

The Nightmare of Failures

The systemic risk rationale is easy to state but difficult to define. The image which comes to mind is one of widespread failures of banks, where one bank's failure causes other banks to fail and so forth in a widening wave of failures reflecting the intricate interdependence of credit relationships in a modern banking and financial system.

"Failure," however, can have a variety of meanings. It might refer simply to a delay in making a payment during the day, or perhaps to the premium an illiquid bank has to pay in selling illiquid assets to balance its books at the end of a day. On the other hand, it might refer to the outright supervisory takeover of a troubled bank that lacks enough capital to satisfy regulatory standards.

A cascade of failures is not the automatic result of the failure of an individual bank. The systemic problem is more one of gaining time and information for the resolution of potential losses than of a vast evaporation of capital through actual losses.

Safety Net Can Increase Risk

Exposure of the banking system to systemic risk depends on the prudential holdings of cash, liquidity, and capital of each bank. As Chairman Greenspan's words remind us, systemic risk is created when the safety net is allowed to become a substitute for capital and liquidity and cash.

Through moral hazard, the safety net increases the very risk against which the safety net protects, and transfers exposures away from private market participants toward the taxpayer.

Another factor underlying systemic risk is the extent to which participants in the banking and payment systems protect themselves against the risk of adverse developments by estimating and controlling their susceptibility to potential failures of their counterparties – even when those risks stem from the risk of failure of others.

> **"In short, systemic risk need not be a catastrophic problem."**

The myth that exposure to systemic risk can be controlled only by government intervention is debunked by the extensive private clearinghouse and other private contractual arrangements that seem to have been successful in the past in managing risk exposures among interdependent counterparties.

Living with Systemic Risk

In short, systemic risk need not be a catastrophic problem.

In the United States, the safety net has been substituted for private capital and liquidity and cash, making it appear that systemic risk would be extreme in the absence of the safety net. But in the absence of the safety net, rational managers of banks would hold larger cushions of cash and liquidity and capital, raising thresholds of payments gridlock and electronic bank runs and interrelated banking insolvencies.

Moreover, private risk-control measures would be developed and adopted as rational bank managers sought to guard against systemic risk by taking actions ahead of time that would assure the time and contractual basis for dealing with failures in an orderly way.

Fed Wire Illustrates Challenge

Access to Fed Wire is a useful case study both because it is little understood and because it illustrates the challenge of trying to limit the scope of the safety

"Lunch at the usual place—or should we be daring?"

If this is your idea of planning, don't bother to read this. 1-800-456-2340.

It's no secret that planning and budgeting can be sheer drudgery. From doing the plan in the first place to tracking how your actual numbers compare to your plan all year long. It's slow, time-consuming labor.

Unless you let Sheshunoff **Bank Financial Planning & Budgeting Software** do the drudge work for you.

You set things up your way. By ROA, income, or percentage growth targets. And it's so easy-to-use that even a beginner can turn out complete, balanced plans and budgets in no time.

It's almost like having a budget that does itself.

Your categories are all set up and ready to fill in. And you can customize line items to suit your needs. The different approaches you can take are clearly explained in your easy-to-read user Guide.

Easy-to-use screens make it easy to enter your data. And you can set up alternative plans and budgets in minutes. Then compare your options at the touch of a key. Item by item.

Your software even checks to make sure you're in balance. Computes your monthly budgets from your annual plan. Does interest rate, margin, and ratio analyses. And gives you the flexibility to make adjustments line by line, month by month.

Plus, you can track your actual numbers against your plan, quickly and easily. Monthly or quarterly. And create variance reports and summary reports as you need them.

Easy, complete, and just for bankers. With our 30-Day Guarantee. Just what you'd expect from Sheshunoff Information Services Inc.

To get your Sheshunoff **Bank Financial Planning & Budgeting Software** for just $495 call 1-800-456-2340.

Safety Net Needs Good Shrinking

Continued from page 14

net's coverage.

Fed Wire provides receiver finality. This simply means that upon receipt of a Fed Wire payment message, a bank acquires irrevocable ownership of an equivalent deposit credit at a Federal Reserve Bank.

Starting about 25 years ago, the Fed began making Fed Wire payments regardless of whether the bank sending the payment had a sufficient balance in its Fed account at the time it made the transfer.

Now, with Fed Wire volume near $1 trillion daily, the Federal Reserve Banks automatically provide daylight overdrafts with peak values in excess of $100 billion daily, trusting the overdrawn banks to top-up their accounts by the time Fed Wire closes and the banking day effectively comes to an end.

Unintended Result

Providing daylight overdrafts to fund Fed Wire payments was an unintended result. Apparently, the practice began when the Fed and its customers installed

"There is a wide variety of possible private arrangements for dealing with failure."

on-line, real-time telecommunications technology without redesigning procedures to check each on-line Fed Wire payment against the payor banks' deposit balance.

This safety net feature has assumed growing importance as the first line of defense against failure and systemic risk. It provides both time and the contractual basis for resolution of potential losses when a bank unexpectedly runs into trouble.

The troubled bank can continue to make payments all day on Fed Wire. If the bank can't balance its books at time end of the day, it is the Fed that is left holding the bag. The Fed must choose between lending at the window or working with the deposit insurance system to keep the bank open or to close it.

The contractual basis for resolving failure is that the smart money can run from the bank during the day, while the Fed lends to the bank overnight, eliminating systemic risk. If the bank can't survive, the remaining uninsured creditors are left to work with the FDIC to determine their losses.

However, there is no reason that every conceivable transaction should be promised a same-day payment guarantee by the federal government. The withdrawal of that implicit promise would curtail some transactions but, more importantly, would encourage private arrangements to reduce risk.

Overdraft Overhaul

The Federal Reserve has been struggling with this issue and has recently adopted a policy for dealing with daylight overdrafts. The policy is an attractive alternative for dealing with failure and systemic risk because it discourages Fed Wire daylight overdrafts and has led to the development of private contractual arrangements for dealing with failure.

Initially, the risk policy of the board of governors' payment system was to reach an agreement with each bank about the expected upper limit on its daylight overdraft, with supervisory remonstration to follow if a bank seem not to be taking the limit seriously.

Then, a year ago, the board published for comment a more complete set of proposals, including a flat penalty fee of 25 basis points per dollar of daylight overdraft in excess of 10% of a bank's capital.

This fee is not actuarially determined, and no actual or shadow reserve fund is contemplated. The fee is simply a penalty designed to discourage Fed Wire daylight overdrafts and encourage private alternatives for dealing with failure.

Real-Time Lock

A more effective way to prevent Fed Wire daylight overdrafts would be an outright, real-time lock on Fed Wire making it impossible for a bank to send a payment that would create an overdraft (or an overdraft in excess of some limit). This is already done for certain institutions, including banks known to be in trouble, and there is no reason it couldn't be done for all Fed Wire users.

"The infallible contractual way to assure that banks don't fail to make payments during the day is to require that they hold enough cash."

There is a more important – indeed, critical – point about the safety net. If federal supervisors act consistently to prevent large banks from failing, little can be gained by reducing Fed Wire daylight overdrafts. If the federal government stands ready to assume the risks involved, there is little incentive for private markets to develop careful counterparty risk scrutiny and effective loss sharing arrangements.

Shrinking the safety net requires a pervasive understanding that when trouble arises the Fed and FDIC will stand aside, leaving participants in private payments arrangements to bear the costs of failure.

Supervision of private payments arrangements to assure effective sharing of loss creates the possibility that banks won't fall into the safety net. This is the route the Federal Reserve's policy seems to be taking.

A more effective way to assure an incentive for meaningful private contractual arrangements to reduce systemic risk is precommitment by federal supervisors that the risk of loss will fall on private market participants.

Private Arrangements

Undoubtedly, there is a wide variety of possible private ar-

Before You Commit Make Sure It Gives You An

To An Imaging System, Open View Of The Future

Your success in this decade could very well depend on your ability to adapt to the volatile change that is predicted. NCR's open systems approach to item and document imaging can help you manage that change... and use it to your advantage.

NCR's imaging technology will allow you to electronically capture, store, process, display and retrieve text, graphics and photographs on-line... resulting in significant benefits.

For example, NCR Check Processing Systems include regional and distributed processing strategies, and will help you deal with shrinking processing windows, check safekeeping, truncation and other changes more quickly and cost effectively. NCR Document Management Systems can help you shorten processing cycles and reduce filing costs, while providing higher levels of productivity for your employees and better service for your customers.

NCR Imaging Systems offer you key technology benefits, too. For example, they are designed to be scalable from entry level to an enterprise-wide system, giving you the power you need as you need it. More importantly, they are based on open systems and industry standards, which gives you complete system flexibility and allows seamless integration between your Imaging Systems and your other information systems. This not only protects your existing technology investment, but creates a powerful, competitive weapon to use in the changing banking environment of the 90s.

If your vision of success in the coming decade includes imaging, make sure it is an open vision. Take a closer look at the company that can help you use it as a strategy to manage change. Phone 1-800-CALL NCR for more information, including our white paper series, *Issues In Imaging*.

REQUIRED READING

Safety Net Needs Good Shrinking

Continued from page 16

rangements for dealing with failure. For these to be effective, they must be based on the requirement that the private counterparties deal with the problem when cash or liquidity or capital runs out.

Let me mention just a few of the ways that creating an incentive for private contractual arrangements might influence the way we deal with payments.

The Cash Alternative

One alternative to Fed Wire daylight overdrafts is cash itself. The infallible contractual way to assure that banks don't fail to make payments during the day is to require that they hold enough cash.

Several years ago, Fed Governor Wayne D. Angell made a cogent proposal for inducing banks to hold more cash, including the payment of interest on excess reserves, but his proposal has not made much headway. Banks could use the existing stock of cash more effectively during the day.

Many people still incorrectly understand this to be slowing down the flow of payments to avoid daylight overdrafts. Conceptually, that might be possible, but it would not be a major factor in avoiding systemic risk in the payments system.

Far more likely – because examples already are in place – are contractual agreements by

"The crucial feature of any private arrangement must be a contractual agreement placing risk of loss squarely on the parties to the arrangement."

which counterparties condense their transaction during the day into a moving net obligation to be paid by one party to another at the end of the day.

If the payment can't be made, the transactions are still good but the damage is limited – because only the smaller net debt of the overextended or failed party must be resolved.

Net Settlement Arrangement

Another avenue – with an important example scheduled to begin in October – is for banks to condense the payment they make to one another during the day into a single net settlement payment at the end of the day.

In the event of failure, the participants in the net settlement arrangement cover the failed position of their troubled counterparty, buying time to work out resolutions of its problems and their potential losses.

The example is Clearing House Interbank Payment System (CHIPS), the electronic foreign exchange payments network operated by the New York clearinghouse, handling a volume of payments rivaling Fed Wire funds transfers.

In October, CHIPS is scheduled to implement an agreement for loss sharing, with a $4 billion pool of participants' liquid collateral to back that agreement.

The crucial feature of any private arrangement must be a contractual agreement placing risk of loss squarely on the parties to the arrangement. Consequently, participants have an incentive to monitor the creditworthiness of their counterparties and enforce standards that limit the risk being assumed.

In addition, some of the underlying financial-market transactions that now generate payments may no longer be feasible because private parties will not be willing to assume the risks of failure to which they would be exposed on terms acceptable to the transacting parties.

Shrinkage Is Feasible

I am encouraged because the payment system risk example demonstrates that it is feasible to shrink the safety net and therefore meet the precondition for financial reform.

As long as the monetary authorities protect liquidity in the economy as a whole through appropriate open-market and discount window policies, protection against failure and systemic risk can be handled by private contractual arrangements, as demonstrated both historically and in emerging private payments arrangements.

The design of effective private arrangements for containing risk will evolve from market ingenuity – with occasional lapses, of course – when there is an incentive to do so.

Perhaps the biggest obstacle to shrinking the safety net, and therefore the biggest obstacle to proceeding with financial reform, will be convincing beneficiaries and custodians of the present safety net that it is in their interests to limit the net and avoid the temptation to extend it in times of trouble.

By removing this obstacle, we should be in a position where banks can expand their lines of business without putting the taxpayers at further risk. □

RTC Sells $915 Million Of Auto Loans to GE

NEW YORK — The Resolution Trust Corp. said it sold $915 million worth of automobile loans to General Electric Capital Corp. in the largest whole-loan transaction since the thrift-bailout agency was formed last year.

The loans were on the books of Empire Federal Savings Bank, Buffalo, which has been under RTC supervision since Jan. 24.

The portfolio acquired by the General Electric Co. subsidiary consisted of 140,000 car loans held by Empire or its subsidiary, Empire of America Consumer Finance Corp. First Boston Corp. solicited bids for the sale.

Banking Coverage Where It Counts
WASHINGTON MONDAY
Every Week in AMERICAN BANKER

You're looking at the difference between our end-of-day pricing service and theirs.

It's called a responsive customer service team.

At Muller Data, our customers tell us we have the "most professional" service in the industry. They say we're friendly and helpful. That we try harder, and do things right the first time.

Answers, fast.
Our records say we answer more than 80 percent of your questions while you're still on the phone. So instead of promises to "get back" to you, we give you answers and solutions – on the spot. When we do have to call you back, we give you a time, and treat it like an important commitment. Because to us, it is.

Accurate data.
Of course, we start with accurate, comprehensive data for more than 750,000 issues, including listed and OTC equities, commodity and financial futures, CMOs, MBSs and UITs – *plus* the full universe of more than one million municipal bonds, corporate fixed-income securities, government instruments, and 80,000 Canadian and overseas equities and bonds.

Can we show you?
We'd like to show you just how accurate, timely and responsive a securities pricing service can be. For more information, write Muller Data Corporation, 161 William St., New York, New York 10038, or call toll-free: 1-800-US-MULLER.

History Retold For S&L Crisis

Continued from *page 5*

it higher."

So the seeds were sown. And by no less than the chairman and the ranking minority member of the Senate Banking Committee.

Accounting for Inflation

In February 1980, the House held extensive hearings and I, as FDIC chairman, testified for an increase to $60,000 to keep up with inflation. My testimony read: "The insurance was last changed from $20,000 to $40,000 in 174, and if $40,000 was the right figure then, taking inflation into account, $60,000 would be the appropriate figure today."

House Banking Committee Chairman St Germain responded that the correct figure six years earlier should have been $50,000 "but we couldn't convince the Senate to go along." During my questioning, Congressman Hanley told me that $100,000 probably would be a good figure so the banks and the FDIC would not have to bear the expense of changing their window stickers if the rate were raised again in the near future.

> **"Commercial real estate is in a shambles because of thrift-induced overbuilding in the 1980s."**

So, clearly, $100,000 was in the background early in the game. The savings and loan lobby worked tirelessly for this figure and these were the lobbyists who were most generous with their political contributions. However, the confrees battled mostly over Reg Q. Insurance was only a side issue. House confrees first offered $40,000, then $60,000, then $75,000.

Attracting Deposits

Why do I focus so much on $100,000? Why was this so important? Because it was crucial if the thrifts were to achieve what they wanted. At that time interest rates were tightly controlled under $100,000, but there was no limit at $100,000 and above. An institution could pay only 5% interest on smaller deposits, but any amount at the $100,000 level. So upping the figure to, say, $99,000, would not suffice. It had to be $100,000 if the thrifts were to attract hundreds of billions in above-market, federally-insured deposits.

(A footnote. We regulators had lifted the interest rate controls at $100,000 in 170 at the insistence of Fed Chairman Arthur Burns during the Penn Central crisis, so the money center banks could attract funds. Previously, Reg Q treated all deposits alike.)

Now we come to the much maligned House-Senate conference that nailed down the $100,000 insurance even though it was not included in either bill. Kathleen Day told the story well in the *Washington Post* on June 24, 1990: "Democrats, GOP Trading Accusations in S&L Crisis." She mentioned a submeeting and quoted "several of the men in the room" to the effect that the participants were Senators Proxmire, Garn and Cranston and Congressman St Germain. "They telephoned banking regulators to inform them of the decision," she added.

Telephone they did. I recall the call vividly. I protested the decision but was told by Proxmire, "That's not the question. The question is, 'can you live with $100,000.'"

My final response was that I would have to live with whatever the confrees did, right or wrong. Paul Nelson, House banking committee staff director, later told me I should have protested even more. I know that Bank Board Chairman Jay Janis must have responded with enthusiastic support.

> **"Congressman Hanley told me that $100,000 probably would be a good figure so the banks and the FDIC would not have to bear the expense of changing their window stickers."**

(Actually there were two telephone calls. Earlier, Bernie Moss of the FDIC called to tell me a motion had been made for $100,000 insurance. He remembers me saying, "I don't object." I recall saying that our position had been consistently against such a figure. Perhaps we just were not communicating.)

No Written Record

The difficulty of reconstructing events on which there is no written record are enormous. Last year a researcher from *Fortune* magazine called to ask my help. She said she had tried talking to the principals "but they can't remember how we got $100,000 insurance."

There was no public focus on the increased insurance as the legislation progressed. In the March 3, 180 issue of *American Banker* there was a long article titled: "Tentative Compromise Reached on Reg Q Bill."

You had to jump to page 20 and there it was, 123 lines into the story, a passing reference on the tentative draft agreement used by the confrees. The article said, in a long list of items:

"• Increase the Federal Deposit insurance ceiling to $75,000 from $40,000."

So that was the public expectation as the confrees went into their final hours of debate.

Insurance Issue Glossed Over

I could find little discussion of insurance in papers of general circulation. In addition to the *American Banker* report there was a mention in the March 10 *Washington Financial Reports*, buried deep in a four-page story.

It said: "The bitterly divided confrees worked for over two hours March 4 and then 7½ hours March 5 before agreeing on major reforms which often had only partial resemblance to the original proposals in either House or Senate." The story

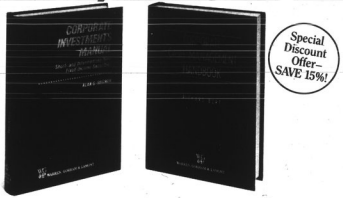
Managing corporate assets doesn't have to be a risky business.



Corporate Investments Manual and Corporate Cash Management Handbook

Corporate Cash Management Handbook and Corporate Investments Manual can take some of the hard work–and a lot of the risk–out of managing your corporate assets. Used together, or separately, the Manual and the Handbook are powerful no-nonsense, working tools you'll use *every* day.

Corporate Cash Management Handbook provides proven tools and techniques that will help you boost corporate profits, reduce interest costs, increase income, strengthen liquidity, and much more! The Handbook will show you how to:

- Take full advantage of EFTs and EDI
- Forecast funds, receipts, balances and disbursements
- Tap sources of liquidity buried in your firm's capital structure
- Extend float for better disbursement control

Corporate Cash Management Handbook–*the working* tool designed to help you build an efficient cash management system for concentrating funds, accelerating collections, and maximizing the funds of your firm.

Corporate Investments Manual is the first investment guide written specifically for the corporate financial officer. It covers everything from the operational procedures of a single trade to overall portfolio management.

Giving you the tools you need to understand *and* analyze securities, regulations, operational techniques, and determine which investment is best for your firm, Corporate Investments Manual offers expert guidance on:

- Choosing a reputable securities dealer
- Purchasing "registered" securities
- Reconciling risk versus return
- Evaluating credit quality
- Developing investment policies and guidelines

The 600-plus page Corporate Investments Manual shows you how to avoid many of the common pitfalls of investing...it's more than just a guide to investing–it's a guide to *smart, profitable* investing!

Take advantage of a special opportunity: review either, or both, books FREE for 30 days–without obligation. Keep one and pay just $98. Better yet, for a limited time only, review both and save 15%!

History Retold For S&L Crisis

Continued from page 19

quoted the U.S. League of Savings Associations in praise of the bill, citing the $100,000 insurance as being "particularly helpful."

So there is the record. Make with it what you will. Certainly the Congress raised the insurance. But just as certainly they did not think through the consequences and most members were idle bystanders, simply ratifying the backdoor deal cut by the conferees.

Deregulation Opens New Doors

The same legislation that gave us $100,000 insurance also allowed thrifts to invest up to 20% of their assets in consumer loans and in commercial and corporate debt securities. It was only a tiny crack in the door but it was a dramatic departure in practice and it whetted the appetite for more.

Two years later, in the Garn-St Germain Act, thrifts were allowed to invest up to 10% of assets in commercial loans, 30% in consumer loans, and 40% in commercial real estate. In short, they could embark on uncharted waters with 80% of their assets.

At the same time state legislatures roared ahead — particularly Texas, Maryland, Ohio, Florida, and California. When they were through, the thrifts were authorized to roll the dice with depositor money on just about anything. And they did.

Bank Board Chairman Ed Gray's pleas for more examiners were answered by the Administration with cutbacks throughout the 1980s, an irresponsible action as the cracks begin to appear in the facade that all was well.

"Thrifts were authorized to roll the dice with depositor money on just about anything. And they did."

At a time that cried out for more supervision, the administration policy was to stand aside.

Now the Congress blameless. The Garn-St Germain Bill lowered safety and soundness standards and allowed what I call fraudulent accounting practices like trading pieces of paper and calling it capital. Then the Banking Act of 1987 expanded the problem by permitting borrowings with government guarantees and other provisions to keep insolvent thrifts operating and to permit sales with enormous taxpayer subsidies.

The notorious Danny Wall disposal sales to beat an end-of-the-year deadline in 1988 were a product of this legislation. The Congress is pretty upset about some of these deals but just can't figure how to get their arms around them.

Hiding the Cost

Although it did not know the magnitude of the problem, the Administration did know there was one by the mid-1980s. Kathleen Day of the *Washington Post* quotes Treasury officials as knowing of an estimated $50 billion cost in 1987 but said they argued it "would be irresponsible to frighten the public" with the figures. The admission that there was a problem came the week following the 1988 election when presumably frightening the public was no longer a concern.

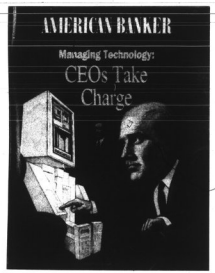
The first acknowledgment that the taxpayers would be hit came from Treasury Secretary Brady on June 14 when he said the Resolution Trust Corp. was going to run out of money and there was nowhere else to go.

What did the President know? Remember, it was Bush who chaired a massive study of financial institutions during the Reagan years. He must have known something.

The final Administration action that deserves to be questioned was its try to hide the costs by keeping them off-budget. In a scuffle with Congress, the Administration won the right to hide half the costs off-budget, but the other half was effectively hidden by not being charged against the Gramm-Rudman ceilings.

Meanwhile, the FDIC and the RTC continue to mop up the wreckage. Chairman Bill Seidman met and passed his goal of selling a big block of institutions before June 30. The remarkable thing is that, in the process, he was able to dispose of about 50% of the assets — and asset disposition is the problem that will be with us for decades. □

American Banker's
Fourth Annual Technology Survey



Get essential information on the changing dymanics of bank technology

American Banker has conducted an extensive survey of senior-level executives responsible for operations at more than 300 commercial banks and financial institutions. This Special Report features candid opinions, important statistical data and revealing analyses, to keep you on top of the banking industry's technological pulse.

Examine management issues, budget and allocation questions, and emerging technologies, such as expert systems and image processing. You can take a look at where banks buy their hardware and get a preview of the latest bank telecommunications systems.

- How satisfied are your peers with current technology and vendors?
- What do they foresee as the future opportunities?
- What influences spending and purchasing decisions in operations and technology?
- What are the strategic objectives behind investing in new technology?
- How involved are chief executives in their banks' technology strategies?
- With consolidation in the industry, what major technology areas are being merged?

Get the answers to these and many other questions in this fascinating chronicle of bank technology.

NY Pension Fund To Buy Securities

NEW YORK — The largest pension fund for employees of New York City said it will buy up to $100 million of mortgage-backed securities issued by the Federal National Mortgage Association, or Fannie Mae.

The securities will be backed by special loans designed for moderate- and middle-income families. Two local lenders – Norstar Mortgage Co. and Manhattan Savings Bank – will originate the loans.

"We hope this program will serve as a model for similar initiatives with pension funds throughout the nation," said Martin D. Levine, a Fannie Mae vice president.

The New York fund, called the New York City Employee Retirement System, said the program should make homeownership affordable for as many as 1,000 families. Eligible borrowers will be offered loans with down payments as small as 5%, compared with the 20% normally required.

The two lenders are to buy mortgage insurance from the New York City Rehabilitation Mortgage Insurance Corp., exchange the loans for Fannie Mae securities, and then sell the securities to the fund. □

Changing Industry Will Have Fewer Banks, Experts Agree

By DONNA SMITH
Reuters

WASHINGTON — Banking industry analysts and observers, from the Federal Reserve Board on down, are convinced that the number of U.S. banks will shrink dramatically in coming years.

Less certainty exists about the extent of this expected consolidation and on how many institutions – particularly small ones – will be left in the end.

Fed Governor John LaWare said he sees the current total of 12,500 individually chartered commercial banks shrinking to 7,000 as earnings pressures persist and geographical-legal barriers are dismantled.

'Dramatic' Consolidation

But industry watcher R. Dan Brumbaugh, currently under fire for his outspokenly critical assessment of the Federal Deposit Insurance Corp.'s health, is less exact.

"I don't think anybody can predict what the consolidation is going to be, except that it is going to be dramatic," said Mr. Brumbaugh, senior research scholar at the Center for Economic Policy Research of Stanford University.

Mr. LaWare, who was chairman of Shawmut National Corp. before joining the Fed in 1988, said he does not agree with some banking analysts who suggest that a handful of large banks with nationwide branch networks – similar to the systems in Europe and Canada – would be sufficient.

Fed Governor John LaWare said he sees the current total of 12,500 individually chartered commercial banks shrinking to 7,000 as earnings pressures persist.

"There is always going to be a very strong and lucrative market for independent banks."
John LaWare
Federal Reserve Board

Independent Banks' Survival

"I think that's a mistake," Mr. LaWare said in an interview. "There is always going to be a very strong and lucrative market for independent banks who provide a unique kind of personalized service to a community.

"They are tough competition for the branch of a big bank from somewhere else."

The current U.S. banking structure evolved in response to thousands of bank failures of the 1930s. Federal and state laws tended to protect small banks from outside competition. Even so, the number of banks in the United States has declined by about 2,000 in the last five years.

Although most states are in regional compacts that allow banks to expand across state lines within their own regions, fully nationwide banking does not exist in the United States.

Legislation has been introduced that would grant full interstate branching rights, and the issue may be reviewed next year as Congress considers modernizing U.S. banking and reforming the federal deposit insurance system.

Lawmakers are under pressure to reform the insurance system after widespread failures in the savings and loan industry depleted the thrift insurance fund, forcing a taxpayer-financed bailout. Savings and loans operate under a regulatory structure separate from that for commercial banks.

Meanwhile, with banks facing greater competition from investment houses and other nonbank companies, the Bush administration is expected to propose a series of reforms, including new investment powers for banks, as a way to help U.S. banks compete in global markets.

Deposit Insurance Reform

The proposals are expected to be part of a study of the deposit insurance system that is to be completed by February. Small bankers are worried that limiting insurance coverage, currently at $100,000 per account, would draw deposits away from them and toward big banks, which the government historically has been reluctant to let fail for fear it would jeopardize the entire system.

On top of these possible changes, federal banking regulators are likely to push for banks to hold bigger capital cushions against potential losses. The drive for more capital will encourage mergers.

Seidman Sees Pressure

Federal Deposit Insurance Corp. Chairman L.) William Seidman said he agrees that the commercial banking system is under pressure but does not see a looming repeat of the savings and loan crisis.

"I would hope that we go to full interstate banking," Mr. Seidman said in a recent interview, however. "We need it for stability of the system. I don't think that's the end of small banks, but it is the end of small banks that can't compete." □

West's Banks Review Ties to Those in Gulf

Continued from page 2

of the big Japanese banks have cut lending and foreign exchange lines to the Gulf, but the decision to do so depends on individual banks' judgment.

Some Japanese houses are eager to extend business with the Middle East and see the crisis as an opportunity to build relationships, others say the area is too dangerous, he added.

The U.S., U.K., and continental European banks have a longer relationship with Arab institutions than Japanese houses, said Patrick Moon, economic adviser on the middle east at Lloyds Bank.

Some Charging Risk Premium

Joachim Helenius, head of foreign exchange sales at Merrill Lynch International Bank Ltd, said banks which charge a high risk premium for trading with Gulf banks probably do so because they lack a relationship or do not expect to be repaid.

The rush to change into U.S. dollars is now over.

"It all depends on how you view the future," he said.

"Our view is the Middle East is an important region and will continue be so in the future." Once the crisis is over, banks which showed loyalty would be appreciated.

Angry Bankers in Bahrain

Meanwhile, bankers in the Gulf said bankers in Bahrain are angry at having been included, even under temporary review or as exempted institutions, in the Aug. 5 U.S. Freeze list.

"Just being on the list cast a shadow on the banks," a banking source in the Gulf said.

Meanwhile, bankers say the initial move to withdraw Gulf bank deposits and the rush to change into U.S. dollars is now over. □

Boatmen's Approves A Takeover Defense

ST. LOUIS, Mo. — Boatmen's Bancshares Inc. said its board adopted a shareholder rights plan, or poison pill, giving stockholders as of Aug. 31 a dividend distribution of one right for each share held.

Each right entitles shareholders to buy one one-hundredth of a share of a new junior participating preferred stock, Series C, at an exercise price of $110. The rights can be exercised 10 days after a person or group acquires 20% or more of Boatmen's outstanding shares.

The $14 billion-asset Boatmen's said the plan was not in response to any takeover threat but to protect the company from coercive tactics. — **Reuters**

Gulf Turmoil Threatens $2.7 Billion Sale of Junk Bonds

Continued from page 2

a recession.

The insolvent Columbia Savings entered the agreement with Gordon on July 25, in a deal that called for Gordon America LP to pay $300 million in cash and execute a $2.7 billion note carrying interest at an annual rate of 10.5%.

Federal Requirement

Columbia must sell its junk bonds to meet federal requirements that all savings and loans dispose of such securities by 1994.

The company had been trying to find one buyer for the portfolio. Thrift analysts have said that Columbia's weakened financial position makes it a prime candidate for takeover by the Resolution Trust Corp.

However, analysts believe that regulators would prefer to see the portfolio sold before they

Gordon Investment shareholders include the Kuwait Investment Office, whose assets were among those the U.S. froze after the invasion.

move in, to avoid doubling their already large holdings of junk bonds.

According to the 10-Q, the parties have until Sept. 20 to gain the necessary regulatory approvals.

Because of the complexity of the deal, which includes Columbia's providing the $2.7 billion note involved in the financing of the deal, regulatory waivers and forebearances are also required, the filing said.

If they are not obtained, it said, Gordon has the option, but not the obligation to withdraw.

That option also could be triggered by a decrease of more than 7.5% in the Merrill Lynch high-yield bond index.

Columbia reported a net loss of $136.5 million, or $6.78 a share, for the quarter that ended June 30. In the comparable 1990 period it earned $6.4 million, or 16 cents a share.

Kuwait Is a Partner

Gordon is a private partnership that counts among its shareholders Canadian Imperial Bank of Commerce; General Electric Capital Corp., a unit of General Electric Co., and the Kuwait Investment Office.

The Kuwait Investment Office's assets are among the Kuwaiti assets that were frozen by the United States after the invasion, along with those of Iraq. □

We helped Dollar and conquer.

What do you call a bank that's everything you see here? Profitable.

Dollar Dry Dock's new idea, to become a one-stop financial center, is made possible by networking from NYNEX.

The concept revolves around over 1,000 teller terminals and ATMs, on-line via NYNEX Digipath Digital Service from New York Telephone. Data lines are hubbed to our Central Office, then routed to the bank's mainframes via a high-speed T1 link.

NYNEX was also a one-stop shop for Dollar Dry Dock. The bank uses TRU SYSTEM telemanagement software from our Telco Research subsidiary. They use the NYNEX INTELLIPATH II Digital Centrex Service from New York Telephone. And they got their Datastar telephone systems from NYNEX Business Information Systems Company. As you'd expect, we take responsibility for ongoing maintenance and support.

NYNEX would like to work with you, too. We offer everything from communications and information systems to the services of New England Telephone, New York Telephone, NYNEX Business Information Systems Company, Telco Research, and the other NYNEX companies. Call us at 1 800 535-1535.

Once you've discovered the answer is NYNEX, you won't have to keep shopping around.

Ex-Broker Gets 15 Years in Loan Fraud, Must Pay $71 Million

LOS ANGELES (UPI) — Lamenting that the billions of dollars being paid to bail out failed savings and loans could have alleviated poverty and homelessness, a federal judge has sentenced a former securities broker to 15 years in prison and ordered him to repay nearly half of $144 million in losses from a mortgage loan scheme.

U.S. District Court Judge Dickran Tevrizian imposed the sentence Aug. 20 and ordered $70.7 million in restitution from David Feldman, 50, a Vietnam War veteran and top graduate of the U.S. Military Academy. The penalty is believed to be the largest ever ordered of an individual in a thrift-related fraud case.

The restitution will be paid to Bank of America, which was trustee for most of the mortgage loans in the scheme, and absorbed the most losses, special assistant U.S. Attorney Sharon McCaslin said.

"It's time to pay the piper," Judge Tevrizian said, adding that the Feldman scheme was typical of the frauds that triggered the nation's multibillion-dollar savings and loan crisis. "The loss has permeated the country," the judge said, and the funds could have been better spent on alleviating "poverty and homelessness."

Sold Defaulted Mortgage Loans

Mr. Feldman, a resident of Palos Verdes Estates, Calif., was convicted June 8 on three counts of mail fraud and acquitted of two other mail fraud counts. Prosecutors said he masterminded an elaborate plan in which some $144 million in mostly defaulted mortgage loans were sold to 20 unsuspecting banks and thrifts in nine states between 1982 and 1984.

"This is not a situation where an investment went sour. This is a situation that was a scam from the beginning."
Judge Dickran Tevrizian, U.S. District Court

Mr. Feldman, through his brokerage firm, National Mortgage Equity Corp., and several business associates, pooled the mortgages and persuaded the lending institutions to invest in the pools with promises of high interest rates and guarantees they would be protected against borrower default. In actuality, 90% of the properties already were in default, and Glacier General Assurance, which was guaranteeing most of the loans, could not cover the losses.

"This is not a situation where an investment went sour," the judge said. "This is a situation that was a scam from the beginning."

Legal Costs Added to Losses

Prosecutors had sought $43.8 million restitution to cover losses suffered by Bank of America, but the judge ordered on $26.9 million in legal and other costs.

Prosecutors argued that Mr. Feldman, who graduated near the top of his class at West Point, habitually violated the oath he took there that "a cadet will not lie, cheat or steal."

Ms. McCaslin said, "David Feldman never stops [committing fraud], nor will he stop until he is behind bars, and even then the bureau of prisons has to be told to watch out for him."

The last remark was a reference to evidence that Mr. Feldman carried out part of the scheme while imprisoned in Boron, Calif., while serving time for a similar fraud he committed as a stockbroker for Merrill Lynch in Chicago in 1982.

"It doesn't matter how sophisticated the investors were. If you cheat 'em, you cheat 'em."
Judge Tevrizian

"He could have been a millionaire," Ms. McCaslin said. "He had the opportunity as one of the fair-haired boys at Merrill Lynch."

Codefendants Kent Rogers, 51, of Huntington Beach, Calif., and George Ash Jr., 45, of Alta Loma, Calif., pleaded guilty to five charges each and agreed to cooperate with prosecutors.

Defense lawyer Rodney Perlman claimed that National Mortgage Equity was not Mr. Feldman's brainchild, but was run by a cousin who never was charged. Mr. Perlman unsuccessfully argued against imprisonment or a restitution order, saying the lending institutions should have been more responsible with their investments.

"I don't believe that our system of justice is designed to throw away, to disregard a human life that has value, simply as a symbolic gesture," Mr. Perlman said. But the judge retorted that, "it doesn't matter how sophisticated these investors were. If you cheat 'em, you cheat 'em." □

Three Banks Sue Housing Agency in Texas over Junk Bonds

By JOHN RACINE
The Bond Buyer

DALLAS — Three banks have filed a class action against the Southeast Texas Housing Finance Corp., saying investors have suffered losses because the proceeds of a $300 million taxable issue were invested in junk bonds.

The Aug. 7 suit alleges fraud by the issuer, its underwriters, and an insurance company, saying they never intended to build homes for the poor.

Instead, the plaintiffs allege, the plan was to invest proceeds in a guaranteed investment contract sold by Executive Life Insurance Co., which made the money in high-yield portfolios that have fallen sharply in value.

Drexel Involved in Deals

The suit is the latest challenge to 1986 taxable bond deals that were lead underwritten by Drexel Burnham Lambert Inc. and invested in GICs sold by Executive Life of Texas, Nebraska, Tennessee, Louisiana, and Colorado. They total $1.85 billion.

The three banks suing say the housing agency purchased $1.22 million of the 1986 series securitized multifamily housing revenue bonds, which have recently traded for as little as 40% of par.

"As the defendants well know, however, none of the proceeds would ever go to develop any low- or moderate-income housing," the suit says. "In fact, all of the money would be deposited with an insurance company, which would invest most of it in high-risk junk bonds."

Others Named in Suit

The suit, filed in Hidalgo County district court, names the agency, which is based in Pasadena, Tex.; Executive Life and its president, Fred Carr; the underwriting team of the now bankrupt Drexel; Rotan Mosle Inc. of Houston; Howard, Weil, LaBouisse, Friedrichs Inc. of New Orleans, and Michael Milken, head of Drexel's junk bond department.

Bill Eiland, executive director of Southeast Texas Housing Finance, said he had not seen the lawsuit, but "the official statement plainly says it was going to be invested until we made loans."

No loans were ever made, a fact Mr. Eiland blames on a soft real estate market and economic conditions in Texas in the mid-1980s.

Investment Called Temporary

The plaintiff's lawyer, Eric Kobrick of the Houston firm of Susman Godfrey, said the investment with Executive Life was only supposed to be interim, "not for good."

"Right now, the allegation is that they [the housing corporation] are participants," Mr. Friar said. "It may be that they were duped."

Other defendants could not be reached for comment.

The three banks now listed as plaintiffs are, Texas State Bank of McAllen and Harlinger State Bank, which both bought $500,000 of the bonds, and First National Bank of Weatherford, which bought $250,000.

The suit is the latest challenge to 1986 taxable bond deals that were lead-underwritten by Drexel Burnham Lambert Inc.

Five other banks that bought the bonds reportedly may join the suit. Mr. Friar said his firm also has launched class actions over the deals in Nebraska and El Paso, Tex.

Wide-Ranging Scheme Alleged

The latest suit alleges that the housing agency bonds were part of a wide-ranging scheme.

"Drexel and Milken and the other defendants were able to engage in a vast 'shell game,' in which high-risk, low-rated junk bonds were marketed under the guise of low-risk, high-rated (usually AAA -- the highest rating) municipal bonds," the suit says. "None of the offering materials ever disclosed to investors that their money would end up in junk bonds."

The lawsuit seeks unspecified damages to compensate investors who claim their bonds have been trading for between 40% and 60% of par because of the high-risk investments.

But the trading price of those bonds was pushed as high as 65% of par value earlier this month after the Southeast Texas Housing Finance Corp. issued a letter saying it was targeting two ways bondholders might hold losses down.

Word of the tentative offer, which was not related to the lawsuit, pushed the value of the bonds up six to 10 points, to a reported high of 66.

Mr. Eiland said he was awaiting a response from bondholders and stressed that Executive Life had not approved the letter's proposals. "We're trying to take a more active role in resolving this," he said of the letter.

Proposal to Withdraw Funds

The proposal is to withdraw funds from the GIC at a discount and use the money to purchase bonds from investors who want to liquidate their position.

"This approach could provide funds to purchase up to $220 million face amount of bonds at a price of approximately 88% of par," the letter says. "No provision would be made for early payment of the remaining $80 million of the bonds."

A second option suggests approaching Executive Life about purchasing any and all bonds for sale. This proposal still would bring the par-price much but be above current market value, the letter says.

"Any program would be voluntary, and any bondholder could elect to simply hold its bonds to maturity," the proposal adds.

The Bond Buyer *is a sister* ***publication of the American Banker.***

INB Financial And Mid-Illinois Amend Merger

INDIANAPOLIS — INB Financial Corp. and People's Mid-Illinois Corp. said they amended their previously announced merger agreement. Under the amended plan, each Mid-Illinois share would be worth $40.88 and the whole merger $51.8 million.

The number of INB shares to be exchanged for each Mid-Illinois share would vary between 1.3857 and 1.3626, depending on INB's average stock price for a 20-day trading period ending five days before the merger is consummated, the companies said.

If INB shares are trading at an average above $30, the exchange ratio would be 1.3626, while if the shares' average value falls below $29, the exchange rate would be 1.3857, the companies said. Also if INB stock's average value falls below $28 during the trading period, the companies may renegotiate or terminate the agreement, INB and Mid-Illinois said.

Under the old agreement, the whole transaction was valued at $50.3 million and each of Mid-Illinois' 1,267,177 shares were valued at $39.83, the companies said.

The amended agreement, which is set to be terminated if the merger is not completed by Dec. 31, 1991, is subject to approval by INB directors, the companies said. — Reuters

VA Plans $293 Million Issue of Securities

Reuters

NEW YORK — The U.S. Department of Veterans Affairs said it has planned an innovative $293 million offering of mortgage-backed securities via First Boston Corp.

American Housing Trust VII will be the issuer. The securities will be backed by vendee loans, which the agency uses to finance purchases of VA-foreclosed property.

The issue is unusual in that it will comprise $97.6 million of pass-through certificates and $195.4 million of multiclass securities. Such issues are usually made separately. Actual proportions of the two parts will be decided only when the offering is priced Thursday.

Structure Aids Flexibility

The so-called proportional coupon allocation structure was designed to provide flexibility in marketing the offering, said Frederick Terrell, director of the investment banking group at First Boston.

As investor demand fluctuates for the pass-through or multiclass portion, the par amount will be shifted between the two parts.

"As investor demand increases or decreases for the pass-through or multiclass portion, we will shift the par amount between the two parts, he said.

Mr. Terrell said he expects the pass-throughs to trade at a tight spread to Government National Mortgage Association securities investment banking group at the full faith and credit of the U.S. government.

This is the second VA issue with full government backing.

Yields to Top Ginnie Maes'

The pass-throughs will have a coupon of 9.5% and a 12.7-year average life. They will have higher yields than Ginnie Maes only because they are less liquid, Mr. Terrell said.

The remainder of the offering will consist of four tranches with maturities of three, seven, 10, and 20 years. Their average lives will be 3.4, 7.6, 11, and 20.5 years, respectively. All the classes have a 9.125% coupon.

The vendee loans underlying the offering have coupons of 9%, 9.5%, and 10%, Mr. Terrell said. These will be combined to produce a synthetic coupon of 9.25%. □

Lamar Savings Officers Indicted

AUSTIN — A federal grand jury has indicted four former executives of now-defunct Lamar Savings Association for alleged misapplication of $121.1 million in thrift funds, a federal prosecutor said.

The 14-count indictment charged that the executives, including former Lamar Savings owner Stanley Adams, tried to conceal the bank's financial problems by arranging "sham" loans to buy repossessed real state properties from the institution's portfolio, U.S. Attorney Ronald Ederer said.

"Lamar is one of the most notorious failures in the Southwest and among the top 100 S&L fraud cases that the Justice Department is now aggressively investigating," said Timothy Ryan, director of the Office of Thrift Supervision.

Lamar Savings had $2 billion in assets when it collapsed in 1983. It grew rapidly before the fall by offering some of the highest rates of deposit in the country.

It failed under the weight of bad real estate loans when a decline in oil prices in the Southwest board continues to be unresponsive to stockholder interests and has failed to take steps to maximize stockholder values.

Mr. Malloy said he holds 300,000 shares, or 9.28%, of the outstanding stock. The company owns Home Federal Savings Bank, Ridgewood, N.Y. — Reuters

NY Bancorp Investor Seeks a Proxy Contest

WASHINGTON — Patrick Malloy, an investment director of New York Bancorp Inc., said he is considering the possibility of a proxy contest to elect his own candidates to the board at the company's annual meeting of shareholders.

In a filing with the Securities and Exchange Commission, Mr. Malloy said he believes the

COMMENT / MERGERS

Midwestern Banks Are Continuing to Outpace Others in Consolidations

By REID NAGLE
President
SNL Securities

Despite a slowdown in the pace of private sector bank consolidations in most areas of the country, bank and thrift mergers in the Midwest continue at a level unmatched in other regions.

Nationally, the aggregate assets exchanged in private sector bank mergers and acquisitions declined from $48.43 billion in the third quarter of 1989 to $18.65 billion in the second quarter of 1990. Since the beginning of 1989, however, transactions involving midwestern acquisitions have represented a disproportionate share of bank consolidation activity.

While midwestern banks account for 22.46% of all banking assets nationwide, midwestern bank acquisitions have accounted for 32.3% of all private deals since the beginning of 1989. During that period, the number

A significant number of deals involve merger-conversions.

of deals in the Midwest outpaced consolidation activity in every other region.

Two Typical Deals

Two deals in the past month typify the midwestern banking activity. On July 26, Norwest announced plans to acquire United Banks of Colorado. Less than two weeks later, Firstar replaced First Bank System as the acquirer of Banks of Iowa. Both deals involve values in excess of $200 million.

The concentration of deals in the Midwest reflects the favorable characteristics of banking in that region as well as the traumas afflicting other areas. Asset quality problems in the Northeast and, to a lesser extent the Southeast, have discouraged potential suitors from venturing forth there.

Institutions in California and the Pacific Northwest, while exempt from real estate woes until just recently have traded at premiums that limited buyer interest.

The Midwest combines the unusual blend of a relatively low level of delinquencies in its banking system with a pool of high-quality buyers. Institutions like Banc One, Fifth Third, First of America, National City, NBD Bancorp, Norwest, and Society Corp. each have the management skill, asset quality, and capital resources to expand internally and through acquisition. No other region, with the exception of the Southeast, has as many qualified buyers.

Most in Good Shape

Similarly, with a few notable exceptions like First Bank System, First Chicago, and the former Trustcorp, banks in the Midwest are in remarkably good shape. As of June 30, nonperforming assets at midwestern institutions stood at 1.26% of assets, the lowest of any region and well below the national average of 2.33%. In a marketplace of wary buyers, a clean balance sheet has become as important as price in determining the salability of a bank.

Of 91 private acquisitions recorded in the Midwest since the beginning of 1989, 61 have involved sellers headquartered in Illinois, Indiana, and Ohio. Based on volume of assets acquired, Illinois and Ohio are first and second respectively, followed by Minnesota, Iowa, Wisconsin, and Indiana.

A Popular Route

More than any other region of the country, a significant number of deals involve merger-conversions, in which a healthy bank acquires a mutual thrift by offering its shares to depositors of the mutual institution. Sixteen of the 91 transactions involved merger-conversions.

While clean balance sheets and attractive pricing make acquisitions feasible, there are three dominant strategies that compel buyers in the Midwest. The first is the advent of interstate banking, which enables growth-minded banks to serve economically defined markets instead of locations defined simply by political boundaries.

A second common rationale for acquisition is the ability for successful banks that have outgrown their market areas to export their capital and skill to new ones. Finally, in the case of merger-conversions, buyers have discovered the ability to acquire attractive franchises and equity at no cost, an antidilution combination that seems almost too good to be true.

The Most-Active List

Among the most active acquirers in the Midwest are five institutions from four states that have accounted for 22 of the 91 deals announced since the beginning of 1989 and for a third of the assets involved. While these companies represent a diversity of business strategies, each has the capital and management expertise necessary to conduct an aggressive expansion program.

Three of the five most active buyers – Merchants National of Indiana, First Financial Bancorp, of Ohio and First of America of Michigan – compete with each other for marketplace penetration in Indiana. Of the other two institutions, Norwest is a national player, recently announcing acquisitions in five different states. Fifth Third, with a reputation as a selective buyer, has not announced an acquisition since the third quarter of 1989.

In general, the prices these companies have paid to actively expand their franchises have exceeded the average price paid for midwestern institutions. Price to book value for all Midwest acquisitions announced in the past 20 months has averaged 133%, compared with 163% for the five most active institutions.

Price-to-earnings and premium-to-tangible book as a percent of core deposits show a similar willingness on the part of active acquirers to pay up to achieve their objectives.

One of the interesting developments has been the intense competition generated in the Indiana market. Merchants National and INB Financial are the state's two largest independent banking companies. Of the two, Merchants National has been the most aggressive in expanding its franchise through acquisition during the past two years.

"The Midwest combines the unusual blend of a relatively low level of delinquencies and a pool of high-quality buyers."

Merchants National began its program in 1985, initially focusing its interest on the central belt of Indiana. At that market filled, Merchants expanded into the northern and southern tiers of the state, effectively becoming a statewide institution in the process.

In the past 20 months, Merchants has announced five acquisitions, all of them banks and all less than $200 million in assets. Most recently, it announced its first out-of-state acquisition, $185 million-asset Palmer Bancorp of Danville, Ill.

Filling In Existing Markets

According to company spokesman Kenneth Carr, the primary strategic motivation for Merchants' acquisitions is to fill in markets within their 17 bank network, while the primary financial objective is to implement efficiencies that will make an acquisition antidilutive within a relatively short time. Merchants "allows banks to maintain [their] name and market autonomy" while consolidating back-office operations.

At the same time that Merchants is expanding its Indiana franchise, two out-of-state institutions have been aggressively moving into the state to extend their Michigan and Ohio operations. First Financial Bancorp, a $1.2 billion-asset bank holding company based in western Ohio, seeks to "affiliate with institutions with the same company orientation" according to Richard Weinman, chief financial officer.

While First Financial's original goal was to build share in the western Ohio markets, the advent of interstate banking enabled the company to expand into more natural geographic markets in eastern Indiana.

Big Plans for Two Thrifts

In order to penetrate the Indiana markets, First Financial has announced plans to acquire two thrifts, Fidelity Federal of Marion and Fayette Federal of Connersville. First Financial plans to leave the acquired thrifts with savings institution charters, but hopes to significantly enhance their profitability by luring new and more profitable customers and by introducing a broader array of services.

Somewhat like Union Planters to the south, First Financial gave acquired managements a high degree of autonomy, relying on performance objectives to bring their return up to First Financial's consistent return on assets of 1.3%. Mr. Weinman attributes First Financial's success in attracting affiliates to the appeal of autonomy, common operating philosophies, and a fair price to shareholders. "Autonomy and philosophies get us in the door, but in the end price gets the deal done," he said.

The third active participant in the Indiana merger market in the past two years has been First of America, a $12.7 billion-asset bank holding company based in Kalamazoo, Mich. With a risk-based capital ratio of 11.5%, a negligible level of nonperforming assets, and profits that consistently exceed 1% of assets, First of America has the financial characteristics necessary to support its aggressive acquisition program.

Selling 'Community Banking'

According to First of America vice chairman Richard Klein, the company outgrew its Michigan opportunities and sought to export its "community banking focus as [First of America] moved out of Michigan into Indiana and Illinois."

All of the company's acquisitions are "culturally attuned to First of America's operating philosophies and are located in conservative communities with midwestern values." The holding company's 38 subsidiaries tend to be located in smaller communities of Michigan, Illinois, and Indiana and specialize in middle-market commercial banking and consumer banking. Since moving beyond Michigan in 1986, First of America has become the dominant player in downstate Illinois.

Much like First Financial in Ohio, First of America has identified thrift targets as an avenue of expansion into desirable markets. Its acquisition of Primebank gained entry into the attractive Grand Rapids market and the expected acquisition of Shelby Federal will move it into Indianapolis.

First of America's Mr. Klein believes that the current problems of the thrift industry will work to buyers' advantage in increasing the supply of saleable franchises and lowering buyers' price expectations. As for the future, First of America plans to continue its practice of buying community banks and thrifts that suit their customer profile.

That might include acquisitions of varying sizes within Michigan, Illinois, and Indiana. Given the right opportunity to enter Wisconsin or Ohio, the company might consider a larger acquisition in those two states.□

Banks Welcome Court Ruling on Liability for Environmental Cleanups

By STEPHEN KLEEGE

A new ruling from an appeals court in Portland, Ore., implicitly rejects a controversial ruling made earlier this year in Atlanta that alarmed bankers by lowering the standard for lender liability in environmental cleanup, according to liability lawyers.

Lenders could breathe a small sigh of relief, lawyers said.

"If I were a lender, I'd feel a whole lot better after this decision," said liability lawyer Edward F. Mannino of Edward F. Mannino & Associates, Philadelphia.

Consistent with Lower Court

Although the U.S. Court of Appeals for the 9th Circuit in Portland sidestepped making its own ruling on the issue raised by the U.S. Court of Appeals for the 11th Circuit in the important Fleet Factors Case, its reasoning appeared consistent with lower court rulings that required active participation in management by the lender as a precondition to liability, lawyers said.

The 11th Circuit astonished many observers by asserting the unit of Fleet/Norstar Financial Group, Providence, R.I., could be held liable merely because it was in a position to influence the management of a plant it had financed in Georgia.

"This court has looked at the reality of banking practices and said 'this is the way lenders do business, and there's no reason they should be held liable,'" Lawrence Schnapf, of Lord Day & Lord, Barrett Smith, said of the latest case. "I hope its going to serve as a model for future decisions."

In rejecting a claim of liability against the Port of St. Helens, which issued bonds to finance a now defunct metal recycling plant, the 9th Circuit noted the earlier 11th Circuit decision, but said, "We leave for another day the establishment of a Ninth Circuit Rule on this issue."

Management Role Crucial

More significantly, the court added, "It is clear from the statute that, whatever the precise parameters of 'participation' there must be some actual management of the facility before a secured lender will fall outside the exception."

The court also rejected the argument that the the Port's input in the planning of the facility constituted participation in management. "Creditors do not give their money blindly," the court said.

At issue in the court cases is the interpretation of the Comprehensive Environmental Response, Compensation and Liability Act, known as the Superfund law. The law provides that a property owner is liable for environmental cleanup, but exempts lenders who hold indicia of ownership to protect a security interest.

Outcry Prompts Change

The outcry over the Fleet Factors decision eventually prompted the Environmental Protection Agency to say it would amend its rules to clarify lender liability. At the same time, bankers stepped up their lobbying for new legislation to limit their exposure to the claims.

They argue that the uncertainties surrounding lender liability has discouraged lending on certain kinds of businesses.

Fleet has said it would petition the U.S. Supreme Court to hear its appeal of the 11th Circuit ruling.

Mr. Mannino said the new decision in the 9th Circuit, while significant, will not improve Fleet's chances of being heard by the highest court, because the the 9th Circuit stopped shy of issuing a ruling that contradicted the other circuit court. □

New Jersey Approves Trump's $65 Million Bank Loan

ATLANTIC CITY — The New Jersey Casino Control Commission said Tuesday that it has approved Donald Trump's $65 million loan agreement with his bankers.

The commission supported the agreement unanimously but made its approval subject to 13 conditions agreed to by Mr. Trump and the New Jersey Division of Gaming Enforcement.

Valerie Armstrong, acting commission chairwoman, said the restructuring was "not a total solution" to Mr. Trump's financial problems.

No Inquiry on Casinos

Ms. Armstrong said the commission was approving the Trump loan agreement without inquiring into the financial stability of his three Atlantic City casinos. "It is surely our obligation to conduct that inquiry as quickly as possible," she said.

The commission will schedule a combined hearing on all the licenses in October, Ms. Armstrong said. Mr. Trump's Taj Mahal casino license expires in April 1991.

The state gaming enforcement agency said Friday that, without the loan agreement, the Trump organization's financial outlook was uncertain and that problems would remain even if the agreement were approved.

Ms. Armstrong said she supported the bank loan restructuring because, without the agreement, the equity in Mr. Trump's casinos could be reached by creditors with claims against his non-casino assets. It was also unlikely, she said, that rejection of the loan deal would lead to a better restructuring that did not include a pledge on the casino equities.

The gaming enforcement agency has said it does not believe Mr. Trump can make a $47 million bond payment due Nov. 1 under current conditions. One condition of commission approval of the loan deal was that Mr. Trump submit within three weeks a plan for making the bond payment.

Casino commission approval of the loan deal was needed because Mr. Trump had, as part of it, pledged his equity in the casinos as collateral.

After the meeting, Trump Organization executive vice president Harvey Freeman told reporters that he expected Mr. Trump to get the $65 million bank loan Tuesday or today. □

Morison Resigns from Bank of Boston

Continued from *page 1*

Mr. Morison said in a telephone interview, "It's been an exciting, magic about leaving now. It seems to be as good a time as any."

Mr. Morison, who is known as Lin, said he is pursuing personal opportunities, including positions in academia. His father was president of Williams College in Waltham, Mass., and Mr. Morison said he would not mind following a similar career path.

Described as a Mentor

In a memorandum circulated to employees last Friday, Bank of Boston's chairman and chief executive Ira Stepanian described Mr. Morison as a "mentor to many of our current lending officers." He said Mr. Morison would be temporarily replaced by Slater Smith, senior credit officer for the national banking group. The bank is reviewing candidates for a permanent replacement, he said.

As executive vice president responsible for national banking, Mr. Morison was responsible for the bank's HLT portfolio.

Profits Plummet

Bank of Boston, the nation's 16th-largest holding company, with $37 billion in assets, earned a $4 million profit in the second quarter, 96% below its year-earlier level.

Last October, Bank of Boston signed a memorandum of understanding with the Federal Reserve Bank and the Office of the Comptroller of the Currency promising to upgrade its systems, procedures, and credit controls.

Although Bank of Boston has been criticized in the past year over the souring of leveraged loans to local companies such as Cuisinarts and Prime Computers, Mr. Morison has repeatedly denied reports that the bank is withdrawing from the leveraged market.

Bulging HLT Portfolio

At the end of the second quarter, Bank of Boston's HLT portfolio stood at 200% of equity, one of the highest ratios among the nation. In the quarter, the company charged off $68 million of its highly leveraged loans and $89 million of its real estate loans.

Mr. Morison conceded that the business has trailed off substantially. "There really has not been much going on," he said. "But from a business point of view, we will continue to pursue transactions, whether HLTs or not, in a manner that's consistent with our historical guidelines."

Mr. Morison joined Bank of Boston in 1965 as a trainee after working for two years as an auditor at Peat, Marwick, Mitchell & Co. Aside from 10 months in which he went to work for a bank customer in the early 1970s, Mr. Morison has spent the rest of his career as a corporate banker.

He was named vice president in the credit and loan department in 1973, senior vice president in 1980, and head of the corporate lending division in 1986. In his latest job as group executive, he was responsible for lending to major corporations throughout the nation, for serving dle-market companies outside of New England, and for most of the company's investment banking operations.

A Loyal Following

At Bank of Boston, Mr. Morison is seen as a loyal following among younger loan officers in his role as head of training within the credit and loan department.

"We will miss him dreadfully because he's so smart and was so great at rallying the troops with a coherent message," said one longtime lender. She would not speculate on his reasons for leaving, though she added that pressures from top management and from regulators undoubtedly played a role.

"I know how I'd be feeling if I were in his shoes," she said. □

Bank Stock Table Explanation: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the dollar value of their stock traded and shares outstanding. As of June 30, 1990, the market value cutoff for banks was $96.7 million, and for thrifts it was $47.8 million. The 52 week high and low prices do not include the latest trading day. PE the price-earnings ratio. It is the current stock price divided by the company's annual earnings per share, using the latest announced earnings. Mkt Cap is the market value of the company's outstanding stock, expressed in millions of dollars. Chg. The price at which the stock last traded, if no trades, the bid price. Chg. The change in price and Thrift Indices: A weighted average of the top 250 banks in market value and the top 50 thrifts in market value. Explanation: highlights show largest percent gainers/losers in price; and two volume leaders are listed, ranked by dollar volume as a percentage of average shares traded daily over the past year.

Data sources: SNL SECURITIES, Charlottesville, VA. 804-977-1600; and Interactive Data Financial News Network, Vienna, VA. Provides SNL with the daily prices.

STOCKS
Selloff Crimps Once-Favored Bank Shares

By GORDON MATTHEWS

NEW YORK — Major banks' stocks sold off sharply Tuesday, and many reached new lows as the market plummeted on investor fears that the Middle East crisis will lead to both inflation and a shrinking economy.

Well-regarded institutions led the way down, including those in California; that continued a trend that began four trading sessions ago.

Chicago's Northern Trust Corp. and New York's J.P. Morgan & Co. were among institutions whose share prices reached new 52-week lows. Northern was off $1.25 a share, to $23.75; Morgan, 50 cents, to $32.75.

"It looks like a lot of profit-taking again," said Virginia A. Adair, a banking analyst at the capital markets subsidiary of Merrill Lynch & Co. "I keep hoping a bottom will appear for the banks, but I can't see it happening right now."

West Coast Slowdown Feared

The big California banks posted major declines on fears that the West Coast economy, only recently seen as vibrant, is now beginning to slow down.

Security Pacific Corp., Los Angeles, was off $1 a share, to $27, in midafternoon trading. Its stock price has fallen 27% since June 30.

Meanwhile, Wells Fargo & Co., San Francisco, was off $1.875 a share, to $55.25, a decline of nearly 30% in the same period. It also reached a new yearly low.

The California banks were among the last in the industry to be hit as part of a general slide in bank equities, "so they have been down the most recently," said Carole Berger, a banking analyst for C.J. Lawrence, Morgan Grenfell Inc.

Higher Prices, Rates Seen

"Right now, the whole market is afraid of higher energy prices and higher interest rates," Ms. Berger said. "And for banks, the market fears that if the U.S. economy is just now entering a recession then the weakening credit cycle is not limited to this year."

Ms. Berger said she could not predict a bottom for bank stocks. "The problem is still one of valuation and especially if we are moving into a recession," she said.

The overall mood in the stock markets was bearish, too. The Dow Jones Industrial Average was off about 50 points in late afternoon after dropping more than 70 points earlier in the day.

Reacting to Mideast News

"The market is just so skittish that news coming out of the Middle East dictates direction in 10-point and 20-point blocks," Thomas Walsh, head of the trading desk at Nikko Securities told Reuters. "There are no moves on sound fundamentals."

Among other well-regarded banks suffering sharp declines were First Wachovia Corp., Winston-Salem, N.C., off $1 a share, to $37.625; Banc One Corp., Columbus, Ohio, off $1.375, to $24.50; and Republic New York Corp., off $1, to $43.625.

First Union Corp., Charlotte, N.C., also touched a new low Tuesday. Its shares were off 75 cents, at $14.875.

An exception to the general decline for well-regarded banks was posted by CoreStates Financial Corp., Philadelphia. It gained 12.5 cents a share, to $32.50, after announcing a stock repurchase program.

The company said it would buy up to 1.1 million of its 55 million common shares outstanding. It noted that these purchases would be in addition to shares acquired for stock options and other award plans and in exchange for outstanding convertible securities.

CoreStates said the purchases will be made on the open market from time to time based on market conditions. □

CAPITAL
Pullback from Dividend Investment Plans

Continued from page 1

tan Corp. and Chemical Banking Corp. learned about arbitragers' interest in discount dividend reinvestment programs earlier this year, when their stocks' prices dropped sharply during pricing periods.

Accordingly, banks are reexamining the dividend reinvestment programs they offer.

For example, Chase and Chemical both revamped the programs they have, and Chemical actually ended the discount feature for nonemployees.

And now First Interstate has followed suit. "It was the price of our stock and the very agitated market we are in," said Thomas Marrie, executive vice president and chief financial officer. "We were concerned that the arbitragers who participate in the program would drive the stock price down even further."

Mr. Marrie added that the capital raised under the program is not needed now. "Even after we've suspended this plan, we still are very confident we will meet our capital target by the end of the year," he said, referring to the 6% ratio of tangible common equity to assets.

Stock Price Depression

The extreme depression of bank stock prices suggests that banks should reexamine dividend reinvestment programs, said Jo Charles Peabody, a vice president at Kidder, Peabody & Co.

Because most banks already meet the minimum capital requirements, there is no reason they should be issuing stock at prices below book value, he said. "I think banks are going to be forced to look for more creative ways to raise capital."

But not all banks with discount dividend reinvestment programs will follow suit.

Fleet/Norstar Financial Group, for instance, has had a discount dividend reinvestment program in place since its merger with Norstar Bancorp. in 1988, said Richard R. Pannone, treasurer.

Richard R. Pannone
Fleet/Norstar

The program lets shareholders buy stock at a 5% discount to the market price, defined as the average price over a 10-day period. To supply program participants, Fleet can issue shares or use shares it repurchases in the secondary market.

Maintaining Flexibility

Fleet's program has not served to raise capital in the past year, Mr. Pannone said, because the capital-rich bank has often provided investors with repurchased shares rather than new shares.

But the bank, based in Providence, R.I., has no plans to change the program, he said. "You have to have a program in place for the flexibility of being able to raise new capital if you need to."

A treasury official at another regional bank concurred. If the costs associated with a public stock offering – the underwriting fee, the market's negative reaction to news of a stock offering, and the management time spent engineering the issue – are taken into account, a dividend reinvestment program begins to look more attractive, he said.

Capital Requirements

And because higher capital requirements may on the horizon, other banks may also want to keep the programs open as a means to raise capital, said Merrill's Mr. Kraushaar. "Most managements are looking over their shoulders at the possibility of higher capital requirements being imposed after 1992," he said.

And even First Interstate is not ruling out an eventual reinstatement of its program. Mr. Marrie pointed out that his bank has suspended the discount and cash option portions of the program only for the quarter.

"We are keeping our options open," he said. "If market conditions change, we could change." □

* * *

MARKET MONITOR

Continental Bank, a subsidiary of Continental Bank Corp., is premarketing $100 million in 10-year subordinated debt. Price talk on the offering, which will be lead managed by Goldman, Sachs & Co., is for a yield 235 to 240 basis points over comparable Treasuries.

The offering is Continental's first trip to the long-term bond markets since it was rescued by the Federal Deposit Insurance Corp.

Continental's offering is also noteworthy in that it is bank-level funding. Banks typically issue debt at the holding company level so they can channel the proceeds where they are most needed. But bank-level financings can often prove less costly – an important consideration in today's bear market for bank bonds. □

FINANCIAL TECHNOLOGY UPDATE

The Electronic Forms Workstation is an effective tool for financial institutions. Laser printing technology, form design/processing software, and NCR's Client/Server Architecture combine cost-effectively and eliminate the need for the storage and warehousing of the preprinted forms.

The Electronic Forms Workstation's modularity enables it to be customized at both the forms development and the forms printing locations. Its essential run-time hardware components include NCR's 5067 or 5267 Financial Workstation, a choice of video displays, PC keyboards, and the NCR's 5037 Laser Printer. The NCR 5037 Financial Laser Printer is a high speed laser printer that can produce forms upon demand. Plus, a wide range of graphic features can be incorporated to enhance word-processing and desktop publishing.

NCR introduces a new account services terminal, the NCR 5663. The 5663 complements the functions of the traditional ATM and offers a wide range of account transaction capabilities. It provides full statements, passbook updates, and check re-orders. Plus, transfer of funds, payment of bills, and lists of direct deposits or debits.

The NCR 5663 ensures maximum up-time for 24-hour automated branch use, and it eases integration within existing system and environment.

Color ATMs are chosen by the leaders. Color ATMs? What could color do for me? That was a question commonly asked by people considering color television when black and white was the standard. The transition from black and white technology to color was slow, but would you buy a black and white television today?

As competition increases, financial institutions are turning to technology for solutions to improve and expand their customer services.

AMERICAN BANKER CONFERENCES *presents*

A SEMINAR SERIES ON

BANK PROFITABILITY

IMPLEMENTING A WINNING STRATEGY IN A RADICALLY CHANGING BANKING ENVIRONMENT

Gain The Insight & Experience Necessary To Stay Ahead Of Your Competition, Revitalize Your Bank...Learn How To Position Yourself & Survive In An Industry Facing Increasing Consolidation & Competition

ATTEND ANY ONE DAY SEMINAR INDIVIDUALLY OR THE ENTIRE SERIES

SEMINAR TOPICS INCLUDE:

DAY ONE:
Innovative Customer Service And Sales Techniques For The Nineties

DAY TWO:
The Nuts And Bolts Of Commercial Lending & Loan Pricing

DAY THREE:
Effective Strategies For Cost Management And Expense Control

DAY FOUR:
Bank And Cross-Industry Acquisitions Of Thrift Institutions & Should Thrifts Be Converting To Banks

DAY FIVE:
Asset/Liability Management

THIS WEEK-LONG SEMINAR SERIES WILL BE PRESENTED THREE SEPERATE TIMES IN TWO SEPERATE VENUES

NEW YORK CITY
THE VISTA HOTEL
MONDAY, JULY 16, 1990 — FRIDAY, JULY 20, 1990

NEW YORK CITY
THE VISTA HOTEL
MONDAY, SEPTEMBER 10, 1990 — FRIDAY, SEPTEMBER 14, 1990

LOS ANGELES, CA
CENTURY PLAZA HOTEL
MONDAY, SEPTEMBER 17, 1990 — FRIDAY, SEPTEMBER 21, 1990

SEMINAR 1

INNOVATIVE CUSTOMER SERVICE AND SALES TECHNIQUES FOR THE NINETIES

July 16, 1990 • The Vista Hotel • New York City
September 10, 1990 • The Vista Hotel • New York City
September 17, 1990 • Century Plaza Hotel • Los Angeles

As the banking environment becomes more competetive, industry leaders view improved customer service as a sollution to retaining market share. But how can your bank achieve such improved service? And as importantly, can quality service be translated into sales? The seminar will address the pressing need for improved customer service and how to implement a service program in your bank. It will also focus on the next step... profiting from quality service through innovative sales techniques, state-of-the-art technology and sales incentives. The industry leaders will address the issue of the nineties...achieving competitive advantage by making your company customer and sales-oriented.

9:00 KEYNOTE SPEECH: EFFECTIVE CUSTOMER SERVICE...THE KEY TO PROFITIBILITY IN THE 90'S
- Profiting from customer service in an age of transition
- A banker's perspective on past successes and failures... and innovations for the future
- A case study in improving service and sales

Thomas Jacob, *Senior Vice President*, Chemical Bank (NY)
Thomas Jacob, *Senior Vice President*, Chemical Bank (NY)
Joan Miszak, *Senior Vice President*, California Federal Bank (LA)

9:45 TURNING SERVICE INTO SALES...ACHIEVING BOTTOM LINE RESULTS FROM QUALITY SERVICE AND SALES TECHNIQUES
- Creating a competitive advantage through customer service
- Improving service...and controlling costs

John A. Goodman, *President*, Techn. Assistance Research Program (NY)
John A. Goodman, *President*, TARP (NY)
Marty Wikoff, *President*, Management Performance Systems (LA)
- The need for effective salesmanship
- Sales techniques for the 90's

Dr. Nancy O'brien, *Marketing Consultant*, Sales Development Assoc. and Dr. Bankers Industry Group, ASTD (NY)
Dr. Nancy O'brien, *Marketing Consultant*, Sales Development Assoc. and Dr. Bankers Industry Group, ASTD (NY)
Shirly Ward, *Vice President*, Bank of America (LA)

10:45 CREATING A SALES CULTURE...A STEP BY STEP APPROACH
- How to implement your new strategy through out the corporation
- How to build a corporate culture based on customer service
- Defining and targeting your customer

Dr. A. Lorri Manasse, *President*, The Cortland Group (NY)
Dr. A. Lorri Manasse, *President*, The Cortland Group (NY)
Dr. A. Lorri Manasse, *President*, The Cortland Group (LA)

11:30 COFFEE BREAK

11:45 ACHIEVING A TECHNOLOGICAL ADVANTAGE...THE ROLE OF TECHNOLOGY IN IMPROVING CUSTOMER SERVICE AND SALES
- Using innovative technology to cross-sell
- How to implement state-of-the art systems to improve service and increase sales

Dr. Michael Harden, *Sales Manager*, Citicorp Information Resources (NY)
Frank Martire, *Chairman*, Citicorp Information Resources (NY)
Charles J. Buchta, *Executive Vice President*, First Interstate Bank (LA)

12:30 HOW TO REMOVE MIDDLE-MEN FROM THE BANKING TRANSACTION...FROM THE BOARDROOM TO THE MAILROOM
- Skills to implement to reduce costs while improving quality of service
- Removing obstacles to the sale

Nicholas Papanikolaw, *Vice President*, Manufacturers Hanover (NY, NY, LA)
John J. Campi, *Managing Director*, Chatham Consulting Group (NY, NY, LA)

1:00 LUNCH WORKSHOP OPPORTUNITIES FOR THE 90'S IN RETAIL AND WHOLESALE BANKING...HOW TO IMPROVE PROFITIBILITY THROUGH SALES AND SERVICE
- Innovative techniques and training methods... a roundtable discussion

Chairperson:
Charlotte Pollard, *Vice President*, Chase Manhattan Bank (NY)
Charlotte Pollard, *Vice President*, Chase Manhattan Bank (NY)
Pamela O'Shea, *Vice President*, City National Bank (LA)

2:45 THE AMERICAN EXPRESS EXAMPLE...A CUSTOMER SERVICE SUCCESS
- A case study in implementing quality service
- Lessons for banks and thrifts

Laura Gross, *Director*, American Express (NY)
Bruce Grieve, *Vice President*, American Express (NY)
Thomas Stevens, *Vice President*, American Express (LA)

3:30 A CASE STUDY IN IMPROVING SALES...THE CHASE TRAINING PROGRAM
- Teaching selling skills
- How to implement a training program

Claire Schopler, *Vice President Training*, Chemical Bank (NY)
Claire Schopler, *Vice President Training*, Chemical Bank (NY)
Claire Schopler, *Vice President Training*, Chemical Bank (LA)

4:15 THE KEY TO IMPROVING SALES...MEASURING YOUR CUSTOMER SERVICE
- Judging the quality of service at your bank
- Learning from the leaders...what techniques do the leading bank use to measure service
- How to determine your bank's effectiveness

Jeffrey Kutler, *Assistant Managing Editor*, American Banker (NY)
Jeffrey Kutler, *Assistant Managing Editor*, American Banker (NY)
Douglas Smith, *Managing Director*, BEI Golembe (LA)

5:00 THE ROLE OF SALES INCENTIVES...WHAT WORKS AND WHAT DOESN'T
- How to use worker compensation to increase sales
- Improving service without increasing costs

William Casey, *Principal*, Paris, Casey Inc. (NY)
William Casey, *Principal*, Paris, Casey Inc. (NY)
Matt Walgon, *Senior Consultant*, Sibson and Co. (LA)

6:00 END OF SEMINAR

SEMINAR 2

THE NUTS & BOLTS OF COMMERCIAL LENDING & LOAN PRICING

July 17, 1990 • The Vista Hotel • New York City
September 11, 1990 • The Vista Hotel • New York City
September 18, 1990 • Century Plaza Hotel • Los Angeles

The battle for commercial loan profitability promises trying times for large corporate and middle market lenders. Over the past two decades, the risk in banks lending portfolios has steadily increased. This is not a function of uncontrolled risk-taking, but rather of the banks' necessary response to the need to find assets which will provide acceptable levels of risk-adjusted return. The events of the past few years have shown that many banks, however, have been unable to effectively control the level of risk that they have taken. Unacceptably high levels of loss have taken place in many banks due to a combination of poor pricing, excessive concentration and the failure to understand the level of risk in a specific loan. Furthermore, new competitors are entering the marketplace scrambling for territory and sparking intense new battles for turf. This seminar reviews how leading-edge banks are beginning to develop new sets of techniques that will geve them a competitive edge in the marketplace for controlling their level of loss, and achieving low-risk diversified portfolios.

8:45 CHAIRMAN'S OPENING REMARKS
William T. Gregor, *Partner*, The MAC Group (NY,LA)

RE-ENGINEERING FROM A CUSTOMER POINT OF VIEW

9:00 KEYNOTE ADDRESS: WHAT RECIPE SHOULD YOU USE TO TURN AROUND YOUR COMMERCIAL LENDING BUSINESS?...A CONSULTANT'S & A BANKER'S VIEWPOINT
William T. Gregor, *Partner*, The MAC Group (NY,LA)
Peter Offermann, *Managing Director*, Bankers Trust (NY)

9:45 CUSTOMER PROFITABILITY & OPPORTUNITIES FOR REFOCUSING ON THE PROFITABLE BUSINESS...NATIONAL WESTMINISTER'S & SECURITY PACIFIC'S MIDDLE MARKET STRATEGY
Vipy C. Popat, *Principle*, Booz Allen & Hamilton (NY,LA)
Edward A. McNally, *Senior V.P.*, National Westminister, USA (NY,LA)
Frank Abraham, *Chief Credit Officer*, Security Pacific National Bank (LA)

11:00 COFFEE BREAK

11:15 PRESTO CHANGO...CONVERTING UNPROFITABLE CUSTOMERS INTO PROFITBLE ONES...USING THE EMERGING SECONDARY MARKET TO YOUR ADVANTAGE
- Where Will The Secondary Market Work & For What Kind Of Loans?
- How Will The Secondary Market Affect Your Ability To Price?
- Secondary Markets & Loan Sales...What Are The Elements Necessary For Success?

David E. Fisher, *Vice President*, Loan Pricing Corp. (NY,LA)

12:15 LUNCH BREAK

RE-ENGINEERING THE PRICING PROCESS

1:30 ARE YOU GETTING THE BANG FOR YOUR BUCK?...DEVELOPING A TARGETED PRICING STRATEGY TO ADEQUATELY PRICE FOR RISK
- What Are The Key Components Of Pricing?
- What Prices Are Banks Actually Getting On Commercial Loans?
- How To Set Strategic Pricing Goals For Your Portfolio
- Do Banks Price Adequately For Risk?

Christopher L. Snyder, *President*, Loan Pricing Corp. (NY,LA)

2:15 A CREDIT BASED APPROACH TO ALIGNING RISK & RETURN IN A C&I LOAN PORTFOLIO
- How To Analyze The Relationship Between Credit Risk & Pricing
- Testing The Adequacy Of The Existing Credit Risk Assesment System
- Refining The Existing Credit Risk System To Serve As A Basis For Commercial Loan Pricing Scenarios

Constance Kenneally, *Partner*, Zeta Services Inc. (NY,LA)

3:00 COFFEE BREAK

RE-ENGINEERING THE CREDIT PROCESS

3:15 EMERGING NEW TECHNIQUES FOR CONTROLING LOSSES & MANAGING THE PORTOLIO
- Buttoned-up Credit Procedures...Ensuring Repayment After The Loan Is Made
- Pricing To Recapture Expected Losses
- Diversification As A Tool In Portfolio Management
- Giving Your Problem Loans A Workout...Security Pacific's Workout & Recovery Strategy

Jonathan P. Moynihan, *Managing VP*, First Manhattan Consulting Group (NY,LA)
Gary J. Coelho, *First VP*, Security Pacific National Bank (LA)

4:00 ARE BANKS LENDING TO LBO's TO CHEAPLY?...THE FUTURE OF HIGHLY LEVERAGED TRANSACTIONS
Mark G. Solow, *Managing Director*, Manufacturers Hanover Trust (NY)
Hugh V. Kemper, *Managing Director*, Morgan Guaranty (NY)
Leland S. Prussia, *Vice Chairman*, Capitalcorp., Inc. (LA)

4:45 COMMERCIAL LOAN SECURITIZATION...A STEP BY STEP APPROACH TO SECURITIZING PERFORMING LOANS
Marshall V. Davidson, *Managing Director*, Kidder Peabody (NY,LA)
Robert M. Okabe, *Vice President*, Kidder Peabody (NY,LA)
Clifford Grieg, *Managing Director*, Standard & Poors (NY,LA)

5:30 END OF SEMINAR

SEMINAR 3

EFFECTIVE COST MANAGEMENT

July 18, 1990 • The Vista Hotel • New York City
September 12, 1990 • The Vista Hotel • New York City
September 19, 1990 • Century Plaza Hotel • Los Angeles

9:00 **CHAIRMAN'S OPENING REMARKS**
Patrick J. Leemputte, *Partner,* Price Waterhouse (NY, LA)

9:15 **ACHIEVING COMPETITIVE ADVANTAGE THROUGH COST LEADERSHIP**
The 1980's showed that cost leadership is a critical success element in all restructured industries. As the pace of restructuring in banking accelerates, winners will emerge based on competitive cost position and related strategic focus. Global finance will come to be dominated by firms obsessed with the twin pursuits of profitability and productivity.
This session concentrates on managing the key noninterest cost drivers of bank performance: 1) business scope and geographic reach, 2) size of workforce and compensation practices, 3) technology spending and investment, and 4) corporate real estate portfolio management.
Charles H. Nobs, *Senior VP,* Bankers Trust Company (NY)
Charles H. Nobs, *Senior VP,* Bankers Trust Company (NY)
Eleni Iatsenko, *Senior VP,* Bankers Trust Company (LA)

10:00 **KEYS TO WINNING THE PRODUCTIVITY RACE**
If superior expense control is essential to surviving the merger decade, then how is it accomplished?
This session addresses three key issues for banks concerned about expense control: 1) How good is the bank now and where is the potential for greater frustration? Analysis based on business mix can identify bloated budgets and problem areas; 2) What kind of programs work to bring expense under control? Experience shows what are the do's and dont's of crafting a program to reduce staff areas, lines of business, branches, operations and systems; 3) What does it take to stay on top? A coherent organization and quantitative performance measures can be keys to sustaining a cost effective culture.
James M. McCormick, *President*
First Manhattan Consulting Group (NY)
James M. McCormick, *President*
First Manhattan Consulting Group (NY)
James M. McCormick, *President*
First Manhattan Consulting Group (LA)

11:00 **STORIES FROM THE FRONT: HOW MELLON BANK'S COST CONTROLS HAVE LED TO NEW BUSINESS OPPORTUNITIES AND LOWER EXPENSES**
Mellon Bank has experienced a great deal of cost cutting in the past decade. Mellon's expertise in this area has shown that you can actually turn a cost center into a profit with the appropriate resources and strategy.
In this session, you will learn how Mellon effectively downsized into a better performing bank. This dedication to cost leadership has helped Mellon develop it's technologies and data processing to the point where these strengths have led to new business opportunities.
Janet Hartung, *Senior Vice President,* Mellon Bank (NY)
Janet Hartung, *Senior Vice President,* Mellon Bank (NY)
Janet Hartung, *Senior Vice President,* Mellon Bank (LA)

12:00 **LUNCH BREAK**

1:15 **HOW TECHNOLOGY CAN HELP YOUR BANK CUT COSTS WHILE IMPROVING PERFORMANCE**
Commercial banks and financial institutions are wholeheartedly embracing information technology (IT) as a way to achieve competitive advantage. But, while bank IT costs have skyrocketed, banks are cautious to crow about their success. Instead, they suffer from exponential growth in computer spending with almost no impact on their bottom line or market share.
In this session, you will learn how to begin to think about, structure and approach the IT problem in your organization. Learn what technology can do to help control costs and what it cannot do. Analyze how to cut the rising costs of your own IT infrastructure. Most important, begin to understand how you can approach IT complexity without being overwhelmed.
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (NY)
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (NY)
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (LA)

2:15 **ELIMINATING EXPENSE THROUGH ACQUISITIONS**
If banks merge to achieve economies of scale then why do most mergers fail to meet their expectations? As bank mergers continue to increase, minimizing costs during the integration process has become essential.
While banks of different sizes and market niches will have different merger goals, there is a proper rationale to mergers that will minimize the consolidation process. This session will look at past mergers to critique successful mergers as well as failures. In particular, where can the economies be achieved?... in back office operations/overhead, retail or wholesale operations, data processing and technology or duplication of staff responsibilities. This session provides a framework to minimize the costs of the merger.
Harry H. Tetonis, *Principal,* Booz, Allen & Hamilton Inc. (NY)
Harry H. Tetonis, *Principal,* Booz, Allen & Hamilton Inc. (NY)
James Bemowski, *Principal,* McKinsey & Co. (LA)

3:15 **MONITORING THE DOWNSIZING EFFORT THROUGH EFFECTIVE HUMAN RESOURCES MANAGEMENT**
• How to retain top performers and employee commitment
• What to cut?...What to keep?...How to do it?
Peter J. Doris, *Senior VP,* Right Associates (NY)
Peter J. Doris, *Senior VP,* Right Associates (NY)
Peter J. Doris, *Senior VP,* Right Associates (LA)

4:15 **MEASURING THE IMPACT OF COST ON PROFIT PERFORMANCE AND SHAREHOLDER VALUE...THE ANALYST'S PERSPECTIVE**
How does a bank's cost performance effect stock price? In this session, learn how analysts objectively view cost cutting practices and how profit performance is related to effective expense practices and how it effects stock price. What banks have made the right moves and what strategies were responsible for improved profit performance.
Gary Gordon, *Vice President,* PaineWebber (NY)
Gary Gordon, *Vice President,* PaineWebber (NY)
Michael Conover, *President,* Ryan Beck & Co. Pacific (LA)

5:00 **END OF SEMINAR**

SEMINAR 4

BANK AND CROSS-INDUSTRY ACQUISITIONS OF THRIFT INSTITUTIONS & SHOULD THRIFTS BE CONVERTING TO BANKS?

July 19, 1990 • The Vista Hotel • New York City
September 13, 1990 • The Vista Hotel • New York City
September 20, 1990 • The Century Plaza Hotel • Los Angeles
September 25, 1990 • The Ritz Carlton • Atlanta
October 9, 1990 • The Ritz Carlton • Chicago

FIRREA has opened the doors to bank acquisitions of thrift institutions and thrift institution conversions to banks. However, it is not altogether clear what this new regulatory flexibility means and whether banks and thrifts should take advantage of these new options. This one day intensive program for bank, thrift, and other business executives, attorneys and consultants focuses on the mechanics and regulatory procedures involved in bank and non-bank acquisitions of thrifts, as well as how and whether thrifts should convert to banks.

9:15 **CHAIRMAN'S OPENING REMARKS**
Eric Luse, *Partner,* Brownstein Zeidman and Schomer

9:30 **SHOULD A THRIFT CONVERT TO A BANK?**
• What Are The Advantages And Disadvantages
• A Review Of The Bank And Thrift Charters
Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
Trent Feldman, *Partner,* Kaplan Smith & Associates (AT,LA)
Edward T. Lotz, *Principal,* Lyons Zomback & Ostrowski (NY,CH)

10:00 **REGULATORY HURDLES AND CONSIDERATIONS INVOLVED IN CONVERTING A THRIFT TO A BANK...HOW CAN IT BE DONE & WHAT IS PERMISSIBLE?**
V. Gerard Comizio, *Director, Corporate and Securities Division,* Office of Thrift Supervision (NY,AT,LA,CH)
Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
Vernon E. Fasbender, *Director for Analysis,* Comptroller of the Currency (Southeastern District) (AT)
Roy Stovall, *Director for Analysis,* Comptroller of the Currency (Northeastern District) (NY)
Donelle Ward, *Director for Analysis,* Comptroller of the Currency (Central District) (CH)
Daniel Pearson, *Director for Bank Supervision & Analysis,* Comptroller of the Currency (Western District) (LA)

10:45 **COFFEE BREAK**

11:00 **CONVERTING A SAVINGS ASSOCIATION TO A BANK... A CASE STUDY**
Samuel J. Malizia, *Partner,* Brownstein Zeidman & Schomer (NY,CH)
James S. Fleischer, *Partner,* Silver Freedman & Taff (LA)
Robert Friedman, *Partner,* Silver Freedman & Taff (AT)

11:30 **WHY SHOULD A BANK OR NON-BANK ACQUIRE A THRIFT... A STEP BY STEP REVIEW**
• What Are The Economic Advantages And Disadvantages?
• Market/Geographic Expansion And Pricing Considerations
Christopher Quakenbush, *Principal,* Sandler O'Neil & Partners (NY,AT)
Fred D. Price, *Principal,* Sandler O'Neil & Partners (LA,CH)
T. Stephen Johnson, *President,* T. Stephen Johnson & Associates (AT)
John Mingo, *Principal,* BEI Golembe Inc. (NY,CH)
Richard Reilman, *Managing Director,* Dean Witter Reynolds, Inc. (NY,LA)

12:00 **EVALUATING A THRIFT ACQUISITION...AN ACQUIRER'S PERSPECTIVE**
• Regulatory, Operational & Financial Differences With Banks
Christopher Quakenbush, *Principal,* Sandler O'Neil & Partners (NY,AT)
Fred D. Price, *Principal,* Sandler O'Neil Partners (LA,CH)
Addison Levi, *Senior Vice President,* Dean Witter Reynolds, Inc. (LA,CH)
Kenneth Reilander, *Managing Director,* PaineWebber, Inc. (NY,AT)

12:30 **LUNCH BREAK**

2:00 **A REVIEW OF THE REGULATORY PARAMETERS & ROADBLOCKS TO BANK ACQUISITIONS OF THRIFTS**
• Interstate/Interstate Banking Issues
• Obstacles Of State Branching Laws & How To Circumvent Them
• Healthy Thrift vs. Failing Thrift Acquisitions
V. Gerard Comizio, *Director Corporate & Securities Division,* OTS (NY,AT,LA,CH)
Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
John Shockey, *Partner,* Milbank Tweed Hadley & McCoy (NY,AT)
John Buchman, *Assistant Deputy Director,* OTS (NY,AT,LA,CH)

3:00 **COFFEE BREAK**

3:15 **WHAT ARE THE STRUCTURAL OPTIONS AND CONSIDERATIONS WHEN ACQUIRING A THRIFT?**
• How Should The Resulting Or Target Institution Be Chartered And Insured?
• Holding Company vs. Direct Acquisitions
Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
Peter Barnes, *Partner,* Arnold & Porter (AT,LA)
William J. Sweet, *Partner,* Skadden Arps Slate Meagher & Flom (NY,CH)

4:15 **A BANK ACQUISITION OF A THRIFT...A CASE STUDY**
Donald Kaplan, *Managing Director,* Kaplan Smith & Associates (NY,LA,CH)
William Moore, *President,* Trident Financial Corporation (NY,AT)

4:45 **TAX AND ACCOUNTING CONSIDERATIONS**
• Recapture Of Bad Debt Reserve
• Pooling vs. Purchase
• Use Of Net Operating Loss Carryovers
Roger Teurfs, *Partner,* KPMG Peat Marwick (NY)
James L. Spreng, *Partner,* KPMG Peat Marwick (NY)
Douglas McEachern, *Partner,* Deloitte & Touche (LA)
Vincent Lanuza, *Partner,* KPMG Peat Marwick (CH)
Gerald F. Hunter, *Partner,* KPMG Peat Marwick (AT)

5:30 **END OF SEMINAR**

SEMINAR 5

ASSET/LIABILITY MANAGEMENT

July 20, 1990 • The Vista Hotel • New York City
September 14, 1990 • The Vista Hotel • New York City
September 21, 1990 • Century Plaza Hotel • Los Angeles

9:00 CHAIRMAN'S OPENING REMARKS
Sanford Rose, *Editor, Journal of Retail Banking*
Senior Columnist, American Banker

9:15 INTEREST RATE RISK MANAGEMENT
The management of interest rate risk is fundamental to sound banking practice. Banks can experience earnings, liquidity, and capital adequacy problems, if management is poorly run.
This session will deal with a number of fundamental rules in managing interest rate risk as well as develop an integrated risk management project. You will understand how risk is measured, as well as, what tools are used to measure risk. Learn how to incorporate these tools to increase bank profitability.
Ronald D. Reading, *Vice President,* First Manhattan Consulting Group

10:30 COFFEE BREAK FOR SPEAKERS AND GUESTS

10:45 LIQUIDITY
This session learn to understand what liquidity is. Where you can get it. How much it costs, and how much it is worth. Finally, learn to understand how to measure and manage liquidity.
Peter G. Mantilla, *Vice President,* Bank of New York (NY)
Richard Lademan, *Vice President,* Bank of America (LA)

11:45 THE USES OF DURATION IN ASSET LIABILITY MANAGEMENT
Technological and analytical developments in the 1990's will significantly enhance the ability to deal with risk. The methodology, tools, and implementation approach provide a more rigorous assessment of market risk.
The specific focus will be to contrast the duration approach with a new approach called risk measurement unit approach. The risk measurement unit approach captures both volatility and non-parallel shifts in the yield curve.
Sanford Rose, *Editor,* Journal of Retail Banking
Senior Columnist, American Banker
Robert M. Mark, *Managing Director,* Manufacturers Hanover Trust

12:30 LUNCH BREAK FOR SPEAKERS AND GUESTS

1:30 OFFICE OF THE COMPTROLLER OF THE CURRENCY AND THE NEW EXAMINATION GUIDELINES
"The OCC has alerted all bankers that they must prudently manage, measure and limit risk, and that enough capital be available to support exposure to such risk."
This session will discuss the OCC's policy on interest rate risk and how active the Office of Thrift Supervision is. The different topics which will be discussed include: risk matrix, gap reports, simulation, and duration.
Jennifer Johnson, *Developer and Administrator,* OCC

2:30 SECURITIZATION...WHEN AND HOW TO USE IT.
- Being able to securitize your own product
- Opening a secondary market
- The 144 Rule with regards to Private Placement

To Be Announced

3:30 LOWER COST OF MARKET AND THE INVESTMENT PORTFOLIO
1990 will be a year when your accounting department must be able to deal effectively with the new AICPA requirements on accounting for debt securities held as assets. A new standard expected to be issued by the AICPA with the support of the SEC and the FASB will require market value determination. The new standard will require allocating security investments among investment portfolio, held for sale, and trading account.
This session will help you understand the new requirements and the techniques required to successfully implement them.
Raymond Perry, *Partner,* Deloitte & Touche

4:30 ASSET LIABILITY MANAGEMENT INTO THE 1990'S.
This session will outline recent advances in the 1) measuring of embedded option risks, 2) measuring volatility risk exposure, 3) measuring index and credit spread risks, 4) integrating value decisions into the management process, 5) integrating risk-based capital guidelines into the risk management process.
Alden Toevs, *Principal,* Morgan Stanley & Co.

5:30 END OF SEMINAR

BANK PROFITABILITY REGISTRATION FORM

VOL. CLV NO. 165 Thursday, August 24, 1990 155th year

New Rules May Erase Dividends Of Some Banks

By LINDA CORMAN

Bank analysts say some banks probably could not pay dividends if proposed federal rules limiting payouts to shareholders were enforced. But many of the analysts are split on whether regulators will truly enforce dividend cuts.

Some say regulators are more likely to skirt the letter of the new rules, which could take effect next January, by allowing some banks to pay dividends in the short run beyond what their earnings dictate. Other analysts argue that the new rules may ultimately have only a minor impact on banks already hard pressed to maintain dividend levels.

ANALYSIS: *Follow-up on the news*

At least one bank, Chase Manhattan, conceded last week that the rules under consideration by the Office of the Comptroller of the Currency and Federal Reserve Board would make it impossible to pay dividends. But Chase said dividends paid to its holding company by other banks would offset the shortfall of the lead New York subsidiary.

"The rules are only a problem for banks that are not earning their dividends," said Raphael Soifer, a bank analyst for Brown Brothers Harriman & Co., who said these account for a "fair number" of institutions.

Although Mr. Soifer said he did not know of specific banks in this category, other analysts said the larger banks that would need to cut dividends under the new rules include Shawmut Bank, Maryland National Bank, Midlantic National Bank, and Bank of Boston.

Accounting Changes

In essence, the proposed regulations are accounting changes that alter the calculation of capital and recent earnings, which are used to determine the capacity to pay dividends. Most banks may now pay dividends only if their losses do not exceed undivided profits and if dividends are paid out of recent earnings.

The new rules propose three basic changes: First, the net of provisions for loan-loss reserves and actual chargeoffs could not be included in recent earnings, as they now are. Also, undivided profits may no longer include the net of allowances for loan and lease losses and bad debt. And only earned portions of a bank's surplus capital funds could be counted as part of undivided profits.

In one harsh assessment of the regulators, J. Richard Freder-

Banks Making Greater Demands On the Top Computer Vendors

By TERI ROBINSON
Fourth of a Series

As bankers intensify their search for computing power and efficiency, they are becoming increasingly critical of the service and support provided by the major computer companies, recent *American Banker* technology surveys indicate.

Asked to rate the vendors on overall satisfaction and several service categories, a majority of computer owners gave the three dominant equipment companies good or excellent grades. But bankers have become less inclined to give the highest rating than they were when polled in 1987 and 1988.

According to industry observers, the results reflect a greater sophistication among bankers and a skepticism that vendors provide efficient and reliable performance at a reasonable price.

Big Blue Holds Lead

International Business Machines Corp., the company identified as primary mainframe supplier by two-thirds of the banks with at least $250 million in deposits, is also the most praised of the big three vendors. (The others are Unisys Corp. and NCR Corp.)

The percentage of bankers who said they are very or completely satisfied with IBM to-

C&S Apologizes For Faulty Notice Of Loan Defaults

By KENNETH CLINE

ATLANTA — Ten thousand customers of Citizens and Southern Corp. received a rude shock late last week when the bank notified them they were in default on their home mortgages.

The customers, it turns out, were merely late with payments.

The Atlanta-based bank said the erroneous notices were mailed because of a computer mistake, which grabbed headlines in the local paper on Wednesday. Confronting a public relations disaster, the bank quickly owned up to the error.

Corrections Being Sent

The bank apologized on Wednesday to the not-so-delinquent customers, who will receive corrections in the mail. Customers who call the bank using a phone number listed on the default notice are also being told to disregard the damning letter.

"There was an error in not stopping those letters going

London Firm Sees Healthy Outlook for U.S. Banks

By JAMES R. KRAUS

NEW YORK — The U.S. banking industry is in far better shape than most analysts believe, according to IBCA Ltd., a prominent London-based credit rating agency.

Assigning a far more positive outlook than Moody's Investors Service or Standard & Poor's Corp., the leading U.S. credit rating agencies, IBCA said the impact of current problems on U.S. banks has been overemphasized and favorable developments have been overlooked.

"Some banks will not survive the next recession, but we do not conclude that the whole U.S. banking industry is now teetering on the edge of a precipice," IBCA said in a report issued Wednesday.

Widening Gap in Ratings

The report acknowledged the growing discrepancy between the British rating agency's assessment of U.S. banks and the more negative position adopted by Moody's and, to a lesser degree, Standard & Poor's. As a result, it said, a greater than nor-

Hot Prospect for Fed Post Busy in White House Job

By LINDA CORMAN

John B. Taylor, a White House economic adviser who is widely mentioned as the likely successor to former Federal Reserve Board Vice Chairman Manuel H. Johnson, is neither confirming nor denying his interest in the job.

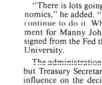
"The job I am doing now is very interesting, important and exciting," said Mr. Taylor, a member of the President's Council of Economic Advisers.

"There is lots going on in terms of the budget, international economics," he added. "I like this job. As far as I know, I am going to continue to do it. What's more important is to get a good replacement for Manny Johnson, who did a good job." Mr. Johnson resigned from the Fed this month to join the faculty of George Mason University.

The administration has been silent on who the nominee might be, but Treasury Secretary Nicholas F. Brady, who will have a major influence on the decision, said recently the appointment is likely early in the fall.

Influential in Areas Affecting Banking

If he were overlooked for the empty seat at the Fed, Mr. Taylor, 43, could hardly be said to be relegated to inactivity. During his first year with the Council of Economic Advisers, Mr. Taylor, who earned a PhD in economics at Stanford University and was a profes-



John B. Taylor

sor there and at a number of other universities, has been a major force in areas affecting banking.

Under the direction of Council Chairman Michael Boskin, Mr. Taylor has been active in financial and trade negotiations with Japan, the current round of negotiations sponsored by the General Agreement on Tariffs and Trade, and the administration's successful effort to move the European Community's second international bank directive away from the so-called reciprocity standard and toward a national treatment approach.

In one of the numerous interagency collaborations in which the council is involved, Mr. Taylor and his colleagues are also contributing to the Treasury Department study of deposit insurance and financial services reform. The council is writing an assessment of private alternatives to federal deposit insurance and of how capital should be defined for the purposes of setting capital standards.

Engrossed as he is in council activities, Mr. Taylor nevertheless has a bird's-eye view of what might be his new home. The Council of Economic Advisers keeps in close touch with the Fed through frequent meetings with the governors and staff.

Served on Greenspan's Staff

Even though the council has, with other members of the administration, repeatedly urged the Fed to cut interest rates, Mr. Taylor displays no discomfort over being a part of the chorus. He has extra cause for being sensitive; not only might he join the Fed but he worked closely with Chairman Alan Greenspan as a senior staff member for the council from 1978-1981 – when Mr. Greenspan was its chairman – and later as a member of his New York consulting firm, Townsend-Greenspan.

Mr. Taylor said the administration's calls for lower interest rates should not be viewed as a sign of friction between the agency and the executive branch. "We are supportive of the Fed's inflation goals. It is the surest way to sustain economic growth," he said. □

Setback for Crossland

NEW YORK — Crossland Savings suffered a setback as the Office of Thrift Supervision disapproved its capital plan and denied its application for an exemption from capital requirements of the thrift-reform law.

The Brooklyn-based thrift, the second-largest in New York City, had $12.8 billion in assets on June 30. It contended that it would have met the requirements had it been allowed to reclassify preferred stock as common stock.

Crossland, which recently terminated an agreement for a capital infusion from a company affiliated with the Chicago-based Pritzker family, said Wednesday that the OTS move would mean "greater restrictions" including a prohibition on asset growth and limits on new loans and investments.

Carolina Merger Deal

COLUMBIA, S.C. — South Carolina National Corp. has agreed to acquire for $105,000 the stock of Unity Bancorp Inc., a North Carolina holding company for Old Republic Savings Bank. Unity and Old Republic are both inactive companies, with no loans or deposits.

South Carolina National Corp. said it plans to hold Unity as a wholly owned subsidiary. Old Republic would operate as a thrift subsidiary of Unity. □

Pennsylvania Bankers' Bank Exemplifies a Vibrant Breed

By A. JOSEPH NEWMAN JR.
Special to the American Banker

CAMP HILL, Pa. — Correspondent banking, the institutional business that has fallen into decline at many money-center and regional banks, is very much alive among some independent banks that have banded together to ensure a dependable source of support services.

More than 2,800 of the small- or institutions are customers of their correspondent service pro-

viders, which are active in 16 states and are known as bankers' banks.

"We try to provide a growing number of basic correspondent banking services, at the lowest possible price and with no barriers to entry," said Frank Kaminski Jr., president and chief executive officer of Pennsylvania Independent Bank, which is typical of the bankers' banks that came of age in the 1980s.

Pennsylvania Independent, the sixth largest of the bankers' banks in terms of capital, with $4 million, will celebrate its seventh anniversary in November. Mr. Kaminski, 42, its chief executive from the start, has a full-time staff of 17 and knows the territory: He formerly headed First Pennsylvania Bank's regional correspondent banking division.

As a bankers' banker, Mr. Kaminski finds himself in competition with traditional big-city correspondent institutions. But he said that with many community bankers viewing large institutions as increasingly remote and less concerned with community banks' needs, a bankers' bank can gain a competitive edge.

Collectively, the 16 bankers' banks add up to a potent competitive force. At midyear 1990, their capital came to $62.7 million, supporting assets of $774.7 million, according to Helge Christensen, who tracks the group as president of the Bankers' Bank of Wisconsin, Madison. A total of 2,834 community banks use them.

In Pennsylvania, Mr. Kaminski competes for balances, loan participations, and such services as check clearing, safekeeping, portfolio and performance analysis, buying and selling federal funds, staff insurance, and charge card programs, either directly or as agent for third-party suppliers.

Depending on the mix of services, Mr. Kaminsky said, "on average, we save our banks up to 50% of the cost" in fees or balances of what he refers to as "regular correspondents."

Smaller-Scale Perks

In selling itself, the Pennsylvania bank relies on the traditional tools of the correspondent game – personal visits, football tickets, golf outings, and other entertainment – but "on a less grand scale," Mr. Kaminski said.

Pitching his bank and its stock – its customers are its owners – Mr. Kaminski also tells community bankers, "We want to be there for you in the future. We were created to provide a safe haven."

Community bankers often perceive that big-city bankers are slowly becoming part of the competition as they expand into

Ryan Chooses John Downey for Key OTS Post

By DEBRA COPE

WASHINGTON — John Downey, a 23-year veteran of the banking regulatory system, has been tapped to oversee the Office of Thrift Supervision's regional examination and supervision force, the agency announced Wednesday.

As OTS's deputy director for regional operations, Mr. Downey, 53, will preside over a massive overhaul that will streamline the agency's 12 districts into five regions.

As deputy director, he rounds out OTS Director T. Timothy Ryan Jr.'s triumvirate of key policy advisers, which includes Harris Weinstein, chief counsel, and Jonathan Fiechter, principal deputy director for Washington operations.

Four People Tried Out

"He is a real professional, he has done an excellent job, and I have confidence in him," Mr. Ryan said of Mr. Downey in a telephone interview. Mr. Ryan

Banks Want More from Top Computer Vendors

Continued from page 1

taled 78%, compared with 76% for Unisys and 68% for NCR.

Top grades for IBM have fallen from 27% in 1987 to 22% this year. For Unisys the decline was from 27% to 17%.

NCR's top ratings, which jumped from 13% in 1987 to 33% in 1988, dropped back to 18%. But that still leaves NCR the only vendor that looks better now than it did three years ago. With only 22 NCR users in the *American Banker* survey sample, these results have a high degree of statistical variability and are not as reliable as the IBM or Unisys data.

According to the telephone survey of 333 senior operations officers, IBM held on to the No. 1 position that it has enjoyed since the 1950s and that showed up in the initial *American Banker* technology surveys in 1987 and 1988. The survey sample this year included 239 banks that own mainframe computers. The survey was conducted by Trans Data Corp., Wayne, Pa., a research affiliate of the *American Banker*.

IBM's market share among all the banks in the survey, with a minimum of $75 million in deposits, was 44%, followed by Unisys at 15% and NCR at 7%.

Large Banks Tell Tale

More indicative of IBM's dominance were the responses of larger banks, with at least $250 million in deposits: 67% called Big Blue their primary mainframe vendor, compared with 20% for Unisys. NCR was identified by 7%, but its strength is in the smaller-bank market; 17 of the 22 NCR customers in the survey sample have less than $250 million in deposits.

Amdahl Corp. garnered 3% of the banks with more than $250 million in deposits, and other vendors, including Digital Equipment Corp. and Hitachi Ltd., shared 7%.

Jack Steeg, assistant vice president in NCR's financial division, admitted that the company has lost ground in the group with over $250 million in deposits. "Those markets are typically markets being merged and bought up," he said. "We've definitely lost some share."

NCR Disputes Figures

The survey showed NCR holding on to 100% of the banks with $75 million to $250 million in deposits, which Mr. Steeg said is below par for the company. "Typically, that's a very good market for us; we would expect a larger percentage than that."

O.G. Greene, a Unisys official, also took issue with the market share figures. "Today, nationwide, we hold 38% of the market in thrifts alone" for host-based systems. Thrifts were not included in the group surveyed.

"Overall, we're closer to the 20% to 30% range," he said.

The survey results also indicated that there is still a large, seemingly untapped market for vendors to exploit. It is surprising, in an industry considered to

Users seemed to be content with hardware maintenance.

be on the leading edge of technology and with the costs of data processing coming down, that 27% of the institutions do not have a host computer.

Among institutions with deposits of $75 million to $100 million, 42% do not have host computers. Only 15% of those bigger than $2 billion in deposits lack a mainframe, and many of those are presumably part of larger holding companies that supply data processing from a central site.

The figure may indicate that a number of banks are using increasingly powerful minicomputers and personal computers where mainframes once were required, but Mr. Steeg of NCR has a different theory: The institutions are relying more and more on independent service bureaus.

"NCR has a real good market in that," Mr. Steeg said, claiming that of the 12,000 or so banks with annual deposits up to $750 million, about a third have data centers.

Mark Mauriello, manager of financial services industry operations for IBM, agreed that a large number of the financial institutions that do not have host systems are heavily serviced.

Servicing Advantages

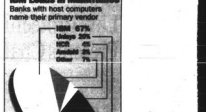
While he sees many banks bringing their computer services in-house, Mr. Greene of Unisys said many still see advantages to being serviced by another bank or service bureau.

"They don't have to deal with staffs; they don't have the capital investment," he said, noting that the trade-offs are flexibility and control. Mr. Greene sees cost saving as the prime reason for financial institutions to turn to off-site servicing.

But Mr. Steeg of NCR believes the choice boils down to a difference in philosophy among banks. "You have to give up some control. In the past, there has been a slight variance in cost," but that is not generally the guiding factor in deciding whether to keep information systems in-house or to opt for a data center solution.

NCR is probably one of the leading data services providers – one of the top three in country," he claimed.

In the satisfaction ratings, users seemed to be content with



See VENDORS page 16

Most Banks Buck 'Trend' away from Mainframes

Although much has been said about "downward migration" – the switch from large mainframe computing to networks dominated by minicomputers – not all bank operations experts are eager to make the move.

The 1990 *American Banker* technology survey found that 89% of senior operations officers said their institutions were not moving mainframe applications to smaller systems.

Only 7% had plans to move to personal computers or minicomputers by the end of 1991.

Larger Banks More Likely to Switch

A greater percentage of banks with deposits of more than $2 billion were planning such switches, however, with 17% in that group saying they would move some applications from a mainframe to a smaller system before 1992.

For those with downsizing plans, the personal computer seems to be the favored alternative, slightly edging out the minicomputer. Of the respondents who are either planning to shift computing strategies or now making the move away from a mainframe, 52% said they would take operations down to the PC level, and 48% had chosen minicomputers.

Meanwhile, one banker in four is taking the opposite tack and migrating from small computers to the more powerful mainframes.

The results do not reflect what is widely considered a trend among computer users. Computer vendors and users alike, however, are contending with the downward shift from mainframes to small systems – and from centralized to distributed computing.

At a Boston consulting firm, more than 70% of clients were recently trying to downsize to local-area networks – which connect personal computers – in certain business units. The results of a Sierra Group study showed LAN servers to be the fastest-growing segment of the computer industry. It predicted the number of those servers would increase 147% in 1990.

Because of huge transaction volumes, financial institutions may find it difficult to abandon host computers for PCs or minicomputers.

Shift Trickier at High Volumes

Peter Crowell, president of Chase Manhattan Corp.'s access services unit, said he expects more users to switch from host-based systems. He called the concept a good one but warned that the idea breaks down as size increases.

Mark Mauriello, manager of financial services industry operations at International Business Machines Corp., said, "There is no question that personal systems are growing in importance, but we don't see that as a detriment to the mainframe." — Teri Robinson

COMMENT / *By Anne Wallace*

Law Protecting the Disabled Presents Challenge to Banks

Now that President Bush has signed the Americans with Disabilities Act, the financial industry faces the task of complying with a major new civil rights law.

The ADA has not received a great deal of attention in the banking industry, possibly because the act's prohibition of discrimination in employment will not require major changes for banks and thrifts. For more than 15 years, they have been prohibited from discriminating against the disabled in employment.

However, Title III of the ADA, which outlaws discrimination against individuals with disabilities by public accommodation imposes significant new responsibilities on the financial industry.

Significant Penalties

The penalties for violating Title III are significant. A court may issue an injunction against a financial institution found to

"It is clear that compliance with the ADA will be costly and cause major changes in the way all financial service providers do business."

have discriminated against a disabled individual, ordering it to eliminate barriers to access.

For convenience, I sometimes refer to a bank when discussing the impact of Title III, but the law also applies to thrifts, credit unions, finance companies, and all other financial service providers.

Although it is impossible to predict the impact of Title III on any one institution, it is clear that compliance with the ADA will be costly and will cause major changes in the way all financial service providers do business.

The ADA does not take effect for 17 months, but there are two reasons why early attention to this new law is important. First, the financial industry should take an active role in writing the regulations to implement Title III. The ADA directs the Justice Department, an agency that is not as familiar with the financial industry as, for example, the Federal Reserve Board, to write implementing regulations within 12 months.

Part of Long-Range Planning

The second reason for concern now is that 17 months is barely enough time to factor into an institution's strategic plans the changes that the ADA will require in services, forms, and physical facilities. Compliance with the ADA should be part of an institution's long-range planning.

The purpose of the ADA is to provide a comprehensive federal prohibition of discrimination against individuals with disabilities and to bring these individuals into the economic and social mainstream of American life.

Hearings on the ADA indicated that the 43 million disabled Americans experience staggering levels of unemployment and poverty; they lead isolated lives and do not frequent places of public accommodation. In addition, the transportation and telecommunications that are so essential to daily American life are largely out of their reach.

The ADA was not aimed solely at the financial industry. In fact, banks, thrifts, credit unions, and finance companies make up only a small corner of the vast category of "public accommodations" to which Title III applies.

Between Dry Cleaners, Barbers

Indeed, banks find themselves in strange company, sandwiched between dry cleaners and barber shops in the definition of "public accommodation" in section 301 of the Act. Yet the definition of public accommodation is a good place to start when trying to understand the scope and impact of the ADA.

Financial institutions are in the same category as every other service provider on Main Street. Like gas stations, beauty shops, and laundromats, financial institutions must enable people with disabilities to fully enjoy the services that they offer.

To many people, the word "disabled" means a wheelchair, but the ADA's definition of disability is much broader. Section 3 of the Act defines disability as a physical or mental impairment that substantially limits one or more of an individual's major life activities, such as walking, seeing, hearing, speaking, or learning.

Minor Injuries Don't Count

A minor, temporary injury, such as a broken arm, would not qualify as a disability because a broken arm would not substantially limit major life activities. However, orthopedic, visual, speech, and hearing impairments that are serious enough to substantially interfere with walking, seeing, or hearing would satisfy the ADA's definition of disability.

To understand the scope of Title III, one has to identify all the services a particular institution offers to the public. Deposit accounts of all kinds, such as checking, savings, and CDs, as well as all types of loans, from credit card, mortgage, and auto loans to commercial loans are covered by Title III.

Safe deposit and wire transfer services, discount brokerage, telephone banking, and automated teller machines must also be accessible to people with disabilities.

While the principal compliance focus will be on the retail side, banks cannot ignore their commercial operations. The law does not apply just to services for personal, family, or household purposes. Commercial loans and services like cash management are subject to the ADA as well.

Thou-Shalt-Note

The substantive provisions of Title III begin with a general prohibition of discrimination. Section 302(a) provides that "no individual shall be discriminated against on the basis of disability in the full and equal enjoyment of the goods, services, [or] facilities . . . of any place of public accommodation."

Section 302(b) sets forth five rules that identify specific discriminatory conduct. The first provides that a place of public accommodation, such as a bank, may not impose eligibility criteria that screen out or tend to screen out individuals with disabilities from fully and equally enjoying the bank's services or facilities.

Examples Hit Home

The Senate report on the ADA provides an example that strikes close to home: a drugstore that accepts a check in payment only if the customer presents a driver's license for identification would violate section 302(b). The rationale is that many individuals with visual and motor disabilities do not have a driver's license. Therefore, requiring a driver's license tends to exclude these persons from using the facilities.

Obviously, financial institutions will have to consider carefully their reliance on a driver's license as a form of identification and review other lending and security qualifications that might unintentionally screen out people with disabilities.

Section 302(b)(2)(ii) is likely to have the most direct cost impact on financial institutions and to cause the most confusion. This paragraph provides that discrimination includes a failure to provide the auxiliary aids and services necessary to enable individuals with disabilities to take advantage of the financial institution's services, unless the institution can demonstrate that providing the aids and services would fundamentally alter the service or would result in an "undue burden."

Aids that Must Be Provided

The definition of "aids and services" includes, but is not limited to, documents in braille for blind people, sign language interpreters, and taped texts and telecommunication devices for the deaf (TTDDs). Financial institutions will clearly have to make their services accessible to individuals with disabilities by providing application forms and agreements in braille, by offering the services of interpreters, and by making ATMs accessible to people with disabilities.

But what are the limits on these responsibilities and what does "undue burden" mean?

The legislative history states that a restaurant would not have to provide its menu in braille if a waiter was available to read the menu to a blind person. This suggests that a bank would not have to prepare a brailled version of every document used in its branches if documents could be read to blind applicants.

Making ATMs accessible to people with disabilities is sure to test the "undue burden" standard. If an institution owns 20 ATMs, does the purchase (at a substantially higher price than a standard ATM) of 20 new ATMs that can be lowered hydraulically to wheelchair height impose an undue burden? Some would say yes, and argue that only "key" ATMs must be moved to wheelchair height or replaced.

Interpreting 'Undue Burden'

It is important to note that there is no universal definition of "undue burden." It means significant difficulty or expense, but this standard is applied on a case-by-case basis, taking into account the size of the institution, the service in question, and the nature and cost of the aid or device.

"Disabled Americans experience staggering levels of unemployment and poverty."

In addition, the fact that providing a particular aid or device imposes an undue burden does not relieve a financial institution of the duty to provide an alternative auxiliary aid that would not impose an undue burden.

Another significant provision is section 302, which requires public accommodations to remove architectural barriers and communication barriers that are structural in nature from existing facilities if the removal is "readily achievable."

"Readily achievable" is a lower standard than "undue burden." It is defined in section 301(9) as "easily accomplishable without much difficulty or expense." Here, too, the ADA constructs a sliding scale, because in deciding whether a particular action is readily achievable, the size of the institution and the nature and cost of the action are considered. In other words, more will be expected of larger and more prosperous institutions.

New Construction

The last substantive provision of Title III that applies to financial institutions is section 303 dealing with new construction. It provides that any building available for first occupancy 30 months after the effective date of the ADA must be "readily accessible to and usable by individuals with disabilities" unless doing so is structurally impracticable.

This section of the act is in-

Bankers' Bank Taps Community Markets in Pennsylvania

Continued from *page 2*

smaller communities.

Passage of statewide banking legislation in Pennsylvania in 1982 gave a major impetus to the formation of the bankers' bank. It was originally sponsored by the Independent Bankers Association of Pennsylvania, which fought the branching bill.

Mr. Kaminski and the bank's other calling officer, Robert Straghan, formerly of Meridian Bancorp., Reading, have another selling point.

Most Users Own Stock

Most of their 107 "respondents," or user banks, are stockholders. A few of the 121 current shareholders, up from 62 initially, are not users now. They tend to be larger banks that retained shares inherited in acquisitions.

"We never try to talk a bank into terminating a relationship" with a big-city correspondent, said Mr. Kaminski, acknowledging that many of his customers are loyal to banks in Philadelphia, Pittsburgh, or even New York. "We do try to show how [community banks] can save money."

When Pennsylvania Independent Bank succeeds with an account, the user tends to continue its big-city relationships but reduces the number and balances.

The fact that only banks can do business with a bankers' bank, Mr. Kaminski said, is "our strength and our weakness."

Pennsylvania Independent has been profitable in every year of operation and has declared a dividend in the past two years.

His customers are easier to talk to because they understand his problems. "But they are also sophisticated enough not to keep idle balances."

Profit Measures Modest

High costs of funds, competitive prices, and narrow margins explain modest earnings ratios of bankers' banks like the one in Pennsylvania – which had a return on assets of 0.46% in 1989 and 0.52% in 1988.

Nonetheless, Pennsylvania Independent has been profitable in every year of operation and has declared a dividend in the past two years.

Pennsylvania Independent Bank's expansion plans call for continued efforts to reach beyond the state line. One New Jersey bank already owns stock, and one in New York is a respondent that holds no shares.

Last year, it acquired Investment Management Services, Bath, Pa., which provides securities brokerage services, including transaction processing, safekeeping, and analysis. The division now accounts for 25% to 35% of pretax earnings.

The bank has just launched a service to confirm that securities offered as loan collateral are not stolen. It is exploring users' interest in joining an automated teller machine network or obtaining ATM processing services under a "group contract" from EDS Corp. Some ideas have been rejected, including a money market mutual fund and an auto-leasing service. □

with disabilities to get to, enter, and use a facility. While this does not necessarily require that every part of a facility be accessible, section 303 contemplates a high degree of convenient access to parking, entrances, and the public areas where services are offered to the public.

As noted at the outset, the ADA is a civil rights law, and the enforcement provisions parallel those provided by the Civil Rights Act of 1964. Individuals with disabilities who believe they have been discriminated against can sue a financial insti-

"Enforcement provisions parallel those provided by the Civil Rights Act of 1964."

tution for injunctive relief or for an order requiring the financial institution to provide an auxiliary aid or service.

Section 308(b) of the ADA authorizes the attorney general to sue institutions that are engaged in a pattern or practice of discrimination against individuals with disabilities. The act also authorizes the court to issue an injunction requiring a financial institution, for example, to modify its ATMs to make them accessible by wheelchair.

At the attorney general's request, the court may impose civil penalties not to exceed a first violation and $100,000 for any subsequent violation. The ADA prohibits, however, the award of punitive damages for violations of Title III.

Financial institutions must start taking the ADA into account today in their construction, purchasing, and planning decisions or risk costly litigation 17 months from now. □

How to profit from 1,347 of your competitors

Proven methods for selling mutual funds

Working with 1,347 banks and S&Ls has taught MFS a lot about selling mutual funds. So have our 66 years of experience since we started the mutual fund industry.

Now we've put it all together in a free training package called *Partners in Profit*. The kit is filled with simple, inexpensive training methods guaranteed to get results. Step-by-step, we'll take you through four major selling opportunities.

1 HOW TO BUILD A SUCCESSFUL INVESTMENT BUSINESS AT THE BRANCH.
2 WORKING THE BOOK: SIX APPROACHES TO GUARANTEE FUTURE BUSINESS.
3 SEMINARS: HOW TO MAKE THEM WORK FOR YOU.
4 SALES IDEAS: HOW TO HELP YOUR CUSTOMERS AVOID INVESTORS' SEVEN MOST COMMON MISTAKES.

MFS, with $26 billion under management for 1.7 million investors, is a name you and your customers can count on for investment performance, service and commitment to the banking industry. We have a dedicated team of professionals available for on-site external training (last year alone, they conducted 1,107 sessions using our acclaimed 12-minute video entitled "Banking and Investing: Today's Team").

Isn't it time you started a partnership with our Banking Industry Marketing Department?

MFS
Helping investors manage money since 1924.

A Look at Laws Granting Interstate Powers to Thrifts

In response to numerous requests from readers, this list of interstate thrift laws is gradually being expanded to include reference numbers identifying the laws. If you can supply copies of any of these laws, or if there is other information you would like to see included in future listings, please write to Robert Paul Molay at the American Banker, 1 State Street Plaza, New York, N.Y. 10004.

ALABAMA: The Alabama Regional Reciprocal Savings Institutions Act (87-152), effective July 1, 1987, allows FSLIC-insured thrifts and thrift holding companies from within the defined Southern Region (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, West Virginia, and the District of Columbia) to acquire Alabama thrift institutions on a reciprocal basis.

ALASKA: In 1982, the state passed nationwide interstate powers for thrifts along with legislation permitting interstate banking for commercial banks. Reciprocity is not required.

ARIZONA: Since Oct. 1, 1986, thrifts from any state have been eligible to acquire Arizona thrifts. No reciprocity is required. The legislation allows out-of-state thrifts to set up de novo operations in Arizona after **June 30, 1992.** Also, any thrift in the state formed after May 31, 1984, has protection from hostile out-of-state bidders until it is five years old.

ARKANSAS: Legislation signed in February 1987 allows thrifts in Alabama, Florida, Georgia, Louisiana, Maryland, Missouri, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia to acquire Arkansas thrifts on a reciprocal basis.

CALIFORNIA: Since July 1, 1987 – under California Financial Code Section 10010 – thrifts from Alaska, Arizona, Colorado, Hawaii, Idaho, Nevada, New Mexico, Oregon, Texas, Utah, and Washington have been allowed to buy California thrifts on a reciprocal basis. Full nationwide reciprocal banking is permitted by code Section 10000 after **Jan. 1, 1991.**

COLORADO: SB121 provides that from July 1, 1988, until Jan. 1, 1991, a Colorado thrift may be acquired by a thrift from any contiguous state that has generally reciprocal laws. Full, unrestricted interstate mergers or acquisitions of Colorado thrifts are allowed after **Jan. 1, 1991.** Even after this date, no acquisition or merger will be allowed if it creates an entity that would control more than 25% of the aggregate federally insured deposits of banks, thrifts, and other financial institutions in Colorado.

CONNECTICUT: Legislation passed in 1983 allows thrifts from Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont to buy Connecticut thrifts on a reciprocal basis.

DELAWARE: Since Jan. 1, 1988, savings and loans from Maryland, New Jersey, Ohio, and Pennsylvania have been allowed to acquire Delaware thrifts on a reciprocal basis only. Thrifts from Virginia and the District of Columbia may enter the state when their legislatures incorporate thrifts in their respective regional compacts. After **June 30, 1990,** Delaware will allow thrifts from any state in the union to enter the state on a reciprocal basis. An opt-out provision permits stockholders of any in-state institution to exempt itself from interstate acquisition before or after the effective date of the legislation.

DISTRICT OF COLUMBIA: Effective Oct. 12, 1988, D.C. Law 7-175 permits a regional thrift or thrift holding company to acquire a District of Columbia thrift or thrift holding company that has been in operation two years or more, if permitted by the home state of the acquirer. Approval of the D.C. superintendent is required, subject to override by the District Council. Protection against hostile takeovers is provided. Branching is also permitted, provided that a proposal is filed for meeting deposit and credit needs of the community. Such branches must cash government checks for nonaccount holders within target development areas. This law does not apply to federal associations.

FLORIDA: Since Jan. 1, 1987, thrifts from any state in the union have been permitted to acquire Florida thrifts on a reciprocal basis. The law was passed in 1986.

GEORGIA: The state passed regional, reciprocal interstate legislation for thrifts in early 1987. The law allows thrift holding companies in Alabama, Florida, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and the District of Columbia to acquire Georgia thrift holding companies.

HAWAII: State laws make no provision for interstate acquisitions.

IDAHO: Banks and thrifts from any state are permitted to buy Idaho banks and thrifts, under a law that took effect Jan. 1, 1989. The March 1987 law does not hinge on reciprocity.

ILLINOIS: Illinois Public Act 85-313 (Senate Bill 213), effective Sept. 10, 1987, allows an out-of-state savings and loan holding company to control or own more than 5% of an Illinois thrift holding company if the acquiring company's home state provides reciprocal privileges.

INDIANA: Legislation effective Sept. 1, 1987, (IC 28-4-8-1) permits savings and loans in the contiguous states of Illinois, Kentucky, Michigan, and Ohio to acquire Indiana thrifts on a reciprocal basis. No out-of-state association may acquire more than 15% of thrift deposits in the state.

IOWA: Since May 1987, savings and loans from any state have been permitted to acquire thrift institutions in Iowa on a reciprocal basis. The legislation reinterprets the meaning of the term "association" to include "foreign" associations.

KANSAS: A law effective April 23, 1987, allows any state-chartered savings and loan association with a home office in Kan-

See **TRIGGER** *next page*

TRIGGER *dates*

Continued from *page* **6**

sas to operate branch offices in any other state. The law also provides reciprocal privileges for state-chartered savings and loans based outside Kansas.

KENTUCKY: House Bill 497, signed into law by the governor March 31 and effective July 15, 1988, allows any holding company in or out of state to acquire three Kentucky thrifts per year until **July 15, 1993,** when unrestricted reciprocal interstate thrift acquisitions will be permitted. No company will be allowed to control more than 15% of savings and loan deposits in Kentucky.

LOUISIANA: Full reciprocal interstate powers for thrifts went into effect Jan. 1, 1989.

MAINE: Nationwide reciprocal interstate powers for thrifts have been in effect in Maine since 1975, as provided by Title 9-B of the Maine Revised Statutes Annotated, Section 1013. In 1984, the law was amended to drop the reciprocity requirement.

MARYLAND: The state's interstate law, effective July 1, 1987, allows savings and loans from Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Pennsylvania, South Carolina, Tennessee, Virginia, West Virginia, and the District of Columbia to acquire Maryland thrifts on a reciprocal basis.

MASSACHUSETTS: Since 1982, thrifts in Maine, Connecticut, Rhode Island, Vermont, and New Hampshire have been permitted to acquire Massachusetts thrifts on a reciprocal basis.

MICHIGAN: Thrifts from any state may acquire or merge with Michigan savings and loans on a reciprocal basis under a bill that took effect July 7, 1987.

MINNESOTA: Since July 1, 1986, savings and loans from Iowa, North Dakota, South Dakota, and Wisconsin have been permitted to acquire Minnesota savings and loans or set up branches in the state on a reciprocal basis. MSA 51.058, effective in 1988, added Idaho, Illinois, Kansas, Missouri, Montana, Nebraska, Washington, and Wyoming to the list.

MISSISSIPPI: Section 81-12-187 of the Mississippi Code of 1972 is being interpreted by the state's five-member board to mean that thrifts from any state are allowed to acquire Mississippi savings and loans on a reciprocal basis, subject to board approval.

MISSOURI: Thrifts from Arkansas, Illinois, Iowa, Kansas, Kentucky, Nebraska, Oklahoma, and Tennessee may acquire Missouri savings institutions on a reciprocal basis. The law was passed in 1986.

NEBRASKA: Revised Statutes of Nebraska 8-901, passed in 1988, authorize reciprocal interstate thrift acquisitions for a 10-state group effective Jan. 1, 1990: Wisconsin, Minnesota, North Dakota, Montana, South Dakota, Wyoming, Colorado, Kansas, Iowa, and Missouri. To date, only South Dakota, Wyoming, Colorado, and Missouri meet Nebraska's reciprocal test. Full nationwide reciprocal acquisitions will be permitted after **Jan. 1, 1991.**

NEVADA: Nonreciprocal nationwide powers for thrifts went into effect Jan. 1, 1989. After **July 1, 1990,** out-of-state thrifts are permitted to operate de novo institutions in the state.

NEW HAMPSHIRE: Since Sept. 1, 1987, thrifts in Connecticut, Maine, Massachusetts, Rhode Island, and Vermont have been permitted to acquire New Hampshire savings and loans. The legislation, passed in May 1987, also has a provision that would allow New Hampshire thrifts to avoid out-of-state acquisitions by "opting out" of the interstate law every two years.

NEW JERSEY: On July 30, 1987, the state passed a two-phase process for the introduction of reciprocal thrift interstate banking. The initial regional phase, effective June 15, 1988, opened New Jersey to thrifts and thrift holding companies from Ohio, Pennsylvania, and West Virginia on a reciprocal basis. The second phase became effective Nov. 15, 1988, triggered by reciprocal laws in Arizona, Idaho, Kentucky, Maine, Michigan, New York, Ohio, Oklahoma, Oregon, Pennsylvania, Utah, West Virginia, and Wyoming. The banking commissioner has determined that these states now meet New Jersey's requirements for reciprocity and that 4 of those 13 are among the 10 largest thrift deposit states. New Mexico and Louisiana have been deemed reciprocal states effective Jan. 1, 1989.

NEW MEXICO: Effective Jan. 1, 1989, an out-of-state thrift or thrift holding company may acquire any New Mexico thrift or thrift holding company that has been continuously operated for at least five years. (38th Legislature, 2d session, laws of 1988, chapter 5, Senate bill 70, as amended.) There are no reciprocity requirements or regional restrictions. De novo entry is allowed **July 1, 1992.**

NEW YORK: A 1982 law permitted out-of-state commercial bank holding companies from anywhere in the United States to enter New York on a reciprocal basis, for a five-year experimental period. In 1987 this law was made permanent and extended to cover thrifts.

NORTH CAROLINA: Under a 1984 law, thrifts from Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, South Carolina, Tennessee, Virginia, West Virginia, and the District of Columbia may enter this state on a reciprocal basis.

NORTH DAKOTA: Has no state-chartered savings institutions.

OHIO: Nationwide reciprocal thrift powers went into effect Oct. 17, 1988.

OKLAHOMA: A June 1986 law states that any out-of-state savings institution may acquire and operate an unlimited number of Oklahoma savings institutions. The in-state thrifts, however, must be at least five years old before they can be acquired.

OREGON: Legislation passed in 1985 allows thrifts from any state to acquire Oregon savings and loans. No reciprocity is required. However, federally chartered institutions wishing to operate de novo institutions in Oregon must have headquarters in states with reciprocal legislation.

PENNSYLVANIA: Since December 1986, thrifts from Delaware, Indiana, Kentucky, Maryland, New Jersey, Ohio,

How they spend it is their business.

Last year, American businesses spent over $100 billion for hotels, meals and airline travel.

Plus billions more for entertainment, supplies and unexpected emergencies. From fixing a fax in Detroit to fixing a flat in Quebec.

The best way to tap into this enormous market is with the Visa® Business Card program.

Cardholders already rate Visa as their number one bankcard, both overall and for business T & E. And the Visa family of cards consistently gets the highest response on solicitations.

With this proven selling power, the business card program will be both easy to sell and lucrative to offer.

The best program for you is also the best one for your customers. They get the advantage of over 284,000 Visa member branches and 44,000 ATMs in 38 countries. Which gives them unequaled access to money all over the world.

Whether it's for a cafe in Paris, a cafeteria in Paducah or just the neighborhood deli.

Your customers also have the advantage of a superior MIS reporting system. Designed to help control and manage both their travel and business expenses.

They get detailed, timely reports broken down in expense report form – monthly, quarterly or annually. And the ability to customize reports according to their specific business needs.

Our program also integrates with your billing system and that of travel agents. Which will keep both your corporate and travel agent clients happy.

They'll be even happier when they hear about the new benefits we've added to the business card package. We'll soon be launching a national consumer campaign that will explain these benefits in detail.

To get the details on how you can sign up, just give us a call at the phone number nearest you. In San Mateo, California, call us at (415) 570-2120 or in McLean, Virginia, call us at (703) 827-8404.

And do it soon.

Because the business of business is booming.

VISA It's everywhere you want to be.®

How they pay for it should be yours.

MARKETING/ADVERTISING

First Union Aims to Attract College Student Accounts

By KENNETH CLINE

Waiting in line is an occupational hazard for freshmen arriving at college, but First Union Corp. is offering students an alternative to queuing up for bank services.

Before they leave home, students throughout the Carolinas and Georgia can mail in applications to join a checking account and credit card program being introduced this fall by the Charlotte, N.C.-based banking company. Students can also open the accounts at the nearest First Union branch when they arrive on campus.

Pilot Program Expanded

The program, called Collegiate Banking Express, is an expansion of a pilot project last year at the University of North Carolina at Chapel Hill, according to Roberta Schroeder, assistant vice president and manager of middle mass marketing.

"We take care of their financial needs now, so they'll be customers later."

Roberta Schroeder *First Union Corp.*

"It's been a fun program, and the students have responded well to it," Ms. Schroeder said. "More kids work and have their own incomes and are a little more independent. So from that standpoint, they're a fairly decent customer group.

"The key to it is they're future customers," she added. "We take care of their financial needs now, so they'll be customers later."

Marketing of the Collegiate Banking Express program is done at the branch level. "It's basically up to the branches. We give them everything they need to conduct college solicitation," Ms. Schroeder said.

Free ATM Use, Visa Card

The Collegiate Banking Express package includes free use of First Union's automated teller machines; a choice of two checking accounts; free first-order checks; a Visa credit card with no annual fee for the first year and an $800 credit limit; $800 in overdraft protection; and free $1,000 accidental death insurance.

If the parent authorizes it, the student account can also get free automatic transfers from a parent's First Union account.

As an additional marketing attraction, First Union is making available, for $19.95, a video entitled "How to Pay for College," which discusses financial aid, scholarships, government loans, and investment strategies.

NCNB Asseses Loan Promotion

No matter how clever a promotion, the ultimate test is its effect on the bottom line. But sometimes, results are difficult to measure. NCNB Corp. concedes that is the case with a recently completed promotion that used scratch-off game cards to give loan discounts.

"There's no way you can directly link the amount of money spent on a promotion like this and the results you get," said NCNB vice president David S. Carter, director of marketing services for the Charlotte, N.C., banking company.

Increased Branch Traffic

Based on the number of prizes awarded, the number of game cards reordered, and the regional loan volume, the banking company did conclude that the "Win What You Want" contest increased branch traffic.

"A promotion of this type is designed to get customers and noncustomers in the door," Mr. Carter said. "It does build short-term traffic, which in turn would translate into sales."

A Million Entries for $100,000 Prize

During the promotion, which ran from early April through June, NCNB invited customers into its Southeast branches to pick up the game cards. Others were distributed through account statements and newspaper advertising.

Each of the 10 million cards included at least a 10% discount on a loan, and some contained cash prizes.

By completing the back of the card and placing it in boxes at branches, customers entered a grand prize drawing for $100,000. This phase of the promotion attracted 1 million entries.

NCNB used a scratch-off game in Texas last year, but awarded gifts instead of cash prizes.

Mr. Carter did offer one caveat for these attention-grabbing promotions. "I think you have to use it in a very strategic manner and be mindful of your image as well," he said.

"You don't want to be out there every year with a sweepstakes or a game." □

Amex Launches a Counterattack

Visa Ads Disputed in Battle for Merchants' Loyalty

By YVETTE D. KANTROW

NEW YORK — American Express has issued a stinging retort to Visa's latest marketing maneuver, touching off another battle in the credit card wars.

In the current bout, the card giants are employing their usual weapons – carefully crafted advertisements, biting sarcasm, and statistics galore. But the spoils will be different for the winner of this fight.

It is the loyalty of the merchant – not the consumer – that American Express and Visa each hope to claim. Though the card companies have aggressively fought for the merchant business before, they have never done so in such a public forum.

This week American Express Co. ran a two-page ad in *The Wall Street Journal* that is similar in design to an ad run by Visa just weeks before. The American Express ad states, "When you consider the profits the American Express card delivers to your business, you realize that Visa is just spinning their wheels."

Earlier this month, Visa U.S.A. began distributing cardboard wheels to merchants that they can use to compare what they spend on American Express transactions with what they spend on Visa transactions. Dubbed "profit improvement calculators," the wheels are part of a larger mass-market ad campaign attacking the rates that merchants pay for what Visa calls the "privilege" of accepting American Express cards.

'Frustration Marketing'

American Express officials initially dismissed the Visa campaign as an example of "frustration marketing." It said the company would rather spend money to improve merchant services than to put together a similar advertising effort.

But on Wednesday an American Express spokeswoman said the company had no choice but to respond because Visa's ad was filled with gross misconceptions.

"We developed the ad for one major reason," she said. "That was to set the record straight." The American Express ad will most likely appear again.

Whether American Express or Visa can actually persuade merchants to choose one card over the other remains to be seen. "A merchant would be imprudent not to take both cards," said Allen R. DeCotiis, president of Payment Systems Inc., a research firm in Tampa, Fla. But the card companies are proceeding full speed ahead.

Visa considers the American Express ad proof that its efforts have been successful in debunking what it calls the American Express prestige myth. "American Express is frustrated here; not Visa," said a spokesman for San Mateo, Calif.-based Visa.

The Visa ad – which is appearing in *The Wall Street Journal, Business Week, Time, Forbes,* and other business and trade publications – includes data claiming that Visa reaches more affluent households than American Express. According to the Visa ad, American Express reaches half as many cardholders with household incomes over $50,000 as Visa does.

But the American Express ad says its customers spend 140% more per year with their card than Visa's customers do. It also states that the average charge on the American Express card is at least 35% higher than the average Visa charge.

In addition to battling over cardholder spending habits and demographics, the Visa and American Express ads fuel the war over discounts – the fees merchants typically pay their banks or other service providers to accept credit cards. The Visa ads attack the typically higher discount fees merchants pay for American Express transactions.

American Express points out that Visa recently announced plans to increase some of its interchange fees – the charges that banks pay each other to settle credit card transactions – by nearly 25%. □

FDIC Chooses Sandler O'Neill to Probe ARM Errors

By RICHARD CHANG
Reuters

NEW YORK — The Federal Deposit Insurance Corp. said it will begin an investigation Sept. 10 on errors in adjustable-rate loans that some contend have cost consumers billions of dollars in overcharges.

David Steadman, managing liquidator of the FDIC's Chicago office, said the agency has hired Sandler O'Neill Mortgage Finance to conduct a three-month review of 2,900 loans totaling $100 million.

Sandler O'Neill will customize a existing software for the review, said Charles Smith, Sandler O'Neill vice president. The firm will reamortize the loans, but the FDIC will decide whether to reclassify overpayments as principal or send out refunds, Mr. Smith said.

Mr. Steadman said the agency plans to examine only loans that are still outstanding.

The loans in question are concentrated in the Midwest and were assumed from the Federal Savings and Loan Insurance Corp. after that thrift insurer was phased out under the thrift-bailout law.

"The main purpose of the review is so that [prospective] purchasers of the loans will get the correct loan information and abide by the Truth-in-Lending Act," Mr. Steadman said.

Computer consultant John Geddes, whose reports of widespread errors in adjustable-rate loans sparked the investigation, said the FDIC policy is unfair to consumers.

"It appears the FDIC is doing the same thing" as the FSLIC, Mr. Geddes said. □

Virginia, West Virginia, and the District of Columbia have been permitted to acquire Pennsylvania thrifts on a reciprocal basis. (Savings Association Code of 1967, as amended, 7 P.S. §6020-14.)

RHODE ISLAND: Under [RIGL (1956) 19-30], full nationwide reciprocal powers took effect Jan 1, 1988.

SOUTH CAROLINA: Savings and loans in Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Tennessee, Virginia, West Virginia, and the District of Columbia are permitted to buy South Carolina thrifts under a June 1985 law. The legislation is reciprocal. Unlike the states that the average charge on the American Express card is at least 35% higher than the average Visa charge.

In addition to battling over cardholder spending habits and demographics, the Visa and American Express ads fuel the war over discounts – the fees merchants typically pay their banks or other service providers to accept credit cards. The Visa ads attack the typically higher discount fees merchants pay for American Express transactions.

American Express points out that Visa recently announced plans to increase some of its interchange fees – the charges that banks pay each other to settle credit card transactions – by nearly 25%. □

First Financial Buys Deposits of a Thrift

STEVENS POINT, Wis. — First Financial Corp. said its First Financial Bank, a thrift subsidiary, acquired all of the deposits and part of the assets of Security Federal Savings and Loan Association, a $180 million-deposit Peoria, Ill., institution with six offices.

The deposits were acquired for a premium of about $2.6 million from Resolution Trust Corp., the federal agency that had been operating Security Federal.

First Financial said it agreed to buy some of Security Federal's assets and has an option to purchase certain other assets related to the six offices.

— Reuters

Ex-1st Fidelity Official Heads Howard Savings

LIVINGSTON, N.J. — Howard Savings Bank said William P. Tuggle has assumed the position of chairman and chief executive officer of the bank.

Mr. Tuggle's appointment has been approved by the Federal Deposit Insurance Corp. The thrift is the second-largest in New Jersey.

Mr. Tuggle was previously a director, president, and chief executive officer of First Fidelity Bank, Newark, and senior executive vice president of its parent, First Fidelity Bancorp.

— Reuters

TENNESSEE: Since July 1985, thrifts from Alabama, Arkansas, Florida, Georgia, Indiana, Kentucky, Louisiana, Mississippi, Missouri, North Carolina, South Carolina, Virginia, and West Virginia have been permitted to acquire Tennessee thrifts on a reciprocal basis.

TEXAS: Under a 1986 law, Texas savings and loans may acquire thrifts and operate branches in any state that includes Texas in its regional or national banking compact. Current state banking law, according to the Texas Savings and Loan League, allows any financial or nonfinancial institution to buy a Texas thrift.

UTAH: Since Dec. 31, 1987, thrifts from anywhere in the nation may acquire Utah savings and loans on a reciprocal basis.

VERMONT: Under a law that took effect Jan. 1, 1988, out-of-state thrifts within the New England region may acquire or merge with Vermont savings and loans on a reciprocal basis. Passed in May 1987, this state's legislation also allowed for nationwide reciprocal activity starting Feb. 1, 1990.

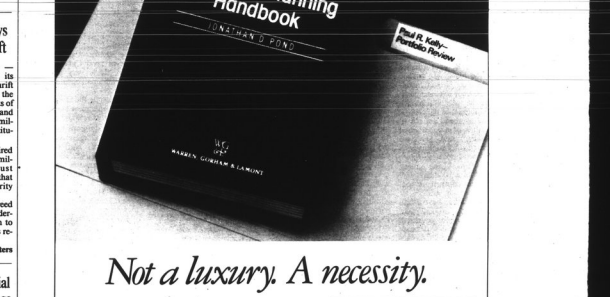
VIRGINIA: Since July 1, 1985, out-of-state savings associations based in Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, West Virginia, and the District of Columbia have been permitted to acquire Virginia savings and loans on a reciprocal basis. The charter of the in-state savings and loan being acquired must be at least two years old. The law also states that at least 80% of the deposits of the acquiring institution must come from the region defined.

WASHINGTON: A law passed in 1981 permits state-chartered savings banks and federally insured savings and loans from any other state to merge with or acquire Washington savings and loans, with the approval of the appropriate state regulators. In 1982, a comprehensive rewrite of the code determined that thrift interstate activity hinges on reciprocity.

WEST VIRGINIA: Effective Jan. 1, 1988, savings and loans from any state in the union may acquire West Virginia thrifts on a reciprocal basis. The in-state institution must be at least three years old.

WISCONSIN: Since Jan. 1, 1987, savings and loans from Illinois, Indiana, Iowa, Kentucky, Michigan, Minnesota, Missouri, and Ohio have been permitted to acquire Wisconsin savings and loans. The legislation hinges on reciprocity.

WYOMING: Since May 22, 1987, savings and loans from any other state have been permitted to acquire Wyoming thrifts. Passed early in 1987, the law was designed as interstate legislation for banks, but thrifts are under the same rules. It does not require reciprocity. It stipulates, however, that the charter of the in-state institution being acquired must be at least three years old. □



Not a luxury. A necessity.

Remember when most people thought financial planning seemed like a good idea, *if* and *when* they could get around to it? Well, those days are gone.

Today, intelligent personal financial planning is the *only way* to ensure your clients' investment stability and help them reach their financial goals. It takes an insightful eye trained on the world's markets. Intuitive knowledge of the economy and how it operates under evolving conditions. And flexibility to change strategies as the world around you changes.

You'll find all of this vital information, combined with hard-hitting, hands-on guidance to make it work for your clients, in the *Personal Financial Planning Handbook.*

Especially now, when your advice could literally make or break your clients, the *Handbook* is the definitive working reference to have handy. You get a unique, integrated approach to personal financial planning that examines the different factors involved and how they affect each other. A distinctive concept that makes it possible for you to give your clients the first-rate financial advice they need...and expect.

Also of interest...

Reis Makes Alliance the Little Bank that Could

By TERESA CARSON

CULVER CITY, Calif. — When Curtis S. Reis was a senior vice president of Crocker National Bank, he used to entertain customers in Crocker's plush 54th floor dining rooms with spectacular views of Los Angeles. Now, as president and chief executive of tiny Alliance Bank, he is likely to treat a borrower to a pastrami sandwich at a Culver City deli.

Mr. Reis no longer has large, well-staffed support departments or a top-flight chef to help him do his job. But the 56-year-old veteran of Crocker and Bankers Trust New York Corp. does not view this as a comedown. "Now I'm the senior marketing guy, the senior lending officer, I can get involved in every aspect of the business," he said.

He also has the satisfaction of engineering a major turnaround at Alliance. He came to the bank in 1986 when Crocker was sold to Wells Fargo & Co. "All of us with C's on our chest were history," he said. When he arrived as CEO, the one-office business bank was awash in red ink. But Mr. Reis launched a massive assault on expenses and problem loans, and now Alliance is earning money again.

Back in the Black

With creative cost-cutting, and by eliminating much support staff, Mr. Reis got Alliance back in the black. He pushed many jobs done by staff members out the door to consultants. He finds he gets crackerjack work at a fraction of the cost.

"Letting overhead get out of control is the nail in the coffin of small banks," said Salvatore Serrantino, California Research Corp., a Santa Monica, Calif., consulting firm. Using outside consultants is a way for small banks "to get competence that they can afford," he said.

"I can't afford to have a full-time marketing officer," Mr. Reis said. "It would cost me at least $50,000 a year with benefits." So he has retained an outside marketing expert. "I meet with him once a week, and we get our marketing for about $15,000 per year plus some costs to cover brochures and the annual report."

Atypical Experience

A graduate of Cornell University, the soft-spoken Mr. Reis has experience that the president of a small bank usually does not. At Bankers Trust, for example, he traveled the Midwest as an account officer and ran various departments such as credit and training.

"Every time I send a client or customer over there they are always impressed with Curtis Reis," said Alliance founding director Michael L. Abrams, a partner at the Los Angeles law firm of Abrams & Goldstein.

At one time at Crocker, Mr. Reis had to manage several thousand employees. When he came to Alliance, the $45.9 million-asset bank had a staff of 42. But Mr. Reis thought that number too large and trimmed it to 25. That helped shave expenses to $2.1 million in 1989 from $3 million in 1985. Now Alliance has $1.08 million in assets per employee, a ratio that compares well with the the nation's most profitable community banks.

Move to Temporary Workers

Alliance keeps the ranks of tellers slim by using temporaries when a regular teller is out. Mr. Reis also has no staff auditor or lawyer.

To keep up with rapidly changing regulations and laws covering banking, Mr. Reis has turned to Bankers Compliance Group, Irvine, Calif. For a monthly fee that averages about $600, the bankers who belong to the group get seminars, a newsletter, manuals, and three phone calls per month for specific legal questions.

Technology has also helped. A laser printer allowed Alliance to eliminate one job in the note department. "We don't need all the forms sitting around regularly becoming obsolete and someone typing them up. When the laws change, the forms can be instantly changed!"

Curtis S. Reis
Alliance Bank

Unlike their larger banks where he worked, "we don't have a lot of meetings," Mr. Reis said. "We also don't have a corporate travel department."

He also noted: "I set the interest rates every week."

The cost-cutting has paid off. After losing $4.2 million from 1983 to 1988, Alliance last year turned a profit for the first time in five years, earning $135,000. Profits for the second quarter of 1990 rose to $67,510, up 84% from $36,566 the year earlier.

"He has done a fine, fine job," said director Robert H. Thompson, president of Hal Thompson Co.

To turn Alliance around, Mr. Reis also had to work off problem loans. In the past eight years, Alliance has written off $7 million in problem loans, including the legal fees. At year-end, Alliance still had $907,000 in loans not earning interest; collecting these is a priority for Mr. Reis.

Focus on Raising Capital

But his main goals now are selling and bolstering Alliance's capital. Mr. Reis has some academic experience in the area, having completed a thesis for the Stonier Graduate School of banking on using senior securities in place of common stock as bank capital.

Mr. Reis plans to raise capital with a new issue of mandatory subordinated convertible debentures. He will be seeking regulatory approval for the issue and expects it to be done as a private placement.

Mr. Reis feels he can be more responsive to customers at Alliance than are bigger banks. "We just finished an $800,000 credit for a group that was buying a property with a car wash and restaurant," Mr. Reis said.

But the emphasis on customer service often translates into a demanding schedule. "I try and see one to two major customers every day," Mr. Reis said. "I make about 40 business development calls per month."

Alliance aims to serve small businesses, executives and professionals. Toward that end, Mr. Reis often finds himself playing salesman. "Everyone knew Bankers Trust, you don't have to explain that. Nobody has ever heard of Alliance," he said.

Nonetheless, Mr. Reis does not have to go far to find new customers. The 10-year-old bank's Culver City base is a thriving community in the Los Angeles area. The town boasts 2,500 businesses and a $2 billion economy, according to estimates of the Culver City Chamber of Commerce.

Favorable Market

"The market in Culver City is a delight," said George R. Newhouse, chairman and chief executive of rival Culver National Bank. "It is very diversified. There are small businesses street after street."

But despite the favorable conditions, Alliance is a "very aggressive," Mr. Newhouse said.

Besides the need to maintain momentum, there is another reason for the bank's energetic posture. When Mr. Reis took the helm at Alliance, he and his family bought about 17% of the bank's stock; at Crocker or Bankers Trust, the purchase of such a sizable stake would have been impossible.

But the ownership stake is strong incentive for Mr. Reis to keep costs down and profits up. □

On Choosing And Using Consultants

By BETH PISKORA

Consultants often can help a bank cut costs, maximize revenues, and rearrange strategic priorities.

But how can a bank choose the best of the bunch and work with them successfully?

Here are a few tips:

Shop Around. **"Don't take the recommendations of the first consultant you talk to," said Geoffrey Day, director of business development for Cambridge, Mass.-based Consulting Exchange. "Recognize that there's a vast supply of consultants with varied areas of expertise."**

For example, a bank with computer woes might be tempted to call in a technology specialist who "may not have any experience in banking and may not understand the repercussions of his or her advice." And if cost cutting is a priority, pick someone with turnaround skills.

Be sure to get advice from more than one consultant.

Geoffrey Day
Consulting Exchange

Check References. **Most consultants are very good at selling themselves, but some do not have the skills to deliver what they promise.**

Get a list of the consultant's current or previous clients and ask them about ability to stay within a budget, work under deadlines, and successfully convey suggestions to management.

Define Your Priorities. **Before calling in outside help, define your goals. Next, ask any prospective consultant to suggest a concrete strategy to achieve those goals.**

Keep an Open Mind. **Begin any process of change with a plan, but remain flexible. A good consultant may see opportunities that you do not.**

Ask Questions. **Make consultants explain their recommendations. Ask them to evaluate both the short- and long-term repercussions.**

For example, a change in lending policies may affect marketing representatives; a shake-up in the operations department may affect the entire bank. Cost-cutting moves, in particular, often can have a ripple effect.

Get a Second Opinion. **"Don't ever follow the advice of one consultant," Mr. Day said. Although this approach may initially prove more costly, in the long run it's more cost-effective.**

Once the bullet leaves the gun, it's too late. □

COST CONTROL
Mellon Bank Consolidates Three of Its Far-Flung Offices

By JEFFREY MARSHALL

As some banks expand – both geographically and strategically – their far-flung kingdoms often come to include a costly hodgepodge of offices.

Mellon Bank is taking aim at this problem with a program to consolidate into a new complex three offices in eastern Pennsylvania.

Cross-Selling Opportunities

Pittsburgh-based Mellon is hoping that bringing the three offices together will generate internal cost efficiencies; communications costs will be reduced and it will be easier to share ideas, officials said. They are also hoping that the combination will create opportunities for cross-selling.

The new center, under construction at a site in Plymouth Meeting, Pa., three miles west of Philadelphia, will house the suburban operations of Mellon's trust, middle-market lending, consumer lending, custom banking, and leasing departments, as well as Mellon Financial Services, a consumer finance subsidiary.

"Since custom banking and trust often share customers," said Becky Brinks, a Mellon spokeswoman in Philadelphia, "this represents one place where customers can go and be introduced to a number of relationship officers and products."

Little Change in Rent

Mellon recently signed a 5 ½-year, $2.9 million lease for 23,000 square feet at the Plymouth Meeting Executive Campus. Although the new rent will not be significantly lower than before, the move will bring 80 Mellon employees into one office.

The new office is near the Pennsylvania Turnpike and is easily accessible by mass transit. That translates into a benefit for both employees and customers, officials said.

Mellon also is hoping that the new setup will be cost-efficient.

"The real benefit to Mellon is that people will be locating to the same site," said Ms. Brinks. "There will be a sharing of ideas and information" That's not much more difficult and costly when the offices were far away.

"We are always evaluating our needs when leases are coming up; we're always assessing the viability of the cost," she said. The Mellon staffers are expected to move when the new complex is completed in September.

Ms. Brinks said the consolidation wouldn't result in the loss of any jobs. □

Ryan Chooses John Downey for Key OTS Post

Continued from page 1

Continued from page 2

settled on his choice after rotating four OTS district directors through Washington to try out for the regional chief's job.

Mr. Downey "is a morale builder," an OTS regional official said. His ability to rally the troops will be critically important as the OTS begins the restructuring of its field staff. Next week, the OTS is expected to make final a plan to elevate district offices in Atlanta, Jersey City, Chicago, Dallas, and San Francisco to regional offices that manage the other seven districts.

"We're very happy about it," said Brian Smith, director of the U.S. League of Savings Institutions' Chicago operation. Mr. Downey has a reputation for being "firm when he has to be, flexible when it's reasonable to be so."

Center of Reorganization

"He'll be at the storm center for the next three or four months as Tim Ryan's reorganization takes place," Mr. Smith said. He added that Mr. Ryan "has to recognize the districts "will require tact, diplomacy, and toughness. This is going to be hard to do the No. 1 objective of reducing costs while improving supervisory policy."

Interim OTS director Salvatore Martoche brought Mr. Downey to Washington last March.

Mr. Downey joined the Federal Home Loan Bank System, predecessor of the OTS, in 1986. That move followed a 19-year career with the Office of the Comptroller of the Currency that culminated in his serving as chief national bank examiner.

He became director of agency functions of the Federal Home Loan Bank of Indianapolis, and succeeded in August 1989 to the post of district director for the then new OTS in Indianapolis.

An Early Choice

Interim OTS director Salvatore Martoche brought Mr. Downey to Washington last March as senior deputy director of supervision policy. Within weeks, he was shifted to the supervision operations post. Then he was placed on special assignment for four months while the new OTS director, Mr. Ryan, looked over candidates for the regional operations job.

In related news, the OTS announced it has adopted a sliding scale of assessments and fees to fund its operations. Troubled institutions will be assessed at a rate 50% higher than healthy ones "to cover the higher costs of supervising them." Thrifts will no longer pay directly for examinations. □

C&S Acts to Defuse Bad Publicity over Faulty Notices

Mr. Scredon said the bank discovered its mistake Saturday, "probably after we started getting calls from customers."

10,00 Received Notices

Mr. Scredon said the notices went out Friday to 10,000 bank customers, most of them in Georgia, Florida, and South Carolina, informing them that they were in default on their August mortgage payments. What the homeowners should have received was a late notice, which the bank routinely sends out when payment is not received by the 15th of the month.

Mr. Scredon said the bank discovered its mistake on Saturday, "probably after we started getting calls from customers."

Upset customers who call the C&S number are being informed that the bank has "experienced some difficulty regarding default notices. If you received a notice and have made your July and August payments prior to Aug. 17, 1990, please disregard the notice you received."

Mr. Scredon said the bank believes in dealing with such problems forthrightly. "It's a matter of finding out the situation and responding quickly," Mr. Scredon said. "We have a lot of customers out there, and we want to deal with it appropriately."

He said that to his knowledge this was the first time such an error had occurred at C&S, the largest commercial bank in Georgia, with $23.3 billion in assets. The company is expected to complete a merger at the end of the month with Sovran Financial Corp., Norfolk, Va. □

EXECUTIVE *changes*

Fleet/Norstar Elects Three Vice Chairmen

Charles W. Carey, John W. Flynn, and **Robert L. Mushkin** have been elected vice chairmen of **Fleet/Norstar Financial Group** Inc., Providence, R.I. All three previously served as executive vice presidents of the diversified national financial services company.

Charles W. Carey

Mr. Carey has responsibilities for the corporation's commercial banking and real estate activities, investment banking subsidiary, and asset-based lending line of business.

Mr. Flynn is chief financial officer, chairman of the assets and liabilities committee, and has responsibility for the corporation's public policy, legal, controller, corporate communications, and treasury functions.

John W. Flynn

Mr. Mushkin is responsible for the nine banks that comprise the New England and New York State Banking Groups.

Robert L. Mushkin

Executive vice presidents given broader responsibilities are **Robert J. Higgins, John B. Robinson, II, Jay Sarles,** and **Michael R. Zucchini.**

Mr. Higgins, who has become chairman of Fleet Bank, Providence, in addition to his position as the bank's chief executive officer, has been given responsibility for two other Fleet/Norstar banks: Fleet Bank of Connecticut, Hartford, and Fleet Bank of Boston.

Mr. Robinson, who heads the four-bank New York State Banking group, has been given additional responsibility for Fleet Bank of Maine, Portland, and Fleet Bank-NH, Nashua.

Mr. Sarles, who has been responsible for managing Fleet/Norstar's mortgage banking, consumer finance, and discount brokerage lines of business, was given additional responsibility for Fleet/Norstar's consumer banking activities and the corporate development function.

Mr. Zucchini, chief information officer, was given new responsibility for AFSA Data Corp., the corporation's California-based student loan processing subsidiary.

Also, **Eugene T. Mann** has retired as executive vice president of the corporation. He was responsible for consumer banking activities of Fleet/Norstar's banks.

Harper Takes Morgan Post

Owen H. Harper, former Crocker National Bank executive, has been appointed managing director of Morgan Guaranty Trust Co., New York, principal banking subsidiary of **J.P. Morgan & Co.**

Owen H. Harper

Mr. Harper will be responsible for developing client relationships for J.P. Morgan's California private banking group. He will provide banking, corporate finance and investment management services to clients throughout the state, dividing his time between Morgan's Los Angeles and San Francisco banking offices.

Mr. Harper was an executive vice president with Crocker National Bank and a member of its management committee from 1974 until that bank was acquired in 1986. He had a number of assignments at Crocker during that period, including corporate banking division head in San Francisco and senior officer in Southern California.

He began his career with Citicorp in New York in 1960.

Also, **John J. Horan,** former chairman and chief executive officer of Merck & Co., has retired as a director of J.P. Morgan & Co. and Morgan Guaranty Trust Co., New York.

CEO of Thrift Resigns Position

Norman J. Harrison, chairman of the board of **American Federal Savings Bank,** Jacksonville, Fla., has relinquished the position of chief executive officer of the thrift.

J. Malcolm Jones Jr., vice chairman of the board, will assume the CEO post.

Mr. Harrison will continue to serve as chairman, and Roger L. Sutton will continue as president and chief operating officer.

Mr. Harrison stated that "the election of Mr. Jones to this position gives an added dimension to the executive capabilities of management. This will provide continued progress of the bank in the development of new opportunities."

Mr. Jones is a native of Jacksonville. He graduated from Bolles School in 1971 and graduated from Wofford College with a degree in economics in 1975.

— **Franklin Smith**

MIDWEST

Norwest Bank Minnesota, Minneapolis, has combined the marketing functions for corporate banking and named **J. Scott Slater** to the new post of vice president and director of corporate bank marketing. He was director of marketing for the bank's capital management and trust group.

In his new post, Mr. Slater has

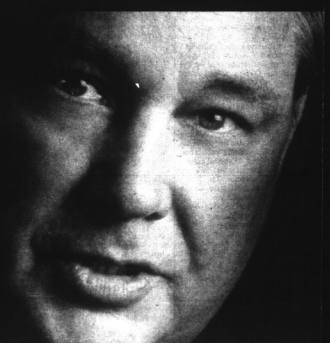
See **EXECUTIVE** *page* **13**

The time has come for the top management of the bank, the CEO, to get involved in automation. Top management must face this fact and cannot wish that responsibility onto others.

Automation is no longer the intrigue and complexity that it has been for 30 years, and top management must realize that fact. The automation directions, strategies, and decisions

must come from bankers, not data processing people. For those CEOs who realize this, the bank can move ahead now. If they won't take the responsibility, then the bank will have to wait until the CEO is willing to become involved.

Automation is no longer decisions in hardware and software, but decisions in the art and science of banking.



Ken Kirchman

KK THE KIRCHMAN CORPORATION

EXECUTIVE *changes*

Continued from *page* **12**

marketing responsibility for the bank's relationship management, international, cash management, commercial insurance and capital management, and trust business. He will also coordinate research, sales programs, and sales and product training for corporate banking.

Fireman's Fund Mortgage Corp., Farmington Hills, Mich., has named **John A. Courson** as president of Central Pacific Mortgage, a subsidiary based in Fair Oaks, Calif.

Mr. Courson had been president and chief executive officer of **Fundamental Mortgage Corp.,** Dallas, Tex.

Old Kent Bank, Elmhurst, Ill., an affiliate of **Old Kent Financial Corp.,** Grand Rapids, has appointed **Dr. Ivan E. Frick,** president of Elmhurst College, to its board of directors.

Star Banc Corp., Cincinnati, said **Mark T. Johnson** has retired as president of the bank holding company.

Oliver W. Waddell, chairman and chief executive officer, has assumed the additional post of president.

MIDDLE ATLANTIC

American Savings Bank, White Plains, N.Y., has appointed two executives to new positions as part of its "back-to-basics" strategy.

Edmond P. Hannigan has been appointed senior vice president, loan review, while **Mark L. Weinberger** has been appointed assistant vice president, real estate.

Mr. Hannigan heads a newly established loan review department that will provide an independent appraisal of the bank's loan portfolio. Mr. Weinberger is responsible for managing American's own real estate portfolio of cooperative apartments.

Hudson Valley National Bank, Yonkers, N.Y., has appointed **John J. Corrado Sr.** as vice president and branch manager of its main office in Yonkers.

Swiss Bank Corp, has named **Bernhard Aeschbacher** to first vice president in its New York branch.

He is head of the commercial banking sector at the branch, with responsibility for the bank's relationship with U.S. subsidiaries of Swiss and other foreign companies.

Community National Bank, Staten Island, N.Y., said **Anthony T. Battista** has joined the bank as vice president of branch management. In this capacity, he will be working closely with Staten Island's various community groups, as well as coordinating the internal, day-to-day activities of CNB's branch network.

He previously served as vice president of branch administration for First Nationwide Bank.

Chase Securities Inc., New York, the securities subsidiary of the **Chase Manhattan Corp.,** has appointed **Craig Sanger** to managing director and head of the syndicate desk.

Mr. Sanger was formerly with Bear Stearns, where he was a vice president in debt syndicates for the past five years.

Dauphin Deposit Corp., Harrisburg, Pa., has appointed **William H. Alexander** a director of the corporation and its principal subsidiary, Dauphin Deposit Bank and Trust Co.

He is chairman of H. B. Alexander & Son Inc. and H.B. Alexander Enterprises Inc.

Societe Generale, New York, said **Bruno Mejean** has joined the banking group as vice president responsible for trade finance activities of the group in the United States.

He will head the bank's effort to focus and expand activities in this area.

Mr. Mejean was previously with the Bank of New York, where he was vice president and team leader in trade and multinational banking division.

Moroze Sherman Gordon & Gordon, New York, said **Peter S. Smedresman** has joined the law firm as a partner specializing in bank financing, regulation of financial services, and the legal aspects of international financial.

Mr. Smedresman was formerly counsel-U.S.A. to the Royal Bank of Canada, the largest financial institution in Canada and the fifth-largest bank in North America, for almost four years.

Skylands Community Bank, Hackettstown, N.J., has named **Bruce L. Schott** as a vice president and senior loan officer for the new bank. He previously served as a commercial loan officer serving Northwest New Jersey for First Fidelity Bank North Jersey and United Jersey Bank Northwest.

Mellon Bank Corp., Pittsburgh, has named **Mary E. McFadden** a vice president in the trust and investment department.

Named assistant vice presidents were **Michael A. Cipriani** in the information management and res.arch department, **David A. Brand** in the finance department, and **Randi J. Weaver** in the technology products department.

Norstar Bank, Melville, N.Y., a subsidiary of **Fleet/Norstar Financial Group,** said **Stephen M. Lang,** vice president, has joined the community banking division-Long Island credit group as credit unit west leader.

Tokai Bank Ltd., New York, has named **Joseph P. Geraghty** as senior vice president, corporate finance at its New York branch.

Mr. Geraghty will lead the bank's active pursuit of more direct business with U.S. corporate clients within selected products and industry lines. As part of this emphasis, he will expand the corporate finance staff.

He previously was with Swiss Bank Corp. where he was a first vice president in charge of its syndication division, which he helped establish in 1987. □

Leading Japanese Banks Seen Liquidating Assets

By JOHN EVANS

Japan's major commercial banks are selling assets to raise capital depleted by the plunge in the Tokyo stock market, according to *International Financing Review*.

In a report from Tokyo, the London-based magazine, an *American Banker* affiliate, quoted several senior officials of Japan's commercial banks as saying that they have started to liquidate assets at home and abroad to sharply curtail balance-sheet growth.

The cuts will start with sales of domestic commercial paper in Tokyo, because such securities carry 100% weighting under rules of the Bank for International Settlements, the magazine said.

'Results Could Be Spectacular'

Since the banks' holdings account for $13 billion out of the $100 billion market for yen commercial paper, "the results could be spectacular," the magazine commented.

The Tokyo market has now lost a third of its value since Jan. 1. The plunge has prevented Japanese banks from offering new equity to help meet BIS standards on capital adequacy.

The accelerating stock selloff in Tokyo has an even bigger effect on banks, drastically devaluing their huge holdings of equities, analysts say. In the past, realizing these so-called hidden assets has been an important way for the banks to raise cash to add to capital in Tier One, the top BIS category. Dai-Ichi Kangyo Bank Ltd. reported that in the fiscal year that ended March 31 nearly 40% of its earnings came from selling stock.

Interbank Funding to Be Reduced

Japanese bankers also say they plan to trim back interbank funding with banks overseas as well as holdings of foreign bonds, although they declined to be specific. Japan's investment institutions and banks are major holders of U.S. Treasury notes and bonds.

Foreign loan guarantees will also be cut, though the last overseas assets to come under the knife will be foreign loans, Tokyo bankers said. At home, short-term loans as well as commercial paper to corporations will be the first to be cut; loan guarantees will follow.

"The banks are also planning to sell some of their domestic stock holdings," IFR reported through its Vigil news service. "However, these sales would be done very carefully on a company-by-company basis, depending on the depth of those corporations' relationships with the bank concerned."

... *by country*

JAPAN

The Finance Ministry is not aware of any plans now to raise the discount rate, and the Bank of Japan remains calm, a top ministry official was quoted as saying Wednesday.

A Finance Ministry spokesman also quoted the official as telling Japanese reporters he sees no need now to take measures to keep local stock prices from falling further.

Commenting on reports that European Commission President Jacques Delors had called for an early meeting of the Group of Seven nations, the official was quoted as saying he was unaware of any such plans.

BAHRAIN

The Bahrain Monetary Agency said it was taking over management of the local branch of Iraq's government-owned **Rafidain Bank.**

The BMA said it took the step in response to a request from the bank's managers in Bahrain.

Banking officials said the commercial branch had been hit by liquidity and solvency problems after its overseas assets were frozen following Iraq's Aug. 2 invasion of Kuwait.

"People are continually trying to withdraw funds – we have enough money, but our bank accounts are blocked," a spokesman for Rafidain Bank said.

Bank of America said it is to close down in Bahrain but stressed that the Gulf crisis had not been a major factor in the decision.

"We are winding down our Bahrain operations as a result of a continuing review of the bank's international strategy for business," Zakir Mahmoud, the bank's vice president for the Gulf, told Reuters.

He said the bank was not leaving a representative office behind. Bank of America employs 20 staff in Bahrain, including 14 Bahrainis.

WEST GERMANY

The Bundesbank council met Wednesday and was expected to meet again today, but it does not plan to hold a news conference, a Bundesbank spokesman said in answer to enquiries.

Economists said they believed the meeting was being held on a Wednesday as well as on a Thursday because of the wide range of issues under discussion. Dealers and economists expect key interest rates to remain unchanged.

Economists said talks were expected to center on composition of the Bundesbank council after German unification. Plans for European monetary integration would also be high on the agenda.

The by country **briefs were supplied by Reuters.**

Venezuelan Acquirer Eyes Florida

Banco Caracas Asks Fed to Allow Miami Bank Deal

By JAMES R. KRAUS

NEW YORK — In a move that could expand the presence of Venezuelan banks in southern Florida, Banco Caracas has requested Federal Reserve Board approval to acquire Eagle National Bank of Miami from Banco de Colombia.

The acquisition would make Banco Caracas the third Venezuelan financial institution to acquire southern Florida bank.

In 1982, a holding company affiliated with Venezuela's Bancor acquired People's National Bank of Hialeah. In 1978, Banco Consolidado acquired Consolidated Bank in Miami.

Other Venezuelan Banks

Three Venezuelan banks, Banco de Venezuela, Banco Latino and Banco Union, have Edge Act subsidiaries in Miami, and others, Banco Industrial de Venezuela and Banco Exterior de los Andes have Miami agencies. Edge Act subsidiaries do only international business.

Banco de Colombia, Colombia's largest bank, owns 97% of Eagle National, a retail bank with $199 million in assets.

In an application to the Fed, Banco Caracas, a small, privately owned Venezuelan bank with $37 million in assets, asked for approval to set up a holding company, Consorcio Inversionista BanCaracas Cibanca C.A. in order to acquire Eagle.

The other members of the holding company would be Seguros Avila C.A., a Venezuelan insurance company, and Banco Caracas N.V., an offshore banking unit in Curacao.

Banks Following Investors

Michael Gokel, director of marketing at Eagle National, declined to comment on the acquisition plan. Banco Caracas officials could not be reached.

Florida banking sources said the Venezuelan interest in acquiring banks in southern Florida reflects growing investment in the state by Venezuelans.

"Venezuelans have longstanding commercial and real estate investments in Florida," said Manuel Lasaga, vice president and senior economist at the bank subsidiary of Southeast Banking Corp., Miami.

Venezuela a Big Importer

Mr. Lasaga said Venezuela imported $1.4 billion worth of goods from Florida in 1989 and $2.2 billion worth in 1989, making that country the state's single biggest export customer.

"It's a natural for them," said Jose Valdes-Fauli, president and chief executive of the $140 million-asset Eastern National Bank in Coral Gables, referring to the Banco Caracas plan.

Mr. Valdes-Fauli added that Venezuelan financial institutions view owning a bank in Florida as a means to expand business and keep financial transactions such as letters of credit and correspondent banking services in-house. □

Turkish Banker on the Move Tries NYC

By JAMES R. KRAUS

NEW YORK — Erol Aksoy, the Turkish banker, has a record of firsts.

In 1977, he became the youngest general manager of a Turkish bank when he was named at age 30 to head Guarantee Bank of Turkey in Istanbul.

In 1984, he led Turkey's first management buyout when he acquired 97% control of Iktisat Bank and set up Turkey's first leasing company.

Park Avenue Bank Deal

This week, he made the single largest private investment ever by a Turkish national in the United States when he acquired control of Park Avenue Bank for $8 million.

"The price is close to book value," Mr. Aksoy said in a recent interview. "Buying a bank is far less time-consuming than acquiring a banking license, and we can add on business in trade finance without increasing overhead costs."

After earning a master's degree in business from Harvard Business School, Mr. Aksoy

Erol Aksoy
Turkish banker-investor

spent three years as an analyst at Smith Barney, Harris Upham & Co. in New York and Paris. He then returned to Istanbul to launch a career in banking.

Turnaround at Iktisat

Mr. Aksoy, 43, turned around Iktisat from a bank with net negative value of $4 million into Turkey's ninth-largest with nearly $1 billion in assets and $40 million in equity.

In 1986, he made his first investment outside Turkey by acquiring a 75% stake in the Paris-based Banque Internationale de Commerce from Princess Isabelle de Bourbon de Parme. Banque Internationale has since established a London subsidiary, and Iktisat has opened representative offices in New York, London, and Moscow.

Mr. Aksoy's success can be attributed to three factors:

He targeted institutions that had run into problems but could be quickly turned around with good management; he placed a major emphasis on building up a banking business in trade finance as Turkey rapidly expanded its foreign trade; and he plowed most of the dividends he earned into new acquisitions.

Dividends Finance Deals

The acquisition of a 66% stake in Park Avenue, for example, was entirely financed from dividends Iktisat paid in the first half of the year.

Mr. Aksoy hopes to apply a similar strategy to Park Avenue, a $50 million-asset bank doing mainly private banking. It was owned by German, U.S., and Lebanese investors and lost $600,000 last year. □

Wary Fed Probably Deferred Rate Cut Again, Experts Say

By DONNA SMITH
Reuters

WASHINGTON — At this week's meeting of the Federal Open Market Committee, the makers of monetary policy probably put off lowering interest rates until inflation fears subside, economists say.

The consensus, they say, was probably that recession is a lesser evil than steep rates.

'They Are Really Caught'

"There is no right decision," said David Wyss, an economist with Data Resources Inc. "They are really caught."

U.S. economic growth was slow even before Iraq's invasion of Kuwait pushed oil prices dramatically higher and made a recession more likely.

But if central bank policymakers move too fast to energize the economy by lowering short-term interest rates, they risk fueling inflation fears in financial markets. Such fears would bring higher long-term rates.

Decisions made at Tuesday's meeting will be kept secret until after the panel's next meeting, scheduled for Oct. 2. Minutes from the July 2-3 meeting will be made public Friday.

"The Fed can only fight inflation or recession. It cannot fight both at the same time," said David Berson, chief economist at the Federal National Mortgage Association. "The Fed is going to have to choose between them or steer a middle course."

> **They have no more idea of what's happening to the economy than anybody else.**
>
> **David Berson**
> *Fannie Mae*

The Fed has been keeping a steady grip on credit. It eased slightly last month to offset what Chairman Alan Greenspan said was overly tight lending by U.S. banks; the bellwether federal funds rate fell from 8.25% to 8%.

Key Report Due Sept.7

Some economists believe the August employment report, scheduled to be released Sept. 7, could provide the first chance for a decisive Fed move. The unemployment rate climbed in July to 5.5%, from 5.2% in June, and job growth slowed sharply.

Martin Regalia, chief economist for the National Council of Savings Institutions, said that if the next unemployment report shows more weakness than expected, the Fed will act.

"There is no question they are going to ease, but they are going to wait a little bit longer," Mr. Regalia said.

After 7½ of uninterrupted growth, the economy is teetering on the edge of a recession, while inflation shows no sign of slowing from its 4.5% rate.

Furthermore, Congress and the White House have made little progress on reducing the federal budget deficit.

Also, the crisis in the Middle East and its effect on oil prices adds to the uncertainty for Fed policymakers.

"They have no more idea of what's happening to the economy than anybody else does in this uncertain time," Mr. Berson said. □

Global ReLeaf comes in all shapes and sizes.

Global warming. The Greenhouse Effect. The continuing decline of our air and water. One of the best and most effective ways to respond to our growing environmental crisis is to plant trees. In fact, you can even get started today, right in your own community.

You see, Global ReLeaf is more than a name. It's Americans like you — of all shapes and sizes — who understand that every new tree can make a difference.

Trees provide shade, beautify our town and country landscape, and reduce heat-trapping C02 build-up in the earth's atmosphere. And those are only a few of their benefits.

So grab your shovel. By planting even one tree, you'll be making a positive contribution to the world we live in . . . and the kind of future we leave behind. You can make a difference right now by calling our special Action Line — 1-900-420-4545. The $5.00 charge actually pays for planting a tree while supporting Global ReLeaf action across the country. And, we'll rush you detailed information on Global ReLeaf. You can make a world of difference.

Banks Demand More Services From Vendors

Continued from *page 3*

the hardware maintenance provided by the top three vendors.

Executives from 37% of the institutions surveyed said the level of hardware maintenance provided by their primary vendor was excellent. Another 44% rated hardware maintenance very good, and 12% said they were neither satisfied nor dissatisfied.

The vendors did not fare as well when it came to software support. Observers have pointed out that computer users are becoming more concerned with finding software solutions and applications that enable them to operate more efficiently. Consequently, their demands are changing and they wield greater clout. Vendors are scrambling to adjust their own strategies to heed these demands.

Of the senior operations officers surveyed, only 17% rated their primary vendor excellent in software support, with another 33% saying they were very satisfied. But 25% were neither satisfied nor dissatisfied, and 14% were displeased.

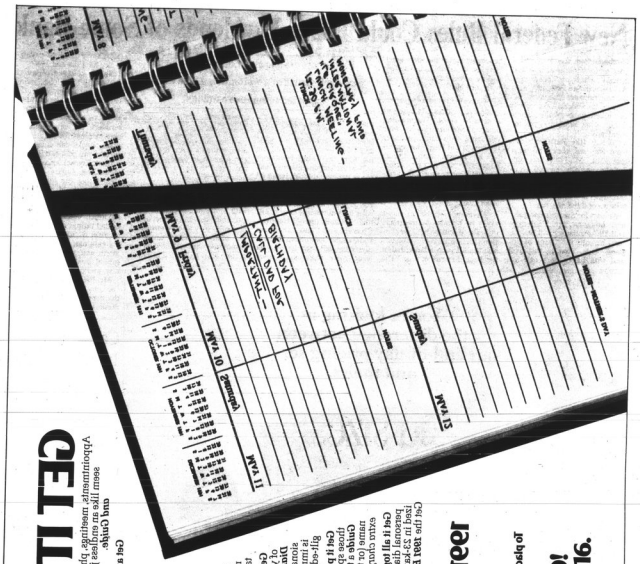
Peter Crowell, president of Chase Access, a computer services unit of Chase Manhattan Bank in New York City, said that dealing with software is new ball game for the top three hardware vendors.

Focus Shifts

Mr. Crowell pointed out that as hardware reliability has increased, both users and vendors have turned their attention to software. "Hardware price/performance keeps getting better, and customers therefore get a better deal. But how do vendors make money? They focus on software."

Mr. Greene said much existing software in banks is old and has been installed for a long time, making it too inflexible for the adjustments and changes that banking customers demand. "It takes a longer period of time to solve problems," he said. "You have a lot of rewriting, which is time-consuming and expensive."

Ms. Robinson is a business writer based in New York.



New Federal Rules Could Erase Dividends of Some Banks

Continued from *page 1*

icks, senior banking analyst and general partner of Montgomery Securities in San Francisco, said the new rules are "meaningless" because the Federal Reserve will not adhere to them when determining what banks may pay for dividends.

"If they [the Fed] don't like what they see, they'll do what they want," Mr. Fredericks said.

But eventually, he said, regulators will insist that banks pay dividends only out of recent earnings, a requirement that goes beyond the new rules.

At least for the next few quarters, however, Mr. Fredericks said the regulators will invoke what he calls the "Bank of England" rule. That is, they will deal with banks on a case-by-case basis and allow them grace periods to restructure so they will be able to cover dividends with earnings.

Chase Is Prime Example

Mr. Fredericks said Chase was a case in point. The holding company cannot currently cover dividends with earnings under the new or old rules. But regulators are allowing it to continue payouts because of a restructuring plan that is expected to improve earnings.

"They have Chase on a short leash," he said.

"Dividends will be cut, but it won't be because of the [new] formula. It will be because they won't be earning the money," said Mark Lynch, a bank analyst for Bear, Stearns & Co. "The chairman [of the Federal Reserve Board] won't go to the chief financial officer of a bank and ask, 'How are we doing on the formula?' " But regulators will be stricter in ensuring that banks can pay dividends out of current earnings, he said.

Regulators are allowing Chase to continue payouts because of a restructuring plan that is expected to improve earnings.

According to Mr. Soifer, the Fed is most likely to fudge the rules for a number of large banks like Manufacturers Hanover, Citicorp, and Chase. These are some of the institutions that analysts say will soon have to set aside more reserves to cover losses on loans to lesser-developed countries.

Although regulators may force dividend cuts over real estate and other loan losses, they are not likely to do so over LDC losses, he said.

Grandfather Clauses

John L. Walker, a partner with Simpson Thacher & Bartlett, noted that the impact of the new rules may also be mitigated for many banks because of grandfather clauses allowing the current rules to be used in calculating their dividend-paying capacity for 1988 and 1989.

Those clauses mean that banks with LDC loans, many of which took large writeoffs in 1989, would not be hurt by the changes that do not allow reserves to be counted as part of earnings. (In determining current earnings for dividend purposes, banks can draw on the current and past two years.)

Brent Erensel, an analyst with Donaldson, Lufkin & Jenrette, argued that the impact of the new rules would be limited by other considerations of regulators. He said they will be paying as much attention to banks' Camel ratings as to their ability to cover dividends with operating earnings. (Camel ratings refer to assessments of a bank's capital, assets, management, equity, and liquidity.)

Mr. Erensel said he could not "see any company headed for a dividend reduction because of these rules." □

You're looking at
the difference between
our end-of-day pricing service
and theirs.

It's called a responsive customer service team.

At Muller Data, our customers tell us we have the "most professional" service in the industry. They say we're friendly and helpful. That we try harder, and do things right the first time.

Answers, fast.
Our records say we answer more than 80 percent of your questions while you're still on the phone. So instead of promises to "get back" to you, we give you answers and solutions – on the spot. When we do have to call you back, we give you a time, and treat it like an important commitment. Because to us, it is.

Accurate data.
Of course, we start with accurate, comprehensive data for more than 750,000 issues, including listed and OTC equities, commodity and financial futures, CMOs, MBSs and UITs – plus the full universe of more than one million municipal bonds, corporate fixed-income securities, government instruments, and 80,000 Canadian and overseas equities and bonds.

Can we show you?
We'd like to show you just how accurate, timely and responsive a securities pricing service can be. For more information, write Muller Data Corporation, 161 William St., New York, New York 10038, or call toll-free: 1-800-US-MULLER.

California Banks In Pact to Merge

PLEASANTON, Calif. — Mission-Valley Bancorp and Northern California Community Bancorp Inc. said they have executed a letter of intent to merge. The resulting $773 million-asset banking company would be named California Banchares Inc.

The companies said the proposed merger will combine them on an equal basis with the exchange ratio equalizing the book value per share of Mission-Valley and Northern California.

Some Shareholders to Gain

At the current book values of the two companies, each share of Mission-Valley common would get one new share of California Banchares stock, the two companies said.

Northern California shareholders would get about 1.23 new shares for each share of existing common stock.

The merger, which depends upon execution of a definitive merger agreement, shareholder approval from both companies and regulatory approval are expected to be completed during the first half of 1991.

— Reuters

Synovus Signs Pact With Citizens Federal

COLUMBUS, Ga. — Synovus Financial Corp. said it has signed a definitive agreement to acquire the $130 million-asset Citizens Federal Savings and Loan Association, Rome, Ga.

The companies signed a letter of intent on July 3, calling for Citizens to convert its mutual ownership to stock form and for Synovus to acquire all of the issued shares. They expect to complete the deal in the fourth quarter pending approvals from state and federal regulators and Citizens depositors. □

Rating Firm in London Says It Likes U.S. Banks

Continued from *page 1*

mail range has opened up in the debt ratings assigned to banks by the three agencies.

Between December 1988 and August 1990, IBCA said, for example, Moody's downgraded the average rating for 32 of the largest U.S. banks to between A-minus and BBB-plus, from A. S&P downgraded the same banks to between A and A-minus, from A and A-plus, IBCA said, but the London firm downgraded those banks to a low A from between A and A-plus.

In some instances, IBCA has maintained its ratings on a bank despite downgradings imposed by the other ratings agencies.

For example, IBCA has maintained its A-minus rating on Citicorp since December 1988, whereas Moody's downgraded the banking company this year to A-minus from A-plus.

The Cost to Citicorp

Attacking the "excessive power" of the rating agencies, IBCA said the Moody's downgrading "reduced the pool of potential investors in Citicorp securities, cost Citicorp an estimated $5 million to $10 million a year, just for its commercial paper program, and tarnished" the bank's image.

The reason for the divergence in views between IBCA and Moody's, it has not think that Citicorp has the management and the ability to deal with the problems," said Mark Gross, an IBCA analyst in New York.

Telling Investors in Advance

The Moody's policy, he added, is to alert investors to unhealthy credit concentrations that could pose problems, such as in real estate, rather than just to recognize losses that have occurred.

"We're not suggesting that these banks aren't going to make it. The vast majority of banks we rate are in good shape," Mr. Mahoney said. "But you could be quite profitable today while subject to asset concentrations that could cause problems very quickly."

Robert Swanton, assistant vice president at S&P, also denied that his agency has moved too fast to downgrade banks.

"There has been, without question, a deterioration in the real estate market that warrants close scrutiny of banks' assets. The deterioration is asset quality. is not a figment of anybody's imagination," Mr. Swanton said.

He also rejected implications that too rapid downgradings of debt ratings increase problems for banks. "If we change a rating and that exacerbates the situation, it may mean that people are retroactively recognizing something that maybe they should have recognized beforehand," he said.

IBCA acknowledged in its report that industry overcapacity; mounting highly leveraged transactions, real estate lending problems, and economic recession are serious problems for U.S. banks.

Nonetheless, equity ratios of major U.S. banks ended the 1980s at 5.32%, close to the 5.26% level in 1982, the agency said. And noninterest income of U.S. banks increased to 1.85% of average assets at yearend 1989, from 1.08% in 1982, it said.

Statistics Tell a Tale

Nonperforming-asset ratios, excluding Third World loans, also declined to 2.39% from 2.67% in 1982, IBCA added, and net medium- and long-term problem Third World loans were less than 25% of equity at yearend 1989, compared to 125% in 1982.

Though the report cited figures for yearend 1989, Mr. Gross said the agency's conclusions take account of developments affecting banks in the first half of this year.

"There has been, without question, a deterioration in the real estate market that warrants close scrutiny of banks' assets. The deterioration is asset quality. is not a figment of anybody's imagination," Mr. Swanton said.

He also rejected implications that too rapid downgradings of debt ratings increase problems for banks. "If we change a rating and that exacerbates the situation, it may mean that people are retroactively recognizing something that maybe they should have recognized beforehand," he said.

IBCA acknowledged in its report that industry overcapacity; mounting highly leveraged transactions, real estate lending problems, and economic recession are serious problems for U.S. banks.

Nonetheless, equity ratios of major U.S. banks ended the 1980s at 5.32%, close to the 5.26% level in 1982, the agency

Farm Loan Market Seen as Steady

CHICAGO — Farm real estate lending will continue to expand in the third quarter of 1990 after a healthy second quarter for rural credit markets, the Federal Reserve Bank of Chicago said.

In a survey of agricultural banks in its district, the Federal Reserve Bank said that farm loan demand was strong and that banks had ample funds available for lending to farmers.

The survey covers banks in northern Illinois, northern Indiana, Iowa, southern Wisconsin, and southern Michigan.

Loan Demand Shows Strength

Farm loan demand at the banks, although down slightly, continues to show strength, according to the report.

About 60% of the banks reported an increase in farm loan demand during the spring months, while 40% said farm loan demand had not changed from year-ago figures.

Farm loan demand showed strength in Iowa and Indiana, while Wisconsin banks were near the district average. Illinois and Michigan banks reported lower-than-average farm loan demand during the second quarter.

Ample Funds Available

Loan availability rose sharply in late 1989 and has remained at a high level, with 30% of the banks reporting that funds available for lending to farmers were up from figures of a year ago.

Interest rates charged on loans to farmers were lower than last year's figures, but were unchanged after dropping during the last four quarterly surveys, the Federal Reserve said.

DEALS: Troubled Health-Tex Reports Talks with Potential Buyers

By WILLIAM GOODWIN

Operating under yet another extension from its lenders, Health-tex Inc. is holding talks with a number of potential buyers of the troubled maker of children's apparel.

"We are discussing the possibility of the sale" of the company, said Eric Margolin, Health-tex's general counsel. He refused to characterize the status of the talks, or identify the potential buyers.

No Payments in Two Years

The company hasn't made interest or principal payments on its roughly $200 million in bank loans for more than two years.

Health-tex was spun off from Chesebrough-Pond's Inc. in a $235 million leveraged buyout in 1985. The LBO was financed by a group of 10 banks led by Bank of New York.

Under a March 1988 standstill agreement that has been extended numerous times, the banks have agreed not to force a liquidation of the company. The standstill agreement is currently set to expire Sept. 30.

"There has been a lot of forbearance on the part of the banks," said a spokeswoman for Ameritrust Corp. of Cleveland, a member of the bank group.

Union Lobbies Banks

At the same time, though, the banks have been the target of a high-profile campaign by the Amalgamated Clothing and Textile Workers Union, which represents the company's workers.

Unless a buyer emerges soon, the banks may run out of patience.

In an effort to pressure the banks into giving the company more time to turn itself around or find a buyer, the union has staged demonstrations at the banks' offices.

While the banks extended the standstill agreement to Sept. 30, the unions may be back, seeking further extensions.

"We're saying, these banks promoted a very imprudent LBO," said William Patterson, a union spokesman. "What makes sense now is a patient strategy" by the banks, he added.

At one point, a union-led buyout of the company was considered. "That is not a prominent option" right now, Mr. Patterson said.

Outside Buyer Sought

Instead, the union is apparently focusing on finding an outside buyer that would be committed to sustaining the company's domestic operations.

Mr. Patterson suggested the union might be a partner in such a buyout through a collective bargaining contract, or some other arrangement. He declined to be more specific.

However, unless a buyer emerges soon, the banks may run out of patience.

Hurt in part by increased foreign competition, Health-tex continues to lose money, one banking source noted.

Meanwhile, Health-tex announced last month that its board named Alan Cohen its new chief executive. Mr. Cohen, chairman of Alco Group, a financial services firm in New York, is a liquidation expert. □

Integrated Halts Investment Fund Sale to Krupp

By STEPHEN KLEGE

Bankrupt Integrated Resources has broken off an agreement to sell four mortgage investment funds for $45 million to Krupp Companies, Boston, dismissing creditors' hopes of a maximum return on the assets.

While the effort to sell control of the funds, consisting of $642 million of insured mortgage investments, has stalled, CRI Insured Mortgage Association, Bethesda, Md., is negotiating with an exchange offer to the limited partners. The creditors, led by Manufacturers Hanover Corp. and Chemical Bank, have estimated a successful offer by CRI would cut their return in half, compared to the deal with Krupp.

Hanover and Chemical are Integrated's largest creditors at $55.8 million and $51.57 million, respectively.

Stephen D. Weinroth, chairman and chief executive of Integrated, denied CRI's charge that an amendment to the partnership agreements illegally reduced the limited partners' control over the funds. It merely set up "a mechanism for independent fee setting" for management of the funds.

Mr. Weinroth said Integrated remains free to negotiate with parties who have expressed an interest in control of the funds "including CRI, if they want to pay for it."

Since filing for reorganization under Chapter 11 of the bankruptcy code in February, he said, Integrated has closed on the sale of 17 assets, with a "substantial part" of the $368 million of proceeds to be distributed among the creditors.

Krupp made its offer following a U.S. Bankruptcy Court auction. But Judge Howard C. Buschman 3d ordered the parties to work out a new deal, eliminating a provision that the deal was contingent on CRI being out of the picture.

"Krupp said in a release that a "litigation contingency required by Krupp's lender was unacceptable to Integrated Resources." □

ADD PLUS® TO YOUR CIRRUS® ATMs AND GET AN EXTRA 150 MILLION

Soon Cirrus® members will be able to cash in on Plus System® customers. Adding the revenue potential of over 150 million Plus® cardholders.

So, by adding the Plus logo to your ATMs, you will start attracting customers who used to pass you by!

For information, please contact Ron Reed, vice president and general manager, at 303-620-7318. And make the most of your ATMs.

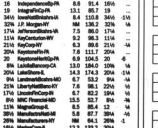
Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding (As of June 30, 1990, the market value cutoff for banks was $56.71 mil. and for thrifts $12.99 mil.) Also listed is the 52-week high and low prices for the stock, PE, the price-earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. MB, to book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Chg.: The price at which the stock last traded. If no trades for the day, the latest bid. AB Bank Index: a weighted average of the top 225 banks by market value and the top 50 thrifts in market value, respectively. Highlights show largest percent gainers in price, and two volume indicators most shares traded and today's volume as a percentage of average shares traded for the last 65 days.

Data sources: SNL SECURITIES, Charlottesville, VA 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides the info with the daily prices.

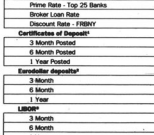
Libor Swap Yield Curve

August 15



Wednesday, August 22, 1990

August 22



Data source: Manufacturers Hanover Trust Co., New York

Description of tables: For lenders and borrowers in the interest rate swap market, the LIBOR swap yield curve is the benchmark interest rate used by active participants when arranging the exchange of fixed- and floating-rate cash flow streams of different maturities. For example, a fixed-rate lender holding a one-year fixed-rate loan and wishing to swap into floating would pay the one year rate at the end of a year in exchange for a floating-rate payment stream, usually 3-month LIBOR, paid and reset quarterly.

First Union's Price Plunge Sparks Interest

By GORDON MATTHEWS

NEW YORK — First Union Corp.'s stock price has hit new 1990 lows this week, prompting some analysts to declare a buying opportunity despite their lingering concerns about the impact of its last acquisition.

The southeastern superregional bank traded at $14.50 at noon Wednesday, down 25 cents on the day and off 27.5% since mid June. By comparison, the *American Banker* index of the nation's 225 largest banks has fallen 20%.

"The recent price decline in the stock provides an excellent buying opportunity that should be seized," said James. M. Rosenberg, a banking industry analyst for Shearson Lehman Brothers.

Mr. Rosenberg previously avoided a short-term buy rating for the stock while awaiting "proof that the projected cost savings from Florida would materialize."

First Union gets high marks from analysts for credit quality, but the Charlotte, N.C. banking firm has been criticized generally for its expense levels and specifically for paying too high a price last year for Florida National Banks of Florida.

Still, many market professionals believe it has built one of the strongest retail banking franchises in the country.

After several heady years in mid 1980's as a sweetheart of the new superregional class of banks, First Union fell out of favor from mid 1986 onward as investors worried increasingly about expensive acquisitions that diluted earnings per share.

$22 Billion in Acquisitions

The company acquired seven major banks and 15 smaller ones in four major southeastern states between November 1985 and last January. Total banking assets acquired totaled over $22 billion.

Now some market professionals think the pendulum is about to swing again.

"First Union is poised to return to favor during the next several years, whether or not other banks stage a rally," Francis X. Suozzo, banking analyst for S.G. Warburg & Co. Inc., said in a recent report.

He believes this is so because, among other things, the company is begin to "leverage its branch network, emphasizing strong consumer relationships as well as smaller and middle market commercial relationships."

Moreover, costs appear to be coming under control. Analysts at Goldman, Sachs & Co. noted recently that the company expects to gain more than $40 million in savings this year from the Florida National acquisition, plans to reduce non-interest expenses by 7% from last year and hold expense growth to less than 3% in 1991.

* * *

WEDNESDAY'S MARKET

Given the pounding bank stocks have taken in recent weeks, one bank has done something different about the slide in bank stock prices. Michigan National Corp., Farmington Hills, Mich., on Wednesday publicized a "letter to colleagues concerning stock performance," listing nine different reasons why it believes "the market (particularly the institutional investor) has overreacted to Michigan National's perceived problems."

Among other things, it noted that the bank's historic charge-off ratio, at 0.32% of loan, is "excellent compared to its peer banks."

The letter did not immediately bolster the bank's stock price, which was off 12.5 cents in late afternoon trading to $24.50.

Major bank and thrift stocks were mostly mixed in dull late summer trading on Wednesday as the stock market overall continued to slip lower.

The largest loser was NCNB Corp., down $1.625 to $32.125 while the biggest afternoon gainer was Society Corp, Cleveland, up $7.5 cents to $28.375. □

CAPITAL
Rising Long-Term Rates Tempt Few Banks

By KELLEY HOLLAND

With the Middle East oil crisis sparking fears of inflation, yields on long-term bonds have been rising steadily while short-term rates have remained relatively stable, steepening the Treasury yield curve.

But don't expect banks to jump to take advantage of the shift. Traditionally, a steeper yield curve could tempt banks to extend the average duration of their investment portfolios to take advantage of the sharply higher yields available in longer maturities.

Many banks, though, are worried that inflation is more than a short-term concern, and are sitting tight with their investment portfolios rather than trying to lock in higher yields by extending their holdings.

Cautious Strategies

"Most of the banks in the country are going to adopt very cautionary strategies because of the uncertainty," said Howard I. Atkins, treasurer of Chase Manhattan Corp. "I wouldn't imagine you're going to get a lot of significant additions to or sales out of investment portfolios right now. It's just too uncertain."

A few banks are even shopping for shorter-term securities because of their worries about the economy and about possible new regulatory restrictions on marking to market long-term investments.

"You have too much uncertainty in terms of the market, the economy and the mark to market thing for banks to be looking to extend," said one bank treasurer.

Since the crisis erupted in the Middle East Aug. 3, worries that higher oil prices would lead to a new round of inflation have dramatically steepened the yield curve. The yield on two-year Treasuries was 20 basis points less than that on five-year Treasuries on Aug. 1, and it was nearly 40 basis points less on Wednesday. The steeper yield curve means there is more of a potential reward for investors willing to buy longer-term securities.

That difference is accentuated for buyers of collateralized mortgage obligations, because two-year CMOs have been trading about 55 basis points over comparable Treasuries and five-year CMOs have been trading about 80 basis points over.

But concerns about the domestic economy are keeping many banks away from long-term investments.

"You're tempted to extend, but you're concerned about stagflation," said J. Howard Ragsdale, a senior vice president in the portfolio strategies division of First American Corp.

The failure of government leaders to come to an agreement on reducing the federal budget deficit has made bankers worried that interest rates could trend upward, and remain a problem for some time to come.

Also, bank portfolio managers worry that high yields in foreign markets will force the Federal Reserve to keep interest rates high to retain investor interest in U.S. government securities. Yields on Japanese government bonds are expected to rise, and yields on British government securities are already well above those on U.S. Treasuries.

"Given the degree of uncertainty we have right now, I don't think the 50 or 60 basis points is enough of an incentive," said Randall King, a vice president and senior portfolio manager at Pittsburgh National Bank, a subsidiary of PNC Financial Corp.

Regulatory Restrictions

Uncertainty about possible regulatory restrictions on how banks report the value of their investment securities is also keeping banks away from long-term assets. The Financial Accounting Standards Board is currently considering a rule that would require banks to mark to market certain investment assets at the end of every reporting period, and to report at the lower of cost or market certain other investment assets.

Since long-term investments generally have more price volatility, the prospect of the new rule is making short-term investments more attractive.

"Long-term rates are more susceptible to bad news," said Mr. King. He said his bank has been active in the market for collateralized mortgage obligations with maturities up to three years, but very quiet in the long end of the market. □

STRATEGIC BANK COST MANAGEMENT

New Approaches To Reducing Costs In An Era Of Uncertainty

FOUR TARGETED SECTIONS

SECTION I: Examining Superior Cost Performers

SECTION II: Alternative Strategies to Cost Management

SECTION III: Using Technology to Help Your Bank Cut Costs While Improving Performance

SECTION IV: Cutting Costs During the Merger Process

OUR DISTINGUISHED SPEAKER PANEL INCLUDES:

J. Carter Bacot, *Chairman*, Bank of New York Co.
Michael Zucchini, *EVP & COO*, Fleet Norstar Financial Group, Inc.
William L. Chenevich, *President & COO*, Security Pacific Automation Co.
James D. Dixon, *Vice Chairman, COO & CFO*, Citizens & Southern Corp.
Richard L. Huber, *Vice Chairman*, Continental Bank
Walter E. Leonard, Jr., *Executive Vice President*, First Wachovia Corp.
Douglas E. Ebert, *President & COO*, Southeast Bank
H. Edward Nyce, *Executive Vice President*, Manufacturers Hanover Trust Co.
James M. McCormick, *President*, First Manhattan Consulting Group
William T. Gregor, *Senior Vice President*, The MAC Group
Patrick J. Leempputte, *Partner*, Price Waterhouse
Harry H. Totonis, *Principal*, Booz, Allen & Hamilton
Charles H. Nobs, *Senior Vice President of Corporate Operating Services*, Bankers Trust Company
Keith P. Russell, *President & COO*, Glendfed & Glendale Federal Bank
Janet S. Hartung, *Senior Vice President*, Mellon Bank
Robert M. Butcher, *Senior Executive Finance & CFO*, Marine Midland Bank

New York City, October 15 & 16, The Vista Hotel
Los Angeles, CA, November 8 & 9, L.A. Hilton & Towers
Boca Raton, FL, December 5 & 6, The Boca Raton Resort & Club

(Advertisement)

October 15 & 16, 1990
The Vista Hotel
New York, NY

DAY ONE:

8:45 CHAIRMAN'S OPENING REMARKS:
Sanford Rose, *Senior Columnist, American Banker* (NY)
John S. Poelker, *President,* Poelker & Associates (LA)
Clayton G. Deutsch, *Principal,* McKinsey & Co. (BOCA)

SECTION I
EXAMINING SUPERIOR COST PERFORMERS

9:00 WINNING THE PRODUCTIVITY RACE THROUGH STRATEGIC COST MANAGEMENT (NY, LA, BOCA)
- Which banks are the superior cost performers and how did they raise productivity through cost management?
- How good is a bank and where are the areas of potential improvement?
- What kind of programs can bring expenses under control"

James M. McCormick, *President*
First Manhattan Consulting Group (NY, LA, BOCA)
Rodgers L. Harper, *Managing Vice President*
First Manhattan Consulting Group (NY, LA, BOCA)

9:45 BANK OF NEW YORK - A CASE STUDY (NY, LA, BOCA)
- As selected from First Manhattan Consulting Group's Expense Productivity Analysis

J. Carter Bacot, *Chairman,* Bank of New York (NY)
Speaker to be announced, Bank of New York (LA, BOCA)

10:30 CONTINENTAL BANK - A CASE STUDY (NY)
Richard L. Huber, *Vice Chairman*
Continental Bank (NY)

AMSOUTH - A CASE STUDY (BOCA)
- As selected from First Manhattan Consulting Group's Expense Productivity Analysis

John W. Woods, *CEO, or* **C. Stanley Bailey,** *Senior Executive Vice President & CFO*
Amsouth Bancorporation (BOCA)

COST CUTTING IN COMMERCIAL LENDING (LA)
Nicholas L. Hayes, *Senior Vice President & Manager*
Bank of California (LA)

11:15 COFFEE/TEA

11:30 THE ANALYST'S REPORT CARD (NY, LA, BOCA)
- How analysts measure a bank's cost effectiveness and how it affects stock prices.
- Why cost efficiency will become an increasingly important driver of bank profitability

James J. McDermott, Jr., *EVP & Director of Research*
Keefe, Bruyette & Woods, Inc. (NY)
Richard A. Mueller, *Financial Group Head*
Duff & Phelps (LA)
Anthony R. Davis, *Senior Vice President*
Wheat First Securities (BOCA)

12:15 LUNCHEON FOR ATTENDEES AND SPEAKERS:

COST RE-ENGINEERING IS NOT A ROCKET SCIENCE! . . . AN OVERVIEW (NY, LA, BOCA)
Robert M. Butcher, *Sector Executive-Finance & Chief Financial Officer,* Marine Midland Bank (NY)
James Benowski, *Principal,* McKinsey & Co. (LA)
Douglas E. Ebert, *President & COO*
Southeast Bank (BOCA)

SECTION II
ALTERNATIVE STRATEGIES FOR SUCCESSFUL COST MANAGEMENT

1:45 ALTERNATIVE STRATEGIES FOR SUCCESSFUL COST MANAGEMENT (NY, LA, BOCA)
- An outline of four different approaches that work
  - — Process Analysis
  - — Economies of Scale
  - — Resource Allocation
  - — Budget Discipline

William T. Gregor, *Senior Vice President*
The MAC Group (NY, LA, BOCA)
Robert B. Hedges, Jr., *Vice President*
The MAC Group (NY, LA, BOCA)

2:30 COST RESTRUCTURING THROUGH PROCESS ANALYSIS (NY, LA, BOCA)
- Increasing efficiency by eliminating archaic processes and functions
- Achieving real, lasting unit-cost reductions; looking beyond belt-tightening
- Dealing with staff and customers during cost restructuring
- Analyzing each individual business on its own and in your bank's matrix

Janet S. Hartung, *Senior Vice President*
Mellon Bank (NY, LA, BOCA)

3:10 THE BENEFITS OF ECONOMIES OF SCALE (NY)
- Why using economies of scale to drive down unit costs will grow increasingly important
- Which businesses are most appropriate for this strategy

Robert L. Nellson, *Director Strategic Planning & Development,* Fleet/Norstar Financial Group, Inc. (NY)

The Only Industry Directory That Matters . . .

BANKING ON TOP BANKERS

WHAT is **Banking On Top Bankers?** It's more than a directory…it's a well-organized sourcebook…a locator of financial services decision-makers and the reference tool that you won't be able to do without!

HOW is **Banking On Top Bankers** different? You get the top 1000 banking professionals at your fingertips. Features include: A separate listing for financial services professionals in 18 different banking areas from Asset Securitization to Banking Technology and a separate listing for professionals by area of profession. This sections presents the "tops" in each field. Professional areas include "The Banking Elite," "Top Investment Bankers," "Top Federal Regulators" and more. Also include are five separate listing of top institutions. Lists include: The top 300 commercial banks, the top 100 thrifts, the top 50 international banks and more.

WHY should you order your copy today? Because we've already done your research for you…and as a conference attendee, we'll give you a 20% discount off the price of the directory.

WHERE can you order your copy today or find out more information? Call (212) 943-2221 or mail a check for $195 to: American Banker Conferences, 1 State Street Plaza, 31st floor, New York, NY 10004, Attn: Director of Conferences.

STRATEGIC BANK COST MANAGEME[illegible]1

New Approaches to Reducing Costs In An Era Of Uncertainty

November 8 & 9, 1990
The L.A. Hilton & Towers
Los Angeles, CA

December 5 & 6, 1990
Boca Raton Resort & Club
Boca Raton, FL

YOU CAN'T BE ALL THINGS TO ALL PEOPLE... A NEW LOOK AT MARKET SEGMENTATION (LA, BOCA)

- Why reorganizing your business mix to segment profitable businesses is essential in today's market
  - To reduce the costs of cross selling
  - To know your client base better
  - To allow directed growth in desirable niches
- Three ways of looking at market segmentation:
  - By product
  - By customer
  - By organization

Peter Lowe, *CFO,* Mitsui Manufacturers Bank (LA)
R. Todd Bowers, *CFO,* Sun Bank (BOCA)

3:55 COFFEE/TEA

4:10 CITIZENS AND SOUTHERN CORP — THE RESOURCE ALLOCATION APPROACH (NY, BOCA)

- The challenges of a multistate, multibank structure
- Setting growth priorities
- Assessing the proper priority on a program-by-program basis
- Phasing out poor performers

James D. Dixon, *Vice Chairman, CFO & CAO*
Citizens and Southern Corp. (NY, BOCA)

THE BUDGET DISCIPLINE APPROACH (LA)

- Focusing on primary geographic markets
- Leveraging existing customer relationships
- Exploiting successful lines of business
- Examining a long-term approach to cost cutting

Lucy Reid, *Senior Vice President*
1st Nationwide Bank (LA)

4:45 SOLVING THE THRIFT CRISIS THROUGH COST REDUCTION (NY, LA, BOCA)

- Comparative costs - Banks vs. Thrifts
- Low Cost Producers vs. Niche Players
- Bank Thrift mergers - Can cost savings justify the price?

Sanford Rose, *Senior Columnist,* American Banker (NY)
Keith P. Russell, *President & COO,* GlenFed & Glendale Federal Bank (LA)

11:10 CONSOLIDATING DATA CENTERS AND BANK OPERATIONS AFTER THE MERGER (NY, LA, BOCA)

- Multibank common systems...Myth or Reality?
- Consolidating bank operations after the merger

Michael Zucchini, *EVP & CIO*
Fleet/Norstar Financial Group Inc. (NY)
James Kridel, *Executive Vice President*
Glendale Federal Bank (LA)
Stephen F. Callaghan, *Executive Vice President*
Citizens and Southern Corp. (BOCA)

11:40 USING IMAGING APPLICATIONS PROFITABLY (NY, LA, BOCA)

- Cost savings and productivity gains broaden acceptance across a range of banking applications
- Technology opens new opportunities for image-enhanced customer service

David C. Liddell, *Image Solutions Manager*
IBM (NY, LA, BOCA)
Speaker to be announced, Mellon Bank (NY)
Peter R. Hill, *Senior Vice President*
Bank of America (LA)
Speaker to be announced, Royal Bank of Canada (BOCA)

12:40 LUNCHEON FOR ATTENDEES AND SPEAKERS:

COST CUTTING IN RETAIL BANKING (NY, LA, BOCA)

- Why banks lose money on 30-50% of their retail consumers
- The difference between efficient and effective marketing
- The need to alter pricing structures

Peter Carroll, *Partner*
Oliver, Wyman & Co. (NY, LA, BOCA)

2:10 STRATEGIC ADVANTAGES OF OUTSOURCING - A CASE STUDY (NY, LA, BOCA)

- How outsourcing can provide strategic advantage
- Factors leading to outsourcing at First Fidelity
- How First Fidelity evaluated the outsourcing option and its experience to date

Ladd Willis, *Managing Vice President*
First Manhattan Consulting Group (NY, LA, BOCA)
Don Parcells, *Senior Vice President*
First Fidelity Bancorp (NY, LA, BOCA)

SECTION IV

EFFECTIVE COST MANAGEMENT IN THE MERGER PROCESS

3:10 COST RATIONALIZATION IN INTERSTATE MERGERS (NY, LA, BOCA)

- What benefits should be anticipated from consolidation
- The difference between intrastate and interstate
- The difference between small and large institutions
- What are the implications to the industry...are mergers inevitable?

Harry H. Totonis, *Principal*
Booz-Allen & Hamilton (NY, LA, BOCA)

3:55 ECONOMIES IN MERGERS AND MULTIBANK SYSTEMS: THE EXPERIENCE AND THE POTENTIAL (NY, BOCA)

- What merger economies should banks seek and when?
- What common mistakes are made and how can they be avoided?
- How should a bank holding company balance the advantages of a multibank system and the potential economies from merging banks?
- How can a multibank system survive the trend toward mergers?

Peter Merrill, *President,* BEI Golembe (NY, BOCA)

THE INTEGRATION PROCESS: HOW TO MANAGE THIS COSTLY PROCESS EFFECTIVELY (LA)

- Sizing the integration effort
- Selecting the appropriate integration approach
- Organizing and managing the process to facilitate centralized planning and decentralized decision making

Carole Kay Lynn, *Partner*
Edgar, Dunn & Conover, Inc. (LA)

4:40 END OF CONFERENCE

AMERICAN BANKER IS NOW ACCEPTING APPLICATIONS FROM VENDORS FOR THE FOLLOWING OPPORTUNITIES:

(1) BOOTH SPACE (2) SPECIAL SUPPLEMENT AND (3) CONFERENCE WORKBOOK

Conference Display: Through a booth demonstration, attendees will have the opportunity to familiarize themselves with various systems to improve productivity and reduce bank costs.

Special Supplement: There will be a special supplement in **American Banker** on Monday, December 17th. This supplement will include articles and advertisements dedicated to cost management.

Conference Workbook: This publication will contain excerpts of the speeches from the conference, in addition to reference information, advertisements and articles.

VOL. CLV NO. 166 | Friday, August 24, 1990 | 155th year

NY Blackout Prompts Review Of Disaster Plans

By JEANNE IIDA and KAREN GULLO

When Citicorp's computer problems kept the nation's domestic payment system open till midnight last week, many others felt the repercussions.

Banks paid overtime to employees working almost round the clock, backup generators were strained at the Federal Reserve Bank, and corporate customers reported lag times in receipt of transactions.

An executive of Merrill Lynch & Co., a Citicorp customer, said the brokerage firm could not quantify the impact of the late settlement on Wednesday. But the week-long problems at Citicorp and other major banks because of a power failure cost Merrill "tens of thousands" of dollars in unnecessary overdrafts because it could not accurately assess its positions, he said.

ANALYSIS: *Follow-up on the news*

Industry experts said Citicorp was caught with its guard down. If it had been using a relatively new form of disaster recovery that copies transactions to a remote site as they occur, it probably would have fared much better. Its funds business would have been disrupted for only a few hours instead of almost a day, they contend.

Remote Vaulting

Manufacturers Hanover Trust Co. and Chemical Bank have had this capability, called remote vaulting, for several months. Neither of those banks' funds transfer operations were affected by the recent blackout, so that ability was not tested.

Ironically, Citicorp was in the process of designing such a system when the power outage occurred, sources close to the bank said.

Industry insiders said that not only was Citicorp lacking in state-of-the-art technology, but it may have handled its operating problems poorly. Citicorp "waited far too long to implement its internal plan, and then it failed," said one disaster recovery expert.

"We're sufficiently concerned [about our disaster recovery plan] that we will do a detailed postmortem and then we'll take action," said Colin Crook, Citicorp's information chief.

"This was a loss of power on a big scale. People tend to focus on defined disaster scenarios. They need to be more flexible."

Sources noted that Citicorp was the only money-center bank

Filings Reveal Banks Hold 30% Of Collateralized Mortgage Bonds

By PHIL ROOSEVELT

As commercial banks stormed into home-mortgage finance over the past year, they appeared to take a special interest in collateralized mortgage obligations, or CMOs. Now, for the first time, regulatory data have specified the extent of that interest.

Led by 100 especially active institutions, the banking industry held about $36 billion of the most common types of CMOs at the end of March, the data show. (Table appears on page 7.) That position, built almost from scratch at the end of 1988, represented nearly 30% of all such CMOs, and about 6% of all securities held by banks.

Steady Appetite

Bankers and dealers say banks' appetites for instruments has diminished somewhat in recent months because of declining yields relative to Treasury securities and some regulatory uncertainty.

But the industry's appetite has hardly disappeared. With loan demand declining, banks are closely eyeing securities purchases, and CMOs still yield more than some corporate bonds, experts note.

"We're still seeing a large amount of interest by banks across the board," says Craig Overlander, a senior managing director at Bear Stearns & Co., New York.

Holdings Disclosure

The Federal Deposit Insurance Corp. required banks to disclose their CMO holdings for the first time in call reports for

Judge Backs Government In Seizure Of Lincoln

By DEBRA COPE

WASHINGTON — U.S. District Court Judge Stanley Sporkin upheld on Thursday the government's 1989 seizure of Lincoln Savings & Loan Association, accusing Charles H. Keating Jr. and other officials of "looting" it.

The ruling was viewed as a big victory for federal thrift regulators and an endorsement of their procedures for assessing and closing troubled institutions.

Heavy Blow to Keating

It also dealt a major blow to Mr. Keating's campaign to regain control of the Irvine, Calif., savings and loan, which had become symbolic of the costly thrift crisis and bailout.

Judge Sporkin's ruling came after eight months of testimony in which Mr. Keating sought to prove that regulators acted "arbitrarily and capriciously" when they placed Lincoln in receivership in April 1989 and in conservatorship four months later.

Mr. Keating contended that the thrift was actually solvent and regulators carried out a personal vendetta against him.

The judge said Lincoln and its parent, Phoenix-based American Continental Corp., improp-

Customers Claim NBW Misused Insured Deposits

By BILL ATKINSON

WASHINGTON — Customers of the failed National Bank of Washington have filed more than a dozen lawsuits alleging that the bank illegally used insured deposits and funds intended for low-risk investments to bolster the commercial paper program of its parent company.

The flurry of lawsuits comes just weeks after the holding company, Washington Bancorp., filed for reorganization under Chapter 11 of the federal Bankruptcy Code. Hours after that Aug. 1 filing, federal regulators seized the $1.6 billion-asset National Bank of Washington and subsequently sold its deposits to Riggs National Corp., Washington.

Wells Fargo Shares Fall Sharply On Fears of California Real Estate

By GORDON MATTHEWS

NEW YORK — Shares of Wells Fargo & Co., a favorite trading vehicle of many bank stock investors, have tumbled dramatically in value this summer as worries have grown about the U.S. economy and in particular about the real estate market in California.

The stock of the well-regarded San Francisco superregional bank closed at $80.125 on July 17 as it reported strong second quarter profits. That same day the Dow Jones industrial average peaked at 3,024.26, before closing just below the 3,000 mark.

Both have since been in a steep southbound spiral, and bank analysts are mixed about Wells' outlook.

Peaked in Mid-July

Wells' shares fell below book value this week and briefly dipped below the $50 mark on Thursday, a slump of 38% from the mid-July peak. In the meantime, the Dow fell another 40 points to 2,560.15, an 18% decline over the same period in the closely watched blue chip index.

"Wells is a major real estate bank and that is what this is all about," said one analyst, who

U.S. League's Heir Apparent Looks Beyond Better Image

By DEBRA COPE

Don't talk about image to Donald B. Shackelford. The Ohio thrift executive who has been drafted to become chairman of the U.S. League of Savings Institutions will straighten you right out.

"I'm not concerned about projecting an image," he said in an interview. "What I'm concerned about is capital strength and capital discipline."

Welcome to the new, improved U.S. League. Seeking to redefine itself as the voice of strong, healthy thrifts, the battered trade group has pinned its hopes on Mr. Shackelford's sterling reputation, political savvy, and Harvard Business School smarts.

Mr. Shackelford, 33, is chairman and chief executive of State Savings Bank, Columbus, Ohio, a capital-rich, profitable thrift in a state with a robust savings and loan industry. State Savings has $1.5 billion in capital and $105 million in net worth.

He has little to say about the 11th-hour maneuvering earlier this month that leapfrogged him past league vice chairman Robert B. O'Brien Jr. to lead the thrift trade group in 1991.

"It is unusual," was about all Mr. Shackelford would outside in a telephone interview while he was vacationing in Nantucket, Mass. Mr. O'Brien, chairman and chief executive officer of Carteret Savings Bank, Morristown, N.J., will remain as the league's vice chairman next year while Carteret's parent company, Ambase Corp., completes a restructuring.

Donald Shackelford

When Mr. Shackelford officially becomes U.S. League chairman in November, he won't face such distractions. That will free him to be a high-profile spokesman next year when Congress is expected to take another crack at revamping the thrift industry and the federal deposit insurance system.

A witty, articulate man who has testified often before Congress, Mr. Shackelford is also a constituent of Rep. Chalmers Wylie, the ranking Republican on the House Banking Committee.

Mr. Shackelford joined State Savings Bank, a family business, in 1964 as a part-time consultant and member of the executive committee, and rose to the chairmanship in 1972. From 1972 to 1977, he was also chairman of Bank One of Cambridge, Ohio. Before joining State Savings, he spent five years as a manager of McKinsey & Co. in Chicago. Since 1965, has also been a director of McLagan Partners, a Chicago management consulting firm.

Classmate of Senator Lugar's

As an undergraduate at Denison University in Ohio he was active in student government and boosted the candidacy of his friend Richard Lugar for student-body president.

Mr. Lugar, a Republican, grew up to be Indiana's senior Senator. "I was his first campaign manager," Mr. Shackelford joked.

Mr. Shackelford earned a BA in economics from Denison in 1954 and an MBA from Harvard Business School in 1959. He joined the Federal Reserve Board's thrift institutions advisory council in 1988 and is now its president. He was chairman of the Ohio Savings and Loan League in 1988-89 and was a director of the Federal Home Loan Bank of Cincinnati. □

Gonzalez: S&L Sales Won't Stick

By BARBARA A. REHM

WASHINGTON — House Banking Committee Chairman Henry B. Gonzalez, D-Tex., predicted Thursday that public outrage will force the administration to cancel or renegotiate many of the government-assisted thrift sales by the Federal Home Loan Bank Board in 1988.

Mr. Gonzalez is planning a Sept. 14 hearing to examine the 1988 deals and look for ways the contracts can be broken or restructured to save Uncle Sam money.

The bank board sold 199 savings and loans with $110 billion in assets to investors before it was dissolved by the thrift bailout law in August 1989. Because the agency had no money to finance the deals, it gave investors government notes, tax breaks, and guaranteed returns.

Many of the deals were consummated in the last few days of 1988 and generated criticism from members of Congress and other observers.

Mr. Gonzalez said in a statement Thursday that the committee's investigation has revealed that for every dollar of capital private investors put into these thrifts, they received $78 in assets and government guarantees.

"Many of these resolutions went beyond sweetheart deals and amounted to virtual giveaways," he said. Mr. Gonzalez added that he thinks the bank board held the deals to the end of the year to avoid an impact on the fall elections.

The administration feared "that a mass of fire sales would immediately give the public a big clue" that the S&L industry was in dire straits, he said. □

OTS Wins Keating Suit on Lincoln

Continued from *page 1*

erly used insured deposits in real estate and other transactions structured "with a great deal of sophistication . . . to have an aura of legality."

Abuse of Office Found

Mr. Keating and other officials of American Continental "abused their positions with respect to Lincoln," Judge Sporkin said in a 49-page opinion. "Bluntly speaking, their actions amounted to a looting of Lincoln."

Mr. Keating sued the Office of Thrift Supervision and its predecessor, the Federal Home Loan Bank Board, as a formal challenge to the receivership action of April 1989. He has a right to appeal, but "this should be a final disposition of the case," said a former senior attorney for the bank board and the OTS.

American Continental issued a statement Thursday saying it "is reviewing all of its options and has no comment at this time."

Judge Sporkin's ruling came on the heels of a district court ruling Wednesday that instructed Mr. Keating to comply with a regulatory order to deliver an audited accounting of his assets to OTS within five days.

OTS Lawyer Hails Ruling

Harris Weinstein, chief OTS counsel, hailed Judge Sporkin's decision as a "Rosetta stone" that will guide the government in its efforts to take over troubled thrifts. He said the ruling underscores the responsibility of accountants and attorneys who represent troubled institutions to "hold their clients vigorously to the highest standards of law and financial reporting."

"Judge Sporkin has described what some very sophisticated people have done in a number of cases," said Mr. Weinstein. "As these cases unfold in detail, the public and legislature will join in asking, 'Where were the outside accountants and attorneys?' I would reword that and say, 'Would this have happened if the professionals were doing their job?' "

An important aspect of Judge Sporkin's opinion is that it sets out the general principles of administrative law governing financial regulators' authority to place an institution into conservatorship or receivership, Mr. Weinstein continued.

"Fundamentally, he is saying that the standard of review for a court is a narrow one," the OTS official said. "The court is not empowered to substitute its judgment for that of the agency."

Elsewhere in his ruling, Judge Sporkin rapped the FHLBB for backing down under pressure from Lincoln. He termed "inexplicable and clearly inappropriate" the agency's decisions in 1987 and 1988 to block appointment of a conservator and transfer supervisory jurisdiction over Lincoln from the Federal Home Loan Bank of San Francisco to Washington.

The decision will have little effect on other cases involving Mr. Keating and the government, said a former senior attorney for the OTS and the bank board. □

Disagreement Kills Deal to Triple Size of Meridian's Mortgage Unit

By PHIL ROSEVELT

NEW YORK — A deal that would have vaulted Meridian Bancorp Inc. into the top ranks of the home-mortgage business has suddenly fallen apart.

The Reading, Pa., banking company's mortgage unit revealed Thursday that it has dropped a plan to acquire 16 mortgage-origination offices from a unit of Travelers Corp.

Dispute on 'Key Terms'

"We've been unable to reach an agreement on key terms that were critical to our ability to complete the transaction," Anthony W. Schweiger, president of Meridian Mortgage Corp., said in a prepared statement.

He declined to elaborate, and Joseph Bryant, president of Travelers Mortgage Services, could not be reached for comment.

Travelers and Meridian had announced a preliminary agreement June 28.

Threefold Growth Planned

The deal would have increased Meridian Mortgage's retail originations to about $3 billion a year, from the current $820 million.

That prospect had made the well-regarded company one of the industry's most prominent growth stories. SMR Research, Budd Lake, N.J., had estimated that the deal would easily put Meridian among the nation's top 25 originators.

Mr. Schweiger indicated that Meridian would look for other opportunities to expand into new markets and boost originations and loan servicing.

Travelers Leaving Field

The 16 branches, scattered over seven eastern states, represented the bulk of the origination network of Travelers Mortgage Services, a Cherry Hill, N.J., company that has been dismembering itself and leaving the field.

A unit of General Electric Capital Corp. has agreed to acquire the company's $12 billion servicing portfolio. And Margaretten & Co., the mortgage unit of Primerica Corp., has bought four Travelers branches in New England. □

Correction

An article Tuesday ("MasterCard to Raise Interchange Fee," page 6), incorrectly calculated Visa's interchange fees taking effect April 1. On a $65 sale, Visa transactions handled electronically will cost from 81 cents to 98 cents. The standard interchange fee for a $65 Visa sale will be approximately $1.35.

TECHNOLOGY/OPERATIONS NEWS

Computers to Remain Top Budget Priority, Survey Finds

By JASON FORSYTHE
Fifth of a Series

NEW YORK — Despite having made sizable purchases of computer hardware during the 1980s, bankers are not expecting a decade of rest.

It might be logical to expect the industry to consolidate its computer investments by emphasizing software enhancements. But according to the 1990 *American Banker* technology survey, computers will remain a top budget priority, particularly personal computers.

Fifty-five percent of senior executives identified personal computers as an area where they will concentrate investments in the next five years.

Applications software was the only other area garnering as much as a 51% response; personnel and training needs ranked third, at 44%. Both those relatively sizable responses reflect concern about the quality of computer software and the people needed to run back-office operations, now increasingly critical and demanding.

Thirty-one percent to 37% said their priorities include electronic funds transfers systems, mainframe hardware, automated tellers and self-service banking, data communications, and item processing.

These are among the findings of the fourth annual *American Banker* technology survey.

Trans Data Corp., the newspaper's research affiliate in Wayne, Pa., interviewed operations and technology executives from 333 commercial banks with at least $75 million in deposits. About half the respondents represented banks with more than $250 million in deposits, and 10% came from institutions with more than $2 billion in deposits.

Mr. Forsythe is a business writer based in New York.

Banks of all sizes are interested in personal computers.

Likeliest to name PCs as a priority were banks with $250 million to $750 million in deposits; 66% did so. Forty-two percent cited mainframe hardware as an area of concentration, and 34% cited mini and departmental computers.

Small banks proved to be nearly as PC-happy as bigger ones. Some 58% of surveyed banks with deposits under $100 million planned to invest in PCs in the next five years.

And the systems are making their way into the executive suite for use by senior managers with more traditional, commercial banking backgrounds.

"Like most CEOs, I came up through lending and corporate services," said Samuel McCullough, chairman of the $12 billion-asset Meridian Bancorp, Reading, Pa. "I've always taken an interest in data processing. The first time I am installing a PC in my office, which will enable me to analyze and manipulate data from the mainframe, do profit reports, break out performance geographically or by product line."

The biggest banks proved likeliest to plan spending for applications software in the next five years. Seventy-seven percent of those with deposits of over $2 billion said they plan such spending, but only 35% of those with deposits under $100 million.

Hardware and Software

The $210 million Stillwater National Bank & Trust Co. in Oklahoma plans to divide spending equally between personal computer hardware and PC-based applications software. Though Stillwater already has a substantial investment in PCs, it will need more of them once the systems are integrated with networking software, said Kerby Crowell, Stillwater's executive vice president and chief financial officer.

So far, 30% of the bank's employees use stand-alone PCs for routine clerical tasks and number crunching.

Mr. Crowell plans to spend on platform automation to improve sales and customer service.

PCs at their fingertips can help people who deal with customers sell certificates of deposit, take loan applications, and answer questions.

"The only key they should have to hit to issue a CD is how many dollars are being invested," Mr. Crowell said. "Any information already in the system should not have to be rekeyed."

Local Area Networks

At the much bigger Barnett Banks in Jacksonville, Fla., PCs and local-area networks to tie them together dominate the computer spending plan. Most of the money will go to linking the bank's service, sales, and telemarketing centers with compatible applications systems. The link will be made with PCs, new and old.

Barnett, with $30 billion in deposits, is looking to improve customer service by installing PCs at branch teller windows. Like Stillwater National, Barnett is automating platforms — and giving a sales orientation to the conventional transaction-processing functions.

Using What You Have

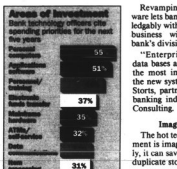
Applications software spending, though less glamorous than new technologies such as expert systems and image processing, is an attempt to get better use of the technology already on board.

"We have to be better delivering the technology that is out there right now, as opposed to what we don't need," said Darwin Smith, president of NCNB Support Services Inc., a Dallas-based unit of NCNB Corp. The company is spending heavily to build a computing utility for all NCNB operations across the country, as well as to improve image-processing and electronic data interchange systems.

Mr. Smith said dollars will be best spent on the low-tech areas of information management and technical training.

Pressure from Nonbanks

The tendency to sidestep exotic hardware and instead link software systems doesn't surprise industry consultants. As competition heats up, technologically sophisticated nonbank competitors are forcing banks to improve customer service.



Revamping application software lets banks deal more knowledgably with customers who do business with many of the bank's divisions.

"Enterprise-wide customer data bases are becoming one of the most important aspects of the new systems," said William Storts, partner in charge of the banking industry for Andersen Consulting.

Image Processing

The hot technology of the moment is image processing. Ideally, it can save money by making duplicate storage of data unnecessary.

Images stored in a central data base can be retrieved on remote terminals. Monthly statements with images of signed transactions reduce customer inquiries and increase customer satisfaction; American Express already sends such statements to cardholders.

Image processing is now the province of banks with the transaction volume. The cost of entry is one reason, and that is expected to fall in the next few years.

But even today the savings can be great, said NCNB's Mr. Smith, in part because the advantages can be extended to credit and risk-control analysis.

Mr. Storts said every superregional or money-center bank plans to use image processing on checks or other documents. The *American Banker* survey found that 27% of those with deposits of over $2 billion plan to install image technology by the end of 1991 – and mostly for transaction processing.

Smaller banks remain far more cautious about taking the plunge. Thirty-one percent of the survey respondents – but only 17% of those below $250 million in deposits – said they would spend major amounts on item-processing hardware in the coming half decade. □

IMAGING. THE END OF THE PAPER CHASE.

COMMENT/ *By James Grant*

Banks Now Pay for Years Of Sapping Their Finances

Whatever else it might be, the dust-up in the Middle East is an Exogenous Event – an unexpected disturbance from outside. In boom times, investment bankers assumed that nothing could, or would, intrude on prosperity – every surprise would be a tender offer.

Now that something has gone wrong, the universal finger of blame is pointed at the scene of the disturbance, not at the frail financial structure that was so easily upset by it.

The United States may or may not be more vulnerable to a disruption of its oil imports than it was 17 years ago. It is certainly, we think, more vulnerable to an interruption of its prosperity. Interest rates are higher, financial leverage is greater, and the banking system is more fragile than it was at the time of the first oil jolt.

Citicorp as Exemplar

There are many ways to illustrate the point, but the decline of Citicorp (then as now the largest U.S. banking company) is one of the most vivid and telling.

In 1973, Citicorp was riding high. By the not very exacting standards of today, the bank was profitable, liquid, conservatively capitalized, resilient, and expansion-minded.

Its stock changed hands at a premium to book value; its debt was unrated (there wasn't much debt to rate, in fact) but was destined to be Aaa when Moody's first investigated it, in 1977.

In every particular, 1990 is different — and different, in course, not only for Citicorp but also for big U.S. banks in general. Although it has not been earning its dividend for three years, Citicorp recently raised it.

"Will the next recession resemble that of 1973-75? Insofar as the resilience of the U.S. financial system bears on the question, we are led to believe that it may well be worse."

Its return on average assets last year was a paltry 23 basis points; it earned 63 basis points in 1973.

In 1989, its ratio of loans to deposits was 112%; it was 80% in 1973. In 1989, Citicorp earned 4.3% on equity; in 1973, it earned 15%. As for its senior debt rating, it is no longer Aaa. Moody's judges it to be A3.

In the early 1970s, Citicorp was hot, like inflation. In 1973, when the editors of *Dun's Review* selected it as one of America's five best-managed corporations, its assets grew by 28%. In 1974, a wall-to-wall recession year, assets grew by 32%.

It is fun to reread the bear-baiting letters that Citicorp chairman Walter Wriston wrote to his shareholders in those days. "It was a good year to remind ourselves that the recuperative powers of the world are enormous and the ability of its three and three-quarter billion people to develop in new ways to handle new situations has always exceeded the imagination of the doomsday prophet," he wrote of 1973.

Brave words! What Mr. Wriston did not commit to paper was that though the inflation subverts what his predecessors called sound banking – that it undermines asset quality in the long run even as it stimulates asset growth in the short run.

And if that thought did not occur to Mr. Wriston, neither did it seem to worry his successors. Pick up any study of questionable bank lending (real estate, highly leveraged transactions, loans to lesser-developed countries), and Citicorp is sure to be mentioned early and often.

A Cycle of Wasting

The issue, however, is not a particular class of loan but a process of atrophy. It is a cycle that has involved much of the U.S. banking industry.

The process works like this (thank you, James Robinson): A rise in bad assets is met with a grudging rise in reserves. As reserves increase, earnings decrease. By degree, the decline in creditworthiness forces a rise in the cost of funding. The prices of jumbo certificates of deposit and interbank loans go up.

As the cost of liabilities rises, interest margins shrink; profits fall again. With every addition to the reserve for bad debts, the problem is exacerbated. Maddeningly, it costs more to attract deposits for loans that aren't accruing interest income than for loans that are.

The Unfriendly Markets

At length, some loans are written down to zero. Still, everyone sees, the reserve is inadequate to cover the questionable debts that haven't been written down all the way.

Walter Wriston was fond of rebutting the calamity-howlers of his day with a line about the market's creative powers. In our day, banks in general, and his alma mater in particular, are making heavy weather of it in a number of markets.

"American Telephone & Telegraph Co. said its new credit card ranks eighth in the country, with revenue of $750 million after 140 days in operation," the *Wall Street Journal* reported last week in an article that must have rattled the windows in Citicorp headquarters.

No doubt, the marketplace is evolving a new, deflation-resistant credit structure even now. But for the time being, the deflation of asset values – the very values against which Citicorp and other banks lent so blithely in the boom – proceeds apace.

In 1973, bankers were optimistic, and bank credit was expanding. In 1990, bankers are worried, and bank credit is stagnant – even, in certain regions and markets, contracting. It is a perilous time in which to impose a new tax on oil.

Will the next recession resemble that of 1973-75? Insofar as the resilience of the U.S. financial system bears on the question, we are led to believe that it may well be worse. □

COMMENT/ *By Masaharu Usuki*

From Tokyo, Strong Support For Japanese Deregulation

The following appeared in slightly different form in a June newsletter published by the Long-Term Credit Bank of Japan, Tokyo.

The second meeting of the Japan-U.S. working group on financial markets took place in Tokyo in late May. A statement issued by U.S. Treasury Undersecretary David Mulford after the meeting said the United States appreciated the liberalization of overseas bank account openings by individuals and other Japanese financial deregulation measures but was still dissatisfied with current conditions regarding deregulation of bank deposit rates and foreign firms' access to the Japanese money market.

The U.S. Congress also remains greatly concerned over Japan's financial markets and is even tougher than the Treasury Department in demanding Japan's financial deregulation.

The Congressional concerns have taken the form of the proposed Fair Trade in Financial Services Act, which passed the Senate Banking Committee. It would enable the Federal Reserve Board and other regulators to disapprove expansion of U.S. operations by foreign financial institutions if the Treasury secretary judges that their countries fail to give U.S. institutions opportunities to fairly compete in their domestic markets.

The primary purpose of the legislation is to pressure Japan into quickening financial deregulation.

Market Share Increasing

Behind the tough U.S. request is the fact that Japanese banks' offices of U.S. and other overseas markets have been persistently increasing. Eight of the 10 largest banks in the world in assets are Japanese.

In 1980, the largest Japanese bank was ranked 10th in the world. But Japanese banks started rapid growth around 1984.

The agreement on new capital adequacy regulations at the Bank for International Settlements in 1988 was designed primarily to hold down the fast expansion of Japanese banks. But the fiscal 1988 asset growth of Japan's city, trust, and long-term credit banks was 16%, exceeding an annual average of 12% for the fiscal 1983-87 period.

In the United States especially, Japanese banks' lending has increased steadily. They accounted for 16% of commercial and industrial loans in the United States at the end of 1988, being the top foreign lender in that country. Moreover, Japanese banks' outstanding loans there expanded as much as 50% from the end of 1983. In contrast, foreign banks' shares of bank loans in Japan is limited to 2% and has been declining.

Competition from EC

Another matter of concern to the United States has emerged in relation to U.S. banks' international competitiveness, namely the European Community's financial market integration scheduled for 1992. Upon integration, an institution given a banking license in any EC country will be able to do business in any other EC nation.

But the EC's second directive on banking allows the EC Commission to decide whether to give a new business license to a foreign bank in view of reciprocity. The decision will depend on whether the home country of the foreign bank guarantees EC banks effective access to its domestic market.

The EC financial market integration has caused two moves in the United States. One seeks to make the U.S. market as liberal as the EC market, by allowing the mutual encroachment of commercial banks and securities companies onto each others' turf and by permitting interstate banking. Another move introduces the weapon of reciprocity requirement to counter the EC action, and directs it against Japan.

Hastening Deregulation

Some foreign leaders, including Federal Reserve Chairman Alan Greenspan, appreciate Japan's financial deregulation to date. The recent declines in Japanese stocks and the yen are expected to decelerate the expansion of Japanese banks' assets. In this context, efforts to persuade foreigners to understand Japan's realities might ease foreign pressures for Japanese deregulation.

But Japan cannot expect such efforts to have a lasting effect. The world is moving toward prompt deregulation, and this can also improve Japan's economic welfare. Deregulation would serve to intensify competition between financial institutions, helping to improve services and lower costs for fund-raising and investment activities of industrial companies and consumers alike.

Needless to say, Japan should make efforts to speed up financial deregulation as much as possible. □

Mr. Usuki is with the economics division of Long-Term Credit Bank of Japan, Tokyo.

COMMERCIAL BANK INVESTMENT MANAGEMENT MANUAL

EDMUND R. MENNIS

Sheshunoff

Better than a crystal ball. 1-800-456-2340.

Your bank's counting on you for every penny of investment income you can give it. So you need a way to stay on top of every new development affecting your portfolio. From the latest investment opportunities to legal and regulatory requirements.

That takes systems. It takes skilled use of economic and interest rate forecasts. And it takes proven methods and techniques for managing the investment function all the way down the line.

The Commercial Bank Investment Management Manual has it all. In 15 easy-to-read chapters written by experts in every area of investment management. So you get a lot of information and guidance in one comprehensive source.

And since it's from Sheshunoff Information Services Inc., you know it's written just for bankers. Plus, we make sure it's realistic and easy to use.

Best of all, it's a lot easier to get a hold of than a crystal ball. All you have to do is call our Client Services Representatives direct at 1-800-456-2340.

High Performance Banking

Bank Holdings in Collateralized Mortgage Bonds Disclosed

Continued from page 1

the quarter ended March 31.

CMOs, which flourished after tax-law changes in 1986, are multiclass securities that can provide investors with more payment certainty than basic mortgage-backed securities. Typically backed by basic mortgage securities, CMOs offer short-, intermediate and long-term estimated maturities.

Risks, Returns Vary

CMO classes vary widely in riskiness and potential returns, Michael Grupe, head of mortgage research at Kidder, Peabody & Co., says banks have

"We're still seeing a large amount of interest by banks across the board."

Craig Overlander
Bear Stearns & Co.

tended to concentrate on relatively stable CMO classes with two- or three-year estimated lives, finding them good hedges against deposits and other liabilities.

Three-year classes of traditional CMOs now sport yields about 90 basis points higher than those of comparable Treasury securities, according to Merrill Lynch Mortgage Capital. The push into CMOs comes as commercial banks also have been making major inroads into mortgage originations, mortgage servicing, and investments in basic mortgage-backed securities.

Risk-based capital rules have provided fresh incentives for banks to take on mortgage assets, and the problems in the thrift industry have created some big opportunities for banks.

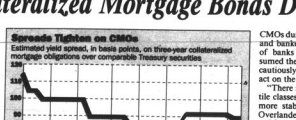
Move Away from Treasuries

National City Bank, Cleveland, says it increased its CMO position sharply last year as concerns about earnings by insolvent and capital-short thrifts drove up the relative yields on most types of mortgage securities.

"We felt mortgage spreads were wide and wouldn't stay that wide for long, so we moved out of Treasuries and into CMOs," said Jeffrey B. Kelly, senior vice president of National City.

The FDIC data show that the top 100 banks held about $25 billion of the most common types of CMOs as of March 31, representing about 18% of all securities held by the banks and 3% of their assets.

The FDIC data deal with



CMOs issued by the Federal National Mortgage Association and the Federal Home Loan Mortgage Corp., the dominant form of CMO.

The two secondary-market agencies say they had a total of $125 billion of such securities outstanding as of March 31. Most of the securities are CMOs issued through real estate mortgage investment conduits.

While the FDIC had not collected CMO data before the first quarter, the Department of Housing and Urban Development has estimated that banks held only $2.1 billion of Fannie Mae and Freddie Mac Remics as of December 1988. Such securities were nonexistent until August 1987, when Fannie Mae issued its first Remic.

Many of the top 100 banks in the market also have substantial positions in basic mortgage-backed securities, known as pass-throughs. No. 1 ranked Pittsburgh National Bank, for example, holds about $2 billion in CMOs and $3.7 billion in pass-throughs as of March 31.

But some banks clearly prefer CMOs to to the pass-throughs. No. 5-ranked First American National Bank, Nashville, Tenn., held $883 million of CMOs as of March 31 but only $174 million of pass-throughs, preferring the shorter maturities available in the CMO market.

The average estimated life of the bank's CMOs is about three years, said Howard Ragsdale, a senior vice president. "Pass-throughs would have 10- or 11-year average lives," he said. "We don't feel that banks should play in that market — it's just too much interest-rate risk."

To be sure, the average lives of short-term CMOs can increase significantly if interest rates rise. The degree of risk varies from CMO to CMO and can be extremely high with so-called companion bonds.

But Mr. Ragsdale reckons that First American's CMOs would increase in average life to increase to only 3.2 years from the current 2.8 years if market rates rose by 300 basis points.

That is well within the limits with which regulators apparently are comfortable. The Office of the Comptroller of the Currency, in a proposed rule that was floated earlier this, suggested that if a 300 basis-point rate rise causes the securities' lives to lengthen by seven years or more, the securities are unsuitable for national banks.

Uncertainty caused by that proposal contributed to a decline in banks' appetites for CMOs during the spring, dealers and bankers say. But a number of banks apparently have resumed their buying, albeit more cautiously. The OCC has yet to act on the proposal.

"There's less interest in volatile classes and more interest in stable classes," said Mr. Overlander of Bear Stearns.

Of course, not all banks have been drawn to CMOs. For example, Signet Bank/Virginia, Richmond — a big player in the pass-through market — has generally steered clear of the CMO market.

The bank likes the higher yields found on pass-throughs and can absorb long-term assets, said Mike Flynn, a Signet vice president. He added that as the CMO market has become increasingly sophisticated, the securities have become "too esoteric to monitor" effectively.

For CMO fans, the most immediate concern is the decline in yields relative to Treasuries. Yields on traditional three-year classes have declined to 90 basis points over Treasuries from 150 basis points at the start of the year, according to Merrill.

The phenomenon stems in part from the weak housing markets, which has restrained the new supply of mortgages and basic mortgage-backed securities, analysts say.

Pittsburgh National, which built most of its industry-leading position in the CMO market of last year, has slowed its buying markedly this year, said Walter L. West, an executive vice president. He cited both a reduced need for assets and the tightening spreads.

"There isn't the opportunity to buy [CMOs] and match-fund them at spreads anywhere near as attractive as last year's," he said.

First Union Corp. also has pulled back in recent months, after increasing its position to about $2 billion during the second quarter. The Charlotte, N.C., company, did not rank in the top 100 on March 31, with holdings of less than $60 million.

"We continually monitor the market and don't feel very good about it right now," said Ross Bumaldo, a senior vice president at First Union. "We feel it might be a bit rich." □

George Bender Joins Ranieri's Battalion

By PHIL ROOSEVELT

George Bender knows what it's like to be Eisenhower's field general, George Patton's — or Casey Stengel's slugger, Mickey Mantle.

He has just become Lewis S. Ranieri's mortgage-banking man.

United Savings Association of Texas, a Houston thrift led by Mr. Ranieri, last week named Mr. Bender executive vice president in charge of its burgeoning mortgage banking operations.

Mr. Bender — formerly head of CenTrust Bank's mortgage banking unit and a 28-year veteran of the industry — says he was eager to work with Mr. Ranieri, a former Salomon Brothers vice chairman who is considered the father of the mortgage-backed securities market.

'Good Combination'

"I bring specific mortgage banking knowledge, and he brings capital markets knowledge second to none — and that's a very good combination," Mr. Bender, 51, said in a phone interview from Houston.

United, which Mr. Ranieri purchased in a government-assisted deal in 1988, recently acquired a 15-state network of mortgage offices from Commonwealth Mortgage of America, Houston.

That gives United the capability to originate an estimated $3 billion of mortgages a year. It currently services about $6 billion of loans for itself and for investors.

"I bring specific mortgage banking knowledge."

George Bender
United Savings Association

"George is a consummate production executive and a seasoned mortgage banking chief executive," said Walter C. Klein, chief executive of Sears Mortgage Co., Riverwoods, Ill. "I think he will be a formidable competitor for national originators, including Sears."

Mr. Bender said United plans to add further to its branch system, especially in the Midwest, and to find a chief correspondent network to get additional volume.

He expects the network to eventually include about 500 small and middle-size mortgage brokers and mortgage bankers. With United underwriting the loans and closing most of them in its own name.

Mr. Bender had been with CenTrust Mortgage, Deerfield Beach, Fla., for five years, helping the company expand from 11 to 54 offices and to markedly boosting profitability, according to United. But the parent, CenTrust Bank, was seized by the government earlier this year.

At CenTrust, Mr. Bender developed a correspondent network that "won kudos around the country," said Thomas La Motta, president and chief of Backed Capital Corp., Cleveland.

Mr. Bender earned his mortgage banking stripes at Advance Mortgage Co., Southfield, Mich., joining the company in 1962 and rising through the ranks during 15 years.

He went on to become senior vice president of United First Mortgage Corp., San Diego; chief executive of Unity Mortgage Corp., Chicago; and chief executive of Vern America Mortgage Co., Denver. □

Data Sources: The federal regulatory "Report of Condition" filed by all federally-insured commercial banks. American Banker extracted these data from **BankSource**, a data base provided by **W.D. Ferguson & Co.**, Irving, Tex. Aggregate data totals for all banks are from the **Federal Deposit Insurance Corp.**, Washington, D.C. **Collateralized Mortgage Obligations** (CMOs) are bonds issued by a trust or other entity and collateralized by FNMA and FHLMC, where an underlying pool of mortgages held by the issuer serve as collateral for the debt obligation. The principal and interest payments from the pool of mortgages are used to retire the CMOs. **REMICS**, or real estate mortgage investment conduits, also are included. A REMIC is a mortgage securities vehicle authorized by the Tax Reform Act of 1986. The REMIC rules authorize a new entity (a REMIC) to hold commercial or residential mortgages and issue securities representing interests in those mortgages. The REMIC itself is exempt from federal income tax. The income from the mortgages held by a REMIC is taxed by the holders of the REMIC regular and residual interests. **Mortgage-backed Securities** are the book value of holdings of certificates of participation in pools of residential mortgages that are U.S. government-issued or guaranteed. Included are certificates of participation in pools of residential mortgages issued or guaranteed by the Government National Mortgage Association (GNMA), the Federal National Mortgage Association (FNMA), and the Federal Home Loan Mortgage Corp. (FHLMC). **Total Securities** are the book value of securities of all types held as assets by the bank. **Total assets** are total assets of the bank, including domestic and foreign offices.

SMALL BUSINESS

Economic Optimism Sags To Lowest Ebb Since 1982

By LAURYN FRANZONI
Special to the American Banker

Despite reports to the contrary, the nation's small-business owners do not believe they are victims of a credit crunch, according to survey results just released by the National Federation of Independent Business, Washington.

The same small-business owners, however, are not optimistic about economic trends. Even before Iraq's invasion of Kuwait, these bustiness owners reported they were putting on the brakes, said federation president John Sloan in presenting the group's findings.

"Small-business owners don't like what they see on the horizon," he said. "And now, with the Iraqi invasion, there will be even less hope for an upturn this fall."

Each quarter the group compiles a small-business optimism index based on expected business and credit conditions, sales volume, and the climate for expansion, among other factors. In 1978, the index stood at 100. In the second-quarter report, based on a July survey of 2,100 firms, the index fell to 98.2, which surveyors said is the lowest level since 1982.

Only 17% Foresee Improvement

Only 17% of those surveyed expect the economy to improve, compared with 22% in the first-quarter report. More than a fifth of the business owners foresee worse times ahead – representing an increase of eight percentage points over the previous month.

"No one should really expect small-business owners to be happy," Mr. Sloan said. "Congress is piling on more laws, more paperwork, and is looking around for ways to create new taxes. Add all that to the Mideast crisis and it could be a long winter for small business everywhere."

The federation calls borrowing conditions a "bright spot." Small business owners appear comfortable not only with the availability of loans; but also with their rates. About 45% of those surveyed said their loans were tied to the prime rate, and only 8% said they expected rates to go higher. The average interest rate paid by small firms dipped slightly during the second quarter to 11.9%, down from 12% in the previous period, according to the survey.

William C. Dunkelberg, the federation's chief economist, said the optimism may be short-lived. The percentage of businesses that expect more trouble getting funds rose to 12% in the latest survey, from 3% at the end of the first quarter. "The real concern is that higher interest rates will result from administered inflation by Congress," Mr. Dunkelberg said.

Fewer New Jobs

The small-business sector has been heralded in past years as the fountain of new jobs for the nation. The federation said its survey shows that fountain is drying up. While it cannot be sure of predicting a sharp increase in unemployment, the group expects mild increases in the unemployment rate and weak hiring statistics.

Overall, plans to increase employment have fallen. Only 16% of the small-business owners said they plan to add workers this year, down from 23% in the previous report. About 10% of the businesses polled expect layoffs.

The demand for credit could be slackening among small businesses, as fewer plan new capital expenditures. The portion planning such expenditures slipped to 29% in the second-quarter report, down three points from earlier this year and seven points from the expansion high of 36% set in early 1989.

"Although the numbers seem small, they characterize the expenditures of more than four million small businesses," Mr. Dunkelberg said. A change of one percentage point, representing median spending of $15,000, could have a big impact on capital spending, he said.

Business Services Merger at Merrill

Merrill Lynch & Co., New York, has merged two divisions that had served portions of the corporate market. As a result of the combination, the brokerage house will offer the services to a broad audience that previously had been targeted primarily at large firms.

The group financial service unit, which provides group employee services including 401(k) retirement plans to larger businesses, has been combined with the business financial services unit, which provides financing and investment services to small and midsize companies.

The merged unit will offer a working capital management account, equipment financing, loans, retirement plan administration, investment and portfolio management, business valuation, and sales services.

The combined unit, known as business financial services, has annual revenue of nearly $550 million. Its new director, J. Arthur Urciuoli, a Merrill Lynch senior vice president, has been the company chief strategist developing services for the small-business market.

Customers Sue Failed DC Bank

Continued from *page 1*

left unpaid, according to a Washington lawyer representing one of the bank's disgruntled customers.

At least 15 creditors holding commercial paper are now trying to recover millions of dollars, she said. Most, if not all, of the creditors claim funds were invested in commercial paper without their authorization. It could not immediately be determined what portion of the suits the commercial paper the bank misused insured deposits.

In one suit, Alicia Fernandez de Goldenberg, a resident of Venezuela, and her daughter Isabel Ana G. Kuperschmit of McLean, Va., claim that the bank breached its fiduciary duty by selling $12,000 from Mrs. Goldenberg's certificate of deposit and investing it in the commercial paper program, according to court documents filed in U.S. District Court for the District of Columbia. The suit was filed on Aug. 6 against top officers of NBW.

CD Renewal Requested

According to Mrs. Goldenberg, Mrs. Goldenberg authorized the bank to renew her CD for six months on Jan. 2, but two months later, a bank employee called her with news that she was a holder of the bank's commercial paper, the suit alleges.

NBW, Washington Bancorp. announced that it could not make payments on $25.8 million of commercial paper insured up to $100,000, lawyers note.

"It is like a nightmare," said Annette Fields, Mrs. Goldenberg's attorney and partner in the Washington law firm of Fields & Director. "We have gone to the FDIC, we have gone to the [Office of the Comptroller of the Currency], we went to the National Bank of Washington before it went under. We wrote letters and said this has got to be some kind of tragic mistake."

The bank taped some of those conversations, according to Ms. Fields. "The FDIC has seized those tapes," she said.

Attorneys in the law firm of Akin Gump Strauss Hauer & Feld, outside counsel for the FDIC, referred calls about the suits to the agency itself. An attorney at the FDIC said she was familiar with the case but could not comment at this point.

At least 15 creditors holding commercial paper are now trying to recover millions of dollars.

Industry followers expressed surprise that such investments would be made without approval from the depositor or investor.

"It would be an extraordinary situation to do that to a customer's deposit without their consent," said Allen Raiken, partner at Morgan, Lewis & Bockius. "As far as I'm concerned, it is a breach of the customer relationship." ☐

Installment Credit Up $27 Billion

NEW YORK – Consumer installment credit grew $27 billion during the 12 months ended June 30, bringing outstandings to a seasonally adjusted total of $723 billion, according to the American Financial Services Association.

Commercial banks hold $336 billion of the consumer credit outstanding, representing 46% of the industry total, the finance industry trade group said. Finance companies claim $139 billion, or 19% of total consumer credit outstanding.

Credit unions hold $90 billion, for 13% of the industry total, while thrifts have $53 billion, or 7%. Retailers account for $37 billion and gas companies for $4 billion.

An additional $64 billion in consumer loans outstanding have been securitized after their origination and are now found in publicly held pools of securitized assets. The securitized portion represents 9% of the total.

According to the trade group, finance companies hold $471 billion in total credit, and more than half that amount is devoted to business credit.

Consumers account for 30% of all credit held by finance companies, the automobile loans comprise 56% of the consumer credit at finance companies. ☐

World Bank Resumes Effort To Curb Population Growth

By ALVER CARLSON
Reuters

After a decade of treading softly on the issue, the World Bank is renewing its public criticism of population growth, terming it a cause of poverty and environmental destruction.

Bank President Barber Conable has been making the case both publicly and privately that curbing population growth is a basic ingredient of economic development and a major goal of the bank.

"The policy is coming from the top," said one bank official.

The new emphasis is also being backed by increased lending.

The World Bank expects the world's population to reach 6.3 billion by the end of this century, up from 5.3 billion now.

Increasing population gives the bank new problems, undercutting its efforts to reduce poverty and improve economic growth.

In the past, many bank officials have been wary of advocating population control. The United States, the bank's biggest member, took the position during the Reagan administration that family planning should not get government or multinational aid.

President Bush, while in agreement, has been less strident on the issue as it applies to the World Bank. Bank officials say Mr. Conable has decided to fill this de facto leadership vacuum.

"The United States used to be the leader in this area, but under Reagan it went in the opposite direction," says Fred Sai, a former senior population adviser at the bank.

World Bank loans for population, health, and nutrition have soared from $544 million or 0.3% of total lending in the 1987 fiscal year to $304 million, or 1.6%, in 1988; $623 million, or 2.9%, in 1989, and $933.4 million for the fiscal year that ended June 30.

The bank estimates that one-fourth of these amounts are earmarked strictly for population issues, and officials believe loan growth in the sector will continue.

... by country

CUBA

Cuba's economy will grow a slim 1% in 1990, according to an economic forecast presented recently to Western creditors by the Communist government.

The document gave only passing mention to what is usually described as "current economic difficulties," an apparent reference to growing shortfalls in oil supplies from the Soviet Union and other East European trading partners.

The 1990 economic forecasts had been presented by Cuba's Western creditors grouped in the Paris Club as a basic requirement for a rescheduling of Cuba's debt to the Paris Club, which is due to expire this December.

Rescheduling the talks has been stalled because Cuba is demanding guarantees of new financing before it will consider restarting principal and interest payments suspended in 1986.

PAPUA NEW GUINEA

Westpac Bank-PNG-Ltd, the Papua New Guinea banking unit of Australia's **Westpac Banking Corp.**, has contracted with **Citicorp** Investment Resources to update its automated retail banking operations.

No price for the contract has been disclosed. The system runs on IBM AS400 computers using Citicorp's Comprehensive Banking System software. Hardware is being supplied separately through a local marketing company in Papua New Guinea. The system replaces an NCR Corp. mainframe.

A Citicorp spokeswoman said that installation at Westpac's 15 branches and 10 sub-branches in Papua New Guinea is scheduled to be complete early in mid-1991.

Citicorp Information Resources, a unit of Citicorp, supplies financial data processing software and servicing.
— James R. Kraus

SRI LANKA

Citicorp Investment Bank Ltd., a Sri Lankan affiliate of Citicorp, will underwrite tea sales from Sri Lanka to the Soviet Union, Industries Minister Ranil Wickremasinghe said Thursday.

Mr. Wickremasinghe said Colombo will give a year's credit to the Soviet Union to import tea. The credit line will be guaranteed by the Citicorp unit.

He told journalists this step was taken because Iraqi buying was in jeopardy and because of the Soviet Union's need for the Colombo tea auction. The Soviets withdrew from the auction in May due to a shortage of foreign exchange.
— Reuters

SWITZERLAND

Daiwa Securities and **Nikko Securities** have applied to Swiss authorities for banking permits, which are expected to be granted by fall. The permits would mean that Japan's four largest banks have Swiss banking powers.

Tokai Bank, Mitsubishi Trust and Banking Corp., and **Sumitomo Trust and Banking Co.** are also expected to file applications for Swiss banking permits.

The moves are interpreted as an opening of the Swiss system in response to Japanese domestic market liberalizations.

Kuwaiti Bank Shifts Operations

Top Management Now in London; Assets Are Shed

By JOHN EVANS

LONDON — In an effort to keep operating around the world, National Bank of Kuwait, the Arab oil state's biggest commercial bank, has shifted much of its top management and activities to London.

The move will "bank-in-exile" measure became clear Thursday when NBK released a detailed picture of its efforts to overcome the impact of the Aug. 2 Iraqi invasion of Kuwait. This includes assistance, to help maintain its liquidity, from a Kuwaiti government agency as well as a program to asset sales to re-produce working capital.

The Kuwaiti state is similarly establishing a government-in-exile in the West, operating with an estimated $50 billion in oil revenues it has invested abroad. Such investments are part of an estimated $100 billion in Kuwaiti monetary assets.

Accounts Not Blocked

NBK has assets of $13.25 billion, making it the third largest bank outside Kuwait. Because NBK is privately owned, it is the only Kuwaiti bank whose assets abroad are not blocked by regulatory agencies around the world. However, NBK's assets within Kuwait are blocked because of Iraq's invasion of the country.

Virtually all NBK's senior management is now based in London, including chief executive Ibrahim S. Dabdoub. An NBK spokesman said that British and U.S. officials have recognized the authority of the board and management in London.

The bank has branches in New York, Singapore, and Bahrain and wholly owned subsidiaries in Paris and Geneva. It is now discussing with regulatory authorities in Britain and overseas the legal framework for continuing to operate these branches and units.

Shrinking Its Portfolio

NBK's aim for the time being is to shrink its international portfolio to ensure that its obligations, including interbank funding, are met on time.

In addition, NBK has started receiving deposits from the Kuwait Investment Office, the London-based agency that holds most of Kuwait's investments in the West.

This is in line with a declaration by the Kuwait finance minister in London this week that he will not allow any Kuwaiti bank overseas to suffer a liquidity shortfall.

Loan Sales at Par

Capital Intelligence, a rating agency specializing in Mideast banks, commented that NBK is "free to dispose of its assets within these assets, which we have been reinvesting, apart from those needed for the limited overexpenses of the government."

Reuters contributed to this article.

Leading Norway Bank, Mortgager Plan to Merge

By JOHN EVANS

Christiania Bank og Kreditkasse, Norway's second biggest commercial bank, has proposed a merger with Realkredit, the country's biggest mortgage institution, to form a financial-services group.

With assets of about $55 billion, it would be Europe's 37th-largest financial company.

The merger is being sought through a holding-company structure scheduled to later include an insurance business, Christiania Bank announced.

The companies announced the proposed merger Wednesday. In reaction, Moody's Investors Service Inc. on Thursday placed Christiania's Aa1 ratings on long-term debt under review for possible downgrading.

The result would be Europe's 37th-largest financial company.

Nordbanken Sees Credit Losses

Separately, Sweden's Nordbanken group, one of Scandinavia's biggest banking groups as a result of a merger this year, announced probable credit losses of up to $115 million.

The bank was established after PKBanken, in which Sweden has a 70% stake, bought Nordbanken for nearly $1 billion.

Nordbanken said an internal survey discovered the potential losses at a few branches of the old Nordbanken. The bank also said it is setting aside $35 million to cover possible losses in a legal case involving leasing operations. Total credit loss reserves for 1990 are estimated at $295 million, the bank said. ☐

Flagship Financial to Close Retail Units in New Jersey

JENKINTOWN, Pa. — Flagship Financial Corp. said it will discontinue the New Jersey retail operations of its First American Savings subsidiary, write off $10 million in goodwill, and accelerate its accumulation of general loan-loss reserves.

As a result, Flagship expects to take an estimated $13 million noncash charge to third-quarter earnings, which is expected to be partially offset by future improvements in core earnings, a seasoned financial professional, with an extensive background in operations, commercial lending, REO, budgeting, strategic and financial planning. A bachelors degree in business, finance or economics and 10 years of experience or a Masters Degree with 5 years experience is required.

Flagship said that its financial condition will not be jeopardized and that its Pennsylvania-based thrift subsidiaries – $698 million-asset First American Savings and $220 million-asset Brandywine Savings Bank – will continue to exceed the fully phased-in capital requirements.

The company said that by accelerating the recognition of noncash items, the balance sheet will be stronger and loan-loss reserves will be about 0.98% of total loans. Results of operations will improve, and cash tax liabilities will be reduced now and in the future.

Flagship will focus on suburban Pennsylvania.

Profit Targets Elusive

It was concluded that First American could not meet profit targets in a reasonable time, and Flagship will focus on suburban markets in Pennsylvania rather than the New Jersey suburbs of Philadelphia.

First American exit will free New Jersey by closing or selling its five retail facilities.

First American's board is investigating whether the $46.7 million of deposits in those offices will be sold. The remainder of First American's board wrote down about $10 million of goodwill, mainly associated with the June 1982 purchase of York Road Federal, and to a lesser extent, with its exit from New Jersey.

The York writedown resulted from a decision to retroactively adopt Financial Accounting Standard No. 72, which requires a partial writedown of goodwill for acquisitions before October 1982.

Recession Worries Prompt Warnings on Debt Burdens

By ROGER PILLION
Reuters

WASHINGTON — The huge mountain of debt racked up by U.S. corporations during the takeover frenzy of the past decade will make them vulnerable if a recession hits, as they struggle to pay off their loans with less available cash.

The high debt load could even worsen the next recession as companies cut expenses to find the cash to repay creditors. Some economists say that recession has already struck since Iraq invaded Kuwait and oil prices have surged to their highest levels in nearly five years.

In a business downturn, the vulnerability of corporations could spill over into the general economy in the form of lower investment spending, which would translate into job losses.

Investments Would Be Cut

A recession could be made to be cut back more quickly due to the heavy interest payments," said David Hyman, chief economist at Data Resources Inc.

DRI estimates that if oil prices remain in the range of $25 to $30 a barrel, investment – a key source of economic growth – would fall 4% mid-1991.

The surge in oil prices since Iraq's invasion in August has raised the specter of a downturn after more than 7½ years of expansion. A downturn is generally defined as two consecutive quarters of a fall in the gross national product.

Recession Could be Mild

Economists at this point believe any recession probably would be mild, and not as severe as the recessions in 1973-75 and 1981-82, when growth fell 4.3% and 3.4%, respectively. But they caution that the uncertainty over oil prices and events in the Gulf make it impossible to rule out a more severe downturn.

"If there is a sharp downturn in earnings, many companies will be unable to meet their obligations," said Benjamin Friedman, a Harvard economics professor. "The corporate sector has become heavily leveraged in the sense that it is heavily dependent on the continued strong growth of earnings."

During the 1950s and 1960s, Mr. Friedman said, it took 16 cents of every dollar of earnings to pay corporations' interest bills.

That average grew to 33 cents in the 1970s, and since 1980 has been 56 cents. It now is 59 to 60 cents, after such multibillion-dollar buyouts as that of RJR Nabisco Inc. and Philip Morris Cos. Inc.'s purchase of Kraft Inc.

Economists said the Fed – while it appears willing to keep interest rates high to check inflation – would move quickly to lower rates at the first signs of a downturn, partly out of fear of

Warnings Sounded on Debt Burden

Continued from *page 12*

the debt overhang.

Mr. Friedman said the potential fallout could spur the Fed to err on the side of preventing a downturn. "The policy choice will be tipped more toward keeping the economy going than against resisting inflation."

Repercussions of a Downturn

Ben Bernanke, professor at Princeton University, recently did a study showing that only the 1,200 corporations he sampled would become insolvent in a recession as severe as that of the mid-1970s.

The insolvency would be based on a company's asset value falling below debt obligations. The surveyed corporations, which included almost all of the nation's largest publicly traded companies, had total sales of $2.3 trillion and book debt outstanding of $675 billion in 1988.

An Analyst Downplays Risk

But Stephen Roach, senior economist at Morgan Stanley & Co., downplayed the risks of the debt overhang. "The debt has been heavily concentrated in sectors of the economy which thus far have had relatively good cash flows," he said.

Mr. Roach singled out nondurables manufacturers, such as food and tobacco companies, as well as public utilities and the service industry.

Between 1982 and 1989, debt growth in those areas accounted for 75% of the cumulative growth in nonfinancial debt, he said. "In recessions, people eat," Mr. Roach said.

BB&T Finishes Acquisition in NC

WILSON, N.C. — BB&T Financial Corp. said it has completed its acquisition of the $301 million-asset Carolina Bancorp Inc., the High Point-based parent company of First Federal of the Carolinas.

The four former offices of First Federal opened this week as BB&T Federal Savings Bank of High Point, a subsidiary of the $5.1 billion-asset BB&T Financial. With offices in High Point, Greensboro, Jamestown, and Thomasville, it is one of BB&T's network of 180 offices in North Carolina and 15 in South Carolina.

BB&T Financial's lead subsidiary is Branch Banking and Trust Co., the fourth-largest bank in North Carolina.

The Wilson-based corporation has announced agreements to acquire four other healthy thrift organizations: Albemarle Savings & Loan Association, Elizabeth City, N.C.; First Federal Savings Bank of Pitt County, Greenville, N.C.; Gate City Federal Savings and Loan Association, Greensboro, N.C.; and Home Savings and Loan Association, Durham, N.C.

The acquisition of First Federal Savings Bank of Pitt County is expected to be completed in early September. □

DEALS: A $68 Million Offer for Control of AmBase, Carteret's Parent

By WILLIAM GOODWIN

AmBase Corp., parent of Carteret Bancorp, said Thursday that an investor group has proposed to buy 50.1% of its common stock for $4 a share in cash, or a total of about $68 million.

AmBase shares were trading at $1.875 late Thursday, up 12.5 cents from Wednesday's close. The company's board is to meet today.

The investor group – Sequoia Associates, Hermitage Capital Corp., and Whitman Heffernon Rhein and Co. – is mainly interested in the Home Insurance Co. subsidiary of AmBase.

Carteret Sale Unlikely

However, it's unlikely the group would seek to sell Carteret, at least for the time being.

"A weak thrift franchise in the Northeast is virtually unsalable in this market," said Reid Nagle, president of SNL Securities, a thrift and banking research concern in Charlottesville, Va. "My guess is, they would retain it, possibly recapitalize it, and run it until the market for thrifts in the Northeast improves."

"We're talking a window of at least two or three years," Mr. Nagle added.

Biggest NJ Thrift

Carteret is New Jersey's biggest thrift, not counting City Savings Bank, which is run by the Resolution Trust Corp.

In its second-quarter earnings report, AmBase said Carteret broke even, compared with a profit of $10 million in the first quarter and a pretax gain of $16 million in the second quarter of 1989.

Robert O'Brien, Carteret's chairman, is considered likely to be retained by the investor group if its proposal to buy control of AmBase is accepted.

"He's a capable and well-regarded person," Mr. Nagle said of the Carteret chairman. Mr. O'Brien didn't return phone calls seeking comment on the investor group's proposal.

William Walsh, a Sequoia general partner, called it "premature" to say whether the group would keep Carteret but added that its general practice is to "retain, not break things up."

For its part, AmBase had been planning to sell all three of its insurance subsidiaries and field itself into Carteret.

Deal to Sell Home Insurance

This month, AmBase said it had agreed to sell Home Insurance to Vik Brothers International. Proceeds from the sale were to be used to retire all AmBase debt, including about $400 million in loans held by a group of banks led by Chase Manhattan Corp.

The debt repayment was required by an amendment to AmBase's agreement with the Chase-led group. When AmBase reported a second-quarter loss of $106 million, it was in noncompliance with the loan pact.

Westpac Refinancing Set

Under the proposal from the investor group, the existing bank debt would be refinanced by a new group of lenders led by Westpac Banking Corp. Details of the facility were not disclosed by the investor group, and Westpac refused to comment.

As part of its proposal to acquire control of AmBase, the investor group plans a rights offering to company shareholders of zero-coupon notes with attached warrants to buy 34 million AmBase common shares at $2 each. The investor group would buy any notes not purchased by shareholders, resulting in a total cash infusion of $68 million. □

Carteret is New Jersey's biggest thrift, not counting City Savings Bank, which is run by the Resolution Trust Corp.

Citicorp, Other Banks Reassess Disaster Recovery Plans

Continued from page 1

with a major data processing site handling both retail and correspondent banking that was affected by the blackout. Many other banks might have been in the same or worse shape if their main data centers went down, they said.

"There's a strong feeling of it can't happen to me, despite the Hinsdale fire, the California earthquake, Hurricane Hugo, and now the Wall Street Fire," said John Nevola, manager of International Business Machine Corp.'s business recovery center.

Disaster Plans Reassessed

Many banks are now reassessing their business recovery plans in overall disaster plans. "We had not considered [on-line backup of funds transfer] to be something we are now looking at," said Walter Brenner, head of disaster recovery planning at Credit Lyonnais. "We've learned a few lessons from this exercise."

Credit Lyonnais moved most operations to contingency sites last week, but kept its funds transfer business operating under generator power at its blacked-out headquarters. As long as backup appeared sufficient, it was considered less risky than shifting sites. "A lot of things could go wrong when you move," Mr. Brenner said. The French bank's staff practiced no problems, and its generators held up all week.

Rehearsals Needed

Disaster recovery experts say it is not enough to have a plan on paper. The execution of disaster simulations must be planned and rehearsed. Many banks say they test their systems once a year, which experts say is not enough.

"The companies that do test rarely test their abilities to do anything more than restore an operating system and do basic connectivity tests," said Jeffrey Marinstein, executive vice president at Contingency Planning Research Inc., Jericho, N.Y. "Less than 10% do any more comprehensive testing than that."

Banks need established plans of action and must factor in the cost of transferring operations to a hot site – a computer-ready alternative location that is owned by an outside vendor or the bank itself.

Some Moved to Hot Sites

During the most recent crisis, a handful of banks – including National Westminster Bank, Manufacturers Hanover, and Credit Lyonnais – quickly moved some processing operations to alternative sites. Others, including Citicorp, completed continue processing in Lower Manhattan, with backup generators holding system in their most critical areas.

Even banks that emerged unscathed from the outage are reevaluating their recovery plans.

At the time, it was hard to know which was the right decision. Consolidated Edison Company of New York, the afflicted utility company, complicated the issue by initially underestimating the time it would take to restore power.

Generators Failed

As the outage dragged on, generators at some of these banks began failing, disrupting trading systems, funds transfers, and other operations. Citicorp, the Federal Reserve Bank, and J.P. Morgan & Co. were among those including funds transfer problems. Some experts said generators failed, not because they had been overloaded, but because fuel suppliers could not get through the chaotic streets.

Failure of a generator at Citicorp's 111 Wall Street data center forced it to shut down certain operations – including funds transfer and retail banking. Some of those operations were later moved to nearby temporary sites for the duration of the power failure.

Even banks that emerged from the outage with their operations unscathed are reevaluating their recovery plans.

'A Dynamic Process'

"Every time you have a real disaster, you reevaluate your plan," said Barry Himel, first vice president of corporate security at Security Pacific Bank in San Francisco. "It's a very dynamic process."

The total cost of the power failure in New York's financial district may never be known.

Merrill lost power for only six hours on Monday. But when Lehman Brothers moved down the cer, Merrill did not know what its account looked like at Citicorp, said G.M. Sieter, Merrill's director of cash management who manages accounts with all the money-center banks.

"When you're scrambling in an information-scarce environment, you want to make sure you cover your banks – so you over-cover," he said. □

Bank Stock Table Explained: The table lists in alphabetical order the closing stock prices for the 225 largest publicly traded commercial banks and the 25 largest publicly traded thrifts, ranked by market capitalization. Market capitalization is the number of common shares outstanding (as of June 30, 1990), the market price of the stock as of the close of trading on August 23, 1990, and the 52-week high and low for the year. The 52-week high and low closing prices for the stock do not include earnings data. It is the reported stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. NM, likely to boost the stock's book value, is the ratio of the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Bk. The price at which the stock last traded. If no trades for the day, the latest bid. Chg. The change in the closing price from the previous day. The banks in market value and the top 50 thrifts in market value, representing the nation's largest and most actively traded banks and thrifts, are ranked by market capitalization. Stock prices are reported in fractions and two volume indicators most shares traded and today's volume as a percentage of average shares traded daily over the past year.

Data sources: SNL SECURITIES, Charlottesville, VA, 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides SNL with the daily prices.

Boston Five Bancorp Posts 3d Quarter Loss

BOSTON — Boston Five Bancorp, parent of Boston Five Cents Savings Bank, reported a net loss of $606,000, or 9 cents a share, for its third fiscal quarter, which ended July 31.

It earned $1.9 million, or 27 cents a share, in the 1989 period.

For the nine months, $2.1 billion-asset Boston Five lost $1.7 million, down from $7.3 million in the 1989 period.

STOCKS

Wells Fargo Shares Tumble Dramatically

Continued from *page 1*

believes the stock is oversold.

While BankAmerica Corp. and Security Pacific Corp. are larger than Wells in market capitalizations, they have gotten less attention even while declining nearly as much as Wells in percentage terms.

Wells' Stock a Vehicle

In late trading on Thursday, Wells was off $1.125 to $51.25 while Security Pacific had declined 50 cents to $26.50 and BankAmerica was off 37.5 cents

George M. Salem Peggy Turbett
Prudential-Bache

to $19.625. Wells' stock is considered a trading vehicle for investors in bank stocks because of its large market capitalization and the liquidity it offers.

Wells is still attracting strong and opposing opinions about the direction of both its share price and the economic winds blowing across the nation's most populous state.

"I'm still a seller, because the real estate market dominates their balance sheet" said George M. Salem of Prudential-Bache Securities Inc., who has long held the most bearish views of any analyst of the banking industry.

With the sharp decline in the Tokyo equity markets, Mr. Salem explained on Thursday, "it puts extra heavy pressure on California real estate, not only from the point of view of possible sales by Japanese interests who were previously viewed as strong long-term holders, but from the whole psychology of real estate values."

Real Estate Assets

Wells Fargo is linked through lending to more California real estate per dollar of assets than any other California bank, Mr. Salem pointed out.

Offering another point of view, J. Richard Fredericks of Montgomery Securities in San Francisco noted that "we've had a buy on the stock of Wells Fargo since it was $7 in 1974."

"The earnings are still there and the price-earnings multiple is unbelievably low," he said. "but you lose a lot of earnings and the dividend would still be covered."

"While I think nonperforming assets are going to go up this quarter, I think the earnings are going to be showing us about a 1.20% return of assets and a 25% return on equity," he said.

That will be down a little from the second quarter, he said, because Wells will have expenses but little income from the acquisition of San Diego's Great American Bank.

The acquisition is viewed as strongly enhancing Wells Fargo's franchise in the area of California.

As for the California economy, Mr. Fredericks said the major slashes in defense expenditures that were expected to hurt California may now be put on hold in view of the tense situation in the Middle East.

Moreover, he said, if the rise in oil prices stemming from Iraq's conquest of Kuwait causes inflation to rise, the trend in declining real estate prices that has worried investors could be stemmed or even reversed.

* * *

THURSDAY'S MARKET

Nearly all major bank and thrift stocks fell along with the rest of the stock market on Thursday as investors worry about rising crude oil prices and turmoil in the Middle East. The Dow Jones Industrial Average plunged late in the day, and was down nearly 80 points to 2480.

In late afternoon trading, J.P. Morgan & Co., the nation's premier money center bank, was off $7.5 cents to $51.875 to another new 52-week low. The largest decline among money centers was posted by Manufacturers Hanover Corp., down $1.50 to $24.75.

Profit-taking was again in evidence among the banking stocks that had not declined as much as others in the industry until recent weeks.

Highly regarded First Wachovia Corp., Winston-Salem, N.C., was off $1 to $36.625 before the close of trading. Similarly, CoreStates Financial Corp., Philadelphia, was off $1 to $32.125. □

CAPITAL

Medium-Term Notes Are Luring Banks

By KELLEY HOLLAND

In an attempt to extend their funding without paying the high costs of subordinated debt issuance, a growing number of banks are turning to the medium-term note market to meet their funding needs.

Banks would like to reduce their reliance on short-term sources of funds such as commercial paper. But rather than pay the high rates prevailing in today's difficult market for bank bonds, they are choosing to borrow in small increments using medium-term notes. Because medium-term notes are senior securities, they do not count as regulatory capital.

Raising Funds Cheaply

"Given the woes in the debt market right now, issuers can raise money much more cheaply in the medium-term note market," said one capital markets expert. "If they brought a $100 million to $150 million [subordinated bond] deal, they'd scare the hell out of the market."

First Bank System has issued more than $100 million in floating-rate medium-term notes since the beginning of the summer, according to David R. Edstam, treasurer. Concerned about the outlook for the capital markets for the rest of 1990, Mr. Edstam likes the option afforded by medium-term notes to issue quickly when opportunities present themselves.

"The view that we have here is that the markets are going to be jumpy for the rest of the year, so we have been funding when the market's there," he said. "You have to be ready when the investors want to invest."

First Bank is currently reducing its dependence on commercial paper, he said. That's partly because First Bank received a credit injection earlier this year when it privately placed $175 million in equity. Also, Mr. Edstam prefers to avoid short-term markets when they are unsettled. "My bias is toward very low or no dependence on commercial paper," he said.

Major Programs in the Works

Banks that have tapped or are looking to tap the medium-term note market

Bank	Size of program
Citicorp	$3 billion
First Bank System Inc.*	$800 million
First Chicago Corp.	$800 million
Chemical Banking Corp.	$750 million
Fleet/Norstar Financial Group	$700 million
Comerica Inc.	$500 million

Source: American Banker

Issuance Down in '90

Banks had been one of the mainstays of the medium-term note market in recent years. Issuance declined in the first half of 1990, though, as banks' funding needs shrunk and spreads on bank notes rose.

Even in the medium-term note market, spreads relative to Treasuries widened 100 basis points for some issuers. But banks have seen their alternative funding costs rise sharply, particularly in the commercial paper market.

"With the turmoil in the commercial paper market that occurred earlier this year, combined with the downgrades that have occurred, prudent management is looking to lessen reliance on commercial paper," said William R. King, a first vice president at Merrill Lynch Capital Markets.

"There are times when these things can be sold at lower yields than we can sell other liabilities," said one banker whose bank has an medium-term note program in place.

First Chicago Plan

First Chicago Wednesday became the latest bank to launch a medium-term note program, announcing a plan to issue up to $800 million in securities with maturities ranging from nine months to 15 years.

But First Chicago is not alone. Citicorp, Chemical Banking Corp., First Bank System, and Fleet/Norstar Financial Group have each issued between $100 million and $250 million in the past two months, banking sources said. PNC Financial Corp. has reportedly been in the market as well, and Comerica Inc. recently set up a $700 million program during the second quarter, though it has yet to issue any securities as a result.

Citicorp filed a $1 billion medium term note shelf registration close to a year ago, and began issuing notes under the program in June. It issued about $200 million in the first several days of offerings.

And Chemical has been issuing two- and three-year medium-term notes at floating interest rates.

MARKET MONITOR

A planned 10-year subordinated debt offering by Continental Bank, a subsidiary of Continental Bank Corp., has so far been coolly received in the premarketing to potential investors. Price talk earlier in the week was for a spread 235 to 240 basis points over comparable Treasuries, but on Thursday talk was for a spread of 275 to 290 basis points over Treasuries. □

Uphill Climb For Home Loan Bank System

By DEBRA COPE

The Federal Home Loan Bank System, once the crown jewel of the thrift industry, is struggling to revive its luster.

The Financial Institutions Reform, Recovery, and Enforcement Act of 1989 plundered the coffers of the 12 district home loan banks, dealt a death sentence to up to 40% of the thrifts that formed their customer base, and imposed costly, long-term financial obligations on the formerly robust district banks.

Unless Congress and the administration spell out an updated mission for the system, the brightest prospect is that the dis-

ANALYSIS: *Follow-up on the news*

trict banks will evolve into fewer, smaller, leaner liquidity facilities serving traditional mortgage lenders, including a growing corps of community banks, observers said.

But if strains on the system intensify, its fate grows cloudier.

System Demise Possible

The banks, handicapped by a leadership void and confronted with a potentially crippling wave of withdrawals by members, could see their earnings spiral further downward, weakening their capital and impairing their ability to contribute to industry bailout costs. Federal policymakers have not ruled out the possibility that the system could meet a quiet demise.

Already the bank system's strong fabric is showing signs of wear. Earnings for the first half of 1990 fell 25%, albeit from record levels in the comparable period last year. And the system's capital base eroded, both in raw dollars and as a share of assets, according to the Federal Housing Finance Board, which oversees the home loan banks.

Inertia Blocks Recovery

Sources note that inertia is the bank system's greatest enemy as it seeks to recover its balance and return to its fundamental mission of promoting housing. Bickering between Congress and the administration, plus a measure of indifference, has stalled the installation of four members of the Federal Housing Finance Board. Housing and Urban Development Secretary Jack Kemp serves as interim chairman.

"This is a $160 billion government-sponsored enterprise, and no public policy direction has been established," said Dennis Jacobe, director of research and economics for the U.S. League of Savings Institutions. "You have 12 banks trying to figure

Battle of Calif. Giants Seen Bringing A Top Premium for Benj. Franklin

By SAM ZUCKERMAN

SAN FRANCISCO — Aggressive bidding by BankAmerica Corp. and Security Pacific Corp. for Benj. Franklin Savings and Loan Association in Oregon may allow the Resolution Trust Corp. to get one of the highest premiums ever paid for a large failed thrift.

Though other offers are expected, bidding for Oregon's largest thrift is shaping up as yet another showdown between BankAmerica and Security Pacific. Both California giants have publicly stated they want to acquire Portland-based Benj. Franklin and see it as a vital part of their Northwest expansion. The thrift is expected to fetch more than $100 million, representing a premium of at least 4% of its core deposits.

The two banks last May fought a bitter contest for Arizona's Western Savings and Loan

Chemical Seen Losing Loan Deal

By WILLIAM GOODWIN

In what would be a blow to Chemical Bank, Consolidated Freightways Inc. is close to an agreement with Bank of America on a new credit facility of about $400 million, sources familiar with the situation said.

The new pact would replace a much larger credit agreement that Consolidated had reached with the subsidiary of Chemical Banking Corp. in June.

Officials at Chemical declined to comment on what appears to be a major loss of business for the bank.

As reported, Chemical committed itself to provide $500 million of a new senior secured credit facility and agreed to raise up to $360 million more from other banks on a best-efforts basis.

Since then, the trucking company has concluded that it could get by with a smaller facility, and it began negotiating with other banks.

The five-year loan package was to be used in part to replace a $300 million revolver from a group led by Security Pacific Corp. The revolver was terminated in July.

The deal with Chemical was

Weak Market Drives Continental To Scrap $100 Million Debt Issue

By KELLEY HOLLAND

In a dramatic example of how the market for bank bonds has dried up, Continental Bank Corp. withdrew a $100 million subordinated debt offering Friday.

Without the offering, the Chicago-based company remains shy of capital requirements that take effect Dec. 31. To meet the requirements, the bank must sell assets, retain earnings, or brave the capital markets again within a few months of having been spurned by investors.

Continental's move under-

scored how difficult it has become for banks to find themselves in today's tumultuous markets. Investors were finicky before the Middle East crisis; now, they have backed away almost completely.

'Impossible' Market

"Very few people have a real good reading on just how little depth there is to the market," said Thomas P. Quigley, senior vice president at Donaldson, Lufkin & Jenrette Inc. "The market conditions are such that it's impossible to move anything

Limited Gain Seen for U.S. In Reopening Thrift Deals

RTC's Consultants Put Figure at $3 Billion

By BARBARA A. REHM

WASHINGTON — Contradicting expectations that the government could gain more than $10 billion by renegotiating the controversial thrift-assistance deals of 1988, accountants hired by the Resolution Trust Corp. have concluded that the government stands to save $3 billion or less.

That estimate is the result of studies by five contractors – Price Waterhouse, Coopers & Lybrand, Kenneth Leventhal & Co., McGladrey & Pullen, and the Mid America Institute for Public Policy – hired this year by the RTC to determine where the government could save money through renegotiation.

The RTC will forward recommendations, based on the accountants' reviews, to its Oversight Board this week.

Gonzalez Prediction Dashed

Rep. Henry B. Gonzalez, chairman of the House Banking Committee, had predicted in a recent interview that "not less than $10 billion" would be saved by restructuring the deals.

"And I think I'm being conservative."

But Rep. Gonzalez and other lawmakers anticipating significant returns from renegotiating the so-called '88 deals are bound to be disappointed, say the experts hired by the RTC to scour the deals for cost-saving opportunities.

The 1989 thrift-bailout law required the RTC to investigate shaving the expense of the 1988

See **LIMITED** *next page*

"Sound Off"

A significant slowdown in California's economy – marked most recently by a falling real estate market – has the financial community in a state of flux. Cutbacks by Pentagon suppliers, overpriced housing, and an overbuilt commercial real estate market caused bank stocks to plummet. *American Banker* staff reporter Fred Vogelstein asked the following question:

How serious is the outlook for the California economy and real estate market? What effect will it have on banks there?

■ John R. Miller
Operating partner
Lincoln Property Co. NC Inc.
Los Angeles

We've definitely hit some softness in the real estate market in California, but it's not as severe as what's gone on in New England or the Southwest. We have some overbuilt markets in office space – there is a two-year supply that needs to be burned off – but we have a broad-based economy that doesn't rely on any one industry. We've already seen the impact on banks. They've taken a more conservative approach in lending. Banks aren't making speculative building loans without a significant amount of equity or a significant amount of prelleasing. However, their conservatism is probably justified. A lot of overbuilding has been driven by an excess supply of capital.

■ Jerry L. Jordan
Chief economist
First Interstate Bancorp
Los Angeles

The California situation is one of those half-full-half-empty water glass stories. It depends on the twist you put on it.

If one wants to be pessimistic, you say California is in the midst of a 50% slowdown in terms of job and population growth.

If you want to perk people up you say we're still growing 50% faster than the national average. The numbers are the same.

But people who try to use the New England analogy have their facts wrong. The New England population is dropping, which means the only way to get tenants to fill your buildings is to steal someone else's tenants. The overall vacancy rate keeps rising.

In the West we're looking for California to come down from three boom years, but since the population growth is positive, things won't be as bad.

Things have slowed but the impact on banks will be minimal relative to Arizona, Texas, or New England.

■ Robert F. Adelizzi
Chairman
HomeFed Corp.
San Diego

We expect the California population to increase on the order of 500,000 to 600,000 and would expect job growth, which has been at 300,000 a year for the last five years, to exceed that in 1990 and 1991. The much heralded cuts in aerospace and defense are overstated. They represent less than 5% of the state's gross product. Looking at the demographics, all the economic indicators are strong and healthy. There are going to be some cutbacks in construction but that will probably be offset by fairly major increases in highway construction and other improvements in the state infrastructure.

There has been a significant decline in bank lending given the negative publicity about the economy and the actual slowing, but it's overstated. Our view is that pure economics will overshadow perception in 12 to 18 months and will force a lending shortage.

■ Tanya Azarchs
Vice president/ratings
Standard & Poor's Corp.
New York

The economy in the state of California is slowing, admittedly, basically due to impacts by both defense cuts and the slowdown in the real estate industry.

Where the state enjoyed substantially above-average GNP growth, it will now tend to be average. In other words, there will be a slowdown, but we're not hitting a wall here.

The risk for banks is that credit quality will deteriorate. So far, it doesn't look like that impact will be unmanageable. □

Limited Gains from Reopening Thrift Deals

Continued from *page 1*

sales by the defunct Federal Savings and Loan Insurance Corp. (FSLIC).

"What you are not going to see is $20 billion in savings or $15 billion savings," said one of the accountants involved in the reviews, which cost the RTC about $5 million, "just don't know if it will be $1 billion or $3 billion."

"We probably all found something to justify our fees many times over," said another accountant who, like his peers at each of the other firms, demanded anonymity before discussing the project. "Clearly it wasn't a waste of money or effort, but the savings [on the deals he reviewed] will be around $1 billion."

Hearing Set for Sept. 14

The House Banking Committee is doing its own analysis of a number of the deals. Rep. Gonzalez plans to hold a hearing Sept. 14 on the deals and the accountants' review.

Though there is talk that the RTC will take back some assets from the 1988 deals, the accountants saw this is as unlikely – because the RTC is burdened enough with assets from seized thrifts. Besides, the acquirers already have 18 months of experience with the assets, but RTC would have to start all over.

Some renegotiation is probable, but the government is considered an unpredictable business partner.

Some of the institutions involved in the '88 deals later bought other thrifts, which regulators are forcing them to operate separately – at least until the reviews are done and the threat of unraveling the 1988 transactions is over.

"In this political environment, it's impossible to predict what will happen," said Frank W. Anderson, an analyst with Stephens Inc., Little Rock. "You know, I think politics is really the basis for the problem in the first place."

To renegotiate the deals, Congress must come up with some cash. The main options available to the government are buying back high-cost notes used to entice acquirers and marking down high-cost assets retained by the acquirers.

Sources in and out of government said in interviews that lawmakers are unlikely to provide any more money to spend on the S&L problem – even if, through renegotiation, the government could come out ahead.

The RTC chairman, L. William Seidman, testified recently that the agency is running low on funds and will need $100 billion next year.

In 96 deals, many of them bunched at the end of 1988, the FSLIC moved 199 faltering thrifts with $110 billion in assets into investors' hands. To facilitate the deals, the strapped insurance agency offered investors $36 billion in government notes and guaranteed asset returns, among other enticements.

Cost Estimates Rising

This summer, the RTC raised its estimate of the cost of the 1988 deals to $53 billion after discovering that losses at these institutions were worse than had been thought. Deteriorating economic conditions also figured in the reassessment.

The review has been criticized as an attempt by Congress to deflect outrage over how much the government is spending to clean up the thrift industry. Some estimates say the total will reach $500 billion.

"I think it is more of a witch hunt than an attempt to save money," said J. Randolph German, a partner in the San Antonio office of the accounting firm Grant Thorton.

The most celebrated of the '88 deals were made in December of that year and involved such well-known investors as Revlon Inc. chairman Ronald O. Perelman and Texas billionaire Robert M. Bass.

Mr. Perelman put up $315 million to acquire five Texas thrifts with a total of $12.2 billion in assets, including Gibraltar Savings Association and First Texas Savings Association. The government estimated at the time that its cost would be $5.1 billion.

Mr. Bass bought American Savings and Loan Association, a $30 billion-asset thrift in Stockton, Calif., that was once the largest U.S. thrift.

He pledged to put in $500 million; the government contributed $1.5 billion.

A Reason to Cooperate

Though the acquirers could assert that a deal is a deal and refuse to cooperate with the reviews, both the RTC and the acquirers are eager to come to terms in order to avoid a stronger backlash from Congress.

"We're working closely with the field team [of hired accountants] and will remain open to any reasonable suggestions they may have," said Owen Blick-

It's Mostly Big Banks that Can Afford Imaging

By JEANNE IIDA
Sixth of a Series

NEW YORK — Big banks have aggressive plans to install image processing systems, but most smaller banks find themselves precluded from experimenting with the costly new technology, the *American Banker*'s annual technology survey found.

Twenty-seven percent of banks with more than $2 billion in deposits plan to have image systems in place by the end of next year – three times the number that say they already have such systems installed.

Indicating that image processing is, at least for now, a big-bank luxury, only two of the 240 banks in the survey with less than $750 million in deposits had installed the technology. Twenty-six percent, or 11%, said they planned to install such systems by the end of 1991.

The data come from contacts with senior technology managers at 333 banks with at least $75 million in deposits. Trans Data Corp., an *American Banker* research affiliate in Wayne, Pa., did the survey by telephone in March and April. A magazine containing summaries and analyses of the findings has been sent to subscribers.

Overoptimism a Danger

Even the biggest and most sophisticated banks may be overoptimistic about how quickly they can install these systems, knowledgeable bankers said.

Those expecting to install image systems by the end of 1991 are "very optimistic," said Gilbert Arbuckle, senior vice president in the information management and research department at the lead subsidiary of Mellon Bank Corp., Pittsburgh. Mellon is installing image processing systems for wholesale lending and check processing.

"There is a long lead time to get the bank staff up with document design, training, and rethinking procedures," said Mr. Arbuckle, head of check processing at Mellon. He said he expects no more than 50 banks to install high-speed image systems by the end of 1991.

Of the banks that plan to install imaging systems, 43% said they would install the more expensive, high-speed transaction processing systems, which are used for such high-volume procedures as check processing.

32% Plan Electronic Files

A smaller group – 32% – said they would install stand-alone systems suitable for storage and retrieval of documents, often called electronic file folder systems.

Big banks were particularly likely to opt for check processing systems.

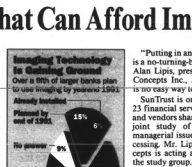
Of banks with $2 billion or more in deposits that installed or plan to install imaging technology, 83% said they would use the higher-cost, high-speed transaction systems; 42% said they would install the more limited document systems. Smaller banks were more inclined to choose inexpensive systems.

The survey reflects the high cost and complexity of high-speed transaction processing systems, which are too pricey for most banks. Check processing systems, for example, start at a couple of million dollars.

Cost Based on Volume

"The cost of some of these technologies is based on the volume of items or data, and smaller institutions don't have the volume to drive the profitability," said Roger Elsom, vice president and manager of operations support at Huntington Service Co. The company is the operations subsidiary of Huntington Bancshares Inc., Columbus, Ohio.

Small banks lack the volume to justify imaging.



Huntington plans to have a check processing system installed by yearend that will process a million checks daily.

Eventually, larger institutions are likely to market these services to smaller ones, which would bring down the cost to the smaller banks. But right now, "bigger institutions have their hands full just figuring out their own applications," Mr. Elsom said.

The caution with which many banks approach image processing is understandable.

Estimate by SunTrust

SunTrust Service Corp., the data processing unit of SunTrust Banks Inc., Atlanta, estimated that image processing could cost as much as 1% of assets, or about $30 million, according to Thomas G. Ash, president and chief executive of the data processing subsidiary.

It is also hard for banks to contain the effects of a high-speed transaction processing system.

"Putting in an imaging system is a no-turning-back thing," said Alan Lipis, president of Global Concepts Inc., Atlanta. "There is no easy way to back off of it."

SunTrust is one of a group of 23 financial services companies and vendors sharing the cost of a joint study of technical and managerial issues in image processing. Mr. Lipis' Global Concepts is acting as consultant to the study group.

Haste Can Make Waste

Other participants in the group are American Telephone & Telegraph Co., Chase Manhattan Corp., First Wachovia Corp., Huntington Banchares, MasterCard International, MCI Communications Corp., and Visa U.S.A.

Banks have run into problems from not adequately planning how to manage images once they were in the system and choosing vendors who were overextended, Mr. Lipis said. "There are banks that have thrown vendors out," he said.

"There's a more realistic approach these days, with phased implementations," Mr. Lipis said.

Both International Business Machines Corp. and Unisys Corp. have introduced their check processing systems in stages with the first phase dealing only with check capture, not with back-office procedures. "It may take three to four years to get a fully integrated check processing system" from vendors, Mr. Lipis said.

Waiting on Investment Return

Banks must be patient for returns on investment, Mr. Lipis said. One bank "experienced only minimal payback on the first phase of its student loan processing system, but it had enormous payback in the second stage," he said.

Mr. Lipis said banks can expect to take a year to develop a system and "maybe another year to put it in." □

Software System Tracks Collateral In Asset Lending

By KAREN GULLO

NEW YORK — Several banks are using a new software system from Automated Financial Systems Inc. that monitors and tracks collateral in asset-based lending.

Bankers say the software, an addition to Automated Financial's commercial lending system, lowers the cost of complex lending arrangements where customers use accounts receivable or inventory as collateral.

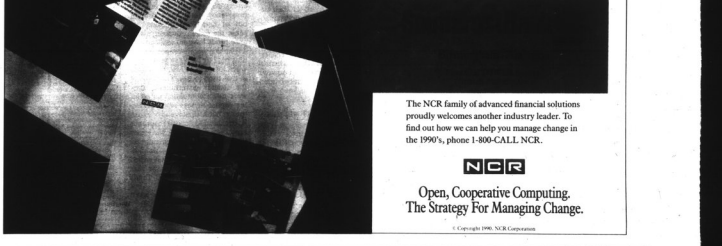
Such loans, which have become a big part of commercial banking, can carry high operating costs. They require meticulous attention to paperwork such as invoices and receipts and daily accounting of collateral availability for borrowing base.

Connecticut National Bank, Hartford; Bank of New England, Boston; Comerica Bank, Detroit; Manufacturers National Corp., Detroit, and a few other banks have recently installed the system on a pilot basis.

Kenneth Boin, vice president at Connecticut National, said the system has reduced operational costs.

The software, which costs $125,000 as an add-on to an existing system or between $250,000 to $400,000 for the complete system, is among the first for asset-based lending to be integrated with a total commercial loan processing system, according to Exton, Penn.-based AFS.

The system runs on mainframe computers and has online capabilities for handling accounts receivable, ineligibles, and inventory. Data from invoices is entered into the system, which automatically calculates collateral aging and availability, audits accounts, generates reports, processes confirmation of collateral and does financial analysis. □



COMMENT/*By Paul S. Nadler*

Changes in the Work Force Require New Bank Policies

Any banker who listens to a demographer should come away with the feeling that changes must be made in bank policies on hiring and keeping employees and on finding new markets.

Look at the following developments:

• Two-thirds of the net new jobs are being taken by women.

• The number of people 15 to 24 years old – potential entry-level employees – has declined 20%.

• New workers frequently lack the skills needed; we have smarter jobs and dumber people.

• Immigrants – with Latins predominating nationwide and Orientals on the West Coast – are rapidly increasing their presence in the work force.

• As a result, white males supply just 12% of growth in the work force.

• Many women with master's degrees in business who have worked for 15 years or more are anxious to control their destiny more and have become less willing to take the "fast-track" assignments required by American business.

"Moving jobs to the suburbs when the work force lives downtown has been a mistake for some companies."

What might all this mean to bankers?

The Significance for Hiring

Certainly, it will be more difficult to find the type of people banks used to hire. Banks must employ more immigrants; net immigration now matches the excess of births over deaths nationwide.

This – and the poor schooling of many native Americans – means that banks must continue to break jobs down into component tasks and spend heavily on education. Already, the private sector spends twice as much on education and training as do public and private educational institutions.

Patterns of immigration also will force banks and other employers to go where the workers are, instead of counting on workers to come to them. Moving jobs to the suburbs when the work force lives downtown has been a mistake for some companies.

And some banks that have studied how long it would take their present employees to commute to a new location have dropped their plans when it turned out that the extra commuting time might well cost them a substantial portion of their trained workers.

The decline in the availability of new workers also helps explain why more companies, like McDonalds, are recruiting retired people.

These demographic factors also help explain why technology like automated teller machines that lessens the need for labor are so valuable to the banking industry. There should be no public outcry that banks are denying people jobs, as was heard when check processing was automated.

Changes in Marketing

The demographic changes that experts forecast will alter employment policies and prospects markedly, and they will also change marketing opportunities and challenges.

As immigrants and less-well-educated native Americans enter the work force and are trained by business, they will also become an important market. Also, more older people are keeping their wealth instead of passing it on to their children while they are alive, making the elderly a more important market.

But while wealth is being retained by the elderly and after home prices have risen dramatically, we have become a nation in which young adults, for the first time ever, appear to have lesser expectation of economic success than their parents did.

Fall in Living Standards

In other words, after 200 years of fulfilling the American dream of progress, our economy is unlikely to give the rising generation even the standard of life their parents had. As evidence, many young families can't afford a home unless both adults work.

To bankers, this decline in expectations should be as much of a challenge as is the decline in productivity and work quality that we have also seen. □

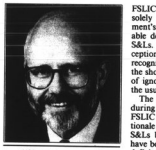
COMMENT/*By Bert Ely*

Federal Deposit Insurance Is Beyond Any Fix or Reform

First of Two Parts



America needs to reform deposit insurance as quickly as possible. Unfortunately, federal deposit insurance cannot be fixed because it is hopelessly and fatally flawed.

Franklin Roosevelt, among many others in the 1930s, clearly recognized the shortcomings of federal deposit insurance. At his first presidential news conference on March 8, 1933, the third day of the national bank holiday, he issued this prophetic warning:

As to "guaranteeing bank deposits . . . the general underlying thought behind the use of the word 'guarantee' with respect to bank deposits is that you guarantee bad banks as well as good banks. The minute the Government starts to do that the government runs into a probable loss. . . . We do not wish to make the United States Government liable for the mistakes and errors of individual banks, and put a premium on unsound banking in the future."

Principles of Insurance

Federal deposit insurance has failed because no government insurance scheme can ever function as a sound insurance mechanism. In fact, insurance of any type is a highly inappropriate government function because the basic principles of insurance conflict with the tenets of democratic government.

Sound insurance programs can survive only if they discriminate between good risks and bad. This discrimination must be based on objective economic measures; nonetheless, insurers must discriminate.

Democratic government works on another principle, namely that all persons are equal before the law, and the law, and its accompanying regulations, must apply equally to all. Also, attempts by government to discriminate are quickly opposed by those who believe they will suffer.

This is not to say that government cannot discriminate in sound grounds, but it is much harder for a monopolistic government to discriminate fairly than it is for insurers operating in a competitive marketplace.

Flat Rate Insurance Premium

A few specific flaws in federal deposit insurance make it hopelessly unsound.

To begin with, there's the flat-rate deposit insurance premium. All banks pay the same deposit insurance premium rate no matter how prudently or how recklessly they operate. In effect, the drunk drivers of the banking world pay no more for their deposit insurance than do their sober siblings.

"No government insurance scheme can ever function as a sound insurance mechanism."

The political process simply will not permit a government agency to charge the riskiest bankers what they should pay. These bankers will squawk loudly and seek political intervention in order to keep from paying what they should.

Closing Insolvent Institutions

Another major problem is the delayed closure of insolvent financial institutions. Closing banks and S&Ls as they approach insolvency or just after they become insolvent should make deposit insurance a nearly costless proposition for a deposit insurer.

In one sense, then, the enormous cost of cleaning up the FSLIC mess was caused almost solely by the federal government's incredible and inexcusable delay in closing insolvent S&Ls. But almost without exception, governments delay in recognizing problems because the short-term political benefits of ignoring problems outweigh the usually higher cost of delay.

The rapidly escalating cost during the 1980s of bailing out FSLIC became an acceptable rationale for not closing insolvent S&Ls because to do so would have boosted the federal budget deficit. This rationale conveniently suited executives of failing S&Ls who increasingly sought salvation in the political process because they had failed in the financial marketplace.

Capital Reserves

And, finally, there's the lack of real capital. Any reserves that a federal insurance fund claims to have simply do not exist. When an insured bank or S&L fails, its insolvency losses come straight out of taxpayers' pockets because the federal deposit insurance funds have no real capital.

The deposit insurance premiums paid by banks in years past, when losses were low, were used at that time to pay other bills of the federal government; they were not accumulated as genuine capital or loss reserves. Because bank insolvency losses have exceeded deposit insurance premiums since 1984, the losses in excess of premium income actually have been paid with higher federal borrowings that added to the budget deficit in the year in which the borrowed funds were spent.

Numerous proposals have

The "How To" system for your whole bank. 1-800-456-2340

How to run your lending area better. How to stay in compliance. How to price your services. How to handle personnel issues. And much, much more.

That's the **Sheshunoff High Performance Management System**. 12 easy-to-use volumes that show you how to manage your bank safely and profitably.

You get model policies and procedures. Sample forms and documentation. And clear, step-by-step recommendations for every part of your bank.

You even get System Updates with the latest ideas for improving performance. And Regulatory Updates designed to make it easier for you to stay in compliance.

Best of all, you get two complete sets with your order. So you can give individual volumes to each department head, and still have a set of your own for handy reference. All for $1,650.

And you know it's information you can trust because it's from Sheshunoff Information Services Inc. The leader in high performance banking since 1971.

To get your whole bank working on the same successful system, just call 1-800-456-2340.

High Performance Banking

COMMUNITY RELATIONS

Chicago Lenders Join Acorn In Land Trust Program

By NANINE ALEXANDER

Two Chicago financial institutions have found an ally in Acorn, the community organization more often viewed as an adversary of banks.

Citibank Federal Savings Bank and First Chicago Corp. are providing most of the funding for a community land trust set up by Acorn Housing Corp., a three-year-old offshoot of the Association of Community Organizations for Reform Now.

The land trust acquires and rehabilitates property obtained from the Resolution Trust Corp., the Department of Housing and Urban Development, and the Department of Veteran Affairs, among others. It then sells the houses to low- and moderate-income people at below-market rates.

"We're charting completely new ground here," Brenda Gaines, senior vice president for residential lending at Citibank, said of the Acorn program. "What they want is a larger number of affordable houses for their clients. It makes sense to work together."

Twenty-three Houses Slated for Renovation

The Citicorp unit, which started working on Acorn's latest project this spring, will provide $565,000 toward a program to acquire and fix up 23 residences by mid-1991. The Illinois State Housing Trust Fund will provide the remaining $486,000 for that project.

Separately, First Chicago has awarded $131,000 to the Acorn Housing Corp. That funding was used to acquire and fix up three houses. The company began working with Acorn about a year ago, said Terrance A. Young, vice president of First Chicago's neighborhood lending program, which has $225 million to spend over a 10-year period.

> **"The homes were in a location where we haven't had much success making loans."**
>
> **Terrance A. Young**
> *First Chicago*

Acorn Housing Corp., which was formed to develop affordable housing, began the land trust, Acorn Community Land Association, about three years ago as an experiment. Through city housing funds and private fund-raising efforts, Acorn initially rehabilitated three houses in the Chicago area, acquired in 1988 through the now defunct Federal Savings and Loan Insurance Corp.

To broaden the program, the group looked for other sources of funding, first lining up First Chicago and now Citibank.

Acorn has had similar programs since 1985 in New York, Philadelphia, Little Rock, Ark., and Phoenix.

Speculative Activity Is Prohibited

Along with helping to satisfy requirements of the Community Reinvestment Act, the Acorn project had other selling points, said Mr. Young of First Chicago. One is that homebuyers cannot speculate on real estate and turn a large profit on the land a few years down the road.

Under the land trust program, homebuyers sign a lease-to-own agreement for three years with Acorn, which sells them the home, but not the land, at the end of this period. The land is held in trust and leased to the homeowner for 99 years.

If the owner decides to sell, Acorn Housing has first option to buy the house at a price equal to the amount of money the homeowner has put into it. "All the houses will stay in the market for low- and moderate-income families," said Chris Brown, executive director of Acorn Housing.

Other attractions for First Chicago included the ability to establish a link with the active community group and the opportunity to reach into new neighborhoods. "The homes were in a location where we haven't had much success making loans," Mr. Young said. The houses were in the Englewood section of the South Side of Chicago.

Down Payments are Small and Rates Low

Homebuyers in the program will make down payments as small as $1,000 and will receive mortgages at below-market rates. To qualify, household incomes must be $12,000 to $30,000. The first renovated houses in the project funded by Citibank should be on the market by the fall, according to the group.

The Federal Home Loan Bank of Chicago brought together Acorn and Citibank after Acorn approached it, said Scott A. Stewart, community investment consultant at the Home Loan bank.

Thrift Law Mandates Contributions

Under the thrift-bailout law, each Home Loan bank is required to contribute a percentage of its annual net income to the Affordable Housing Program. That portion is 5% this year and climbs to 10% or $100 million, whichever is greater, in 1995. The Chicago Home Loan bank has earmarked $2.44 million for affordable housing this year.

Citibank borrowed part of the funding for the Acorn project from the Home Loan bank. □

Banks Face Deadline in December

Right to Sell Insurance Dependent on Census Data

By YVETTE D. KANTROW

NEW YORK — Time may be running out for some banks that want to take advantage of one of this year's obscure but significant decisions expanding bank insurance powers.

In May, a federal court upheld a ruling by the Office of the Comptroller of the Currency allowing banks to sell insurance nationwide from offices in towns with fewer than 5,000 residents. Under the ruling, a town's population is determined by the U.S. Census, which is completed every 10 years.

Exempt Status up in Air

On Dec. 30, the 1990 Census will be released, with updated data that may show many small towns have surpassed the 5,000-resident cutoff. Banks that have been eligible for the "small-town exemption" during the 1980s may then find themselves ineligible for insurance licenses.

Michael P. Bucci, a consultant at the Wyatt Co., Washington, said it is unlikely that any licenses granted before the new Census figures are released will be revoked.

As a result, consultants and other banking executives pushing for expanded powers are urging small-town banks to obtain insurance licenses now to ensure that they have this business authority. Even institutions with no immediate plans to sell insurance should apply for licenses during the next four months, they say.

"It's kind of like having some people in the bull pen," said Leton Harding, a vice president at the Virginia Bankers Association. "You may never call on them to pitch, but it's good to know you can if you need them."

Source of Income

According to Mr. Bucci, a relatively small number of banks eligible for insurance licenses under the small-town exemption have applied for them. "With all the financial woes you hear about with banks, here's something they could be doing to produce income that they are not," he said.

While the Comptroller's ruling technically applies only to national banks, it affects thousands of state-chartered banks as well. Approximately 35 states have enacted "wild-card statutes" that essentially give their banks the same rights as national banks. And many of these states are now willing to grant

> **Small-town banks are being urged to obtain insurance licenses now to ensure that they have this business authority.**

insurance licenses to banks in towns with populations under 5,000.

Virginia is one of the states with a wild-card statute. According to Mr. Harding, 55 banks with Virginia charters are eligible for insurance licenses under the Comptroller's ruling and are now applying for them. Mr. Harding said he expected many of those banks would be ineligible for insurance licenses when the new Census data become available, because Virginia has experienced major population growth.

"As the population moves from rural to more metropolitan areas, you can find many examples of states that will exceed the 5,000-population rule," he said.

Under the Comptroller's ruling, national banks need not have a headquarters in a small-town to qualify for an insurance license – a branch will suffice. But that provision is less clear among the 35 state statutes.

In Virginia, for example, the statute regarding small-town banks and insurance does not specify whether a bank must be headquartered in the small town or have an office there. "It's really up to the interpretation of the insurance commissioner," Mr. Harding said. "They have not issued a clear statement on that." □

FDIC Studying Risk Factors

NEW YORK — In a recently filed comment, the Federal Deposit Insurance Corp. did not raise any objections to Delaware's new, wide-ranging insurance regulations.

But the agency is continuing to study whether insurance powers are too risky for the deposit insurance system, according to Robert Mailovich, assistant director in the FDIC's division of bank supervision.

"We're continuing on our current project and hope to have something out this year," Mr. Mailovich said.

"I'm another couple of months we want to be able to go to the [FDIC] board with something," he said.

In July, the Delaware banking commissioner proposed regulations for the the state's banking and insurance law. Enacted in May, the law empowers Delaware banks to underwrite and sell insurance nationwide.

Has Commented

The FDIC commented this month on Delaware's proposals, but its remarks were not adverse, Mr. Mailovich said.

FDIC Chairman L. William Seidman asked his staff to review the Delaware law and its impact on the safety of the deposit insurance system in June. The law is seen as significant because it effectively allows major banks like Citicorp and Chase Manhattan Corp. – which have charters in the state – to enter the insurance business.

Reports of Large Cash Transactions to IRS Surges Sharply

By LOUIS GERHARDSTEIN

WASHINGTON — The threat of government prosecution seems to have sparked a sharp uptick this year in the reporting of large-dollar transactions to the federal government, observers say, with filings to the Internal Revenue Service by businesses soaring 40% and by banks 10% in the first six months of 1990 over the comparable period the year before.

The surge in reporting by businesses of cash transactions of $10,000 or more means companies have begun to take seriously government threats of prosecution for noncompliance, said Charles Intriago, a former Florida prosecutor who now monitors laundering issues as publisher of the *Money Laundering Alert* newsletter. The penalty for noncompliance or fraudulent filing is a felony.

Buying expensive luxury cars or yachts through dealers who accept cash payments has been a popular way to launder drug money. Reporting these transactions via IRS form 8300 helps the government track drug transactions by creating a paper trail to the initial purchaser.

Reporting Surge in 1985

The surge in reporting by business mirrors a similar reaction by financial institutions in 1985 when the Bank of Boston plead guilty to violations of the Bank Secrecy Act, said Charles Morley who, as chief investigator for the Senate's permanent subcommittee on investigations, headed a congressional probe into the issue.

Following the Bank of Boston investigation, filings increased from a few hundred thousand per year to just over 6 million in 1989, said Mr. Morley, who now consults with banks on money laundering compliance. Singling out the Bank of Boston served to "hit everybody upside the head with a 2-by-4 and say, 'Hey, we have a regulation that we expect you to follow,' " he said.

The volume of currency transaction reports, known to the IRS as form 4789, has grown significantly in recent years. In 1986, 3.7 million reports were filed. That figure grew to 5 million in 1987, 5.8 million in 1988 and 6.3 million in 1989. Through the first six months of 1990, 4.2 million reports have been filed, according to the IRS.

On a lesser scale, businesses increasingly are reporting large-dollar transactions on form 8300. From 12,084 forms filed in 1986, the volume has increased steadily to 21,323 in 1989. Through the first six months of 1990, 16,845 forms were filed, according to the IRS.

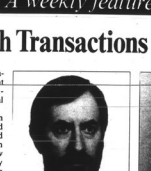
Treasury Cracks Down

In tandem with the report of sharp increases in filings, tougher Treasury Department regulations became effective.

As of Aug. 13, financial institutions now must keep available for IRS inspection a log of all $3,000 in bank checks, cashier's checks, traveler's checks or money orders that includes the identity of the purchaser.

Banks do not have to automatically report these transactions, but the Treasury Department can request the information from an institution at any time.

cash transactions of more than



"It's certainly going to make it more difficult for the bad guys to structure transactions."

Charles Morley
Consultant

"What you're doing to money launderers is making the job more labor-intensive."

Boris F. Melnikoff
Head of ABA's laundering task force

The move is another effort to attack "smurfing," a practice whereby individuals hired by drug dealers purchase financial instruments in amounts of less than $10,000 to avoid reporting requirements.

"It's certainly going to make it more difficult for the bad guys to structure transactions," said Mr. Morley, adding that the lower recording level of $3,000 may bring some banks that never handled a $10,000 transactions "face-to-face" with the Bank Secrecy Act for the first time.

"What you're doing to money launderers is making the job more labor-intensive," said Boris F. Melnikoff, head of the American Banker Association's money laundering task force. But, added Mr. Melnikoff, senior vice president at First Atlanta Corp., "As we tighten up (reporting rules), someone is going to stay up the extra hour to figure out how to beat you."

Valuable Paper Trail

Bankers and money-laundering experts agree that the Treasury Department won't react immediately to the new regulation. Its value, they say, will be the paper trail it creates that will assist money laundering investigations in the future.

But while the tighter restriction may make front-line laundering operations more difficult, it does not address the more serious problem of drug money sent around the world by electronic wire transfers.

Salvatore Martoche, former director of the Treasury Department's office of financial enforcement and now partner with the Buffalo law firm of Hiscock and Barclay, said wire transfers are the likely next target of Treasury to hamper money laundering operations.

Mr. Gerhardstein writes for the Medill News Service.

THE WEEK *ahead*

MONDAY, AUGUST 27

The Federal Reserve Board holds a closed meeting to consider applications by Harris Trust and Savings Bank, Chicago, to acquire Bank of Montreal Global, a Delaware corporation, and for Bank of Montreal Global to invest in Bank of Montreal Trust Co. Ltd., of the Channel Islands.

Also on the agenda is consideration of an application by C&S/Sovran Corp. to acquire companies engaged in permissible insurance agency activities. 202-452-3000.

Presidents of the Federal Home Loan Bank Systems convene for two days in their private monthly meeting.

The House and Senate are in recess. The House returns Sept. 5 and immediately begins extensive hearings on thrift and bank matters. The Senate reconvenes Sept. 10.

TUESDAY, AUGUST 28

The Federal Deposit Insurance Corp., at a closed board meeting, could rule on a petition by Wauwatosa Savings and Loan of Wisconsin to keep its deposit insurance if it leaves the Federal Home Loan Bank of Chicago.

The FDIC is under pressure to decide by the end of August. A ruling was postponed from last week's closed meeting. 202-393-8400.

Balance of payments merchandise trade figures for the second quarter of this year, which include the value of all goods and services plus financial transactions, are announced by the Commerce Department.

WEDNESDAY, AUGUST 29

Leading economic indicators for July are released by the Commerce Department.

Single-family home sales figures for July are announced by the Commerce Department.

THURSDAY, AUGUST 30

Factory orders and shipments figures for July are released by the Commerce Department.

FRIDAY, AUGUST 31

No significant events scheduled.

PEOPLE

Treasury Study Team Dogged by Hard Luck

Neither elections, nor illness, nor Iraqi invasions will hold up the Treasury Department's megastudy of deposit insurance and reform of the financial system, the department says. But those factors probably will bar completion before the yearend target date, says **Robert R. Glauber,**

Robert R. Glauber
Treasury Department

Treasury under secrary for finance, who is in charge of the multi-agency undertaking.

The sidelining of two key team members will prevent a speedup, Mr. Glauber said in a recent interview.

The two are **Jerome H. Powell,** newly appointed as assistant secretary for domestic finance, who has not been confirmed in that post, and **John C. Dugan,** deputy assistant secretary for financial policy.

Mr. Powell, who has been prevented from taking part in policymaking since coming to the Treasury as a consultant in May, was scheduled for an Aug. 3 confirmation hearing. But Iraq chose the day before to invade Kuwait. The hearing was canceled.

Mr. Dugan, 35, has been out of action because of an illness that sent him to the hospital twice in the past few months. Last Friday the Treasury Department said he was expected back at work Sept. 10.

* * *

Mary Short is returning to Arizona after a 16-month stint as deputy director for supervisory programs of the Office of Thrift Supervision.

Ms. Short, who joined OTS after three years as Arizona banking superintendent, will leave the agency Sept. 14. She has no firm plans – apart from marriage, on Sept. 22, to **George Leonard,** chief executive of Ambanc Holdings, a Colorado-based bank holding company.

In a telephone interview, Ms. Short said she is weighing whether to continue with the federal government – the Resolution Trust Corp. has a Phoenix office – or seek a state or private job. In her last days at OTS, she put finishing touches on the agency's appraisal rule.

* * *

Want a challenge? The Resolution Trust Corp. is looking for a lobbyist.

The deadline for applications is Friday. The man currently in the job is **Loren T. Hooper,** a five-year veteran of the legislative affairs office in the Federal Deposit Insurance Corp. He took the RTC post on an acting basis last October.

Why is the RTC posting his job? "That's an interesting question," Mr. Hooper said in an interview last week. Will he apply? "I haven't decided yet, . . . I'm keeping my options open."

Of two colleagues contacted, one said Mr. Hooper is a shoo-in; the other said Mr. Hooper does not even want the job.

Mr. Hooper, 47, worked for Sen. Robert W. Kasten Jr., R-Wis., before joining the FDIC in the mid-1980s. He was a tax lawyer for the Internal Revenue Service before working on Capitol Hill. He took his law degree at the University of San Diego.

RTC Expected to Get Very High Premium for Ore. Thrift

Continued from *page 1*

Association. San Francisco-based BankAmerica won with an $81 million bid reportedly only $700,000 above that of its Los Angeles rival.

"I would be shocked if anybody besides B of A or SecPac gets the Benj.," said Jay Tejera, an analyst with Dain Bosworth Inc., Seattle.

Benj. Franklin is one of the biggest of the 77 failed thrifts the RTC hopes to sell or liquidate before Sept 30. Other major institutions on the block include City Savings Bank, Bedminster, N.J.; Empire Federal Savings Bank, Buffalo; and Merabank, Phoenix.

The deadline for submitting bids for Benj. Franklin is tomorrow according to sources familiar with the bidding. The sources said a deal may be announced in about three weeks.

Alan Blodgett, Benj. Franklin's federally appointed managing agent, said there is "serious interest" in Benj. Franklin, but declined further comment.

With about $2.6 billion in core deposits, and 66 of its 88 branches in Oregon, including more than 30 in metropolitan

"The winning bid will be one of the highest prices paid on an RTC deal."

An Oregon banker

Portland, Benj. Franklin represents virtually the only remaining opportunity to buy significant shares in the state's highly concentrated banking market. U.S. Bank of Oregon and First Interstate Bank of Oregon, a unit of Los Angeles-based First Interstate Bancorp, together hold more than 70% of Oregon's commercial bank deposits.

Benj. Franklin also has nine branches in Idaho, 12 in Washington and one in Utah.

Seized for Negative Capital

Although Benj. Franklin was marginally profitable, federal regulators seized the thrift in February because it had negative capital of more than $100 million. The capital hole was the result of more than $280 million in good will remaining from a 1983 acquisition.

Since April, Benj. Franklin has sold about $1.3 billion in mortgage-backed securities and pooled loans, reducing assets from about $4.6 billion to $3.3 billion. The thrift hopes to sell another $400 million in assets before a sale is concluded, Mr. Blodgett said.

May Top 4.6% of Deposits

Banking experts predict the premium paid to acquire Benj. Franklin could equal or top the 4.6% of core deposits Bank of America paid for Western, resulting in a purchase price of about $120 million.

The winning bid for Benj. Franklin "will be one of the highest prices paid on an RTC deal," forecasts an Oregon banker who asked not to be identified.

In the 207 sales of federally controlled thrifts that took place from August 1989, when the RTC began operations, through June 1990, the average premium was about 2% of core deposits, said Henry S. Peltz, an analyst with Keefe, Bruyette & Woods, Inc., a handful of larger thrifts, including Gibraltar Savings in California and Centrust Savings Bank in Florida have sold for premiums over 4% of deposits.

Strong Incentives

For Security Pacific and BankAmerica, the stakes in the Benj. Franklin bidding are high. Security Pacific already owns a $1.5 billion asset unit in Oregon, but its back office facilities in the state are designed for an operation of at least $2 billion in assets, Mr. Tejera estimates.

"We are extremely interested in Benj. Franklin and intend to put in a strong bid," said a senior Security Pacific official who asked not to be identified. "We see an investment like this as a strategic move."

BankAmerica also has a major incentive to acquire Benj. Franklin. Seafirst Bank Oregon, the company's subsidiary in the state, currently has just one retail branch and $112 million in assets, a result of BankAmerica's purchase last year of tiny Woodburn State Bank.

No Fallback

BankAmerica officials say that Benj. Franklin represents their only shoe-in chance to establish a meaningful presence in Oregon. "If we don't get it, there isn't a fallback," said Luke S. Helms, president of Seafirst Corp., BankAmerica's Seattle-based holding company.

Though Security Pacific and Bank of America are widely considered the leading bidders, another potential acquirer might enter the fray.

Competition from Seattle

Two Seattle-based thrifts, $7.3 billion-asset Washington Mutual Savings Bank and $2.6-billion asset Washington Federal Savings and Loan Association are weighing a joint bid, according to sources familiar with the bidding.

The two thrifts last month approached Merrill Lynch Capital Markets and Lehman Brothers to seek an investment bank that might want some of Benj. Franklin's assets. Both firms declined to participate, sources said.

Washington Fed and Washington Mutual have teamed up because neither has the financial muscle to put together a competitive bid on its own, sources said. While they would divide branches and deposits, an investment banking partner would take most of Benj. Franklin's assets for resale.

Officials of the two thrifts declined to comment.

RT Holdings Inc., the U.S. subsidiary of Canada's Royal Trustco Ltd. and the owner of Pacific First Savings Bank, Seattle, reviewed Benj. Franklin's books and may also submit a bid, sources said. □

WHAT SEPARATES A GOOD LOAN AGREEMENT FROM A BAD ONE?

Often a very fine line...

Is a tidal wave of bankruptcy and loan forfeitures on the way? Some experts think so. They predict the 1990s will see an unprecedented surge in borrower insolvency and loan workouts.

But now, you can greatly reduce the risk of bad loans by relying on the practical guidance you'll find in ***Structuring Commercial Loan Agreements.***

Newly revised and updated, the Second Edition of ***Structuring Commercial Loan Agreements*** explains each type of credit facility, helps you determine which loan provision is appropriate, and shows how to negotiate *any* kind of commercial loan. You'll learn what to ask for—and what to watch out for—in drafting provisions. And, you'll learn how to analyze loan proposals and agreements—and their possible effects on your institution.

What's more, ***Structuring Commercial Loan Agreements*** provides a complete portfolio of model loan agreements that you can adapt to your specific needs.

In a business where one small error or one wrongly-worded phrase in an agreement can make the difference between profit and loss, you need the kind of solid, realistic advice you'll find in ***Structuring Commercial Loan Agreements.***

Now you can receive ***Structuring Commercial Loan Agreements*** for a **FREE** 30-day trial examination. Just call for your copy —there's no obligation and no risk!

For immediate service call toll-free: 1-800-950-1210.

Philippines Must Abandon 'Begging' Abroad, Aide Says

By JEREMY CLIFT
Reuters

CEBU, Philippines — Finance Secretary Jesus Estanislao says that the country needs a major economic restructuring to help it boost exports – and that Manila must stop holding out the begging bowl to international creditors.

"Instead of begging from other countries, what we need to do is be respectable and become a business partner of other countries," he said in a speech to business, military, and religious leaders in the central Philippine city of Cebu late last week.

Mr. Estanislao said a government program of tax reforms and tariff changes is designed to put the economy on a new footing and remove protection for "infant industries that refuse to grow up." The aim is for the country to start earning its living through a dramatic growth in exports, he said.

Tariff changes that will take effect Sept. 1 have been opposed by many businessmen whose industries had been protected for the past 30 years.

"Few, if any, want to bite the bullet. Few, if any, are willing to take the-bitter medicine in order to cure our endemic disease," Mr. Estanislao said.

He repeated his opposition to a moratorium proposed by the the Philippine Congress on payments of the country's $26 billion debt.

The influential Roman Catholic archbishop of Manila, Cardinal Jaime Sin, on Friday backed calls to limit Philippine foreign debt payments, saying it is morally wrong to put debt servicing before basic human needs.

Trade Deficit up 62%

In the first six months of 1990, the Philippine trade deficit soared to $1.87 billion, 62% more than in the comparable 1989 period. Imports jumped 17.5%; exports rose only 3.7%.

A major earthquake last month and the economic impact of the Persian Gulf crisis are expected to fuel inflation, curb economic growth, and push the balance of trade further out of line.

Persistent rumors of a possible coup attempt are deterring foreign investment.

"It is about time that we introduce a sense of urgency to all we do, because time is limited," Mr. Estanislao said. "We do not have the luxury of resources, nor of international sympathy.

"The Philippines is no longer the darling of the world, because 1986 is too far gone," he said, referring to the 1986 revolt that installed President Corazon Aquino.

"The only reasonable and respectable way to earn dollars is that we Filipinos go out and begin fighting in export markets," Mr. Estanislao said.

"But that message is not coming through at all. All we do is quarrel and debate."

... *by country*

ECUADOR

Ecuador has approved a $12.6 million refinancing agreement with Japan's Overseas Economic Cooperation Fund on public sector debt.

A presidential decree published in the *Official Register* authorizes Finance Minister Jorge Gallardo to sign the accord, which has a 10-year payment term, a six-year grace period, and a 5.25% fixed interest rate.

This month President Rodrigo Borja approved another refinancing accord, for a $12 million loan from Japan's Export-Import Bank. Both loans were for the state power company, **Instituto Ecuatoriano de Electrificacion.**

West Germany announced Thursday that it had signed a refinancing accord with Ecuador on a $26 million loan. President Borja last month authorized refinancing accords for a total of about $75 million with Switzerland, West Germany, and the United States on public sector debts.

Meanwhile, according to a Central Bank report, Ecuador's international reserves dropped to $159 million at the end of July, from $193 million in June a year earlier, reserves showed a $56 million deficit.

The report said assets stood at more than $627 million and debits totaled $468 million.

Declining prices for oil, the principal export, led to the drop in foreign exchange earnings in the first half of the year, the report said. The country also was hurt by depressed prices for its coffee and shrimp exports.

WEST GERMANY

Westdeutsche Landesbank Girozentrale said it has a mandate to arrange a $130 million transferable term loan for **Norcen Energy Resources** Ltd. of Canada.

Interest on the syndicated eight-year loan will be set at 27.5 basis points above the London interbank offered rate in the first four years and at 30 points over Libor in the last four.

The commitment fee is 8.5 basis points, and repayment will be made in six semiannual installments, the first coming due 5½ years after the signing.

The by country briefs were supplied by Reuters.

Caracas Expects Huge Debt Swap

Says Banks Agree to Trade In 90% of $20 Billion in Loans

By JAMES R. KRAUS

NEW YORK — Venezuela's creditor banks have agreed to exchange 90% of $20 billion in medium-term and long-term loans for bonds and Venezuelan treasury notes, Carlos Hernandez Delfino, commissioner for debt negotiations, said in an interview.

"Participation has been overwhelming," Mr. Hernandez said. "Banks have shown a significant interest."

He said Venezuela hopes to sign a debt reduction accord by the end of November.

A spokesman for Chase Manhattan Corp., which chairs the Venezuelan bank advisory committee, declined to comment on Mr. Hernandez's remarks. But sources said banks have overwhelmingly chosen to exchange their loans for 30-year Venezuelan bonds carrying a 6.75% rate.

Venezuela owes U.S. banks $5.9 billion, Japanese $4.1 billion, British $2.3 billion, German $1.6 billion, French $1.5 billion, and Canadian $1.3 billion. Among U.S. banks, Manufacturers Hanover Corp. was owed $937 million as of June 30, Chase Manhattan Corp. $879 million, Chemical Banking Corp. $634 million, Citicorp $600 million, and J.P. Morgan & Co. $320 million.

Fifth Brady Accord

The debt pact would be the fifth under an initiative launched by U.S. Treasury Secretary Nicholas F. Brady in March of 1989. Debt reduction agreements have been concluded with Mexico, the Philippines, Costa Rica, and Morocco.

Venezuela's planning minister, Miguel Rodriguez, said in Caracas last week that the country's debt reduction accord will reduce its $20.5 billion commercial bank debt 20% and Venezuela's annual $3.1 billion interest payments by more than half.

Mr. Hernandez said the actual debt reduction is to be implemented in two stages.

Bankers said Venezuela would need to buy $2.24 billion in U.S government securities to back the accord.

In the first stage, on Oct. 18 banks could swap several billion dollars in loans at a discount for three-month Venezuelan treasury notes bearing market interest rates and collateralized by U.S. treasuries. Venezuela is proposing that banks exchange $1 worth of loans for 45 cents in Venezuelan treasury notes.

In the second stage, on Nov. 18 banks would have four additional options:

• Exchange their debt for an equal amount in 30-year Venezuelan government bonds bearing a 6.75% interest rate. The principal and 14 months of interest would be collateralized by zero-coupon U.S. Treasuries.

• Exchange their debt at a 30% discount for 30-year Venezuelan government bonds paying market interest rates. The principal and 14 months' interest would be collateralized by zero-coupon U.S. Treasuries.

• Exchange their debt for bonds bearing a reduced interest of 5% for five years and a market rate thereafter. The interest would be backed by zero-coupon U.S. Treasuries.

• Exchange their debt for uncollateralized bearer bonds carrying market interest rates and listed on the Luxembourg stock exchange. However, banks would have to advance Venezuela $1 in new loans for every $5 that is exchanged.

International Backing

Bankers in New York calculated that Venezuela would need to purchase $2.24 billion in U.S government securities to back the accord. The International Bank for Reconstruction and Development, the International Monetary Fund, and Japan's Export-Import Bank have agreed to lend Venezuela $2.7 billion to buy U.S. government securities that will be used to back principal and interest payments on the bonds Venezuela will issue.

"They got it covered up the wazoo," said one banker. He noted that Venezuela will not even have to touch its estimated $7 billion in reserves, including some $5 billion in gold reserves.

Mr. Hernandez declined to discuss how much Venezuela will buy in zero-coupon Treasuries to back the bonds it will issue, or what price it will pay.□

Bundesbank Rejects 'Speculation' on Reorganization

Reuters

FRANKFURT — German unification will have consequences for the structure of the Bundesbank, but it is not possible to say anything about the shape of the central council's policymaking council after unity, a Bundesbank spokesman said.

Responding to a West German newspaper report, the spokesman said, "All assumptions currently circulating in public are speculation."

The *Hamburger Abendblatt* reported Friday that the Bundesbank wanted the influence of regional representatives on its policymaking council to stay unchanged despite the creation of five new East German states.

The newspaper said the reorganization of the Bundesbank council had been discussed at last week's council meeting, which started on Wednesday and continued on Thursday.

The Bundesbank spokesman said a draft of the treaty on German unification provided for decisions on restructuring the Bundesbank to be taken within one year of unification.

Unification is due to take place Oct. 3.

Economists said any changes to the composition of the Bundesbank council would involve changes to the Bundesbank act that would have to be agreed by the government of a unified Germany. □

Continued from *page 4*

been offered in recent years to fix federal deposit insurance. All are attempts to fix the unfixable. None will work. These proposals fall into two broad categories: More depositor discipline or stronger capital and regulation.

Various proposals to enhance depositor discipline have been proffered. All will be ineffective or will backfire if implemented.

Reducing Deposit Insurance

Reduce deposit insurance from the $100,000 level. Lowering the deposit insurance limit to, say, the range of $40,000 to $60,000 will not bring more depositor discipline to bear on banks because a lower explicit insurance limit will not effect that many deposits.

Approximately 6% of all domestic bank and S&L deposits are in the $50,000 to $100,000 band. That percentage equals about $200 billion of the $3.4 trillion on deposit in the domestic offices of banks and S&Ls insured by the Bank Insurance Fund (BIF) and the Savings Association Insurance Fund (SAIF) at the end of 1989.

In effect, lowering the deposit insurance limit from $100,000 to $50,000 would shift about $200 billion of deposits from the status of being explicitly insured to being explicitly uninsured.

How Effective is a Lower Limit?

The ineffectiveness of lowering the deposit insurance limit can be seen by examining its impact on three types of depositors.

To begin with there are the very large depositors. A substantial portion of the deposits in the $50,000 to $100,000 group are in accounts of $5 million, $10 million, or more. These deposits are placed in banks, usually larger ones, based on widespread depositor belief in the "too big to fail" policy and sometimes on a depositor's evaluation of a bank's soundness.

"Given the ineffectiveness of lowering the deposit insurance ceiling, Congress will not spill political blood to pursue this hollow act."

Because these depositors disregard the deposit insurance limit in determining where to place their funds, this first group of depositors will not be influenced at all by any lowering of the deposit insurance limit.

Lower Limit an Inconvenience

There are depositors who do worry about the $100,000 limit. Often these are individuals who have a substantial amount of their net worth, modest though it may be, on deposit in a bank or S&L, usually in certificates of deposit. Lowering the insurance limit will merely be an inconvenience for most of these folks, for they will respond to a lower limit by spreading their savings over a larger number of institutions.

Finally there are the depositors who include small businesses, professional people, and nonprofit organizations with fluctuating bank balances. At some time during the year, the bank balance of hundreds of thousands of depositors of this type exceeds the $100,000 limit; the number exceeding a lower insurance limit will be even higher. Depositors in this group that worry about the deposit insurance limit will shift their funds to a larger bank that they believe is unlikely to be liquidated if it fails or they may spread their balances over several banks.

Given the ineffectiveness of lowering the deposit insurance ceiling, Congress will not spill political blood to pursue this hollow act. Doing so will unnecessarily raise the ire of hundreds of thousands of voters while having no substantive effect.

About Rumors

Coinsurance would require that depositors absorb a predetermined share of a bank's insolvency loss, say 10%, above a low amount, say $10,000 or $25,000. A coinsurance requirement, if enforced for all failed banks, would greatly increase instability in the banking system, for suddenly millions of Americans would have some reason to fear losing some money if their bank or S&L failed.

Rumors of troubles would create runs to currency and to foreign-domiciled banks that would make the weeks preceding the 1933 bank holiday look like a Sunday school picnic.

"A coinsurance requirement, if enforced for all failed banks, would greatly increase instability in the banking system."

Such disruptions also would be very damaging to even healthy banks and to the smooth functioning of the American economy, which is vitally dependent on an uninterrupted flow of funds through the nation's payments system. Deposit insurance is supposed to bring stability to a financial system, not instability.

Limiting Insurance Usage

Lifetime limits or comparable restrictions would cap the amount of benefit a person or a family could derive from federal deposit insurance. Thus, a naive 21-year old construction worker, saving to buy his first home, might have $10,000 in a bank that fails. The government would reimburse him for the $10,000 loss but would then cover no future loss of his due to a bank failure.

For years to come, and perhaps for life, that person, and perhaps his family (however that would be defined), would be doomed never to benefit again from the full amount of federal deposit insurance. Needless to say, that person or family would quickly and easily find ways to evade the federal record keepers, thus defeating the intent of this administratively impractical proposal.

A Sound Public Policy

The "too big to fail" policy eviscerates the entire concept of depositor discipline. The federal

COMMENT

Continued from *page 12*

government's obvious policy in all large, and in many small banks that fail is to protect all deposit balances. As a practical matter, all other industrialized countries have the same policy.

Although heavily criticized, protecting all deposits in failed banks is very sound economic and public policy because that policy enhances financial stability. Consequently, deposit insurance limits and all other attempts to impose losses are futile as long as policymakers properly and fully protect all deposits in most bank failures.

"Too big to fail," however, is a misnomer. This policy really is "too big to liquidate". Continental Illinois failed even though it was not liquidated. Instead, its top managers lost their jobs, its directors were disgraced, and its stockholders effectively were wiped out. The same holds true for FirstRepublic, MBank, and other large, failed banking organizations. Despite these clear failures, many believe that these institutions should have been liquidated so as to impose losses on their large depositors.

Impose Losses on Depositors?

Abandoning the "too big to fail" policy by attempting to impose losses on uninsured depositors is bad public policy for a number of reasons.

"Attempting to impose losses on uninsured depositors is bad public policy for a number of reasons."

To begin with, an announced policy of liquidating a large bank or, alternatively, transferring only insured deposits into a "bridge bank," if taken seriously by the financial world, will set off a race for the door every time rumors circulated that a bank with deposits above the insurance limit was in trouble.

This will be the case because those depositors who make it out the door before the bank is closed will be fully protected while those who don't will suffer a loss. The race will be won by those who are fastest rather than those who are the most deliberate. Prudence will dictatea policy of, when in doubt, run.

Destabilizing Effect

Such sprints by depositors will be destabalizing to the financial system while destroying intangible yet valuable going concern value in the affected banks. This destruction of going concern value is economically wasteful and about as sensible as the medical practice of bloodletting.

Another consideration is that liquidating failed banks is more expensive for the deposit insurer than merging the failed bank into another institution, even though mergers do not impose losses on large depositors and other creditors. Liquidations are more expensive than mergers subsidized by a deposit insurer because liquidation destroys going concern value.

Effects of Liquidating

Liquidating a bank drives away longtime customers and destroys relationships where the bank customer is both a depositor and a borrower. In effect, liquidation destroys a market presence built over many years. This destruction of going-concern value is why in the world of commerce, actual liquidations are a last resort for disposing of a bankrupt business.

"Liquidating a bank drives away longtime customers and destroys relationships where the bank customer is both a depositor and a borrower."

The rapid shrinkage of Continental Illinois in 1984 probably added at least $100 million to the FDIC's loss in that situation. Had Continental Illinois been liquidated that year, as some have suggested, the FDIC would have suffered hundreds of millions of dollars of additional losses. Liquidation is bad economic policy; therefore, liquidation is bad public policy.

A final word on the subject is that as a practical matter America will not abandon the "too big to fail" policy because other industrialized nations are unwilling to impose bank insolvency losses on depositors. This is the why the "too big to fail" policy is here to stay.

Banking regulators in other countries have been extremely reluctant to impose losses on depositors and creditors in larger banks, especially since the failure of the Herstatt bank in Germany in 1974.

Foreign regulators apparently are too scared, and wisely so, of the financial instability that can occur when attempting to impose losses on depositors. These regulators apparently believe that it is far more preferable for surviving banks and other taxpayers to absorb the insolvency loss of a failed bank, rather than attempting to impose those losses on depositors and other creditors.

A Competitive Disadvantage

If America abandoned its "too big to fail" policy, and other nations did not, many larger American banks would clearly be at a competitive disadvantage both domestically and internationally since explicitly uninsured depositors would have less reason to fear keeping deposits in a foreign bank than they would in an American bank. Regulators understand this competitive issue, which is why they resist ending the "too big to fail" policy.

Thus, America will not abandon the "too big to fail" policy unless Congress mandates an end to this policy and can enforce this policy against the extremely strong desire of regulators to do otherwise.

More Capital and Regulation

The other major type of reform proposal revolvers around stronger capital and more effective regulation of banks. Specific proposals fall into several broad

categories.

Specific proposals for stronger capital are of two–types. One would require even higher levels of equity capital for banks than will be required by the risk-based capital standards now beinf implemented. The other proposal calls for mandate substantial amounts of subordinated debt as a component of bank capital structures.

Uniform Capital Requirements

Proposals for even higher capital levels reflect the refulators' longtime refrain that more capital will solve all that ails deposit insurance. However, these proposals ignore the fact that not all banks require the same level of capital. Thus, attempting to impose higher, uniform capital requirements on banks will increase the risk for many banks as they chase higher yielding yet riskier assets to earn, in the short-term, the higher returns demanded by the higher capital requirements.

Subordinated debt is seen by some as a more palatable alternative to more equity capital because debt is cheaper than equity due to the tax-deductibility of interest. There also is the belief that debt holders and financial markets will be more effective discipliners of a weakening bank than are equity holders, particularly if debt holders can take control of a failing bank from its stockholders.

However, proponents of mandatory subordinated debt do not offer convincing arguments that debt holders will do what equity holders seem unable to do. Further, the recent experience with larger failing banks and S&Ls, in which subordinated debt often comprised a portion of these institutions' capital structure, does not give credence to the subordinated debt proposals.

"Attempting to impose higher, uniform capital requirements on banks will increase the risk for many banks."

Action Before Insolvency

Promptly disposing of a failing bank or S&L through a sale or merger is a laudatory policy objective, and one that always has been available to the regulators. If an institution can be taken over and sold before it actually becomes insolvent, its failure should not cost its deposit insurer any money. However, for two reasons, it will be impossible for Congress to legislate a rule that will consistently force the closure of institutions approachinf insolvency.

First, it will be extremely difficult to legislate a rule that can be applied fairly to all types and sizes of banking institutions in an increasingly diverse banking world. Second, banking regulators will vigorously oppose any attempts to limit their freedom of action in dealing with a failing bank or S&L.

Opposition to a Quick Closing

Weak banks and S&Ls also will oppose any legislative policy that dictates closure before insolvency. The owners and managers of these institutions will want every opportunity to attempt to avert failure should their institution ever get into trouble.

Past acts of forbearance for weak institutions, such as farm and energy banks received in the 1980s, are ample evidence that Congress will grant forbearances in the future for what will seem at the time to be very legitimate reasons. Thus, with two strong sources of political opposition, regulators and weak institutions, prompt closure policies will not work for any government deposit insurance profram.

Proposals for mandated early closure rules also fail for the same reason that more equity capital or subordinated debt will not work. Namely, they depend on prompt enforcement by government regulators. Yet, as we have seen time after time, and will see again and again, the taxpayer cannot count on government regulators to protect his or her interests.

Narrow Banking Concept

The narrow banking concept represents the most extreme attempt to fix federal deposit insurance. Narrow banking would practically eliminate deposit insurance losses by making it almost impossible for a federally insured bank to fail. This would be accomplished by mandating the shift of riskier activities, and the volatile or "hazardous" liabilities that fund these activities, from banks to uninsured firms or to the uninsured affiliates of a bank holding company.

"The taxpayer cannot count on government regulators to protect his interests."

Narrow banking essentially would turn the clock back several centuries to the time when banks had lots more capital liquidity and far fewer powers. This concept, though, would impede banking synergies increasingly feasible due to technology. Worse, narrow banking would increase risks to that segment of the federal or taxpayer's safety net now managed by the Federal Reserve. Thus, the cure might be worse than the disease.

The failings of federal deposit insurance are costly and must be reformed. But federal deposit insurance is irreparable; therefore, the risk and rewards of insuring deposits must be shifted to a private sector mechanism that can genuinely overcome the inherent and uncorrectable shortcomings of federal deposit insurance. The 100% cross-guarantee concept, which will be described in the second part of this article, is that mechanism. □

To crack the tough small business market, you need hard facts.

How are your competitors segmenting and marketing to one of the most profitable markets in banking?

Trans Data knows. And you should, too.

Small businesses think, react and bank unlike any other customers. They have strong ideas about what they deserve. And they have needs other banks are already addressing aggressively.

Trans Data gets you inside cost-effectively.

Three prepared Trans Data studies take a hard look at timely topics. Your competitors' strategies and products. The needs and attitudes of key market segments. In-depth reactions to popular DDA accounts. You'll find insights and projectable results to impact product development, customer service and marketing strategies.

Or focus on your local prospects with a proprietary Trans Data survey. Tailored from a thoroughly-tested model, it's a rapid and economical way to probe your potential small business base.

Gather a year's worth of results in days.

Syndicated studies are obtainable immediately. Proprietary results could be in your hands as soon as two weeks after interviews begin. And all are backed by a decade of rigorous experience in banking research.

For the past year, we've been answering the tough questions about small business you're asking today. If small business banking looks like a big business to you, call now.

Federal Home Loan Bank System Struggles to Revive Luster

Continued from *page 1*

out what their long-term strategic plan is when you don't have a central plan," he said.

Because the Home Loan Bank system still has not untangled its fate from that of the thrift industry that dominates its rosters, its long-term viability remains in doubt. "It is possible, given the structure of the system, the way advances are supported by stock, that the system could become a very efficient self-liquidating entity," a senior Treasury official told the *American Banker* earlier this summer.

More Authority for Districts

Should policymakers rethink the Home Loan Bank system, they may start by broadening the district banks' investment authority, perhaps permitting them to purchase whole loans or expanding their now-limited authority to buy mortgage- backed securities.

New investments would help the banks maintain their income stream amid slackening demand for advances, which now generate 80% to 85% of income, district bank officials said. But it would also introduce risk to their portfolios and subject them to direct competition with some of their largest members, who might "gut" the Home Loan Banks' profitability decline than to possibly impact their own institution," said one Home Loan Bank chairman.

Other options include dissolving the ties between borrowing and stock purchases; opening the advances program to mortgage bankers; encouraging the banks to expand their correspondent services; easing the district banks' contributions to S&L cleanups and low-income housing; permitting Federal Home Loan Bank stock to be traded; or even selling the banks to private investors.

But the district banks face an uphill battle.

"It will be very hard for the banks to carve out new powers for themselves," partly because of their historical association with "abominably bad thrift regulation," said Eric Hemel, a thrift analyst at First Boston Corp.

12 Thrifts Seek Exit

The district banks are also dealing with requests from 12 state-chartered thrifts to leave the system. They want to cash in their Home Loan Bank stock but retain deposit insurance.

The exit petitions, pending before the Federal Deposit Insurance Corp., spurred Treasury officials to warn that a wide-spread exodus could impair the bank system's ability to contribute to the thrift bailout.

The 1989 thrift-reform bill relieved the Home Loan Banks of regulatory responsibility for the thrift industry and freed them to recruit new members from a broadened base that includes commercial banks and credit unions. Since the spring, 16 commercial banks have joined the district banks, attracted by long-term loans at favorable rates, letters of credit and other correspondent services, and the ability to participate in an affordable housing program.

But high costs of entering the system, additional stock-purchase requirements for borrowing, and an uncertain dividend stream make it unlikely that the Home Loan Banks will be able to offset the shrinkage of their traditional thrift membership.

"It would be very, very optimistic to think that additional members at the same pace we lose them through case resolution," said Leo J. Blaher, president of the Federal Home Loan Bank of Chicago.

Future in Commercial Banks

Even if the system's powers will be limited, more commercial banks will be drawn to the Home Loan Bank system "because the thrifts of the future," said Jonathan Gray, a banking analyst for Sanford C. Bernstein & Co., New York. As banks compensate for their slipping role in residential and industrial lending by shifting their emphasis to mortgages, "the question isn't whether there's going to be a thrift industry, but whether there's going to be a banking industry," he said.

Others agreed that the Federal Home Loan Bank System possesses many strengths. Alone among government-sponsored enterprises -- corporations such as the National Mortgage Association and Student Loan Marketing Association -- the district banks enjoy top investment ratings for their consolidated debt obligations. No Federal Home Loan Bank has ever lost a dollar on a loan, largely because conservative lending policies and overcollateralization of advances have ensured a virtually risk-free portfolio.

But weaknesses are starting to become evident. System profits in the first half fell to $743 million in 1990 from $949 million in 1989. Significantly, prepayment penalties on advances provided $57 million, or 8%, of profits for the first six months of 1990, compared to $28.5 million; or 3%, in 1989's first half. Most of these penalties were paid by the Resolution Trust Corp., which typically repays the borrowings of failed thrifts to free the high-quality mortgage loans that collateralize the advances.

Concerns Persist

A persistent worry is that the district banks could be tapped to contribute to rising costs of the S&L cleanup, having already surrendered $3.1 billion in retained earnings plus $300 million annually to fund the effort.

A related concern is whether accountants will one day force thrifts to write down the value of their paid-in Federal Home Loan Bank capital stock. It totaled $11.3 billion in July, roughly one quarter of the thrift industry's tangible capital. Although the Federal Home Loan Bank system believes that impairment of capital is not a threat, and its accounting firm has stated the stock is unimpaired.

Yet doubts linger. "If the value of the system itself starts to erode, there is a theoretical potential for accountants to come in and say the stock is not worth the value," said Martin Regalia, chief economist of the National Council of Savings Institutions.

"If there's another hit against the Federal Home Loan Banks' capital, the question is going to be raised whether the asset has value or is permanently impaired," said Joseph Mauriello, a partner with Peat Marwick in New York, and chairman of the American Institute of Certified Public Accountants' savings and loan committee. "We have that on our short list of things that every so often we have to take a look at, but it's not a today issue." □

"This is a $160 billion government-sponsored enterprise, and no public policy direction has been established."

Dennis Jacobe
U.S. League of Savings Institutions

Sallie Mae Director Named

WASHINGTON - Robert A. Estrada, an attorney and chairman of Estrada Securities Inc., Dallas, has been appointed by President Bush to serve as a director of the Student Loan Marketing Association.

Estrada replaces Irby C. Simpkins Jr. of Nashville, Tenn., who served on the Sallie Mae board for nine years. □

Executive Help Wanted

DIRECTOR OF MARKET RESEARCH

Leading market research firm serving the financial services industry seeks a creative and entrepreneurial Director of Market Research.

Ideal candidate is a strong market researcher with extensive experience in questionnaire design, project management, market segmentation, and sampling. The ability to translate market research data into actionable marketing strategy and tactics is critical for success, as are excellent verbal and written communication skills. Experience in retail and/or corporate banking is a strong plus.

Exciting opportunity to innovate for an experienced market research professional looking for a new challenge.

DEALS: Chemical May Lose $860 Million Credit Deal with Citibank

Continued from page 1

negotiated at a time of major uncertainty about how quickly Consolidated would be able to stabilize its money-losing Emery Air Freight operation. "It was a tough agreement," according to a Consolidated observer, who asked not to be named.

Recently, though, signs have emerged that Emery may have begun to turn the corner. Its second-quarter operating loss narrowed to about $31 million, from $70 million in the first quarter, and the improved performance appears to be continuing.

A sustained improvement in Emery's operating performance means the parent company needs less borrowing capacity.

Consolidated's board in July installed a new top management team, which revisited a number of issues, including the need for the $860 million credit agreement with Chemical.

Since then, Consolidated has talked with several other banks, including units of BankAmerica Corp. and Citicorp, about obtaining a smaller, cheaper credit facility.

The company is now nearing completion of a credit pact with Bank of America as lead bank, sources said. It was unclear whether Citibank would be part of the new bank group, but Chemical was said to be out of the picture.

However, Chemical still has a relationship with Consolidated through a $75 million revolver provided in June.

> **"It was a tough agreement," an observer said of the Chemical loan.**

Meanwhile, Chemical officials refused to say whether the bank got a fee for its $500 million commitment.

It remains unclear whether Chemical made any serious effort to renegotiate the Consolidated credit pact. Consolidated's credit pact. Consolidated's board chairman, James J. Meenaghan, chief of the Home Insurance unit, will be elected president and CEO.

AmBase said it will continue talks to sell its insurance subsidiaries, including the previously announced sale of Home Insurance to Vik Brothers International.

— Reuters

Investor Group Gets Letter Backing AmBase Takeover

AmBase Corp. said it has signed a letter of intent to sell 50.1% of its common stock at $4 per share to an investor group.

The investor group's proposal to acquire controlling interest in AmBase includes all its units, including Carteret Bancorp. The transaction depends upon signing of a definitive agreement by Sept. 28, stockholder and regulatory approvals, and financing.

AmBase said Friday that, on completion of the transaction, G.T. Scharffenberger will retire as chairman, president, and chief executive officer. Donald MacNaughton is expected to be elected chairman, and James J. Meenaghan, chief of the Home Insurance unit, will be elected president and CEO.

AmBase said it will continue talks to sell its insurance subsidiaries, including the previously announced sale of Home Insurance to Vik Brothers International.

Limited Gains From Reopening '88 Thrift Deals

Continued from page 2

silver, a spokesman for American Savings.

The reviewing accountants agreed: "By and large, I think they [acquirers] are willing to sit down and work out something that is mutually advantageous," one said.

Another said, "There are ways that you can renegotiate that are a win-win for the acquirers and the government."

Some Deals Bar Prepayment

On Wednesday, the panel began to buy back the high-cost notes used to entice acquirers, once accountants involved in the review said: "The government would simply be changing the financial structure of these deals."

Treasury's current long-term borrowing rate is 8.8%. The interest costs on the 1988 deals range up to 14%. Most of the FSLIC notes are 2% above the Texas cost of funds, or about 10.5%.

But some of the contacts, including the Bass deal, forbid prepayment of the notes.

In another incentive to investors, the FSLIC guaranteed minimum returns on assets taken over by acquirers. Now that the asset values are better understood, the RTC could force a writedown to market value, pay the acquirer the difference, and in the process shrink the assets on which the government has to guarantee a return.

An example might be a loan turned over to the acquirer with a value of $200 million and a guaranteed return two percentage points more than the average cost of funds. If the asset were worth $100 million, the acquirer would be paid $100 million and the return would be cut in half.

Because an acquirer would have to reinvest the $100 million, probably at a lower return than under the FSLIC deal, the acquirer would need an incentive to write down the assets.

Sources reviewing these deals said some acquirers are so sick of working with the government that getting Uncle Sam out of their business is reason enough to go along with the restructuring.

Bank Stock Table Explained: The table lists alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding (As of June 30, 1990, the market value cutoff for banks was $58.71 mil. and for thrifts $107.8 mil.) 52 Wk Hi & Lo are the highest 52-week high and low closing prices for the stock. PE: the price earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. Mkt. Sto. book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Clo.: the price at which the stock last traded. If no trades for the day, the latest bid. **All Bank or Thrift Indices:** A weighted average of the top 225 banks in market value and the top 50 thrifts in market value, respectively, highlighting those largest percent gainers in price and low volume indicators most shares traded and today's volume as a percentage of average shares traded day over the past year.

STOCKS
Catapulting into the Double Digits

By GORDON MATTHEWS

Stock dividend yields for a third of the nation's 50 largest banks have moved higher than the 30-year Treasury bond yield, signaling that the elusive bottom could be near for some of the beleaguered equities.

Banking industry analysts generally agree that high yields relative to the bond market mean the stocks will receive some support. But the experts also caution that this assumes investor confidence that bank dividends can be maintained.

"In the past these historical high yields have been turning points for bank stock performance," said Mark Alpert, an analyst at Bear, Stearns & Co. "But you also have a lot of investors right now who fear the banking industry is no better than the savings and loan industry and that dividends aren't safe."

Yields Exceed 10%

The stocks of a dozen banks, predominantly money-center and northeastern superregional institutions, are yielding 10% or more, and six others sported yields of 9% or above. By comparison, the benchmark government "long bond" yielded 9.17% on Friday afternoon.

Relative to the rest of the stock market, the banks are in "uncharted waters" these days, said J. Richard Fredericks, the banking analyst for Montgomery Securities, San Francisco.

The median dividend yield of the top 50 banks is currently 7.5%, more than double the 3.7% yield for the Standard & Poor's 500 stock index, the most often used measure of the overall equity market. The yield, which moves inversely to prices, is calculated by dividing the stock price by the annual dividend.

Among the top 50 banks, the highest return available from a dividend by far is at Midlantic Corp., Edison, N.J., whose stock last week dipped below $10 in price.

Midlantic currently yields a stratospheric 19%. New York's Chase Manhattan Corp. is second at 14.4%, followed by MNC Financial Inc., Baltimore, at 13.6%.

By contrast, the three lowest yielding banks in the top 50 are Republic New York Corp. at 3%, Chicago's Northern Trust Corp. at 3.2% and Atlanta's SunTrust Banks Inc. at 4.2%.

Short Sellers Stick Out Necks

Short sellers of bank stocks – investors who believe prices will fall even further – appear to be making a potentially costly wager that dividends will not be held at some banks. They have sharply increased their positions in shares of Chase, Chemical New York Corp. and First Interstate Bancorp., Los Angeles, among several other.

"Shoring high-yielding stocks is a relative expensive pursuit because the individual or corporation instituting the sale must make good the dividend to the buyer. Thus, in some cases the stocks drop more than 10% in order for the seller to cover the carry costs," said Richard X. Bove, an analyst for Dean Witter Reynolds Inc.

Covering Short Positions

This suggests that if money-center institutions in particular maintain their dividends, as Mr. Bove expects, "substantial pressure" will build on short sellers to cover their positions before the next dividends are announced for these stocks. This would lead to the acquiring of stock, thus giving prices a lift. □

CAPITAL
Continental Drops $100 Million Debt Issue

Continued from *page 1*
of size right now."

Continental's officials cited market conditions as the key to withdrawing the deal. "The events in the Middle East have caused the financial markets to deteriorate, so we thought the prudent thing was to pull back and wait until the markets stabilize," a spokesman said.

But capital markets sources said that, while general market conditions were a factor, a more immediate concern for investors was that the indicated pricing, or "price talk," on Continental's offering had increased sharply during the week.

Indicated Yield Zooms

Monday, price talk indicated a yield of about 235 basis points more than for comparable Treasury securities. By Thursday, however, price talk was for a yield of nearly 290 basis points more than Treasuries, an unusually large change.

"They were dead wrong," a capital market specialist said, referring to lead manager Goldman, Sachs & Co. "I don't know what they were doing."

An investment banker predicted that Continental will difficulty would spook any bank of less than sterling quality that had been contemplating a debt issue. A spokesman for Goldman declined to comment.

Pulling the deal leaves Continental with a total risk-based capital ratio, calculated by the 1992 requirement and the transitional standard, which takes effect at yearend and allows banks to count a greater portion of loan-loss reserves as capital.

Capital Problem

The holding company finished the second quarter with a risk-based capital ratio of 7.2% under transitional rules, which require a 7.25% minimum. Its capital ratio under 1992 rules was just 6.99%, compared to a required minimum of 8%.

To bring its capital ratios up to standards, the company must reenter the capital markets this year, generate substantial retained earnings, or sell assets.

Continental's officials said they remained optimistic about the bank's ability to tap the capital markets. "We have a hope and expectation to be back in the market before the end of the year," said an officer who did not want to be named.

Continental's debt ratings do not appear to be impaired by its capital ratios. Rosemarie Cinforte, an assistant vice president at Moody's Investors Service, said, "Continental's capital ratios are a consideration, but they are not a major factor in the rating at this point."

Even so, if the crisis in the Persian Gulf continues, Continental could face the same or even higher funding costs later this year, particularly after initially pulling the offering.

Continental is not the first bank to withdraw a debt offering within the last 12 months.

MNC Had to Go Elsewhere

MNC Financial Inc. also withdrew a debt offering after investors failed to sign up to buy the subordinated debt it was trying to issue last December. Ultimately, the Baltimore-based banking company privately placed $74 million in subordinated debt with Japanese investors – but not until after repeated attempts to issue subordinated bonds domestically.

The wide spread over Treasury yields discussed for the Continental deal late last week was being talked about despite the offering's being made at the bank level rather than the holding company level.

The rating on Continental's subordinated holding company debt is Baa3 from Moody's and BBB-minus from Standard & Poor's Corp., a notch lower than the ratings it likely would have gotten for bank-level subordinated debt. That means the indicated yield on a holding company offering would probably have been even higher.

"We have a hope and expectation to be back in the market before the end of the year."
A Continental executive

MARKET MONITOR

As the federal funds rate hit a record 60% near the end of the two-week settlement period last Wednesday, borrowings at the discount window of the Federal Reserve Bank of New York rocketed upward as well.

More than half the major New York banks used the discount window, borrowing $2.24 billion, compared to no borrowings in the previous two weeks.

The settlement period that ended Wednesday was one of the the most tumultuous on record, including at a time of major power outage in lower Manhattan on Aug. 13.

The outage disrupted the fed funds market because banks had trouble clearing trades through the Fed's wire system, Fedwire. Citicorp. The Fed Wire did not open until late in the morning Aug. 16. As a result, many banks found themselves either with huge deposits at the Fed, far in excess of their reserve needs, or seriously overdrawn. □

OTS Gearing Up to Pursue Accountants and Lawyers

The 2,855 S&Ls suffered net over-the-counter withdrawals of $4.4 billion in March, the agency said.

By DEBRA COPE

WASHINGTON — The Office of Thrift Supervision, emboldened by a court ruling last Thursday that excoriated accountants and lawyers for failing to stop abuses at now-defunct Lincoln Savings and Loan Association, is preparing to crack down on those professions.

The U.S. District Court ruling, which upheld the government's April 1989 takeover of Lincoln, "sustains our view that lawyers, accountants, and other professionals have important duties" to depositors and investors in financial institutions, Harris Weinstein, chief counsel at the OTS, said Friday.

Keating Called 'Looter'

Federal District Judge Stanley Sporkin found that Irvine, Calif.-based Lincoln was the victim of "looting" by its chairman, Charles H. Keating Jr., and other officials.

"We expect to move against individuals [responsible for wrongdoing] in a very strong way," Mr. Weinstein told reporters. Through civil suits and enforcement actions, the OTS could disbar professionals from practicing before the OTS or prohibit them from representing any financial institution, he said.

The thrift regulator can also seek civil money penalties against "institution-related parties" for wrongdoing committed since Aug. 9, 1989, when President Bush signed the Financial Institutions Reform, Recovery, and Enforcement Act.

Officers, Directors Targeted

To date, the OTS has filed no professional liability suits. About 500 have been brought by the Federal Deposit Insurance Corp. and the Resolution Trust Corp., but most of those are against officers and directors.

In other OTS news:

- Mr. Weinstein said Mr. Keating could face contempt charges if he fails to produce a full, audited accounting of his finances. Mr. Keating was due today to comply with an OTS disclosure order, "unless he persuades us to give him a few more days," Mr. Weinstein said.
- The OTS said the 2,855 thrifts experienced net over-the-counter withdrawals of $4.4 billion in March. But quarterly crediting of interest helped pump up deposits by $8 billion, yielding an overall increase in the deposit base of $3.7 billion to $929.9 billion.
- The agency issued its rules defining when thrifts must obtain real estate appraisals from state-licensed or state-certified professionals. Thrifts may use licensed appraisers for most real estate transactions, including home mortgages, of $50,000 to $250,000. But they must hire certified appraisers, who must pass more rigorous tests, for nonroutine transactions of $250,000 or more, except one-to four-family home mortgage loans.

The requirements are similar to those adopted by the FDIC and the Office of the Comptroller of the Currency, but will have to be reconciled with the Federal Reserve Board's $100,000 minimum for licensed or certified appraisals.

- The OTS withdrew a December 1989 rule governing release of customer financial records, and said it will propose revisions within 60 days. □

AMERICAN BANKER

Markets Force More Banks to Private Equity

By FRED VOGELSTEIN

With capital ratios under pressure and rock-bottom stock prices making the markets unreceptive to public offerings, a number of large to midsized banks are mulling the prospect of raising equity privately.

It is an alternative most consider unpleasant and one they wouldn't have considered a year ago.

The move to sell private equity has "certainly accelerated since the beginning of the year," said H. Rodgin Cohen, a partner at Sullivan & Cromwell and a leading banking attorney. "As access to the capital markets for banks has declined and their need for capital has accelerated, it creates the pressure for this to be done."

Most remember how lack of market interest this year forced First Interstate Bancorp to sell most of its public offering to Kohlberg Kravis Roberts & Co.

Hoping to avoid a similar fate, banks that can't afford to wait until stock prices rebound have been forced to consider private deals. They don't like the idea of having one shareholder control a large block of stock; however, most believe that is preferable to offering shares publicly and finding no buyers.

Four Just Under Way

Mr. Cohen said he is working on four private placement deals for banks. The deals are "in various stages, from very preliminary talks to some that are much more serious," he said, and one deal is far enough along that the investor is performing due diligence.

The impetus for private equity deals, however, is not just coming from desperate bankers. A dearth of industrial deals and the demise of the junk bond market have left investors flush with cash.

"If these situations turn around, the returns can be fairly spectacular," said Donald Moore, managing director of the worldwide financial institutions group at Morgan Stanley & Co. He said he knows of six investors who are looking for private equity deals with banks.

$5 Billion in Assets

Although which banks and investors are considering private deals has been difficult to determine, Mr. Moore and others involved in the discussions said they involve banks with at least $5 billion in assets that are

FDIC chairman

Seidman Wants Extra Latitude To Raise Rates

By BILL ATKINSON

WASHINGTON — Less than two weeks after the Federal Deposit Insurance Corp. voted to raise bank insurance premiums by the maximum amount allowed, chairman L. William Seidman said he would welcome the authority to boost premiums further.

In an interview, Mr. Seidman said the FDIC has no immediate plan to raise premiums again, if Congress permitted it. But with the Bank Insurance Fund under stress, he said, the agency would be more comfortable with the latitude to raise premiums when it feels the need.

Flexibility's a 'Good Idea'

"I think probably additional flexibility would be a good idea," Mr. Seidman said. "If they [Congress] want to give it to us, I think we certainly would want to see that premium-increase flexibility."

The FDIC has proposed increasing premiums by 63%, to 19.5 cents per $100 dollars of in-

Fed Survey Confirms Banks Have Tightened Loan Terms

By ROBERT TRIGAUX

WASHINGTON — Fears of recession and declines in credit quality led bankers to tighten their standards for general business loans and commercial real estate loans over the past three months, according to a Federal Reserve Board study released Monday.

Reinforcing earlier indications of a contraction in bank credit, the Fed's August survey showed the business-loan cutbacks have gone beyond those related to corporate mergers, which declined sharply earlier in the year.

Restrictions on All Types

Bank-imposed measures such as higher loan costs or more restrictive covenants affected all

Bankers Ready to Answer the Call With Financial Help for Soldiers

By YVETTE D. KANTROW

NEW YORK – Some bankers are inviting out programs to show their patriotism as U.S. military forces are called to action.

Bankers across the country now say they stand ready to comply with the Soldiers and Sailors Civil Relief Act, an obscure 1940 law that requires lenders to slash interest rates on loans to people who are called to active duty.

Special Efforts

A few bankers are also going above and beyond the call of duty, publicizing special efforts to ease the financial burdens borne by members of the armed forces, including the National Guard.

After a rash of media reports about the law – which limits interest rates on loans to 6% for servicemen – Carl E. Reichardt, chairman of Wells Fargo Bank, acted Friday to defer principal and interest payments on all consumer loans for reservists while they are on active military duty.

'It Is the Least We Can Do'

"He just really felt it was the right thing to do," a spokeswoman for the San Francisco-based bank said. "When you look at

Texan Toughing It Out at Family Bank

By STEVE KLINKERMAN

SAN ANTONIO — His great-grandfather survived a stint as a Confederate rifleman and founded Frost National Bank of San Antonio in 1899.

His great-uncle guided the bank through the years of financial panic that followed the stock market crash of 1929.

Now, the mantle of leadership has fallen on the shoulders of T.C. "Tom" Frost. His job is to prevent Cullen/Frost Bankers Inc., the Lone Star state's last major independent banking company, from becoming another casualty of the Texas oil and real estate recession.

Of the three men, some say, the youngest Frost has the toughest challenge.

By many banking measures, San Antonio-based Cullen/Frost barely has a pulse. Almost 10% of its gross loans are in some stage of default, and it has not paid a dividend since 1986.

Its stock is trading at almost a 50% discount to book value, and its return on assets is a paltry 0.08%, one-twelfth the return expected of a healthy bank.

"The heat is on," said Frank Anderson, a senior analyst at Stephens Inc., Little Rock. "Cullen/Frost could not withstand another dip in the econ-

To Hanover's Joyce Healy, Marketers Deserve Limelight

By LAURYN FRANZONI
Special to the American Banker

Until Labor Day, Bank Marketing Association president Joyce A. Healy is vacationing in the New Hampshire woods, away from telephones, fax machines, computers, and an overbooked calendar.

The pace will quicken when she returns to New York. On Sept. 16, the Manufacturers Hanover Trust Co. senior vice president will become the first woman to preside over a BMA national conference – a milestone that coincides with the association's 75th anniversary.

The 42-year-old has taken an unusual path to the limelight. With degrees in sociology and urban planning, Ms. Healy made a sharp turn into the banking industry, joining Manufacturers Hanover in 1971. Since then, she has climbed from a marketing research analyst to senior line manager in charge of corporate cash management services in Hanover's GeoServe division.

In a recent phone interview, she said her career path is indicative of the changes in bank marketing.

"Marketing," she said, "has moved out of a functional specialty done by advertising people to a function of many line managers."

Joyce A. Healy

Ms. Healy, who has been in the association's chain of command for four years, tries to help other marketers break out of pure advertising functions. "I'd like to see more marketers sitting at the head table doing the planning, rather than in the back room doing the ads," she said.

Today's bank marketer is somewhere in the middle of the curve between functionary and strategist, she contends. The transition, she said, began with industry deregulation in 1982.

In response to changes in the industry, the Bank Marketing Association has had to broaden its focus and appeal, Ms. Healy said. But she would like to see still more involvement by line managers and community bank CEOs in the group's activities. To that end, she's trying to take better advantage of the group's merger with the American Bankers Association, integrating the mailing lists of both organizations and "practicing what we preach."

"The organization needs to find new audiences for a good product," she says. "A bank president doesn't want to attend a school for bank marketing, but he may want to attend a CEO Institute."

Before joining Hanover, Ms. Healy worked for the Boston Model Cities Federation as an urban planner. Before that, she helped the Catholic Archdiocese in Pittsburgh, her hometown, select locations.

Though her job as association president has been a demanding one, Ms. Healy sees a payoff for both herself and her employer. "What you get back in terms of peer group support and perspective is worth it," she said.

The job, she added, is similar to that of bank marketers everywhere. "If you're going to do it well, you'll need a lot of general business knowledge and a lot of functional knowledge in areas like research and data base management."

Ms. Franzoni is a freelance banking reporter based in Springfield, Mo.

Recovering Thrift Picks New Chief

By PHIL ROOSEVELT

Richard Dalrymple, formerly an executive with Bank of Boston, has become president and chief operating officer of Anchor Savings Bank, a large, Hewlett, N.Y., thrift in the midst of a turnaround.

He fills a post that had been vacant since last November, when William Schneider resigned.

Richard Dalrymple

Mr. Dalrymple most recently was head of Bank of Boston's worldwide banking services operation, responsible for corporate trust services, shareholder services, and cash management. He joined the bank in 1985 as president of the Massachusetts Bank Group, with responsibility for 125 statewide branches.

He also has served as president of Bank of Boston's southern New England region. Previously, he was an executive vice president at European-American Bank, Uniondale, N.Y.

At the $9.2 billion-asset Anchor, he will be working under James M. Large Jr., chairman and chief executive, who joined the thrift in April 1989 from First Interstate Bancorp, Los Angles.

The thrift has suffered some serious losses during the past two years and fails to meet the capital requirements mandated by the thrift-bailout law. But a plan by Mr. Large to revive the institution was approved by regulators earlier this year. □

Tax Break for Realty Buyers Sought

Plan to Speed RTC Disposals Discussed in Congress

By BARBARA A. REHM

WASHINGTON — A proposal is circulating in the House and Senate tax-writing committees to provide $1 billion in tax credits to investors who buy distressed real estate from the Resolution Trust Corp.

Currently under discussion among staff members of the Senate Finance Committee and House Ways and Means committee, the proposed tax breaks would be granted in a two-year pilot program to help speed sales from the RTC's $17.3 billion portfolio of real estate assets.

But while such tax concessions could be a useful incentive to potential buyers, many observers are skeptical that Congress would enact another tax break tied to the politically charged savings and loan scandal.

Price Cuts Held Easier

One critic, the thrift-industry consultant Bert Ely, said a simpler solution for the RTC would be to "just turn around and cut the prices" of the assets it inherited from failed S&Ls.

The proposal would allow an investor to take tax credits – direct reductions in income taxes owed – totaling 80% of the purchase price's face value minus whatever financing the investor could secure from a commercial lender. The credits would be disbursed in equal amounts over five years.

One of the plan's architects, tax lobbyist David H. Miller, says that for every $1 the government forgoes through tax credits, it will save $2 in reduced RTC borrowing costs and carrying costs on the assets sold.

Reason for Support

He believes that members of Congress would be drawn to his plan because they could portray their support as part of the solution to the thrift crisis.

"We've got a lot of very good response on the Senate side," he said. "I think the key here is going to be the administration. If they get behind it, then I think it is very doable in the context of the budget deficit package."

> **"We've got a lot of very good response on the Senate side. I think the key here is going to be the administration."**
>
> **David H. Miller**
> *Tax lobbyist*

Sen. David L. Boren, D-Okla., and Sen. William A. Armstrong, R-Colo., both Finance Committee members, are particularly interested in the plan.

Mr. Miller said he was planning to meet with administration officials in September.

Moving the Assets

"The whole thing is based on the government getting its money now and getting assets out of the government's hands," said Mr. Miller, a former lobbyist for Chase Manhattan Corp. who is now a partner with Federal Legislative Associates, Washington.

"Unless you entice buyers, these assets are just going to sit."

Mr. Miller drew up the plan with John P. Manning, president of Boston Capital-Partners Inc., a Boston-based investment banking company specializing in raising tax-credit equity.

One prominent tax lobbyist, who asked that his name not be used, said the plan was unlikely to fly.

"I don't think Congress will buy it," he said. "They are extremely reluctant to give out tax breaks, particularly tax breaks related to the savings and loan mess."

"It's just a way to say you sold it for more than it's worth," said Marvin Markus, managing director of the asset finance department at Kidder, Peabody & Co. in New York. "It's a zero-sum game where the government's the loser."

Bert Ely, head of Ely & Co., Alexandria, Va., agreed. "This is just a way to hide the cost of the loss," he said. "The assets will sell for more, but Treasury will collect less in tax revenues."

As the tax credit proposal is envisioned, if a group of investors wants to buy a $1 million piece of property from the RTC and a bank is willing to lend $400,000, the government would offer the investors $480,000 in tax credits – equal to 80% of the $600,000 balance the investors would need to raise to buy the property.

Cost Would Be Masked

The tax credits, in a sense, help mask the true cost of the S&L bailout because the RTC can report that it sold a property for $1 million, even though the $480,000 tax credits mean the government's net revenue is $520,000.

To avoid the embarrassment of any investor paying no taxes, individuals would be limited to claiming credits of $50,000 or 50% of their total tax liability in a year, whichever is less.

In the case of corporations, the existing tax-credit limit applies – $25,000 plus 70% of remaining tax liability.

In practice, the RTC would get its asking price of $1 million and the investors get to subtract about $96,000 from their tax bills each year for five years. Meanwhile, the asset is out of government hands, eliminating RTC carrying costs such as maintenance, taxes, and insurance.

Improvements Called Likely

Proponents of the plans say, ideally, the new private-sector owners would improve the asset so that in five years it could be sold for more than its purchase price. □

TECHNOLOGY/OPERATIONS NEWS

Fed Is Designing a Network With Image-Sending Ability

By JEANNE IIDA

NEW YORK — The Federal Reserve System is designing a nationwide communications network to make electronic transactions more efficient and to accommodate new technologies, such as image processing.

The network, called the Fednet Communications System, will link the Fed's 12 district banks, 25 branches, the Board of Governors, the Treasury, and three contingency processing centers.

The new network will enable the Fed to move Automated Clearing House transactions and Fed Wire payments the fastest and most economical way possible. "For the first time, we'll be able to send traffic across district lines," said Jerry D. Shreeves, senior vice president of the Federal Reserve Bank of Kansas City.

Bankers welcome the streamlining, which will not be completed for several years, but note that it may make the Fed a stronger competitor in certain areas.

"If the Fed begins to consolidate [its network], that would give them the ability to reduce their costs and then a permanent price in competition to those of us in the correspondent banking business," said Robert J. Dukas, executive vice president and cashier of American National Bank and Trust Co., Chicago.

At the same time, the single network could give banks "a standard set of processes at standard costs," no matter the Fed district, Mr. Buskas said.

With Fednet, banks with branches in many states will need only a single type of software to link to multiple Fed district banks.

The Fed plans to begin awarding contracts for the network this fall. It plans to begin installing equipment next spring and expects the project to be completed in 1994.

Fednet will replace a backbone network and 12 regional networks, which use many different types of equipment. Financial institutions will connect to the new network as they do to the old, using communications devices called modems.

Though the Fed said it could not yet estimate the cost of the project, it expects to keep spending within the $40 million a year budgeted for communications.

Imaging Considered

"We're trying to design this network to accommodate greater volumes and the possibility for doing some kind of imaging," Mr. Shreeves said.

With the higher-capacity network, Fed banks could exchange images of checks.

Banks could also put in two connections to their regional Federal Reserve Bank and maintain a permanent connection to one of the Fed's contingency sites.

The Fed head offices will be linked by high-speed communications lines, called T-1s. Regional branches may be linked by lower-speed communications lines.

But as it beefs up its network, the Fed is simultaneously encouraging banks to link electronically to the local Fed.

"We want to make sure our network is not a hurdle to be crossed when we're pushing for [financial institutions to make] electronic connections," said Mr. Shreeves. About 8,700 of the 14,000 U.S.-based financial institutions are linked electronically to the Fed's network. □

MasterCard to Upgrade Imaging

Seeks Broader Participation in Its Year-Old System

By KAREN GULLO

NEW YORK — MasterCard International is planning changes in its image system for transmitting sales drafts, in hopes of encouraging member banks to join the one-year-old program.

The system, called MasterCom, is intended to speed processing by transmitting images of sales drafts instead of the actual documents – a practice that can save banks both time and money.

To use the system, called MasterCom, members must lease a workstation that includes a personal computer, printer, and scanner. Beginning Oct. 1, MasterCard will cut the cost of leasing the equipment to $800 a month, from $1,100.

Holding Costs Down

To attract smaller banks that may have balked at equipment costs, the association plans to add an image transmission service that would allow them to use the system without having to lease their own equipment.

The price cut for equipment will coincide with the introduction of fees for transactions, system installation, and system training. MasterCard will charge a 60-cent fee for each transaction after Oct. 1. A $7,500 fee for installation and training, which has been waived since the imaging system was made available, will also be added at that time.

Eventually, New York-based MasterCard plans to allow members to use MasterCom for both MasterCard and Visa transactions. The system is able to process both types of transactions, and bankers generally favor the idea, saying it would eliminate the cost of two electronic systems for charge-back retrieval.

But Visa U.S.A., San Mateo, Calif., and MasterCard have yet to reach an agreement on such a proposal.

MasterCard says it nevertheless plans to move forward with a pilot to test transmission of Visa transactions. MasterCard said four banks, which it declined to identify, have agreed to participate.

Users Were Skeptical

Association officials say MasterCom got off to a slow start because users were skeptical and certain licensing issues had to be resolved. Banks and their third-party processors also needed some time to iron out operational difficulties and to install compatible software.

> **"We just exceeded 12,000 transmissions a week, which is about one-third of all retrieval requests."**
>
> **David Africk**
> *MasterCard International*

In January, MasterCard told its largest member banks that they must adopt MasterCom by yearend. Sixty-five of its largest card-issuing banks, including Citicorp, NCNB Corp., Barnett Banks Inc. and First Wachovia Corp., have installed the system.

"We are hoping to have 90 banks signed up by the end of the year," said David Africk, senior vice president. "We just exceeded 12,000 transmissions a week, which is about one-third of all retrieval requests. Our goal is to be doing 20,000 transmissions a week by year's end, for 80% of all charge-back retrievals."

Mr. Africk said members were notified several months ago about changes in the system's costs.

A formal announcement of service additions will be made in September, he said. One enhancement will be the expansion of MasterCom next month to include transmission of other types of card document images.

MasterCom can speed the processing of a charge-back, which arises when a customer requests a copy of a draft, so banks save money. With MasterCom, paper slips of sales drafts are converted to electronic images, which are then transmitted instead of the actual documents.

MasterCard estimated that electronic imaging cuts the cost of retrieving documents by $5,000 a month for the average member bank. The time needed to fulfill requests for drafts, which sometimes can be as long as a month, can be reduced by 75%, according to MasterCard.

Some bankers said they recently joined the program to beat the higher cost of implementation later.

"It's my understanding the cost of the installation of the system will go up dramatically," said Mary C. Cobia, vice president at NationsBank of Tennessee, N.A. NCNB. The bank installed the MasterCom work station last month.

NCNB initially plans to use MasterCom for MasterCard transmissions only but would eventually look at using it for Visa, too. "It would be in all of the users interest to consolidate to one system," said Ms. Cobia.

Visa officials said they have held talks with MasterCard on sharing the technology but said problems with MasterCom have stalled any agreement.

A Question of Size

"MasterCom is too expensive for the smaller members and too cumbersome for large ones," said Richard M. Lonergan, senior vice president for VisaNet new business development. □

Half of the world's top banks draw the line on transaction processing.

And they use Shared's software solutions to keep it going up. Through electronic banking and merchant services, these companies and hundreds of others are more profitable, competitive and in better control of their transaction processing networks, 24 hours a day. Seven days a week.

Industry Self-Insurance: The Alternative to FDIC

Second of Two Parts

Federal deposit insurance must be replaced. The 100% cross-guarantee concept represents a comprehensive proposal for effectively replacing federal deposit insurance while retaining the FDIC as a backup insurer only for deposits under $100,000.

Briefly, the 100% cross-guarantee concept is an industry self-insurance mechanism that would use the earning power and the capital resources of the entire banking system, if necessary, to protect all deposits in every bank. (The term "banking" and "bank" encompass commercial banks, savings banks, and S&Ls, but not credit unions and money market mutual funds.)

Under the 100% cross-guarantee concept, every bank would enter a cross-guarantee contract. This contract would protect all of the bank's deposits, including balances of more than $100,000, from any loss of principal, interest, or liquidity in any circumstance. Other liabilities of the guaranteed institution also could be protected under the 100% cross-guarantee contract.

Contracts Would be Syndicated

Each cross-guarantee contract would be issued by an ad hoc syndicate of banks called "first-tier guarantors." Each guarantor bank itself would be guaranteed by a separate syndicate of guarantors. Syndicates would be organized by specialized firms called syndicate agents. Cross-guarantee contracts would be syndicated in a manner comparable to the syndication of insurance risks at Lloyd's of London.

The 100% cross-guarantee concept will be described in much more detail in "Making Deposit Insurance Safe Through 100% Cross-Guarantees," a monograph that will be published this fall by the National Chamber Foundation, an affiliate of the U.S. Chamber of Commerce.

Guarantors would regularly collect a risk-sensitive deposit insurance premium from each of the banks that they help to guarantee. Although risk-sensitive premiums would discourage unsound banking practices, a few guaranteed banks still would slide hopelessly toward insolvency.

Protection Against Loss

Thus, each cross-guarantee contract would permit the guaranteed bank's guarantors to take over the bank *before* it becomes insolvent. The syndicate should then be able to fully protect all deposits and other guaranteed liabilities without any loss. If the guarantors do not take over the failing bank quickly enough, they would have to write checks to protect depositors and other guaranteed liabilities against any loss.

In the rare event of a large loss or a concentration of losses, a "stop-loss" provision in each cross-guarantee contract would permit a portion of that loss to be passed through the guarantor banks to their own guarantors. If necessary, the stop-loss provision (which effectively is a reinsurance mechanism) would spread the loss across the entire banking system.

In effect, the stop-loss feature would use the earning power and the equity capital of all guaranteed banks to construct a "solvency safety net" under the entire banking system. This safety net would permit the banking system to survive losses even greater than those suffered by depositors during the Great Depression.

Unlike the federal safety net, the solvency safety net would not consume taxpayer dollars to protect depositors. However, deposits up to $100,000 could be protected further by retaining the FDIC as a backup guarantor in the highly, highly unlikely event that cross-guarantees fail to perform.

A chart illustrates the 100% cross-guarantee concept. The chart contrasts 100% cross-guarantees with the flow of bank insolvency losses under federal deposit insurance.

The 100% cross-guarantees would protect depositors and taxpayers much better than federal deposit insurance because cross-guarantees would be much more responsive to marketplace forces than would seek to minimize bank insolvency losses.

Premium Based on Risk

Premium rate formulas may charge the riskiest banks as much as 20 times the rate charged the safest banks. Intoxicated bankers truly would pay for the carnage they can cause while prudent bankers may pay as little as 4 basis points (.04%) annually, one-fifth of the premium rate they are scheduled to pay next year.

Where a high premiums does not curb risky banking, "equity market intervention" usually would occur: Stockholders would use proxy contests to force management changes or new investors would take over and recapitalize weakening banks. These investors would then profit when cross-guarantee premium rates drop as capital is pumped into the bank.

Another chart illustrates the likely interaction between cross-guarantee premium rates and capital levels. The management of the top bank (Bank 1) responded to a rising premium rate by reversing the course of the bank and slowly rebuilding its capital level.

The middle bank (Bank 2) was recapitalized, which quickly brought down its premium rate as the bank moved toward renewed financial strength and a lower probability of failure.

A Crucial Point

The bottom bank (Bank 3) kept on sliding toward insolvency until its guarantors took it over before it became insolvent. This timely takeover kept the guarantors' losses at zero. It is crucial to the 100% cross-guarantee concept that the takeover point specified in a cross-guarantee contract be negotiated solely by the guaranteed bank and its syndicate of guarantors.

Prompt closure of failing banks by their guarantors, coupled with the solvency safety net created through the stop-loss mechanism, would easily contain bank insolvency losses within the private sector.

The 100% cross-guarantee concept is strengthened further by a minimum equity capital requirement for the banking system (but not for individual banks) and by risk diversification requirements imposed on both guarantors and for individual cross-guarantee contracts. These safety features are among the seven safeguards built into the 100% cross-guarantee concept.

Benefits to the System

The 100% cross-guarantee concept offers more than a score of benefits to the banking system, to the economy, to the American taxpayer, and to the political process. The order in which these benefits are presented does not diminish the importance of those benefits not listed first.

The 100% cross-guarantees are the only way to completely integrate deposit insurance reform and the restructuring of financial services because 100% cross-guarantees would shift completely to the private sector restructuring decisions and the associated insolvency risks.

Implementation of 100% cross-guarantees can occur much more quickly and completely than any other deposit insurance reform proposal. Many banks and S&Ls would be ready to switch to 100% cross-guarantees as early as the first anniversary of the legislation authorizing cross-guarantees.

Represents Major Reform

The 100% cross-guarantee concept represents the only comprehensive reform of deposit insurance that has been offered. All other reform proposals only tinker or fiddle with federal deposit insurance.

The solvency safety net constructed by the stop-loss feature in all cross-guarantee contracts would effectively privatize the federal safety net. Privatization

"Lunch at the usual place—or should we be daring!"

If this is your idea of planning, don't bother to read this.

1-800-456-2340.

It's no secret that planning and budgeting can be sheer drudgery. From doing the plan in the first place to tracking how your actual numbers compare to your plan all year long. It's slow, time-consuming labor.

Unless you let Sheshunoff **Bank Financial Planning & Budgeting Software** do the drudge work for you.

You set things up your way. By ROA, income, or percentage growth targets. And it's so easy-to-use that even a beginner can turn out complete, balanced plans and budgets in no time.

It's almost like having a budget that does itself.

Your categories are all set up and ready to fill in. And you can customize line items to suit your needs. The different approaches you can take are clearly explained in your easy-to-read user Guide.

Easy-to-use screens make it easy to enter your data. And you can set up alternative plans and budgets in minutes. Then compare your options at the touch of a key. Item by item.

Your software even checks to make sure you're in balance. Computes your monthly budgets from your annual plan. Does interest rate, margin, and ratio analyses. And gives you the flexibility to make adjustments line by line, month by month.

Plus, you can track your actual numbers against your plan, quickly and easily. Monthly or quarterly. And create variance reports and summary reports as you need them.

Easy, complete, and just for bankers. With our 30-Day Guarantee. Just what you'd expect from Sheshunoff Information Services Inc.

To get your Sheshunoff **Bank Financial Planning & Budgeting Software** for just $495 call 1-800-456-2340.

CREDIT UNIONS

Taxation Plan in the Works, But Passage Seems Unlikely

By BARBARA A. REHM

Working to close the U.S. budget gap, the Joint Tax Committee has included the credit union industry on its list of likely tax targets.

The committee, whose members come from the Senate Finance and the House Ways and Means panels, is doing much of the numbers-crunching in preparation for the budget summit, which is to resume Sept. 10.

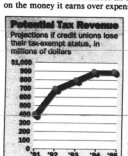
Estimates of Revenues

According to the group's estimates, obtained from another source by the *American Banker*, Uncle Sam could pocket $3.7 billion over five years if it taxes the nation's 15,000 credit unions.

The potential tax revenue is estimated at $400 million in 1991, $700 million in 1992, $800 million in 1993, and $900 million in each of the following two years. No one from the Joint Tax Committee was available to explain how it arrived at its figures.

Double Taxation an Issue

Credit union representatives argue that such a plan would result in double taxation because an institution would be paying taxes on the money it earns over expenses – money that is is paid out to members. Those members pay income taxes on the credit union payouts.



The committee divided its credit union plan into two options: taxing all credit unions or only those with more than $10 million in assets.

Interestingly, the committee reports that the same revenue, $3.7 billion, would be reaped over five years no matter which option was chosen. The apparent reason is that only a negligible amount of revenue would be raised by taxing smaller institutions.

Only 3,500 of the nation's 15,000-plus credit unions have more than $10 million in assets. And more than half of the country's credit unions have less than $2.5 million in assets, according to Robert Loftus, director of public and congressional affairs at the National Credit Union Administration.

60 Million Members Pack Political Punch

The summiteers may consider it more politically palatable to tax only the larger credit unions. Previous proposals from other groups would have allowed credit unions with $5 million or less to remain tax exempt.

Even though the tax committees and the Treasury Department appear eager to tax credit unions, the idea has little support elsewhere in Congress. Part of the reason may be that credit unions boast 60 million members spread across almost every congressional district.

The Iraqi Wild Card

"I think there is not enough revenue there to risk the political damage or fallout," Mr. Loftus said.

The summerlong vigil to reduce the federal budget deficit has been dealt a wild card by the Iraqi invasion of Kuwait and the resulting turmoil. With more and more U.S. forces going to the region, the prospect of a significant decline in the deficit has virtually vanished.

Is It Wise to Raise Taxes?

The nation has begun to believe that the economy had slipped into a recession, according to some pundits. In the midst of an economic downturn, is it wise to raise taxes? Can the administration manage a conflict in the Mideast and still have time and personnel left to negotiate a budget package? The answer to both questions is probably no.

For all these reasons, credit unions are likely to escape taxation for at least another budget cycle.

No Signs of Alarm

Some observers say the deficit will burgeon even more when the savings and loan tab is tacked on and the bills for the Iraqi adventure start arriving. And the more money the government needs, the more places it is likely to look for funding.

Credit union representatives, however, do not seem overly alarmed.

Legislative Steamroller Is Possible

"We're concerned if people are out there advocating that it should be done," said John Zimmerman, a lobbyist with the National Association of Federal Credit Unions in Washington. "Our concerns are increased proportionately to what they need to raise."

If a budget deal does come together, it may sweep through Congress, making it hard for individual lawmakers to object to various elements, said Linda Rearick, a tax specialist at the American Bankers Association. □

Banks Ready to Help Soldiers

Continued from *page 1*

the [crisis in the Persian Gulf], this is the least we can do."

First Interstate Bank of California has launched a similar effort. And Society Bank of Cleveland has established a toll-free telephone number to provide information and answer questions about the law.

"We're trying to eliminate as much confusion in [the service-men's] minds as possible," said a spokesman for Society Bank.

Warning from Pentagon

Some initial reports on the soldiers and sailors law suggested it could be troublesome for banks because it does not require the federal government to reimburse them for money lost when they lower interest rates. The Defense Department's general counsel – reportedly upset about a contention by some banks that borrowers must prove that they have been financially burdened by leaving private-sector jobs – is said to have warned some lenders not to resist efforts by eligible servicemen to arrange rate cuts to 6%.

The Defense Department could not be reached for comment.

"If you are excessively boastful about it and try to use it as a competitive advantage, it won't go well."

Edward Furash
Furash & Co.

But consultant Edward Furash contends the cost to the banking industry to comply with the law should be minimal. With President Bush planning to activate up to 50,000 members of the National Guard and other reserves, only a small percentage of most institutions' customer bases are expected to be affected, he said. Wells Fargo, for instance, anticipates that about 400 of its customers will be called to active duty and will take advantage of its payment deferral plan.

"Given the public's attitude toward the industry in terms of great concerns over safety and soundness, and a sense of resentment at problems stemming from the thrift bailout, most banks see this as an opportunity to be good corporate citizens," said Mr. Furash, founder of Furash & Co., a bank consulting firm in Washington.

Modesty Is Urged

But, Mr. Furash warned, financial institutions should not try to turn their compliance with the law into a public relations coup.

"If you are excessively boastful about it and try to use it as a competitive advantage, it won't go well," he said. Instead, banks should take a low-key approach, informing the public in what he termed "a matter-of-fact way" that they will slash interest rates on servicemen loans.

Wells Fargo Bank ran advertisements in 15 California newspapers on Monday explaining its payment deferral plan. First Interstate and Society Bank are both relying on media reports to inform the public of their efforts. □

Lenders Urged to Monitor Student Loans

By ROBERT M. GARSON

WASHINGTON — Attempting to deal with mounting losses from the government's student loan program, Education Secretary Lauro Cavazos is urging lenders to redouble efforts to keep guaranteed loans from going into default.

In a handbook issued Monday and sent to all participants in the guaranteed loan program, Mr. Cavazos said lenders should research loan risks carefully before extending credit, stay in touch with borrowers while the loan remains outstanding, and monitor loan servicers carefully. Once a loan goes into default, Mr. Cavazos said, lenders should use effective collection techniques.

Although the 81-page handbook contains no new guidelines or program requirements, it includes case histories of a number of industry success stories, which are intended to serve as models for program participants.

Default Rate Responsibility

He declined to say which component of the student loan process – the government, institutions of higher learning, accreditation agencies, or lenders themselves – is most responsible for the high default rate.

Craig Ulrich, general counsel to the Consumer Bankers Association, said most lenders are already doing what the Education Department is suggesting.

"What he may be alluding to is the stuff between the lines – knowing the institution [of higher education] and double-clutching if you see an institution with a large default rate, like a beauty school with 50% defaults," Mr. Ulrich said.

But Mr. Ulrich said the student loan program is one that, by its nature, will generate loan defaults.

"You're giving money to people who haven't completed their education yet, who have no credit history or work experience," he said. "To suggest that there won't be loan defaults is to look at the program through rose-tinted glasses.

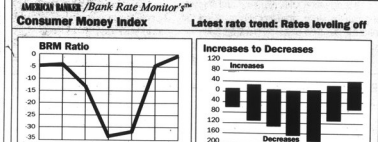
"The question is whether the default rate is so egregious as to be out of hand," he added. "I don't think that it is."

Still, taxpayers may be on the hook for more than $2 billion this year to pay for defaulted student loans, according to the Department of Education. The department estimates that $12 billion will be lent to some 5 million students this year.

The Education Department handbook also urges schools to counsel students on their responsibilities as borrowers. □

AMERICAN BANKER /*Bank Rate Monitor's*™

Consumer Money Index — **Latest rate trend: Rates leveling off**



Bank Rate Monitor's ratio indicates the probable direction of retail interest rates over the next several weeks. The ratio is computed by dividing the total number of rate decreases into the number of increases or vice-versa on six types of accounts offered by the 10 largest banks and thrifts in each of the nation's 10 largest markets. Example: 100 rate increases and 25 decreases would make a 4-to-1 "Plus" ratio. Or, 100 decreases and 25 increases would make a 4-to-1 "Minus" ratio. Over time, the longer and farther the ratio moves on the Plus or Minus side, the more sustained the current rate cycle is likely to be. When the ratio suddenly moves strongly in an opposite direction, it usually signals the beginning of the end of a cycle. The graph shows how the ratio has moved over the past 8 weeks, and the bar chart shows the actual number of rate increases to decreases used to calculate the ratio. The greater the number of ups and downs, the longer the cycle probably will last.

Surplus Manhattan Office Space Means Trouble for Banks

By ANDREW REINBACH

Once considered a boom town, Manhattan's glory days are behind it. The real estate frenzy that catapulted developers to the top of *Forbes* magazine list of wealthiest Americans has taken a drastic turn, epitomized by Donald Trump's inability to pay interest on billions of dollars in debt.

An enormous supply of space has created strong downward pressure on office rents, especially in new, vacant buildings. That pressure is creating major cash flow problems for the owners, raising specters of major problems for their lenders, which include not only the large New York banks but major foreign banks as well.

Cash Flow Called Inadequate

"There's no question that some buildings will not generate enough cash flow to cover the debt, or that there will be foreclosures," said a prominent broker who requested anonymity.

A plunge in the fortunes of the financial services industry that accompanied the stock market crash of October 1987 caused much of the problem for Manhattan's commercial real estate market. Wall Street and commercial banks have been laying off employees ever since.

High Growth Doubted

"There is no way that Wall Street will sustain the sort of employment growth that it had in the mid-1980s," said Charles H. Wurtzebach, senior vice president of the Prudential Realty Group Inc., Newark. "There's serious softness in the trends of employment growth in New York, and the prospects for at least the next 36 months are not attractive."

In fact, there is more office space vacant or under construction in Manhattan today than was built during the 1980s – 63.3 million square feet against 54 million square feet, according to Cushman & Wakefield Inc. And that number does not include another four million square feet that will be rising on Times Square beginning in 1991.

Break-even rents for empty office buildings in the Times Square area are generally about $45 a square foot.

Market Rate Noted

But the market is much lower – $26 to $31 per square foot, according to Warren Schad, chief financial officer of the Solomon Organization, which owns a vacant office building at Times Square, 750 Seventh Ave.

And in addition to accepting uneconomic rents, owners are offering prospective tenants free rent and large allowances for work letters, or interior tenant work – six months of rent and $50 per square foot, respectively, at 750 Seventh Ave., according to documents furnished by Cushman & Wakefield.

This further lowers the amount of cash available to service debt and increases the prospect for bank lenders of workouts, surrendered deeds, or foreclosures.

Most real estate professionals in New York do not think that buildings such as 750 Seventh Ave. or 1540 Broadway, another vacant office building nearby, can turn a profit.

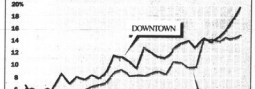
Avoiding Default

According to public documents, 750 Seventh Ave., a 570,000-square-foot building, had $212.5 million lent to it by Citicorp and the Bank of Nova Scotia – a cost of $372.80 per square foot. Mr. Schad said that his building can make a profit at rents near $30 per square foot and will avoid default.

The cost of building office space in Times Square in the late 1980s was generally $300 per square foot, or $300 million for a one-million square foot tower. This could be financed with a construction loan at about 12%, requiring $36 million in cash equity – $36 per square foot. Operating the building is likely to to cost $9 per square foot.

Who'll Take Manhattan?

Office vacancy rates, by quarter



Source: Edward S. Gordon Co.

Some of the workouts that local real estate professionals expect are already under way. At 1540 Broadway, for instance, a finished and vacant mixed-use building with 870,000 square feet of office space, developer Bruce Eichner is currently negotiating his fate with his construction lender, Citicorp.

Japanese Are Involved

Citicorp lent Mr. Eichner $280 million as lead lender of a syndicate that includes the Industrial Bank of Japan, Hokkaido Takushoku Bank, Kyowa Bank, Nippon Credit Bank, Nissho Iwai American Corp., and Orient Leasing Corp. The building is accepting base rents of $27 per square foot, plus four months of free rent and a $50 work letter, according to Cushman & Wakefield.

Among the issues: The mortgage documents say it would be a default if the principals of Chicago-based VMS Realty Corp. – Robert Van Kampen, Peter Morris and Joel Stone – cease being general partners.

But the complicated structure of the deal may have resulted in a workout agreement with VMS Strategic Land Trust, a former VMS real estate investment trust that is suing Mr. Van Kampen, Mr. Morris and Mr. Stone on behalf of its shareholders. Spokesmen for all parties declined comment.

Lender Opted for Equity

Last year, another vacant office building in the downtown area, 17 State Street, was also the subject of negotiations between the developer, Melvin Kaufman, and the New York-based lender, Teacher's Insurance and Annuity/College Equity Retirement Fund. That negotiation resulted in Mr. Kaufman's elimination from the project.

"You could say that it was a concealed deed surrendered in lieu of foreclosure, but there was real consideration [paid to Mr. Kaufman] over and above the amount of the mortgage," said John Somers, a TIAA/CREF senior vice president. "He would have loved a restructured debt, but the debt structure in place was three years old, and it didn't make sense to us. We felt we could do better as owners."

Such workouts are likely to become more and more common in the future, because the amount of space that already stands vacant is vastly greater than the measurable net growth of workers entering the market in the 1990s.

The continuing economic pressure on building owners created by owning millions of square feet of vacant space will eventually force banks to act, said the former head of a money center bank's real estate department.

"The leases being put out now can't cover the debt, and the interest reserves are running out," he said. "Banks are being pushed by the OCC to be stricter, so they're pushing developers by doing reappraisals and then making demands for new cash infusions from the owners, but that changes the developer's risks.

"This would have worked in the Seventies, but today you've got a different sort of developer –they're a much higher grade of people, and they'd rather surrender the deed than endure three to five years of grief from banks."

A likely outcome for many outstanding construction loans on vacant buildings, he said, is that loan documents will be rewritten so that almost all the cash flow from the building goes to servicing the debt, with a sale scheduled in perhaps 10 years. The remaining debt payments, plus interest, would come out of the sale proceeds, and the remaining profit, if any, would go to the developer, who would essentially become a building manager.

Not everybody in the Manhattan market thinks things are quite so grim. Veronica Hackett, executive vice president of Park Tower Realty Inc., which will be starting the 4.1 million square foot Times Square Center, for instance, thinks much of the gloom and doom is overdone.

"The overall market may have an oversupply, but our indications are that the market for new space is firming," she said. "The bank's exposure isn't on 63 million square feet – it's on a couple of million square feet of high quality space that will be absorbed in the next two years." □

Prudent Hedge Against Market Softness Now Haunts Builders, Lenders

By ANDREW REINBACH

The road to hell is paved with good intentions – and banks and real estate developers traveled it together, said John A. Koskinen, president of Washington-based Palmieri Co.

"It started because it takes more time to get buildings approved, so developers began planning office buildings when vacancy rates were high," he said. "Then to be on the safe side, they assumed vacancy rates would be high for some time, so some of the money lent was a two- to three-year interest reserve, and costs rose."

How Interest Reserve Works

Mr. Koskinen explained that a $20 million construction loan at 12.5%, with a two-year interest reserve, requires $25 million in funding since the $20 million loan accrues $2.5 million in interest per year.

"Right away, everything was more expensive than it had to be," Mr. Koskinen said. "If you asked two years ago, 'How did markets support 15% vacancy rates?', the answer was, 'Interest reserves.'"

At the time, he said, such provisions seemed prudent in an environment where local real estate markets were softening even as further development was justified by an economy that continued to expand.

The problem arose out of the very awareness by lenders and developers that their local markets were softening. Mr. Koskinen said. More and more market research was commissioned to make sure that projects – and construction loans – were economically justified.

Everyone Read Same Page

"The problem was, every lender and developer read the same market statistics," Mr. Koskinen continued. "If a market needed one building, you had five guys building it. And everybody had interest reserves."

These precautions against tough markets in the form of interest reserves are beginning to run out now, said Mr. Koskinen, and will continue running out for two or three years.

But while this is likely to bring bad news for developers and bank lenders, it's good news for Mr. Koskinen and his company. Palmieri specializes in working out problem loans and restructuring problem companies.

The restructuring of Florida-based General Development Corp., a publicly held real estate developer, is typical of his company's assignments. In this case, said Mr. Koskinen, Palmieri will plan a reorganization of the company as an adviser to management, while the company runs its day-to-day affairs.

Managing Creditors, Too

Alternatively, Palmieri takes over day-to-day management responsibilities. But in any case, Mr. Koskinen said, the main task is to reorganize the company while managing the strife among its various classes of debt and equity holders.

"Classically," he said, "the battle is between the secured creditors on one hand – who get their money no matter what – and the unsecured creditors and the shareholders on the other – who feel the company is worth more alive than dead." □

COMMENT
Self-Insurance For U.S. Banks

Continued from page 4

would eliminate the risk of taxpayer loss now associated with the federal safety net. Shifting the safety net function to 100% cross-guarantees would then permit the Federal Reserve to concentrate solely on its monetary management duties.

The 100% cross-guarantees would not take away any existing protections for depositors and the financial system; cross-guarantees would only add to existing protections. Retaining federal deposit insurance, up to $100,000, to backstop 100% cross-guarantees, would give small depositors confidence that their deposits are just as safe as they now are.

Healthier Banks

The 100% cross-guarantees would dramatically reverse the declining creditworthiness of American banks. This reversal in turn would raise public and marketplace confidence in American banks, thus allowing them to raise funds more cheaply. Cheaper funds in turn would bring lower interest rates to borrowers.

> **"Privatization would eliminate the risk of taxpayer loss now associated with the federal safety net."**

The 100% cross-guarantees would enhance the overall competitiveness of American banks. Not only would banks enjoy a lower cost of funds, but appropriately capitalized banks would pay substantially less for deposit insurance than they now pay. In addition, banks would be free of many regulatory burdens that now add greatly to their operating expenses and limit their operational flexibility.

The 100% cross-guarantee concept builds on the existing strengths of the banking system, most notably the equity capital already invested in it. This capital and its earning power are more than enough to enable the banking system to withstand another Great Depression, once 100% cross-guarantees become a reality.

Increased Financial Stability

The 100% cross-guarantee concept would greatly increase financial stability within the banking system by fully and explicitly protecting all domestic and foreign deposits in American banks. This explicit protection would end uncertainty about the strength of the banking system that arises whenever a bank invests substantial uninsured deposits gets into financial difficulty.

Today, this uncertainty is competitively damaging to American banks because banks in other industrialized nations are not afflicted by uncertainties about their strength.

By protecting all deposits, 100% cross-guarantees would eliminate the daylight overdraft risk. Because 100% cross-guarantees could easily be extended to cover all liabilities of the payments system, guarantors effectively would bear the daylight overdraft risk as part of assuming the overall solvency risk of a guaranteed bank.

Timely takeovers of failing banks, before they become insolvent, would improve the overall efficiency of the economy by ridding the banking system of inefficient competitors. One of the hidden costs of the FSLIC debacle has been that it has burdened the banking system with overcapacity in the form of inefficient and insolvent S&Ls whose losses have been subsidized by the taxpayer.

Burden off Depositors

The 100% cross-guarantees would eliminate any need for depositor discipline. Because guarantors would protect all deposit balances, including balances of more than $100,000, there would be no need to rely on depositors to discipline the risk-taking proclivities of bankers.

Thus, 100% cross-guarantees would impose all risk assessment responsibilities on equity capital, which is best suited to assess and price financial risks. This would free a highly risk-adverse set of creditors (bank depositors) from a task that they neither like nor do very well.

The 100% cross-guarantee concept effectively eliminates the too-big-to-fail issue. Because guarantors would protect all deposits, it would not be necessary for the guarantors to liquidate a bank just to punish depositors. But banks can still fail under the cross-guarantee concept because their stockholders would get wiped out if the guaranteed bank becomes insolvent.

No Risk to Taxpayers

Because 100% cross-guarantees would eliminate practically all risk to taxpayers, federal deposit insurance would no longer represent a $2.8 trillion contingent liability of the federal government.

The risk-deterring effect of risk-sensitive premiums would encourage banks to lend and invest more wisely than many banks now do. Wiser lending would lead to a more productive

Hundreds of cases involving the Uniform Commercial Code are decided in the courts *every month!* Keeping up with on-going litigation requires hundreds of hours work...unless you have Quinn's monthly **Uniform Commercial Code Law Letter** at hand.

Each month, **Uniform Commercial Code Law Letter** reviews the state and federal cases with the greatest impact and the most far-reaching changes, covering all the important elements of each case. Giving you the information you–or your clients–need to stay on top of changing UCC law, the **Letter**'s comprehensive coverage includes:

- Analysis of the major points in each case, with clear definitions of positions and arguments of both sides
- Discussion of the factors that went into the decision and how it fits within the UCC framework
- Precise, practical commentary on a decision's impact on business governed by the Code and how you can adapt.

Written by Thomas M. Quinn, a nationally recognized authority on the UCC who is often cited in court opinions, **Uniform Commercial Code Law Letter** also contains a "Consumer Credit Report," which keeps you up-to-date on such critical issues as:

- Truth in Lending
- Fair Credit Billing Act
- Electronic Funds Transfer Act
- FTC Credit Practice Rules
- Fair Debt Collection Practices Act

With a subscription to **Uniform Commercial Code Law Letter**, you'll get monthly advice from a UCC expert who'll give you jargon-free analysis, useful planning guidance, and help you and your clients stay in compliance with the UCC. And you'll save a lot of valuable time. Subscribe now.

No Gain at Banks' Brazil Meeting

By PAUL KELASH
LDC Debt Report

Results of last week's meeting of Brazil's bank advisory committee, headed by Citicorp, and reports from economy minister Zelia Cardoso de Mello, marked another week of sound and fury regarding Brazil's commercial debt.

In what seems a regular phenomenon these days, nothing significant appears to have surfaced.

Labeled an "informational meeting," banks met in New York and rehashed old themes: Brazil should make some attempt to clear its arrears with banks before any serious negotiations begin, banking sources said.

Meanwhile, Mr. Cardoso is holding the line on Brazil's debt priorities: namely, dealing with the International Monetary Fund, followed by the Paris Club group of bilateral creditors, and then the banks. "In principle, negotiations will be in that order," Mr. Cardoso said.

But banks noted at the meeting that Brazil should be talking with banks as the IMF process is being worked out.

Despite its rhetoric with the banks, Brazil understands that as a condition for new loans from the IMF and World Bank, it may have to make some effort to clear arrears to commercial banks, as Citicorp chairman John S. Reed has argued in recent weeks.

David C. Mulford, U.S. treasury under secretary and architect of the Brady plan, visited Brazil last week and reportedly pressed hard for the need to resume payments to banks.

But reports out of Brasilia say that Mr. Mulford told Brazil the U.S. would accept a 20% reduction on U.S. Export-Import Bank loans and a 60% reduction on U.S. concessional food loans made to Brazil in the 1970s.

This bit of bilateralism ahead of IMF and Paris Club agreements could be bad news for banks because it could encourage the Collor administration to press banks for stiffer reductions.

LDC Debt Report is an *American Banker* newsletter.

Banks Lending to Venezuela Again

Money-Centers Are Willing to Provide New Funds

By JAMES R. KRAUS

As Venezuela's $20 billion debt-reduction deal with banks gets closer to being finalized, the most surprising outcome has been the willingness of several large money-center banks to provide Venezuela with new money.

Loans to Third World countries have been a major millstone around banks' necks and has contributed heavily to depressing their share prices.

Venezuela's debt is now trading at 47 cents on the dollar on secondary markets, so providing the country with additional financing could amount to throwing good money after bad.

And when Mexico concluded a similar debt reduction agreement with banks last year, only Citicorp was willing to advance Mexico a significant amount of new money.

Banks Ready to Lend

Yet this time around, Chase Manhattan Corp., Manufacturers Hanover10 Corp., and Citicorp have decided to grant Venezuela new money equal to 20% of their outstanding medium-term and long-term loans.

Manufacturers Hanover, for example, will provide Venezuela with $177 million in new money. Chase Manhattan with $156 million, and Citicorp with $120 million.

Other banks such as J.P. Morgan & Co.and Chemical Banking Corp. have opted to exchange part of their loans for bonds with a reduced interest rate and provide some new money as well.

Yet bankers and analysts said the decision was not at all surprising.

Banks are keen to avoid further writedowns they would have to make if they exchanged the loans on their books for Venezuelan bonds at a discount.

Never in Arrears

Venezuela is in far better shape than Mexico financially, has never gone into arrears on its debt, and has some $7 billion in reserves, including $5 billion in gold.

Most important, Venezuela stands to profit handsomely from the recent sharp increase in oil prices.

"Fact of the matter is, Venezuela is likely to produce more oil at higher prices. If I had the option of giving them (Venezuela) a discount or lending more money, I'd lend more money," said Richard X. Bove, first vice president at Dean Witter Reynolds Inc. in New York.

"It's hard to say that it's a bad option for the banks to pick," said Mark Gross, an analyst in New York with IBCA Inc.

Analysts added that most banks are now heavily reserved against losses on their Third World loans and that the stock market is unlikely to drive down banks share prices because of new loans to Venezuela.

"Everybody's felt all along that Venezuela is good money and that it is able to service its debt obligations. With oil heading north, they've become a pretty good credit," said one banker in New York.

"Venezuela has always been kind of on the fringes of the debt crisis and has been keen to maintain good relations with its banks," said another banker.

Unlike the Mexicans, who pushed mainly for debt reduction during the negotiations and offered banks a limited range of options, Venezuela showed greater flexibility during negotiations. □

Kuwait Offers Support to Its Banks Abroad

By PIERRE TRAN
Reuters

LONDON — Kuwait's finance minister, Sheikh Ali al-Khalifa al-Sabah, said he met heads of Kuwaiti banks in London and pledged the support of the government, the Kuwait Investment Office, and other organizations.

"I have told them that we, the government, the KIO and all our other organizations stand behind them," said the minister at a news conference.

"If any one of them is in liquidity difficulties, we will be more than glad and willing to tide them over."

Funds Still Controlled

Despite the occupation of Kuwait by Iraq, the government still controls extensive assets outside Kuwait.

Most Kuwaiti banks are lenders rather than borrowers. It is still unclear whether any are net debtors.

Sheikh Ali encouraged the chairmen of Kuwaiti banks to form a committee and to coordinate their activities globally.

"Our concern is their relationship with other international banks and on that regard, we are reconstructing the balance sheet of each and every one." The chairmen of each of the Kuwaiti banks are writing to the banks they work with, asking them for help in reconstructing their balances sheets, he added.

Information Not Available

Kuwaiti banks are unable to get access to assets and balance sheets at home and most only have London representative offices.

Representative offices are not licensed for bank activities such as deposit taking. They serve as eyes and ears of the home bank.

However, the minister said some of the Kuwaiti banks are British-based and these will provide offices to some of the other banks. Some banks are based in Paris and Geneva and these will work together, the minister said.

Sheikh Ali also said he had met investment managers at the Kuwait Investment Office, which holds major shareholdings in British companies, including some 10% in Midland Bank and a big stake in British Petroleum.

The office "has made a lot of money by taking a contrarian view of the market and thinks it may be the right time to buy," said Sheikh Ali, formerly Kuwait's oil minister.

The finance minister said on Wednesday in Bonn that Kuwait would be selectively increasing its holdings in German companies. □

COMMENT
Self-Insurance For U.S. Banks

Continued from *page 9*

use of credit within the economy, which in turn would enhance GNP growth.

In effect, risk-sensitive premiums would eliminate the "moral hazard" in deposit insurance that has caused so much wasteful lending and investing in recent years.

An End to Cross-Subsidy

Risk-sensitive premiums would largely, if not completely, eliminate the cross-subsidy in flat-rate deposit insurance premiums, a subsidy that now flows from good banks to the bad. In 1991, that cross-subsidy would cost America's better banks $3-$4 billion.

Risk-sensitive premiums would cause the nation's riskier banks, taken as a group, to pay for most, if not all, of the insolvency losses the failed banks in this group incur.

The 100% cross-guarantees would permit banks to escape the one-size-must-fit-all mentality of bank regulation and capital requirements. Cross-guarantees would effectively shift regulation to the cross-guarantee contract and to the risk-balancing incentives of risk-sensitive premiums.

This shift would give individual banks the flexibility to negotiate contractual terms that would permit them to innovate at their own pace and to tailor their capital structure to the lending and investing strategy best suited for that bank.

"Risk-sensitive premiums would largely, if not completely, eliminate the cross-subsidy in flat-rate deposit insurance premiums."

The 100% cross-guarantees would greatly improve opportunities for community-banks by freeing them of the negative consequences of the current small-enough-to-liquidate policy. No longer would community banks experience difficulty in gathering deposits over $100,000.

Cross-guarantees also would have the especially beneficial effect of lowering the cost of funds for community banks while permitting them to operate more efficiently.

The 100%-cross-guarantee concept can easily be extended to protect the liabilities of all providers of financial services, including securities firms, money market mutual funds, insurance companies, and even government-sponsored enterprises such as Fannie Mae and Freddie Mac.

Broader Capital Base

The 100% cross-guarantee concept can be structured to permit nonbank firms to participate as guarantors. Broadening the capital base available to guarantee bank deposits and other bank liabilities in this manner would further strengthen the financial backing of America's banks.

Perhaps the greatest benefit of 100% cross-guarantees would be to substantially depoliticize the banking business because banks no longer would have an incentive to seek political salvation for their banking troubles. Thus, 100% cross-guarantees would free the political process of the inherent flaws of federal deposit insurance.

The 100% cross-guarantee concept offers the only comprehensive solution to the irreparable problems of federal deposit insurance. Cross-guarantees also would bring many benefits to the American economy and to the American people while preserving the promise of federal deposit insurance. The way is clear. The time to act is now. □

1st Security Buys Thrift's Deposits

SALT LAKE CITY — First Security Corp. said it has acquired from the Resolution Trust Corp. $11.2 million in deposits of the Sweetwater Savings & Loan Association, Rock Springs, Wyo., for a $36,000 cash premium.

The deposits were transferred to First Security Bank of Rock Springs on Aug. 22. The former Sweetwater office opened the next day as part of the $6 billion-asset First Security system. Its 1,600 accounts were to be consolidated in First Security's Rock Springs office effective Aug. 27.

"We have completed three acquisitions in less than a year to strengthen our coverage of growing markets in Utah and Idaho and to enter profitable new markets in Oregon," said Spencer F. Eccles, chairman and chief executive officer of First Security Corp. "Two other acquisitions are pending, awaiting required approvals."

First Security operates 183 banking offices in Wyoming, Idaho, Oregon, and Utah, as well as a leasing company, two insurance companies, an investment management firm, and a discount broker. □

Thrift Acquiring $69 Million in Deposits

SALT LAKE CITY — First Federal Savings Bank said it has received approval from the Office of Thrift Supervision to purchase the retail deposits of the five branches of the Utah affiliate of Crossland Savings, Brooklyn, N.Y.

Gerald R. Christensen, chairman of First Federal, said it would acquire $69 million in deposits effective Sept. 28. On Oct. 1, three Crossland branches will reopen as First Federal locations, and two others will be consolidated in nearby First Federal offices.

All the Crossland branches are in the Salt Lake Valley. The $292 million-asset First Federal currently has four branches in Salt Lake and one in Price. □

Newly Revised Third Edition

Fully integrated coverage of Regulation CC and Article 4A of the UCC

UNFAILING SUPPORT.

Finally, there's a hands-on reference that presents clear analysis of all the rules and regulations affecting the collection of bank checks and other payment mechanisms.

The **Law of Bank Deposits, Collections, and Credit Cards, Third Edition**, gives you dependable guidance for dealing with the traditional problems associated with bank checks, and also deals extensively with related issues surrounding bank credit cards, letters of credit, wire transfers and EFT.

Most important, the new **Third Edition** offers completely up-to-date information and analysis of Regulation CC and Article 4A of the UCC—the most baffling sets of rules and regulations confronting the banking industry today.

Written by Barkley Clark and backed by the reputation of Warren, Gorham and Lamont, **The Law of Bank Deposits, Collections, and Credit Cards** contains a number of "dueling tips" to assist any type of financial institution in documenting relationships with depositors. Plus, a wide variety of litigation strategies are included to help you defend your institution against the midnight deadline to check kiting, from funds availability to setoff and more.

Best of all, **The Law of Bank Deposits, Collections, and Credit Cards** saves you hours of research time by bringing all this information together in *one* easy-to-use volume.

To order, reference offers commercial bankers, savings and loan associations, credit unions and thrift institutions the unfailing support found in **The Law of Bank Deposits, Collections, and Credit Cards.** Take advantage of this special opportunity to review this landmark reference FREE for 30 days—without obligation. Keep the book and pay just $98 plus postage and handling. Why risky? Don't risk it. Call now. **Examine it FREE for 30 days!**

Apocalypse for U.S. Banks? Not Now, Says Credit Rater

This report, published here in an edited version, was issued Aug. 22 by IBCA Ltd., a London-based credit rating agency.

In Eastern Europe and the U.S.S.R., Marxism is crumbling, to be replaced by capitalism at last triumphant; the "evil empire" has been destroyed, and market forces will solve all problems.

Overnight, primitive Skodas, Ladas, and Trabants will be converted into state-fo-the-art BMWs and Porsches, and every inhabitant of Eastern and Central Europe, Central Asia, and the People's Republic of China will be introduced to the culinary skills of Ronald McDonald.

"Outside the United States, Moody's has lowered ratings for several Japanese banks on the basis of its concern about real estate exposure."

Meanwhile, in the U.S., reputed home of modern capitalism, these same market forces, assisted by political chicanery that would have put the pre-perestroika Soviet Union to shame, seem to be on the verge of tearing asunder banks that are household names. No matter what they do, these banks seem doomed.

Media Hysteria

This, at least, is the message to be gained from the more hysterical outpourings of the media, particularly in the United States. In fact, the press has awakened public awareness to the point where we [members of the IBCA staff] now find our casual conversations with friends and family turning to discussions of the impending collapse of banks. This is in sharp contrast to the situation just a year ago, when mere mention of what we do was a certain way to put a quick end to any social conversation.

Faced by this onslaught, we have attempted in this report to answer the question: How bad is the current condition of the U.S. banking industry?

The report discusses the reasons U.S. banks have run into difficulties, reviews the performance of major banks during the 1980s, states our opinions on prospects for the industry, and comments on the actions, reactions, and possibly excessive power of rating agencies.

We believe that some banks will not survive the next recession, but we do not conclude that the whole U.S. banking industry is now teetering on the edge of a precipice. Our analysis shows that, in spite of all the bad news, there have been considerable positive developments among major banks in the past decade.

Our conclusion, under the circumstances, is cautiously optimistic: In brief, apocalypse for the U.S. banking industry at least has been postponed; maybe it has even been canceled.

The Rating Agencies' View

A special report we published in May 1989 . . . [compared] our ratings of banks throughout the world with those of the two other major agencies.

While noting that conclusions are difficult to draw because of the different number of banks rated in each country, we pointed out that U.S. banks were ranked at the bottom by all three agencies.

We also noted that ratings by Moody's Investors Service of banks outside the United States tended to be higher than those of both IBCA Ltd. and Standard & Poor's Corp. We demonstrated that the opposite was true in the United States, where Moody's was by far the "toughest" agency.

Since then, outside the United States, Moody's has lowered ratings for several Japanese banks on the basis of its concern about real estate exposure. All three agencies have lowered Australian banks' ratings, with Moody's leading the field and going further than the other two, and S&P and IBCA have dropped the ratings of the major Finnish banks and selected U.K. banks. IBCA has also raised the ratings of several continental European banks.

In the United States, the situation is clear: All three agencies are in agreement that the risks for U.S. banks are increasing. However, the extent of the reactions has varied, with Moody's going further than the other two and S&P recently taking actions to catch up. Only a select few banking companies have retained the ratings they held 18 months ago. According to Moody's, only three of the top 50 U.S. holding companies merit a rating of AA- or higher. In effect, the industry has been downgraded.

For the 52 largest banks, there have been only a very limited number of upgrades in the past 18 months. All three agencies have raised BankAmerica Corp. several notches, and both IBCA and S&P have raised the ratings for Manufacturers Hanover. S&P has raised five other ratings, IBCA three, and Moody's one. In contrast, IBCA has lowered its ratings of 19 companies, S&P 21, and Moody's 32.

As a result, the divergences we noted in our report last summer have widened. At the beginning of 1989, the average rating by both IBCA and SP was 5.3 (between A and A-plus), while Moody's was 6.0 (equivalent to an A). By early August 1990, the average IBCA rating had dropped by 0.9, to 6.2; the average rating by S&P by 1.2, to 6.5, and the average Moody's rating by 1.4, to 7.4 (between A-minus and BBB-plus).

Brisk competition is a basic

If you're still undecided about the Visa Debit program, check out our latest references.

(Over 1,300 more available upon request.)

Looks like we're on a pretty good winning streak. After all, the Visa Debit® program now has over 1,300 participants. Including First Chicago Bank, Norwest Bank and Dime Savings Bank.

Three institutions that built their reputations by making astute financial decisions.

Like participating in the Visa Debit program. By adding the Visa marks to your ATM card, you could realize DDA income from both interchange and additional periodic fees.

Meaning, Visa Debit can make your checking accounts even more profitable. And there's no better way to bolster your service, since a Visa Debit card offers your customers all kinds of convenience.

Including access to their checking accounts without their checkbooks. Access to cash at over 300,000 Visa Member branches and 52,000 network ATMs. And instant buying power with over 7.5 million merchants who accept Visa worldwide.

Call us at (415) 570-2120 in San Mateo, California, or at (703) 827-8404 in McLean, Virginia. We're ready to assist you with marketing and technical support, plus answers to any questions.

In other words, everything it'll take to add you to our references.

VISA

It's everywhere you want to be.

No Apocalypse Seen for Banks

Continued from *page* **12**

tenet for the success of a capitalist system, but there are problems when this is applied to a regulated industry in which weaker competitors are protected from failure. The U.S. Congress is responsible, because in the 1930s it established an inefficient regulatory system and a framework which handcuffed banks, preventing expansion of their geographic and product lines. Then, in the 1980s, Congress deregulated portions of the industry without reforming the deposit insurance scheme.

In recent years, Congress has not confronted the problems of the banks (and has been ineffective in addressing the problems of the savings and loan associations). Regulators are to blame for implementing laws in a draconian manner and adopting the doctrine of "too big to fail". Bankers are responsible for their slow adaptation to changing circumstances and their apparently immutable herd instinct.

The capacity problem is further exacerbated by nonbanking companies that are formidable competitors, such as insurance companies, auto companies, American Express Co., Sears, Roebuck and Co., and now American Telephone and Telegraph Co., with its credit card. There is no doubt this excess capacity has reduced the profitability of all participants and contributed to excessive risk taking by banks.

"For the 52 largest banks, there have been only a limited number of upgrades in the past 18 months. In contrast, IBCA has lowered its ratings of 19 banks, S&P 21, and Moody's 32."

Economic theory indicates that if individual companies do not have sufficient opportunities to earn adequate returns on their capital, then the capital should be returned to shareholders for investment in other vehicles. Additionally, banking is based on confidence, and steps to cut (or not raise) dividends are generally perceived by markets to be signs of weakness.

U.S. banks steadily increased dividends throughout the 1980s despite pressures on earnings. However, that appears to have been counterproductive, as banks stocks have not performed well anyway, which has made it difficult to raise equity.

Several factors will lead to an acceleration of the consolidation process – excess capital in the industry; capital insufficiency at many institutions, caused by excessive fragmentation in the industry; demands by regulators for more capital, and a difficult environment for banks to raise capital. Some consolidation may be relatively easy, but much of the process will be painful. Nonetheless, the result will be positive for survivors.

How Have Banks Really Fared?

The general consensus is that U.S. banks ended the 1980s in significantly worse shape than they were in at the beginning of the decade. This is particularly troubling since, after seven years of a relatively healthy economy, banks should be in a strong position.

Performance data for the last eight years of the 1980s on the 52 holding companies currently rated by IBCA demonstrate that in fact there have been a number of positive trends:

• Except for 1987 and 1989, which included large provisions for loans to lesser-developed countries, average return on assets have generally been between 70 and 80 basis points, and peaked in 1988 at 0.91%. Except in the past three years, average returns on equity were consistently close to the 13% mark.

"Brisk competition is a basic tenet for a capitalist system, but there are problems when this is applied to a regulated industry."

• Margins in the first five years hovered close to 4.4%, but in the past three years they have been closer to 4.0%. The latter years reflect not only the nonaccrual status of LDC loans, but also mounting competition for deposits.

• Offsetting the margin pressure in part, noninterest income has steadily increased relative to average assets, from 1.08% in 1982 to 1.85% in 1989.

• Relative to average assets, noninterest expenses rose sharply between 1982 and 1987 as banks expanded into new areas. But that trend has reversed in the past two years as banks have been under increased pressure to control costs.

• In the past three years , the banks have taken huge losses related to LDCs but for the most part are now immunized against remaining exposure. U.S. banks recognized LDC exposure as a problem later than continental European banks, but for the U.S. banks it was a much greater problem. Hence the procrastination.

However, in belatedly dealing with the problem, this group as a whole has demonstrated considerable resilience. In the past three years, LDC chargeoffs totaled more than $14 billion. At yearend 1989, these holding companies had reserves equal to almost one-half of remaining medium-term and long-term LDC exposure of $42 billion; four years earlier, reserves were less than 5% of medium- and long-term exposure of more than $66 billion. Net medium- and long-term exposure was below 25% of equity at yearend 1989, compared with more than

INDEX *of top stories*

The following is a selective index, arranged by subject, of the top stories in *American Banker* last week. The date of appearance precedes each item. This column was compiled by Matt Barthel.

COMMENTARY

8/20 Some banks have expressed an interest in securitizing middle-market loans. Sanford Rose examines the obstacles to securitization of commercial as opposed to consumer loans and how these obstacles can be surmounted. *Page 1*

8/21 To earn enough to satisfy stockholders, banks will have to drastically alter the mix of their businesses, writes Sanford Rose. *Page 4*

8/22 The government may regret the credit contraction, but it is also helping it along, writes James Grant. *Page 4*

8/23 Banks should begin planning now to comply with the Americans with Disabilities Act, writes Anne Wallace. *Page 4*

8/24 The next recession may be worse than the last, given the weakened resilience of the U.S. financial system, writes James Grant. *Page 4*

COMMERCIAL LENDING

8/20 Some banks have expressed an interest in securitizing middle-market loans. Sanford Rose examines the obstacles to securitization of commercial as opposed to consumer loans and how these obstacles be surmounted. *Page 1*

8/20 A Japanese bank has found a way around a recent move by the Ministry of Finance to make it more difficult to issue subordinated bonds. *Page 1*

COMMERCIAL REAL ESTATE

8/21 The factors now creating a virtual depression in real estate development may also hinder bank workouts in the 1990s. *Page 8*

8/21 Texas is emerging from an era of overbuilding, but the real estate market isn't out of the woods yet. *Page 9*

8/22 Two federal bank regulators have agreed on a new standard for real estate appraisals that is at odds with a previously adopted Federal Reserve Board rule vigorously opposed by the appraisal industry. *Page 1*

8/22 T. Lincoln Morison Jr., the longtime head of corporate lending at Bank of Boston Corp., resigned unexpectedly. *Page 1*

8/24 Shares of Wells Fargo & Co., a favorite trading vehicle of many bank stock investors, have tumbled dramatically in value this summer as worries have grown about the U.S. economy and in particular about the real estate market in California. *Page 1*

COMMUNITY RELATIONS

8/23 Bankers' banks, like Pennsylvania Independent, are serving as dependable sources of support services for smaller institutions. *Page 2*

CONSUMER SERVICES

8/20 MNC Financial Inc. is said to be gearing for growth in its credit card operation despite heavy losses from real estate loans. *Page 6*

8/21 Regulators are encouraging credit unions to sell some of their large mortgage portfolios in order to reduce interest rate risk. *Page 6*

8/21 MasterCard is planning to increase its interchange fees by about 11% next year. *Page 6*

8/22 Fleet/Norstar is rolling out a splashy program to increase use of its machines, at a time when some major ATM networks have thrown in the towel on promotional campaigns. *Page 6*

8/24 Small-business owners do not believe they are victims of a credit crunch, but they do worry about economic trends, a survey shows. *Page 8*

DEPOSIT INSURANCE

8/21 Rep. Frank Annunzio is opposing efforts by House Banking Committee Chairman Henry B. Gonzalez to fire researcher R. Dan Brumbaugh, who is working on a study of the bank insurance fund. *Page 1*

EARNINGS

8/21 A Salomon Brothers Inc. report that drove down the price of bank stocks provides a gloomy outlook for the nation's largest institutions, including a projected 19% drop in core earnings this year. *Page 1*

8/21 Thrift results were a mixed bag in the second quarter, with some companies posting big losses because of massive provisions for loan problems. *Page 2*

FAILURES

8/24 Customers of the failed National Bank of Washington have filed more than a dozen lawsuits alleging that the bank illegally used insured deposits and funds intended for low-risk investments to bolster the commercial paper program of its parent company. *Page 1*

FINANCE

8/20 The general syndication of RJR Nabisco Inc.'s $2.25 billion bank facility is basically a failure. *Page 1*

8/20 Major bank stocks and the broader market were clobbered again as a result of concerns that rising inflation and weak real estate markets have put the Fed in a no-win position. *Page 1&2*

8/20 The New Jersey Gaming Commission is expected to approve a $65 million bridge loan for Donald Trump, despite its doubts that the Trump real estate empire can support the restructured debt load. *Page 14*

8/21 As the agent banks on a $2.25 billion credit for RJR Nabisco Inc. wrap up an unsuccessful effort to sell down $1.4 billion of the loan in the secondary market, the lead banks on a $1.75 billion facility for Lin Broadcasting Corp. are gearing up for what some bankers are saying will be a similarly unsuccessful effort. *Page*

8/21 A Salomon Brothers Inc. report that drove down the price of bank stocks provides a gloomy outlook for the nation's largest institutions, including a projected 19% drop in core earnings this year. *Page 1*

8/21 Suburban Atlanta entrepreneurs, in a contrary move, are proposing to start their own bank. *Page 20*

8/22 When First Interstate Bancorp announced that it would suspend its discount dividend reinvestment program, it became the latest in a series of banks to show themselves unwilling to endure the shareholder dilution created by such offerings. *Page 1*

8/22 Major banks' stocks sold off sharply as investors became fearful that the situation in the Persian Gulf is deteriorating. *Page 6*

8/23 Bank analysts say some banks' profits could not pay dividends if proposed federal rules limiting payouts to shareholders were enforced. But many of the analysts are split on whether regulators will truly enforce dividend cuts. *Page 1*

8/23 First Union Corp.'s stock price hit new yearly lows this week, prompting some analysts to declare a buying opportunity despite their lingering concerns about the impact of its last acquisition. *Page 24*

8/23 Long-term bond yields have been rising steadily while short-term rates have remained relatively stable, but don't expect banks to jump to take advantage of the shift. *Page 24*

8/24 Customers of the failed National Bank of Washington have filed more than a dozen lawsuits alleging that the bank illegally used insured deposits and funds intended for low-risk investments to bolster the commercial paper program of its parent company. *Page 1*

8/24 Shares of Wells Fargo & Co., a favorite trading vehicle of many bank stock investors, have tumbled dramatically in value this summer as worries have grown about the U.S. economy and in particular about the real estate market in California. *Page 1*

8/24 In an attempt to extend their funding without paying the high costs of subordinated debt issuance, a growing number of banks are turning to the market for medium-term notes. *Page 16*

8/24 Ambase Corp., parent of Carteret Bancorp, said that an investor group has proposed to buy 50.1% of its common stock. *Page 14*

HOME MORTGAGES

8/23 Ten thousand customers of Sears and Southern Corp. received a rude shock when the bank notified them they were in default on their home mortgages. The customers, it turns out, were merely late with their payments. *Page 1*

8/24 As commercial banks stormed into home-mortgage finance over the past year, they appeared to take a special interest in collateralized mortgage obligations, or CMOs. Now, for the first time, regulatory data has identified the extent of that interest. *Page 1*

8/24 Meridian's mortgage unit has dropped a plan to acquire 16 mortgage-origination offices from a subsidiary of Travelers Corp. *Page 2*

8/24 George Bender, formerly of CenTrust, is about to go to bat for Lewis S. Ranieri as his top mortgage banking man. *Page 6*

INTERNATIONAL

8/20 A Japanese bank has found a way around a recent move by the Ministry of Finance to make it more difficult to issue subordinated bonds. *Page 1*

8/21 The dollar's decline against the mark and the yen since the Gulf crisis began signals that the U.S. currency may no longer be viewed as a safe haven. *Page 12*

8/22 Western banks are reviewing their relationships with Arab banks in the Gulf, but most are keeping credit lines open, bankers said. *Page 2*

8/22 Credit Suisse's move to expand operations abroad and strengthen its business base at home is winning praise from analysts. *Page 10*

8/23 The U.S. banking industry is in far better shape than most analysts believe, according to IBCA Ltd., a prominent London-based credit rating agency. *Page 1*

8/23 Erol Aksoy made the largest private investment ever by a Turkish national in the United States when he acquired control of Park Avenue Bank for $8 million this week. *Page 14*

8/23 Banco Caracas has requested Federal Reserve Board approval to acquire Eagle National Bank of Miami from Banco de Colombia. *Page 14*

8/24 National Bank of Kuwait, the Arab oil state's biggest commercial bank, has shifted much of its top management and activity to London. *Page 9*

INTERSTATE BANKING

8/21 Idaho banking authorities say they are exploring legal options to block an unusual maneuver by U.S. Bancorp to enter the state by moving the headquarters of a Washington subsidiary across the border. *Page 1*

LEGAL / CRIME

8/21 Idaho banking authorities say they are exploring legal options to block an unusual maneuver by U.S. Bancorp to enter the state by moving the headquarters of a Washington subsidiary across the border. *Page 1*

8/24 Customers of the failed National Bank of Washington have filed more than a dozen lawsuits alleging that the bank illegally used insured deposits and funds intended for low-risk investments to bolster the commercial paper program of its parent company. *Page 1*

LEGISLATION / REGULATION

8/20 House Banking Committee Chairman Henry B. Gonzalez is seeking to fire the outspoken economist R. Dan Brumbaugh from a committee-sanctioned study of the Federal Deposit Insurance Corp. *Page 1*

8/20 The New Jersey Gaming Commission is expected to approve a $65 million bridge loan for Donald Trump, despite its doubts that the Trump real estate empire can support the restructured debt load. *Page 14*

8/20 Moody's Investors Service Inc. received a rude shock when the bank notified them they were in default on their home mortgages. The customers, it turns out, were merely late with their payments. *Page 1*

8/24 As commercial banks stormed into home-mortgage finance over the past year, they appeared to take a special interest in collateralized mortgage obligations, or CMOs. Now, for the first time, regulatory data has identified the extent of that interest. *Page 1*

8/24 Meridian's mortgage unit has dropped a plan to acquire 16 mortgage-origination offices from a subsidiary of Travelers Corp. *Page 2*

8/24 George Bender, formerly of CenTrust, is about to go to bat for Lewis S. Ranieri as his top mortgage banking man. *Page 6*

8/24 Rep. Frank Annunzio is opposing efforts by House Banking Committee Chairman Henry B. Gonzalez to fire researcher R. Dan Brumbaugh, who is working on a study of the bank insurance fund. *Page 1*

8/24 Two federal bank regulators have agreed on a new standard for real estate appraisals that is at odds with a previously adopted Federal Reserve Board rule vigorously opposed by the appraisal industry. *Page 1*

8/24 Edward Harshfield's plan to rescue Columbia Savings may be in jeopardy if a Toronto-based company decides to pull out of a deal to buy the thrift's junk bond portfolio. *Page 2*

8/23 Bank analysts say some banks probably could not pay dividends if proposed federal rules limiting payouts to shareholders were enforced. But many of the analysts are split on whether regulators will truly enforce dividend cuts. *Page 1*

8/24 As commercial banks stormed into home-mortgage finance over the past year, they appeared to take a special interest in collateralized mortgage obligations, or CMOs. Now, for the first time, regulatory data has identified the extent of that interest. *Page 1*

MANAGEMENT / HUMAN RESOURCES

8/20 Shedding some of banking's past conservatism and mistrust of computers, chief executive officers are getting in on the technology act. They are doing so with great enthusiasm and, perhaps paradoxically, gaining the loyalty and respect of underlings from very different career backgrounds. *Page 1*

8/23 Curtis Reis went from a plush position at Crocker National to the hands-on job of turning around Alliance Bank in Culver City, Calif. *Page 10*

MERGERS / ACQUISITIONS

8/24 U.S. District Judge Stanley Sporkin upheld the government's 1989 seizure of Lincoln Savings & Loan Association, accusing Charles H. Keating Jr. and other officials of "looting" it. *Page 1*

Appeals Court Dismisses Claim By Shareholders

By STEPHEN KLEEGE

A recent decision by the U.S. Court of Appeals for the 7th Circuit in Chicago is giving bankers ammunition in fighting shareholder claims.

The opinion, written by appeals Judge Frank Easterbrook, affirmed a lower court ruling against shareholders of Continental Bank Corp. The shareholders, Rocco and Louise DiLeo, had sued the accounting firm of Ernst & Young in connection with losses at Continental Bank.

They contended that Continental understated its bad loans by $4 billion and should have been quicker to set aside loan-loss reserves.

Judge Easterbrook, who is also an economist, said the shareholders failed to offer any examples of fraud in actions by the bank and its auditor.

"Four billion dollars is a big number," Judge Easterbrook said. "But even a large column of big numbers need not add up to fraud.

"The story in this complaint is familiar in securities litigation," the Judge added. "At some time the firm bathes itself in a favorable light. Later the firm discloses that things are worse. The plaintiff contends that the difference must be attributable to fraud."

Borrowing a phrase from another court decision, the judge said there is no "fraud by hindsight, and hindsight is all the DiLeos offer."

Michael D. Gottsch, an attorney in the Haverford, Pa., firm of Greenfield & Chimicles, which specializes in shareholder litigation against banks, said the ruling does not apply outside the 7th Circuit.

But, he added, "in most of our bank cases, we voluntarily agree to dismiss" that cite the ruling.

He argued that the opinion sets an unreasonably high standard, since it seems to require shareholders to cite specific examples of loans – information banks don't make public. □

We'd like to shed some light on commercial banking law.

Commercial banking law. You've got to comply with it–but first, you've got to understand it.

Bank Officer's Handbook of Commercial Banking Law sheds light on this very complex and often confusing aspect of banking.

Combining historical banking material with recent changes in UCC codes and consumer protection statutes, the **Handbook** offers quick answers to the legal questions that arise in your day-to-day operations. It's an excellent overview of all commercial banking law in one comprehensive volume–concise, readable, and well-organized. And when you need further information, special footnotes lead you to specific sources of in-depth detail on the subject.

If you're a bank officer in a supervisory or decision-making position, you can't afford to be in the dark about commercial banking law. Get your copy of the **Handbook** today!

No Apocalypse Seen for U.S. Banks

Continued from *page 13*

125% at the outset of the LDC crisis, in 1982.

• Excluding LDC data, ratios of nonperforming assets generally trended downward during the decade and at yearend 1989 were below the levels at yearend 1981 (2.30% compared with 2.67%). This ratio has fluctuated considerably in the past three years: from 2.16% in 1987 to 1.68% in 1988 to 2.30% in 1989. The drop in 1988 may be attributed to the restructurings of First City, Mellon, and BankAmerica, as well as to improving trends at a number of individual banks. The spike back up in 1989 can be attributed to real estate problems at banks operating in weak markets.

• Excluding LDC data, there have been significant increases in both reserves relative to total loans (from 1.17% in 1982 to 1.77% in 1989) and reserves relative to nonperforming loans (from 68% to 125%).

• Chargeoffs have escalated: from 0.52% of average loans in 1982 to 1.19% in 1989. However, excluding LDC chargeoffs, the ratio in the past three years has been in the neighborhood of 70 basis points. That is somewhat above the levels in the earlier part of that decade, loan portfolios towards consumer lending.

• Over the eight-year period, the banks paid out over 56% of their earnings of $54 billion in dividends. Net income for the past three years aggregated $14.7 billion, yet the banks paid more than $15 billion in dividends.

• Despite the high payout ratios and the buildup of LDC reserves, equity ratios ended the 1980s remarkably close to their 1982 levels.

• On average, common equity was 5.26% of assets in 1982 and 5.32% in 1989. Total equity averaged 9.81% of loans in 1982, 9.61% in 1989.

In short, the statistics do not depict an industry on the edge of bankruptcy. However, they reflect history.

Multiple Threats

What threats loom in the future for the banks?

Real Estate. This is now viewed as the most significant problem and with reason. Texas banks initially suffered from energy loans, but it was real estate lending that put stakes through their corporate hearts.

Many banks have had significant growth in their real estate portfolios in recent years, and the rate of increase of nonperforming real estate loans has accelerated. At yearend 1989, the subject U.S. bank holding companies had $181 billion of real estate loans (excluding residential mortgages), 14.8% of total loans; more than $11.5 billion (6.4%) of those [real estate loans] were classified as nonperforming. Just two years earlier, the comparable figures were $153 billion (14.2% of total loans) and $5.5 billion (3.6% of real estate loans).

Real estate values in Arizona and New England have declined sharply, and all banks in those regions have been affected. Clearly there has been overbuilding in many areas throughout the country, and there are widespread signs of market deterioration. Moreover, actions taken by the Resolution Trust Corp. in its efforts to unload the massive amount of real state assets which it is acquiring in the S&L bailout are likely to exert a negative influence. This does not augur well; some of the more aggressive, poorly managed banks will certainly suffer significant problems.

HLTs. Throughout 1989 bankers were contending that they did not expect highly leveraged transactions (HLTs) to develop into a major problem area. The bankers noted that loans for HLTs receive considerable attention at senior levels of management and that individual banks were making only a small proportion of the deals they reviewed.

However, in the aggregate, a large number of deals did get done – and by definition, these loans are more risky than average. Through 1989, the performance of these loans was for the most part fairly good. But the environment has changed this year. No doubt more companies will experience difficulties, and those difficulties will be exacerbated by a recession or a period of higher interest rates.

Recession. The U.S. economy has been growing for seven years, but during that time some serious imbalances have been created, in particular the budget and trade deficits. The economy appears to be in a fragile condition and yet continues to limp along.

Considerable lip service has been paid to reducing the budget deficit (even President Bush is now willing to talk about new taxes), but the track record of Congress does not provide much cause for optimism. Moreover, recession concerns have been heightened by Iraq's recent invasion of Kuwait.

With all this negative news, the stock market's performance has been somewhat lackluster; moreover, within this market, bank stocks have not performed well. The low multiples at which U.S. banks are trading makes it extremely expensive for them to raise capital and places them at a competitive disadvantage vis-a-vis many non-U.S. banks.

The Case for Optimism

The problems above constitute an impressive catalogue of imminent doom. Is there a counterargument? It is not entirely facetious to claim that when all the experts agree something will happen, it then becomes quite certain that it will not. There are, nevertheless, other, more substantial reasons for optimism:

LDC Debt. Perhaps it is surprising to see this as a "good news" item. However, with only very limited exceptions, the growth in U.S. banks' capital and reserves since the onset of the LDC crisis in 1982 has brought them to the point where the LDC risk on their balance sheets is no longer sufficient to threaten the survival of individual banks.

We consider that LDC lending for the most part is no longer a bank problem.

Regulators. We have already examined the negatives posed by real estate; the positives are less obvious. Experience shows that over time, realized losses on nonperforming real estate loans ultimately tend to be less than on other types of lending.

For example, the REIT crisis in the mid-1970s led to very high levels of nonperforming real estate loans (in many cases more than 50% of such loans were nonperforming) and large chargeoffs late in the decade. But that was followed by significant recoveries in the early 1980s.

Real estate has always been a cyclical business. Exceptionally, as events in Texas demonstrated, a prolonged downtown can lead to sharp drops in values which wipe out the lending banks.

"In recent years, Congress has not confronted the problems of the banks (and has been ineffective in addressing the problems of the savings and loan associations). Regulators are to blame for implementing laws in a draconian manner and adopting the doctrine of 'too big to fail.' "

Various geographic areas in the U.S. are currently in the throes of a sharp downturn resulting from a lack of liquidity in the market, and we are not particularly sanguine about their short-term prospects.

However, we do not believe this is a rerun of the Texas phenomenon. The Texas real estate boom and bust had unique characteristics: for example, almost total dependence on energy, unbridled almost naive enthusiasm, and lack of land-use controls.

The recent actions of regulators, although apparently harsh, have generally been designed to nip the crisis in the bud. In its reviews of real estate portfolios, the Office of the Comptroller of the Currency has been applying new standards for about eight months, and we suspect the worst in over.

The office tried first to review those banks it identified as having the highest probability of difficulties. The likelihood is that it chose well, and thus that banks that have yet to be examined under the new standards are indeed in better shape. Those banks also had time to prepare themselves for review.

In addition, we do not expect any major surprises at the large banks which have on-site regulators on a full-time basis.

HLTs. As noted above, HLTs are a potential threat, and some banks will have difficulties with their portfolios. But we expect that these problems will be on a much smaller scale than the LDC situation – much more contained and more selective (that is, affecting those banks which have been less rigorous in their credit standards).

HLT loans are generally diversified by industry, and bankers have a much greater capacity to exercise control over these loans than they do over loans to sovereign governments. Also, banks generally hold a senior-creditor preference in HLT transactions.

Total HLT outstandings of the 52 largest companies were $75 billion at yearend 1989, and less than 3% of these loans were nonperforming. We anticipate total HLT exposure will decline and the nonperforming level will increase, but we expect the losses will be manageable.

"Bankers are responsible for their slow adaptation to changing circumstances and their apparently immutable herd instinct."

Core Funding. The essential although not always immediately apparent cause of bank failures is deterioration in asset quality. Perhaps the best insurance against this is a strong core deposit base, one of the inherent strengths of traditional retail banks.

In part because of the deposit insurance scheme, such deposits generally do not leave banks when the banks encounter difficulties. The asset quality problems at BankAmerica were probably as severe as those at Continental Illinois; however, the latter required a rescue package when large depositors started fleeing. In contrast, BankAmerica's strong core deposit base provided it with sufficient time to recover using its own resources.

A major contributor to the problems of the Texas banks was their lack of strong customer deposit bases. It is a comfort in present circumstances that this is one of the accepted strengths of many regional banks.

Foreign Banks. Foreign banks might be regarded as posing yet another threat to the U.S. industry. In our opinion they do not.

For the most part, their expansion into U.S. markets has not been particularly successful. That is not surprising, since, with the exception of particular niches, it is difficult to see the competitive advantage that foreign banks would have over the natives. (This is not to praise U.S. banks, as they have in general been no more successful when they have entered non-U.S. markets.)

The one exception to date in the U.S. has been Japanese banks which, because of their access to relatively cheap capital, have been able to compete on price for many services. However, by U.S. standards the Japanese banks have not been particularly profitable in their U.S. endeavors.

We expect that Japanese banks will become significantly less aggressive as they become more constrained in terms of capital adequacy.

Also, in the near term, more of the capital that foreign banks can utilize outside their home countries should wind up being directed to European Community and Eastern European countries.

The S&L Industry. The RTC bailout of the S&Ls has both positive and negative ramifications for commercial banks, but on balance we believe it should come out positive.

First, some of the excess capacity (and generally the capacity that was acting most irrationally) is being taken out of the financial system.

Second, banks are being given opportunities to expand their networks at favorable prices with little risk.

The downside stems from the tremendous amount of real estate assets that the RTC will have to sell, potentially depressing the market further. We suspect that the RTC will not be particularly efficient in performing this function; however, we gain some solace from its inability to actually create new problem assets.

Economics, Demographics. The U.S. economy is still the largest in the world, and while it is presently going through difficult adjustments, we do not see its status changing yet.

There are some events currently taking place in the world, such as the developments in the Soviet Union, which should have a positive impact on the United States. The United States could also benefit from the opening of new markets in Eastern Europe. And there is hope that steps taken by the Latin American countries under the auspices of the Brady plan will help to improve their economies.

Finally, present demographic trends imply an increase in the country's wealth and a higher propensity to save on the part of aging baby boomers.

Reduction of Excess Capacity.

A considerable amount of capacity is being removed from the banking industry. In contrast with the prior four decades, there were a large number of failures of commercial banks in the 1980s.

The number of mergers has slowed in recent years, but we expect that capacity will be reduced further through the merger process.

So far this year, four institutions have relinquished their status as primary dealers. These data is difficult to find a major bank that has not undertaken a restructuring that includes a reduction of "nonstrategic" businesses or product lines. Competitive pressures will cause this process to continue.

There has also been a reduction of capacity outside the banking industry. Examples are the demise of the S&Ls, the retreat of foreign banks, the failure of Drexel, and cutbacks by investment banks.

This theory says that if there is

Are U.S. banks missing out on global marketing opportunities?

There is no denying that the world is changing. But are U.S. banks changing along with it?

In this special report, *American Banker* takes a look at whether U.S. banks are taking advantage of the latest opportunities to compete globally. Or are they isolating themselves and missing out?

You'll get answers to questions like these:

Are U.S. banks handicapped in the global market because of the layers of regulation, high costs of raising capital and domestic real estate problems?

Where do banks get demographic information and how do they measure demographic changes around the world?

What is the latest technology used to help with international marketing strategies and demographics?

What are the ethnic markets banks are missing? And what type of services are most useful for these groups?

How do world environmental concerns affect corporate marketing strategies?

With this special report from *American Banker*, you'll be able to identify changing international markets and figure out if there really is a global opportunity for you, and if so, how you can best capitalize on it.

Cullen/Frost Struggles; Subsidized Banks Thrive

Continued from *page 1*

omy."

Inspired by family heritage, not to mention personal pride, Mr. Frost said he's determined to turn around the $3.3 billion-asset company before retiring as chairman and chief executive in late 1992.

"We are going to make it," the 62-year-old executive vowed.

While the more prosperous of the nation's bankers might not regard keeping Cullen/Frost alive as a major achievement, the perspective is quite different here in Texas. In a state where hundreds of banks and thrifts have failed, Cullen/Frost has not required a penny of federal assistance.

"To be standing when the rest of the industry is gone means a heck of a lot," said Peter Bartholow, chairman and chief executive of MCorp, which entered bankruptcy proceedings last year after 20 of its 25 member banks were seized by federal regulators.

A Secret at the Core

As real estate markets weaken nationwide, Mr. Frost's story speaks to possibly hundreds of bankers facing protracted market downturns that will test their mettle.

Mr. Frost's secret? Maximizing the profitability of core operations.

During the past 42 months, the bank has eliminated 275 of the 2,097 jobs on its roster, reducing quarterly payroll expenses by more than $1 million.

The bank increased service charges, raising quarterly fee income by roughly $1.4 million, or 33%. Meanwhile, the bank's trust unit racked up a 54% increase in assets under management, yielding a 54%, or $1.6 million, increase in quarterly trust revenue.

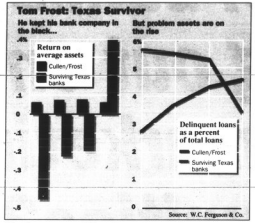
When it came down to deals proposed by familiar developers, however, the bank jumped right in, at times extending the same kind of credit previously denied strangers. Now, the chickens have come home to roost: At midyear 1990, real estate made up 78% of the bank's problem assets.

Low-Cost Deposits

By wooing customers with old-fashioned relationship banking, Cullen/Frost also attracted an almost 10% increase in low-cost consumer deposits. It reinvested the money in securities and posted a 5%, or $1.3 million, increase in quarterly net interest income during the 42 months when its problem assets were more than doubling.

"We stayed with the basic blocking and tackling, and that's what got us this far," said Mr. Frost, who is a director of the Federal Reserve Bank of Dallas.

That strategy helped Cullen/Frost report profits – albeit slim ones – for the last 15 consecutive quarters. During that time, all of the larger Texas bank holding companies either failed or sold themselves to new owners, who subsequently had to prop up their Texas acquisitions. Cullen/Frost last year earned $2.7 million, or 31 cents a share.



The bank's minuscule profits were achieved at a steep price, however: the sale of many prized assets.

Steady Operating Losses

Excluding special gains, the company suffered pretax losses of more than $19 million in the 42 months ended June 30. The special gains – including sales of securities, the bank's headquarters building, and data-processing servicing rights – transformed those results into $7.7 million of net income.

"They have muddled through by selling assets as needed," said Sandra Flannigan, a vice president at Alex. Brown & Sons Inc., Baltimore.

Though analysts are concerned about Cullen/Frost, they appear to hold Mr. Frost in high regard. "He is down-home, folksy, and has a reputation for honesty and integrity," said Mr. Anderson, the Stephens Inc. analyst. "There is more than luck involved in his bank's survival."

Still, Cullen/Frost is in trouble.

Delinquent Loans Climb

In the past 18 months, the company's total of delinquent loans and repossessed properties jumped 39%, to $136.7 million or 9.9% of gross loans. Experts called that level dangerous.

Reluctant to sell his prized trust unit – a profit center that analysts value at roughly $60 million – Mr. Frost can only hope that a recent slowing of loan delinquencies marks the beginning of the end of the bank's portfolio deterioration.

The trend of rising nonperforming assets "has got to change, or we are in trouble," he admitted.

At best, said Ms. Flannigan, Cullen/Frost can expect several more years of marginal results as it works to shed problem assets, a view held by several analysts who follow the company.

Family Traditions Helped

Meanwhile, Mr. Frost is thanking his lucky stars that the bank missed out on many lending opportunities during the Texas real estate industry's go years. One restraint then was Cullen/Frost's lingering troubles with energy loans.

Equally important, Mr. Frost maintained, was that he followed most of his family's traditional banking practices.

He fondly recalled how his great-uncle Joe – the J.H. Frost who was at the helm during the Great Depression – taught him to lend on the basis of customer relations and to avoid the temptation of plowing most depositor funds into loans.

By investing a huge chunk of depositor funds in securities, Mr. Frost avoided a bet-the-bank concentration on real estate loans and established a pool of investments that easily could be sold to meet liquidity needs.

One 'Violation' Hurt

Still, Mr. Frost got hurt when he violated one family banking rule: Never lend on raw land. At midyear 1990, almost half of the bank's $50 million worth of foreclosed real estate was land. "Uncle Joe wouldn't have approved of that," said Mr. Frost.

But as it turned out, J.H. Frost's traditional lending approach had its own weakness.

Relationship banking as practiced by Cullen/Frost during the boom years in Texas real estate meant that the bank shunned speculative loans on projects spearheaded by unfamiliar dealmakers. So far, so good.

When it came down to deals proposed by familiar developers, however, the bank jumped right in, at times extending the same kind of credit previously denied strangers. Now, the chickens have come home to roost: At midyear 1990, real estate made up 78% of the bank's problem assets.

Going Along with Customers

"We are taking it on the chin because we went along with some of our own customers," Mr. Frost said.

These mistakes did not kill the bank. But now, Mr. Frost and his management team must endure a veritable survivor's curse.

Because the bank is loaded with problem assets, it faces years of additional struggle just to get back on its feet. This spring, Mr. Frost canceled plans for partial retirement, retaining the chief executive post that was to have been taken by bank president Robert McClane.

Moreover, Cullen/Frost has little chance of being bought out soon by a larger and stronger institution that could provide capital needed to restore its competitive prowess.

Acquirers Not Attracted Now

At this fragile stage in the national economic cycle, potential buyers would not want to compound their own portfolio uncertainties by acquiring Cullen/Frost, said Ms. Flannigan.

An irony of Mr. Frost's predicament is that all the big failed banks he outlasted have been rebuilt with federal assistance – and now several are coming after his market.

In Cullen/Frost's own back yard, for example, San Antonio Savings Association was acquired by First Gibraltar Bank. And the failed banks of National Bancshares Corp. of Texas recently were acquired by NCNB Texas National Bank, the largest banking company in Texas.

Backed by substantial capital, and free of any exposure to problem assets, these federally subsidized Goliaths can attack the market with a vigor that Cullen/Frost won't be able to muster for years.

Portfolio War Still Rages

"We've still got our problems, and everyone else's are solved," conceded Mr. Frost. But as is typical of an executive whose bank is in trouble, he can barely find time to think about competition. He is more concerned about Cullen/Frost's portfolio.

Looking at the worry lines in his face, and hearing the anxiety in his voice, it is clear this executive has been walking at the edge of a high precipice and that he has no choice but to keep on.

That is the price survivors must sometimes pay. And for T.C. Frost, there is no other way: "The war is still on, and we have much to do before we can breathe any sighs of relief." □

Banking Coverage Where It Counts

Seidman Wants Extra Latitude To Raise Rates

Continued from *page 1*

sured deposits, effective Jan. 1. The proposal, which was put out for public comment Aug. 14, is virtually certain to gain final approval.

The thrift bailout law had required that the 12-cent premium now paid by commercial banks rise to 15 cents Jan. 1. The FDIC, facing the prospect of a $2 billion net loss to the insurance fund this year, stemming from bank failures, voted to tack on an additional 4.5-cent increase.

Mr. Seidman said his agency "explored" whether it could raise premiums above the 19.5 cents allowed in the bailout law. But the FDIC's lawyers advised against it because "they didn't think we ought to assert that position, although that wasn't entirely clear," he said.

When asked what the agency would have done had it not faced a 19.5-cent ceiling, Mr. Seidman said it probably would not have gone higher. "Weighing the size and the percentage increase, the number we arrived at was a good sound business judgment as to what we ought to do," he said.

Under the bailout law, the FDIC has authority to raise premiums an additional 7.5 cents in 1992. But if new legislation were passed, a rise could come sooner.

"My sense is that there is less than a 50-50 chance of that happening this year, but, boy, I certainly wouldn't rule it out," said Bert Ely, president of Ely & Co., an Alexandria, Va.-based financial consulting firm. "I think there is enough concern about the size of the fund."

By yearend, the bank fund is expected to drop to 55 cents for each $100 of deposits insured, down from 70 cents last Dec. 31. That would mark the fifth straight year the fund's coverage has declined.

The health of the fund has caught the attention of several powerful members of Congress, and observers contend the FDIC may get power in new legislation to increase premiums at its discretion.

Already this month, House Banking Committee Chairman Henry B. Gonzalez, wrote Mr. Seidman asking whether he thinks the premium assessment should be raised to 23 cents. Such an increase would place bank premiums at parity with those for thrifts.

Rep. Gonzalez, D-Tex., noted that the latest increase will not bring the fund's coverage to $1.25 per $100 of insured deposits "for at least five years." The FDIC's target is to reach that level by 1995.

"I am considering a proposal to lift the current ceiling on annual premium increases, as well as the ceiling on designated insurance fund reserves," Mr. Gonzalez wrote.

Although Mr. Seidman said he is satisfied with the most recent increase, he thinks additional flexibility would be a good idea. □

"He is down-home, folksy, and has a reputation for honesty and integrity. There is more than luck involved in his bank's survival."

No Apocalypse Seen for Banks

Continued from page 16

sufficient commentality of interest, the parties involved will ensure the appropriate result. A sound banking system is a prerequisite for a healthy economy, and we expect that actions will be taken to ensure its soundness. The stakes are too high for failure.

(This theory did not hold true for S&Ls, as they no longer serve a function that other financial intermediaries cannot perform.)

Congress and regulators have not had a great track record, but we believe the point has been reached where they must and will take necessary steps to reform the industry.

This report has identified factors that have weakened the credit quality of banks and have created concerns. We have also pointed out the significant variation in ratings among the three rating agencies.

Sadly for the purist analyst but happily for the banks, it is highly unlikely that we will ever find out which of the rating agencies was right. Unless there are wholesale bankruptcies, each agency will claim success.

IBCA will argue "I told you so."

Moody's will say that more banks would have failed but for their prescient actions, which heightened awareness of the problems and brought the U.S. banks back from the brink.

S&P will be in the happy position of being in the middle and claiming they were right whatever happens.

Perhaps the most important message from the market is that a rating agency can exercise excessive power. And that is the fault of investors, not of the rating agencies.

When Moody's lowered Citicorp's short-term rating, it reduced the pool of potential investors in Citicorp securities, cost Citicorp an estimated $5 million to $10 million a year just for its commercial-paper program, and tarnished the bank's image.

Moody's may be right or may be wrong, but it appears extreme that a decision made by a small group of all-too-human analysts can be given such a valuation.

Fed Seen on Steady Course in Rough Seas

By GARY SEIDMAN
Reuters

NEW YORK — Patience, the Federal Reserve appears to be counseling, is the most prudent method of dealing with the troublesome state of the U.S. economy.

Just days after its monetary policymakers gathered to commiserate over what may be the Fed's greatest dilemma since the 1987 stock market crash, the central bank seems to be signaling that a steady interest rate policy is the most appropriate, economists said.

"The Fed is just like the rest of us. There is a certain ambivalence about what is happening," one economist said.

Inflation, Weakness

Inflation and sluggish economic growth are the symptoms for which U.S. financial markets are seeking a remedy.

"The bond market is worried about inflation, and the stock market is worried about recession. The Fed is trying to figure out which of these two is the bigger menace," said Robert Declemente, an economist at Salomon Brothers Inc.

A soaring oil price is the most worrisome culprit. Since Iraq invaded Kuwait 21 days ago, putting the Middle East in a state of war readiness, oil has jumped more than $11 a barrel to its highest price since 1983. The Dow Jones industrial average, in turn, has fallen to its lowest level in a year.

The dollar is trading at record lows against the German mark, and yields on Treasury bonds are at four-month highs.

Dollars Diverted to Gas Pump

The concern is that the surge in oil prices will detour Americans' disposable income to the gas pump. It will increase the costs of manufacturing, cutting into profit margins and ultimately costing workers their jobs at companies that cannot compete. Economists point out that the implications are both inflationary and recessionary.

Add to that the unknowns of moving into recession with a budget deficit that amounts to 3% of gross national product, the cost of bailing out the savings and loan industry, liquidity problems at commercial banks, and a corporate sector so highly leveraged that even a mild recession could cause massive loan defaults.

A Waiting Game

"Until the Fed has a clear indication how the economy and the markets will react to a rate change, I can understand why they have to wait on an easing," one economist said.

On July 13, when the Fed last cut interest rates after holding policy steady for seven months, the adjustment did not deter a rise in long-term bond yields.

"They lost control over rates," the economist said. "When the yield curve flattens – and that could be a while going the oil implications – then they can ease again."

It was the consensus among Wall Street economists just 10 days ago, before July's consumer price report showing inflation on the rise even before the Iraqi conflict broke out, that another quick easing of interest rates would address the immediate recessionary concerns. □

DEALS: Fed Survey Confirms Banks Are Cutting Back on Their Loans

Continued from page 1

types of nonmerger-related business loans. Middle-market companies – with annual sales of $50 million to $250 million – faced the tightest squeeze.

The report also showed banks have slowed their sales of business loans and have become less willing to extend home equity lines of credit.

The Fed study was based on a survey of 60 domestic banks and 18 U.S. branches and agencies of foreign banks. It was conducted by the central bank's division of monetary affairs as part of a periodic assessment of senior loan officers' opinions.

According to the August survey, the most conspicuous aspect of the credit contraction was in loan covenants: 53% of domestic banks said they had tightened covenants for middle-market borrowers, while over a third had done so for their large borrowers.

Other Approaches

Tightening was also reported by banks reducing the maximum size of credit lines, raising spreads on loan rates over base rates, and increasing collateral requirements.

Of the surveyed banks surveyed, 43% said they had set more stringent standards for middle-market customers.

In the already depressed market for commercial real estate, about three-quarters of respondents said they had imposed tighter credit standards over the last three months for applications to finance commercial office buildings. This figure was similar to that reported in a Fed survey of lenders last May, and in both cases a large number of respondents reported tightening "considerably."

Outlook Is Key Factor

"By far the most important reason domestic respondents gave for tightening their credit standards in the last three months were a less favorable economic outlook and industry-specific problems," the Fed survey concluded. It also cited current pressures on banks' capital positions and capital precautions expected to result from a deterioration in loan quality.

Also, the Fed said, many banks cited regulatory pressures as a reason for tightening. Some members of Congress and other critics have pointed to regulatory treatment of problem loans as the cause of a purported "credit crunch" in New England.

The Fed's August survey also indicated that after years of continuous expansion, the growth in sales of commercial and industrial loans had cooled somewhat. Loan sales were up in the year ending June 30, 1990, by only $8 billion, to $20 billion, from $28 billion in the year before.

Fed officials suggested part of the slowdown in growth was a renewed interest by banks in improving loan portfolios and some decline in the quality of loans sold. The ratio of nonperforming loans rose to 3.5% as of June 30, up from 1% a year earlier.

Of the business loans sold, a greater share represented obligations of investment-grade borrowers – perhaps reflecting "purchasers' concern about credit quality," the Fed survey suggested. Loans from investment-grade borrowers rose to 44% of the market as of June 30, up from 35% the year before, the Fed said.

Merger-related loans remained an important source of loans sold – 37% as of June 30 – but had fallen from 45% a year earlier due to the declining volume of merger activity.

Branches and agencies of foreign banks continued to be the largest-percentage sellers, but the Fed noted, even though their holdings are down from last year, small and domestic banks "significantly" increased their holdings in the year ending in June.

Plus System

ADD PLUS® TO YOUR CIRRUS® ATMs AND GET AN EXTRA 150 MILLION

Soon Cirrus® members will be able to cash in on Plus System® customers. Adding the revenue potential of over 150 million Plus® cardholders.

So, by adding the Plus logo to your ATMs, you will start attracting customers who used to pass you by!

For information, please contact Ron Reed, vice president and general manager, at 303-620-7318. And make the most of your ATMs.

Security Pacific Asked to Renew Long-Term Loan

By STEPHEN KLEGGE

Everest & Jennings International, the world's largest wheelchair maker, is trying to persuade its main lender, Security Pacific Corp., Los Angeles, to renew long-term financing.

The manufacturer has laid off 55 workers in an effort to trim costs at its Camarillo, Calif., headquarters. Raymond V. Thomas, chief financial officer, dated the company's problems from its 1982 move into new facilities that were "far too large."

Although the company was able to finance its new facility from the sale of its former Los Angeles property, Mr. Thomas said, problems arose late last year when a $31 million loan from Security Pacific matured and an outside investor, Industrial Equity (Pacific) Ltd., gained control from the Jennings family.

Complex and thus far unsatisfactory negotiations among the investor, the company, and the bank ensued, Mr. Thomas said, and E&J borrowed $14.1 million for working capital using promissory notes to IEP.

The wheelchair company said it is operating on the basis of informal day-to-day waivers and extensions from the bank; the last formal waiver and extension agreement expired July 31.

Security Pacific declined to comment.

The promissory notes came due Aug. 15 and also are being extended on an informal, day-to-day basis, E&J said.

The Camarillo plant accounts for about 65% of the company's worldwide business. An operation headquartered in Germany and financed by a group of German banks accounts for the balance of the business.

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding. (As of June 30, 1990). The market value cutoff for banks was $56.71 mil. and for thrifts $107.8 mil.) **52 Wk Hi** Las the moving 52-week high and low closing prices for the stock. **PE** is the price-earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. **Mkt. to book:** the ratio of the current day's closing price to the stock's book value, expressed as a percentage. **Book value** is adjusted for announced earnings and dividends. **Chg.** The price at the close of trading on the previous day. **Chg.** The change in the **AB Bank and Thrift Index:** A weighted average of the top 200 banks in market value and the top 50 thrifts in market value, respectively. Highlights one largest percent gainers in banks and two volume indicators most shares traded and today's volume as a percentage of average shares traded over the past 90 days.

Data sources: SNL SECURITIES, Charlottesville, VA. 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides SNL with the daily prices.

Analysts Cite Bargain Hunting In Big Bank Rise

By GORDON MATTHEWS

NEW YORK — Bank stocks rallied Monday as the overall market soared absent bad news from the Middle East and amid hints that higher interest rates may not be a certainty after all.

But careful and selected bargain hunting seemed more the order of the day than a fundamental change in investor attitude or economic outlook, pointed out one banking industry analyst.

"For a day with a 90- to 100-point upward move in the stock market, it was a relatively quiet day on our trading floor," said Judah S. Kraushaar, first vice president of Merrill Lynch Capital Markets Inc.

Dow Average Jumps

The widely watched Dow Jones industrial average closed the day up 78.71 points, or 3.1%, after having been ahead more than 90 points during the day. The *American Banker* index of the 225 largest publicly traded bank stocks rose 3.14%, its largest single-day advance since May.

The biggest gainers among banks were money-center institutions that have boasted high dividend yields and top-quality regional and superregional banks. Analysts took this as strong evidence of bargain hunting.

In the market for Treasury debt, yields declined as prices rose, indicating at least a short-term easing in interest rates.

Money-Centers Climb

Among money-centers, Citicorp was up $1 to $18.50, while Manufacturers Hanover Corp. was up $2 to $25.375. Chase Manhattan Corp. was up $7.5 cents to $17.875, while Republic New York Corp. was up $2 to $544.375.

Among top superregionals, which have been hit hard by profit taking in recent weeks, the gains were also dramatic. Banc One Corp., Columbus, Ohio, was up $1.25 to $26; NCNB Corp., Charlotte, N.C., was up $1.50 to $33; and First Wachovia Corp., Winston-Salem, N.C., was up $1.625 to $36.625.

The major California banks, which have also been pummeled in recent weeks, posted large gains as well. Wells Fargo & Co. was up $2.125 to $54.25, Security Pacific Corp. was up $1.25 to $27.25, and BankAmerica Corp. was up $7.5 cents to $21.25. □

Citicorp Called Barometer of Consumer Loans

By GORDON MATTHEWS

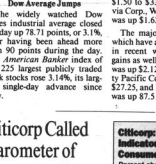
If the economy is headed for recession, consumer lending may be the next banking industry problem. And some analysts believe that shares of Citicorp, the nation's largest banking company, may be a good yardstick of such developments.

Consumer debt spiraled upward in the 1980s, hitting 16% of personal income at the end of 1989, according to government figures. Citicorp's major subsidiary, Citibank, has a huge consumer loan portfolio, partly because it is the leading card-issuing bank in the country.

On Monday, Citicorp's stock rose 87.5 cents to $18.375 as the stock market enjoyed a broad rally in the absence of any adverse developments in the Middle East. But its shares are down some 25% since the end of the first quarter, a bit more than other banks.

"As various regions of the nation enter recessionary environments, we believe bank earnings will be impinged by increasing consumer loan losses," according to Norman Jaffe and Raimundo C. Archibold Jr., bank analysts for Fox-Pitt Kelton Inc.

Because consumer lending — especially credit cards — is among their most profitable lines of business, many banks expanded rapidly in this area in the 1980s. Some banks became even more aggressive when other businesses, such as real estate lending, began to slow.



From 1982 through 1989, consumer loans held by commercial banks increased 12% annually, the Fox-Pitt analysts noted.

Keeping an eye on Citicorp is a good way to keep an eye on consumer loan developments, they said. Unlike most other banks, it discloses nonaccrual consumer loans. The figures show that past-due loans of this kind began rising sharply a year ago after several years of stability.

Consumer loans 90 days or more past due were 3.45% of outstandings at the end of the second quarter, up from 2.65% a year ago. So far, however, the higher delinquencies have not translated into high loan losses for the big New York bank. □

CAPITAL

More Banks Forced to Weigh Private Equity

Continued from *page 1*

thinking about issuing $100 million to $200 million in equity.

"With most of these investors, their tendency is not to want to deal with a situation that is small," said John Adams, a director of financial institutions at First Boston Corp. He said he is working with banks on initial phases of two or three deals.

Those outside the discussions mention Chemical Banking Corp., First Fidelity Bancorporation, Valley National Corp., and Southeast Banking Corp. as likely players.

Those four, said PaineWebber, Inc. analyst Thomas K. Brown, either need the capital to ensure survival — as does Southeast Banking — or find themselves in turnaround modes, eager to take advantage of opportunities but short of the capital required for regulatory approval.

"With confidence in the banks at very low levels, a public offering is not an option. Valley said it was not considering a secondary deal, and the other three declined to comment on whether they are investors.

"A lot of banks are seeing opportunities to acquire deposits in very attractive markets that are for sale in their franchise area. But you can only do so much if your capital base is strong," said Jonathan Kagan, a managing director of Corporate Partners, a Lazard Freres & Co.-sponsored fund that bought $145 million in new private equity from Minneapolis-based First Bank System in June.

The issue of privately placed equity is a thorny one for banks because of the risk of selling a block of equity to one holder.

"The biggest issue for banks and boards is having a block of stock in one person's hands," said Peter L. Gartman, chief financial officer at MNC Financial Corp. "Most boards are reluctant to do that. It's primarily a control issue."

And because such shareholders hold very large stakes, "they'll have an opinion [management] will have to listen to. A lot of bank managements might not want someone in that who would disagree with them," Mr. Gartman said. Still, he said, some banks are finding that, though they dislike giving one shareholder so much clout, they are running out of alternatives.

After a huge loss in the second quarter, MNC this month agreed to sell $180 million of cumulative convertible preferred stock to its largest shareholder, Alfred Lerner. Like the deals in the pipeline now, the MNC transaction was designed to boost the company's capital base at a time when it was desperately needed but had very few other ways to raise funds.

The agreement could raise Mr. Lerner's stake in the company to 23%, from 9%.

"If you need capital now, you're faced with three or four alternatives, none of which are very pleasing," Mr. Gartman said. "We thought this deal "was sort of a lesser evil."

H. RODGIN COHEN is working on four private placement deals for banks.

"A lot of banks that two to three—years—ago—would—have pounded their fist on the table and said we're in great shape . . . are now starting to face up to the realities . . . that they may not have excess capital or enough at all," said Mr. Adams of First Boston, "and that they will have to look at all sorts of different alternatives to get it to where they need to be."

How many deals will actually get done is not clear because of the many complications. In addition to management control issues, investors also bring a host of stipulations to the table.

For example, Mr. Cohen of Sullivan & Cromwell said that, when an investor owns more than 5% of a company, regulators look very closely at that person's motives should he or she want a seat on the board of directors.

"Although they are starting to make some accommodations, in the early 1980s, they imposed as many conditions on the deal that investors were saying, 'The hell with it,' " Mr. Cohen said.

The large returns – usually 25% to 35% – that investors look for in these deals also create a host of obstacles. Investors may require management to write down a chunk of the loan portfolio. Often, they demand that management step aside.

The point experts make is that a particular set of circumstances must come together to make these kinds of deal work.

"They're not just looking to buy the average bank," said Mr. Moore of Morgan Stanley. "They're looking for the turnaround situation."

Mr. Cohen said, "It's not coincidental that, in two out of the three deals like this that have been done so far, there has been new management in place." He was referring to E.M. Warburg, Pincus & Co.'s $175 million investment in Mellon Bank and Corporate Partners' investment in First Bank System.

In the third deal, with MNC, it is unclear what kind of confidence Mr. Lerner has in current management, although Mr. Cohen said it appeared chairman Alan P. Holtzcell Jr. would not be replaced.

PaineWebber's Mr. Brown said his top candidate for a private equity deal is Valley National, because it is turning things around after losses for most of 1989 and near flat earnings in the first two quarters of this year.

"The six largest S&Ls in their market area have been taken over by the RTC. They could enhance their franchise [by buying some or all of them from the RTC] if they had more capital," Mr. Brown said. However, with a tangible common equity to asset ratio of only 4.3%, he said, he doubted regulators would permit any RTC deals. □

Keating Resignation Confirmed By American Continental Corp.

WASHINGTON — Charles Keating Jr. has resigned as chairman of American Continental Corp., the parent of the failed Lincoln Savings and Loan Association, a lawyer for American Continental confirmed Monday.

The resignation of Mr. Keating and five other officials followed a federal court ruling last Thursday upholding the government's takeover of Irvine, Calif.-based Lincoln, whose failure is expected to cost taxpayers over $2 billion.

U.S. District Court Judge Stanley Sporkin dismissed a lawsuit by Keating to recover the thrift, saying Keating had "looted" Lincoln.

Judge Will Appoint Overseer

The resignations open the way for Federal Judge Richard Bilby to appoint a new person or agent to supervise American Continental, which is in Chapter 11 bankruptcy proceedings.

James Feder, a lawyer for American Continental, said he expected American Continental eventually would be liquidated. He said the liquidation value of the company was $20 million to $30 million, although creditors believe it is less.

Mr. Feder said the others who resigned were Judy Wischer, president, Robert Kielty and Robert Wurzelbacher Jr (Keating's son-in-law), both senior vice presidents, Andrew Ligget, chief financial officer, and Bradley Butland, company spokesman and Keating son-in-law.

Is Wall Street Overaggressive In Bond Pricing?

By KELLEY HOLLAND

When Continental Bank Corp. withdrew its planned debt offering last week, the Chicago-based bank became the latest in a series of banks to feel the effects of seemingly aggressive bond pricing by Wall Street firms.

Debt offerings by commercial banks appear to be getting mispriced with greater frequency, and it is making it harder than ever for new issues to come to market, according to bankers and capital markets specialists.

They say overly aggressive pricing is adding to the barriers banks face when they consider tapping the capital markets, making it even harder for them to raise new capital.

ANALYSIS: *Follow-up on the news*

"You've got a negative market on the one hand, anxious banks on another, and investment banks who are anxious for business," said a treasury official at one regional bank. "There's a certain amount of pain that's going to be shared by everybody."

Bond offerings brought as recently as late July are now trading at yields as much as 20 basis points wider relative to Treasuries than the yield at offering. Bonds issued in June by Bankers Trust Corp. at a yield 115 basis points over Treasuries are now trading at a yield about 150 basis points over Treasuries.

And last week, the proposed yield spread relative to Treasuries for the Continental offering increased 50 basis points before the bank decided to defer the issue.

"Some are done with some market reality and some aren't," said one investment banker.

Overly Optimistic Pricing

Several factors are causing bonds to be mispriced, specialists say. First, investment bankers who work with banks are suffering from a near absence of new issue business this year, as banks who can afford to wait are staying away from the jittery capital markets.

As a result, when a bank does decide to come to market, competition is fierce for the underwriting fees that will ensue.

Investment bankers are bidding aggressively for what underwriting business there is today. And often, that aggressive bidding means telling clients that deals can get done at overly optimistic rates.

"When you get into any situa-

HLTs Soar at First Chicago As Top Lenders' Total Slides

By STEVEN LIPIN

First Chicago Corp.'s portfolio of loans financing highly leveraged transactions skyrocketed by $1 billion, or 38%, in the second quarter, mostly because of the reclassification of existing loans, according to regulatory filings.

Meanwhile, Wells Fargo & Co., Bank of Boston Corp., and Security Pacific Corp. reduced their HLT credits by hundreds of millions of dollars.

Average Is Down

The total HLT portfolio of the 25 banks with the largest exposure fell by a marginal 1.7% in the second quarter, according to data compiled by SNL Securities, a publishing and data base company based in Charlottesville, Va. HLTs as a percentage of assets also fell slightly.

Where HLT underwriting increased, most was attributed to the reclassification of existing loans, not from booking new ones, bank officials say. Banks continue to pore through their portfolios to determine whether a loan constitutes an HLT.

Despite the new standard definition, "there's a lot of interpretation," said a senior credit official at a major bank. "It's not as straightforward as one might think."

How HLT Portfolios Changed in 2d Quarter

Biggest changes in HLT portfolios
Dollars in millions

Secondary-Market Obstacle

While equity analysts have pressed banks to reduce outstanding loans to leveraged companies, bankers say the difficult environment for syndication has slowed loan sales to the secondary market. That has made it harder for banks to reach their goals of reducing HLT portfolios.

However, banks that sold HLT loans during the quarter booked new ones and received the up-front fees and higher interest rates, which helped the bottom line, bankers said. And the new loans were often of better quality than existing credits.

"What you're seeing is that banks are pursuing a strategy of maintaining a steady HLT portfolio," commented Christopher L. Snyder, president of Loan Pricing Corp. As some loans are sold off, others are added, he

Gonzalez Wants Single Banking and Thrift Czar

By BARBARA A. REHM

WASHINGTON — Rep. Henry B. Gonzalez said he is planning to introduce legislation next year to merge the three deposit insurance funds and create a single regulator for banks, thrifts, and credit unions.

The House Banking Committee chairman wants to set the far-reaching regulatory reform in motion this fall with a series of hearings leading to introduction of two major bills when the 102d Congress convenes next year.

Time Pressure Seen

"I don't like to be governed by fear," the 74-year-old Texas Democrat said in a recent interview with *American Banker*. "What I fear is that time will not allow us to do the fundamental, drastic overhaul of the system required before you have a crisis."

One of the components of his drastic overhaul would be a bill revamping the deposit insurance system, which most Washington observers see as the next big financial priority on Capitol Hill. A second bill would address regulatory reform.

"There is an absolute need to completely overhaul the regula-

3 Calif. Giants Lead Contenders For Merabank

By TERESA CARSON

LOS ANGELES — Eager to expand their Western presence, three big California banks have emerged as the top contenders to acquire the failed Merabank, the largest thrift in Arizona.

Bank America Corp., San Francisco, Security Pacific Corp., Los Angeles, and Wells Fargo & Co., San Francisco, are aggressively pursuing Merabank, which has 66 branches holding $4.7 billion in deposits. Though Merabank is an attractive franchise for building market share, sources said the Resolution Trust Corp. may not get a hefty premium because of Arizona's troubled economy.

Big Premium Unlikely

"The pricing will probably not be as rich as Western," said one source. Bank of America last

Bottorff Ties the Knot that Binds Sovran to Citizens and Southern

By KENNETH CLINE

ATLANTA — When Sovran Financial Corp. and Citizens and Southern Corp. announced plans to merge last September, senior executives on both sides began describing their budding relationship with mantralike repetition.

"We're a merger of equals," they said over and over to reporters, analysts, and anyone else who would listen.

The delicate task of maintaining the equilibrium in this merger fell to Sovran's president, Dennis C. Bottorff.

Bottorff's People Skills

Mr. Bottorff, 46, has already proven his mastery as a behind-the-scenes player, particularly skilled in handling people and winning over others to his point of view. But these talents will be taxed to their limits in the

the Float

American Airlines won't give its employees direct deposit, and some of the fliers are furious.

A pilot and a flight attendant at the Dallas-based airline have petitioned the National Automated Clearing House for help, clearing house officials said.

The fliers complain that American is deliberately taking advantage of the interest float between the time paychecks are issued and cashed.

The issue is magnified for airline employees, they say, because pilots, flight attendants, and other workers are often wandering the world without the opportunity to deposit their paychecks.

An American Airlines spokesman confirmed that the company does not offer direct deposit but said he could not comment because it could become a union contract issue.

An official of the South Western Automated Clearing House Association said he is devoting all his time to the issue.

American, he noted, has proposed charging its employees an annual fee for direct deposit, to compensate for loss of the float.

From BNE to BONY?

BNE Associates, a Bank of New England investment banking subsidiary, may be sold to Bank of New York Co., according to well-placed sources.

The group and its 14 investment bankers specialize in private placements, merger and acquisition advice, and restructurings of troubled companies.

BNE Associates was set up in October 1986 by Donald Stacey, a veteran of PaineWebber Inc., who will continue running the group from the Boston area, sources said.

BNE Associates, which may rechristen itself BNY Associates, does not invest its own capital or that of its parent in the companies it advises.

A spokesman at Bank of New England said discussions with interested parties about a sale are ongoing, but no final decision has been reached. Bank of New York would not comment.

Sources speculated that the unit will be sold for only a nominal amount as Bank of New England rushes to shed noncore businesses.

* * *

Frozen Swaps

In its SEC filing for a subordinated note offering last week, Chicago's Continental Bank acknowledged that U.S. banks may suffer some direct consequences from the crisis in the Middle East.

The freeze imposed by the United States and other nations on Iraqi and Kuwaiti government assets "may affect certain of the bank's existing or pending transactions," Continental said in the "recent developments" section of its preliminary offering circular. (The $100 million offering was subsequently withdrawn.)

Activities that could be affected by the freeze include placing and acceptance of deposits with branches of Middle Eastern-based banks as well as swaps and foreign currency transactions with those banks, the bank said.

Management "is not yet in a position to assess precisely" any financial risks from the developments, the Continental document said, "but believes that they will not have a material adverse effect on the Bank's financial condition."

* * *

Chemical Card Sale?

Rumors have been circulating in the credit card market for several months that a multibillion-dollar portfolio is up for sale. Attention has faded in and out on Chemical Banking Corp., which has a $1.7 billion portfolio but is not the dominant issuer in its home market.

The bank as a matter of policy does not comment on market rumors about potential sales or acquisitions, said Charles Salmans, a Chemical spokesman.

However, he pointed to several signs of Chemical's commitment to the card business – its signing of a multiyear contract with First Data Resources in June for the processing of its consumer cards and the recent promotion of Anthony G. Nuzzo, head of the credit card business, to senior vice president.

Some rivals, however, read the processing contract differently. It could mistakenly think Chemical has a less proprietary interest in the card business than some of its competitors, like rival banker said. Chemical has not made a major card portfolio acquisition since the mid-1980s.

Whether or not Chemical is selling, the rumor about some large portfolio maintains steam because of banks' need to shed assets for capital purposes and to raise cash. Card portfolios are easy to sell and have been going for a healthy 20% over the value of receivables.

On a Diet

The U.S. League of Savings Institutions continues to shrink. The once powerful thrift trade association fired 16 employees this month. That leaves the league with 175 employees versus 250 one year ago.

One-fourth of the layoffs occurred in Washington; the rest at the league's headquarters office in Chicago. The trade group — which is considering changing its name in the wake of poor publicity for savings institutions — also fired 26 people last October. Another 33 employees have quit or not been replaced.

The most recent round of layoffs in Chicago felled employees and support staff working in convention planning, membership, publications, and technical services. In Washington, the office manager and three support staffers were fired.

The league has no plans to shut the Washington office, which employs about 40 people, said James H. Grohl, a spokesman. "We're not operating at a deficit," he said. He would not comment on how much the league will save through the cuts, and said that none of the survivors will endure pay cuts.

Arkansas Rebuffed on Branching

Court Upholds Sale of Multibranch Thrift to Bank

By BILL ATKINSON

WASHINGTON — States seeking to maintain control over bank branching suffered another setback Tuesday when a federal appeals court reversed a ruling preventing the Resolution Trust Corp. from overriding state law in its sale of a multibranch thrift to an Arkansas bank.

In a strongly worded 10-page opinion, Judge Gerald W. Heaney of the 8th U.S. Circuit Court of Appeals in Minneapolis took issue with "each and every substantive conclusion reached by the majority of the [lower] court," said Leonard Rubin of the Bracewell & Patterson law firm in Washington.

Sale of Thrift to Bank

The Arkansas case involved the RTC's sale of Independence Federal Savings Bank, Batesville, to Worthen Bank and Trust Co., Little Rock. State officials argued that the RTC, in permitting Worthen to retain Independence's 20 branches, was violating state restrictions on branching by commercial banks.

"We are disappointed at the decision of the circuit," said Doyle Bartlett, vice president for legislative services with the Conference of State Bank Supervisors, a trade group representing state regulators. "We still believe federal agencies should not have the ability to override state law without clear statutory mandate to do so."

State Regulators Involved

The state regulators' group filed an amicus brief on appeal, supporting the Arkansas ruling, and Mr. Bartlett said the organization is reviewing its options before acting further.

"Obviously, we feel [the 1989 reform law] had given us the authority to selectively override when it was important to do so," said Stephen Katsanos, an RTC spokesman. "The laws of supply and demand are at work here in selling these S&Ls, and we have a lot of franchises to sell."

Colorado Case Pending

In February, a Colorado judge issued a temporary restraining order barring the RTC from overriding state law in selling a statewide thrift to a bank. A hearing on the case is scheduled Sept. 7 to consider a permanent restraining order.

In May, the RTC formally adopted a rule permitting banks to acquire and operate the branches of failed thrifts even if it violated a state's law.

A similar case was argued in New Mexico courts after the RTC approved sale of a multibranch thrift to a New Mexico commercial bank. A New Mexico judge ruled in favor of the RTC. That decision is on appeal before the 10th U.S. Circuit Court of Appeals in Denver. □

Riegle Rejects Part-Time Members For New Housing Finance Board

By DEBRA COPE

WASHINGTON — Senate Banking Committee Chairman Donald Riegle told President Bush he would not accept a part-time Federal Housing Finance Board member, sources said.

Sources said Sen. Riegle's ultimatum to the President, in a letter delivered Monday, derailed administration plans to appoint a part-time board while Congress is in recess. The housing finance board was created last August to oversee the Federal Home Loan Bank System.

Only the Secretary of Housing and Urban Development, Jack Kemp, holds a permanent seat on the five-member board. Without an independent five-member board, the finance board may never emerge from the agency's shadow, sources said.

Sen. Riegle, D-Mich., has refused to schedule hearings on the four board nominations until the debate over the appointments is resolved.

The Justice Department, in an opinion letter made public July 12, determined that, based upon the legislative intent of the 1989 thrift-reform law, the finance board should serve part-time.

But Sen. Riegle has questioned whether part-time status is appropriate for an independent agency that has both rule-making and adjudicatory power.

President Bush has nominated Daniel F. Evans Jr. as finance board chairman and Lawrence O. Costiglio, William D. Perkins, and Marilyn R. Seymann as board members. □

Jarrett Resigns From Ameritrust Chairmanship

By NANINE ALEXANDER

CHICAGO — Ameritrust Corp. chairman and chief executive Jerry V. Jarrett resigned unexpectedly Tuesday, amid mounting loan problems and a massive restructuring.

"I have subscribed to the philosophy for many years that says that when one does not feel good about coming to work every morning, one should quit and move on to something else," said Mr. Jarrett, 58. "That time has come."

Smith Steps In

Cleveland-based Ameritrust said Craig R. Smith would assume most of Mr. Jarrett's du-

New Swift System to Allow Sending of Large Data Files

By JEANNE IIDA

NEW YORK — The group that operates the Swift network is adding technology that will let banks transmit large volumes of information and paves the way for the international transfer of electronic trading documents.

The Society for Worldwide Interbank Financial Telecommunication said Tuesday it has signed a $2.3 million contract to install three fault-tolerant computers from Stratus Computers Inc. in its Brussels headquarters.

The computers, together with software from Marben, a Paris-

> **"Today, banks are exchanging this type of information by paper," Euan Sellar** *Swift*

based company, will be the basis for a bulk file-transfer service to be available in late 1991, Swift officials said.

Longer Messages Possible

The new service, to be called interbank file transfer, will allow banks to send much longer messages than on the current Swift network. Much of this information is now sent by facsimile, telex, or mail.

Eventually, the file-transfer service will be capable of carrying the standard electronic trading documents known as electronic data interchange.

The new service will run in parallel with Swift's traditional messaging service and will be available to all member institutions. Swift members will be briefed about the service in demonstrations at the group's annual conference Oct. 1-5 in Berlin.

Banks now transmit payment instructions and letters of credit over the Swift network using a standard message format.

"There's a limited amount of information you can put in these messages," said Euan Sellar, a spokesman for Swift in Brussels.

The new file-transfer service will enable international branches to scan and send accounting data, account information, and customer files to their head offices. Banks could also send electronic mail-like messages to their correspondent banks, Swift officials said.

"Today, banks are exchanging this type of information by paper," said Mr. Sellar. "They don't have the electronic capability."

Banks will send information via the new service in the same kind of envelopes – called X.400 – that will be used for international EDI messages, which vary in length. A single payment instruction may have 500 or 1,000 invoices attached.

"Swift is positioning the organization to be a carrier of [interbank] EDI payments information, when those standards are available," said Nicholas Oldfield, industry manager for banking at Stratus.

Writing Worldwide Standards

Efforts to write international EDI standards now exist. The international standards body, known as EDIFACT for Administration, Commerce, and Transportation, or Edifact, is hammering out standards for such bank documents as letters of credit and payments instructions.

Edifact formats will be slightly different from the EDI document formats commonly used in the United States. Swift is working with a group of 65 banks to develop message formats for Edifact. □

UJB Aims to Track Profits, Costs

PC-Based System Expected to Alter Planning Process

By RICHARD LAYNE

NEW YORK — In what may lead to a shakeup in its wholesale banking operations, UJB Financial Corp. is adding information systems that will measure the profitability of its customers and products, and the productivity of its lenders.

The $13 billion-asset banking company plans to install a personal computer on the desk of some 300 wholesale bankers as part of its multimillion-dollar automation effort.

Through the computers, the first of which will be installed in October, lenders will be plugged into an array of software, including profitability systems. Using those systems, managers will monitor portfolios, profitability, and individual deals.

Better Grasp of Costs

"We will now be able to determine the components of costs so we can see how we earn our dollars," said Robert J. Peters, senior executive vice president at United Jersey Bank, the lead bank of UJB Financial, Princeton, N.J.

Mr. Peters is responsible companywide for wholesale banking, which includes private banking, middle-market lending, asset-based and construction lending, and corporate finance.

Like the vast majority of banks, UJB cannot now determine accurately which customers are a source of profits and which product lines generate sufficient profit margins. UJB executives believe that once they can tell the money makers from the money losers, the company will drop some product lines and even bankers.

Some Products Will Be Dropped

"There will be products that you won't support, because they won't have the returns," said Mr. Peters. "We are all looking for niches that maximize profitability." Mr. Peters said it is too early to say which products are likely to be discontinued.

UJB claims to be the first banking company to add such systems as part of a comprehensive plan to improve the way it uses computers and communication systems.

Other banks, including CoreStates Corp. and Norwest Corp., have installed commercially available software to measure

> **"We will now be able to determine the components of costs so we can see how we earn our dollars."** **Robert J. Peters** *United Jersey Bank*

customer and lending officer performance. And many banks are adding some form of automation to their wholesale banking.

Software can range from programs to help inexperienced lenders analyze credits to image-processing systems that ease the storage and retrieval of lending documents.

Effect on Planning

For UJB, getting a handle on profitability was essential to determining which business lines will continue to receive capital in the future.

Wall Street analysts say that UJB is a strong wholesale bank, with geographic appeal – more than 60% of its commercial loans are for local businesses. Like other New Jersey banks, however, it has suffered from the region's real estate woes. The bank reported that at the end of June, 3% of its commercial loans were nonperforming.

In the first wave of the wholesale automation project, middle-market lenders at United Jersey Bank will get IBM PS/2 personal computers and access to a new release of CRISP (Customer Relationship Information System), a profitability software sold by Micro/Resources Inc., Corte Madera, Calif.

The new version of CRISP, which is installed at 200 banks, includes the ability to measure product profitability along with customer profitability. The lenders will also get software for word processing and electronic mail. Those personal computers will be linked by a network.

By January, 100 more wholesale bankers are scheduled to get the equipment. By 1992, some 300 wholesale bankers will be on the system, which will include financial analysis and a communication software. Stuart Krepea, vice president at UJB, estimated the project will cost $3 million.

Part of the project involves a change in the way UJB uses its computers to make the most efficient use of personal computers and the large-scale mainframes.

Access to Stored Data

The banking company plans to move to what some technologists call a client-server architecture, in which part of an application may run on a PC and part on a mainframe.

Splitting an application lets the bank take advantage of the enormous data storage and communications capability of a mainframe and the processing capability of a PC. Banc One Corp., Columbus, Ohio, is already moving in this direction. □

DON'T LET REJECTS WRECK YOUR DAY. REACT!

Coping with High Leverage: A Framework for Lenders

Spurred by relatively attractive lending spreads, financing of highly leveraged transactions has grown in recent years. Despite a relatively favorable economic climate, the number of troubled HLTs, such as Federated, Interco, and Seaman Furniture has risen. Consequently regulators, rating agencies, and shareholders are becoming concerned with bank HLT exposure.

Some commentators believe that the next recession will trigger widespread HLT defaults. Thus, they conclude that HLTs will become the banking crisis of the 1990s.

The current concerns with the HLT market do not reflect any fundamental changes in risk. Rather, they merely reflect a growing awareness of risks that have existed for several years.

The problem for banks is not with HLT lending in general but with their underwriting and portfolio practices.

Little Margin for Error

High leverage levels leave little margin for error with debtor performance problems quickly triggering a financial crisis. Consequently, correct HLT underwriting decisions are critical and involve business and financial risk.

Business risk concerns the predictability of the debtor's operating cash flows. Companies with unpredictable or volatile operating cash flows are poor HLT candidates because of their uncertain debt servicing ability. Thus, the following situations should be avoided:

Technology. Changing technology disrupts product life cycles and usually requires heavy R&D and capital expenditures, which reduce debt servicing ability. The problems caused by fax technology for Western Union illustrate this problem.

Customer Concentrations. The loss or deterioration of a major customer can seriously impact operations, as occurred at Tracor when the Defense Department reduced its expenditures.

Turnarounds. Turnarounds, such as those planned in the minicomputer industry are highly uncertain and frequently take longer than planned. Consequently, operating cash flow is difficult to predict.

Commodity Products. Capacity and demand fluctuations can reduce prices below break-even, as is now taking place in both print and commodity chemicals.

Cyclical. Durable goods manufacturers, such as Fruehauf, are highly susceptible to unpredictable cyclical downturns.

Unsettled Management. An experienced and motivated senior management team must be in place. As Revco demonstrated, it takes too much time and money to build a new team.

The second underwriting consideration is financial risk. Financial risk considerations focus on the relationship of the debtor's expected cash flows to debt service requirements. Even companies with stable, predictable cash flows will fail if overburdened with debt. The areas of concern are as follows:

Purchase-Price Multiples. Preferred multiples are six to eight times trailing earnings before interest and taxes (EBIT). Overpriced transactions leaving the debtor in an unbalanced financial position, such as Federated at 20 times trailing EBIT, are especially suspect.

Capitalization. Transactions with multiples of funded debt to trailing EBIT exceeding six or seven times, such as Southland at more than 15 times, are difficult to justify. They simply cannot service their debt according to the terms without assuming operating improvements, asset sales, or refinancing. Additionally, equity capitalization should represent 20% to 30% of the capital structure to provide an adequate cushion for unexpected events.

Projected Debt Service Coverages. The credibility of projected debt service coverages is critical. Transactions based on large projected improvements in historical operating performance, such as that of Ohio Mattress, are questionable. A credibility test is to require trailing EBIT to cover first-year pro forma debt service by at least 1.5 times.

Reliance on Asset Sales. Transactions overly dependent on asset sales are suspect because of uncertainties over the price and timing of the sales. West Point-Pepperell and Interco demonstrate the risks involved when asset sales represent more than 15% of the total transaction size.

Interest Rate Risk. The high level of floating-rate debt in most HLTs exposes the debtor to interest rate risk. This is usually controlled by requiring at least 30% of the bank term debt to be fixed through swaps or caps for three to five years.

Liquidity Risk Exposure. Many recent HLTs contain bridge loans and bonds with increasing rate, reset, and payment-in-kind features. These features are designed to delay cash debt service until the debtor's operations improve or until the debtor can refinance the obligation. Some debtors are, however, facing less than projected performance results and rising debt service requirements from these features, and are unable to refinance.

Consequently, they are exposed to a serious liquidity squeeze, which has forced some firms, such as Jim Walter/Hillsborough into bankruptcy.

The profit potential in HLTs intensified bank interest in funding leveraged transactions. Some banks cut their underwriting standards to gain or maintain market share. Thus, they

> **"The problem is not with HLT lending in general but with underwriting and portfolio practices."**

funded many poorly conceived transactions, which are currently experiencing trouble as the class of 1988-89 transactions matures.

HLT lending represents not an industry concentration but a common transaction type involving higher-than-normal leverage levels. Unlike many other problem loan areas, such as energy, developing country, and real estate loans, HLT lending is diversified across a wide number of industries.

Prudent portfolio management requires consideration of the following:

Overall Portfolio Limit. An overall portfolio maximum tied to the level of bank assets should be established, usually in the range of 2% to 5% of earning assets. As is true for other higher-risk activities, undue exposures suggest concern regarding whether the institution can absorb the risks involved.

Individual Transaction Limits. The maximum hold level in any individual transaction should be limited to between $25 million and $35 million. Syndication risk for larger commitments to be sold into the secondary market should be separately managed.

Diversification. The maximum industry exposure should not exceed 10% to 15% of the portfolio. An additional concern is geographical diversity, especially for regional banks.

Investment Instrument. Senior secured corporate debt instruments have historical recov-

COMMENT/ *By Roger G. Powell*

Are We Caught in an Oddity Known as a Liquidity Trap?

Some don't fear the onset of recession. They are convinced that the Federal Reserve will see it coming and respond with easier money.

But there is an oddity in monetary affairs called a "liquidity trap." If we have fallen into a liquidity trap, then monetary ease will not work and interest rates may behave in an unpredictable fashion.

High-Powered Money

Easy money comes when monetary authorities provide commercial banks with plenty of raw material with which to make loans. That raw material is measured in banking-system reserves – high-powered or concentrated money. It is then diluted and packaged by banks into individual loans.

The bankers' profit motive allows us to rely on full use of the central bank's raw-material delivery and be confident that it will be diluted to the maximum allowed by reserve and capital requirements.

An Excess of Liquidity

But what happens if the commercial banks don't use the raw material? Only when banks aren't willing to lend or borrowers aren't willing to borrow does high-powered money sit unused. The economy would then have an excess of liquidity. Hence the liquidity trap.

Unusual interest rate behavior could be a side effect if a liquidity trap is operating. It seems clear that short-term rates would fall dramatically, though the risk premium might expand for each change in rating.

A Perverse Impact

What would become of longer rates? With a bond market still sensitive to potential inflationary pressures, the immediate impact might be perverse. The inventory of high-powered money available to the banking system could be seen as inflationary new material, suggesting to investors that they should invest only at yields sufficient to offset losses of purchasing power that might arise from changes in currency values.

Effect on Yield Curve

If a liquidity trap is operating, then the near-term effect should be greater differences between short-term and long-term interest rates, at least in the short run. And greater monetary ease should raise inflation expectations, leading to higher, rather than lower, long-term rates.

Does the current combination of rising capital requirements, heightened regulatory discipline, asset-quality stress, and the expectation of a recession create a lineup that could lead us into such a trap?

Rising capital requirements reduce the volume of loans fabricated from high-powered money. Difficult examinations and asset-quality stress lead bankers to reduce lending. And the expectation of recession influences both lender and borrower to hold back.

If banks don't lend and borrowers don't borrow, then ease won't work. A liquidity trap is, fortunately, rare and, unfortunately, perverse. □

Mr. Powell is an analyst with Alex. Brown & Sons, Baltimore.

The most important thing about banking is the bottom line.

Here's the bottom line.

AT&T gives banks a highly cost-effective way to do business.

When it comes to delivering the telecommunications services that banks really need in today's market, AT&T is unmatched. And we're going further.

More flexibility and better cost control.

For headquarters to branch, or branch-to-branch communications, the AT&T Software Defined Network (SDN) gives you all the benefits of a private voice network. But with greater flexibility and better cost control, plus the ability to track and monitor call volume.

The hottest technology in banking today.

And what SDN does for voice, our new Software Defined Data Network (SDDN) now does for data. SDDN is a switched data service with dynamic bandwidth allocation that provides the transmission flexibility necessary for image-processing applications, such as signature verification, document processing and check processing.

AT&T is committed to meeting the banking industry's needs.

In 1989, AT&T introduced the Retail Banking Solution, which gives branch banks the tools needed to manage and grow customer relationships effectively. And the AT&T DEFINITY® Communications System helps speed calls to and from customer service centers. So go with AT&T. Because with our innovative services we give your bank the competitive edge. And that's what counts on the bottom line.

Innovation. Another AT&T advantage.

For more information, call your AT&T Account Executive or 1 800 247-1212, Ext. 580.

© 1990 AT&T
SDDN pending FCC approval.

AT&T
The right choice.

Bottorff, the Tie that Binds Sovran to Citizens and Southern

Continued from *page 1*

Sovran and Atlanta-based Citizens and Southern are expected to seal their union this week.

"The challenge is really a challenge of merging the two cultures, which comes down to making decisions about people," said Jon Burke, banking analyst at Atlanta-based Robinson-Humphrey Co., referring to Mr. Bottorff. "And that is one of the things he does best."

In Line to Be CEO

Mr. Bottorff is chairman of C&S/Sovran's transition team and will become its chief operating officer. C&S chairman Bennett A. Brown will be the merged companies' first chief executive officer, but Mr. Bottorff has been designated to succeed him. Mr. Brown, 61, has never said publicly when he would retire, but most analysts expect him to step down within a year or two.

The C&S/Sovran assignment highlights Mr. Bottorff's meteoric ascent. Just three years ago, he was managing a $5 billion-asset bank in Nashville. He has been chief operating officer of Sovran, a $25.4 billion-asset company, for only 2½ years.

Short of stature and balding at the temples, he seems to fit the profile of the distracted college professor rather than of the hard-charging captain of industry. He is never without his briefcase full of books, mostly about banking, and delights in exploring the industry's theoretical underpinnings.

C&S chairman Bennett A. Brown will be the merged companies' first chief executive officer, but Mr. Bottorff will succeed him.

Not a Captivating Speaker

His speeches in front of large audiences tend to be low-key, in strong contrast to Mr. Brown's more spirited delivery. During a recent joint presentation to the Georgia Securities Association in Atlanta, Mr. Brown amused the audience with his folksy humor, while Mr. Bottorff's joke-telling showed a less sure touch.

But whatever charisma Mr. Bottorff may lack as a public speaker he reportedly makes up for with his insight into the human side of banking: "My basic belief is that most people want to do the right thing," he said. "The challenge is to establish the right environment for that."

To help his people do the right thing, Mr. Bottorff said, he adheres to a planning credo: The person who must carry out a plan should help develop it in order to feel a sense of ownership.

This credo helped smooth out some of the bumps associated with Sovran's 1987 acquisition of Commerce Union, Mr. Bottorff's Nashville bank. Toby S. Wilt, a Sovran director and Mr. Bottorff's college roommate, recalled that the two sides were unable to agree on how to merge some departments.

Instead of imposing a solution, Mr. Bottorff chose several officers from each bank and sent them off for a weekend at a state park to come up with a mutually acceptable plan. The officers did return with a plan – and had a vested interest in making it

COMMENT

Coping with High Leverage

Continued from *page 4*

cy rates in the 60% to 90% range. Therefore, the risk of loss, even in a bankruptcy such as Federated's, is relatively low. Banks having more junior in-

"Even companies with stable, predictable cash flows will fail if overburdened with debt."

struments, such as unsecured senior notes, subordinated debt or equity interests in HLTs, have higher risk exposures.

Transaction Review. Higher-risk HLTs require close monitoring. This involves quarterly transaction reviews concerning operating results, covenant compliance, and collateral values. Decisions based on that information are needed on revised risk code ratings, possible provisions and loan sales.

Market Is Improving

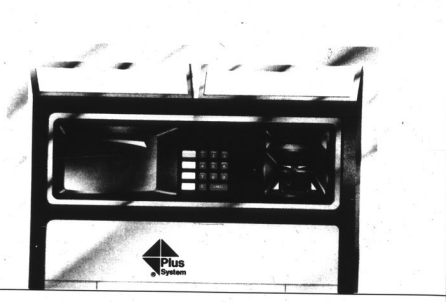
The HLT market is not condemned forever to its current unsettled state. The market is regrouping with a smaller number of stronger transactions. Additionally, the competitive dynamics are improving as a number of less sophisticated banks have withdrawn from HLT lending because of to capital and underwriting problems.

Thus, the remaining professional participants can expect improving long term prospects.

Not all HLT are, however, created equal. Additionally, bank underwriting and portfolio approaches to HLT lending vary considerably. The HLT problems facing many banks are largely attributable to poor underwriting and portfolio decisions.

HLT lending is not suitable for every institution. The increased level of risk requires a disciplined credit screening approach as outlined above. □

IF YOUR ATMs AREN'T QUITE LIVING UP TO THEIR POTENTIAL...



Gonzalez Wants a Czar for Banks, Thrifts, Credit Unions

Continued from *page 1*

tory system," said Rep. Gonzalez. "It's just atrocious." And while the congressman has not yet assembled all the details of his legislation, he is sure it will call for a brand new regulatory body.

"I think we are going to unitary regulation," he said, meaning that a single agency would oversee all types of depository institutions.

If Rep. Gonzalez gets his way, the Federal Reserve Board would not be that single regulator.

Sidestepping the Fed

"Why should the Fed be in regulation?" he asked. "It's our monetary policymaking body, and that's what it ought to be."

"Leave regulation to regulators," he said. The Fed "can't do both efficiently."

Nor do the other bank, thrift, or credit union agencies stand to gain much from Rep. Gonzalez's anti-Fed sentiments. He prefers to start fresh with a new agency.

"Here we are floundering with this discrepant, conflicting, and in some cases overlapping of regulatory functions, ill-defined or undefined, where the issue ultimately is the safety and soundness of the banking system," he said.

As for the 50 state regulators, Rep. Gonzalez avoided saying directly that his bill will attempt to stamp out the states' system. But after a few disparaging comments about the quality of the states' thrift supervision, Rep. Gonzalez said that if the federal government is on the hook for state bank losses, then those banks should be overseen by a federal regulator.

"We are nationalizing the responsibility of the Treasury," he explained.

Back to the '30s

Essentially, Rep. Gonzalez wants to take deposit insurance back to its 1930s roots. He argues that what is wrong today is that the insurance funds cover deposits rather than depositors. To blame for this warping of the original insurance mandate, he says, is the advent of pass-through insurance, which lets accounts of multimillion-dollar depositors be completely insured.

"It never was the intent to insure more than individual accounts," he said.

He wants this restriction to be included in the reforms that the Treasury Department endorses when its study on ways to update the deposit insurance system is completed early next year.

Rep. Gonzalez does not buy the argument that it is politically impossible to narrow insurance coverage to individuals rather than accounts.

Rep. Henry B. Gonzalez
Texas Democrat

Rep. Gonzalez is also ready to lower the $100,000 deposit insurance ceiling.

"One hundred thousand is not the holy-script number," he said. "We didn't have one minute's discussion when the fund was raised to $100,000 from $40,000. That's why debate is imperative."

Against 'Too Big to Fail'

Another accepted notion that irks the House Banking Committee chairman is that some banks are too big to fail. Rep. Gonzalez thinks this belief gives regulators too much discretion. He questions whether the "too big to fail" concept is "merely a postponement, and an unwillingness [by regulators] to face the plain facts."

He adds: "The thing that's drained the [FDIC insurance] fund is the big banks."

For September, Rep. Gonzalez already has four hearings scheduled to explore ways to revamp the regulatory system and reform deposit insurance. He says he expects to schedule at least six more hearings on the same subject before Congress adjourns in October.

Wide-Ranging Hearings

Witnesses are expected to explain their views on a wide range of topics, including merging the bank, thrift, and credit union insurance funds; insuring deposits privately; hiking banks' insurance premiums to 23 cents per $100 in deposits from the 19.5 cents proposed by the FDIC for next year, and limiting the investments a bank can make with insured deposits.

He also intends to solicit opinions on a plan he has to rank banks by assets and force banks in a particular size category to chip in to cover the failure costs of any bank in that category.

Rep. Gonzalez said he is anxious that reform does not get bogged down in politics.

Rep. Gonzalez has been a congressman and a member of the banking committee since 1962. That year the committee held two hearings. Since taking over as chairman in January 1989, the full committee has hosted 43 hearings.

Since taking over the banking committee in 1989, Rep. Gonzalez has become famous for extensive hearings. "To me it's not unorthodox. To me, it's just doing the job," he said.

Though Rep. Gonzalez is commonly labeled a populist, "I'm not one who is ideologically or psychologically against deregulation or against big banks per se" he said, "But there are problems." □

MAYBE IT'S TIME FOR A FACE LIFT.

Join the CIRRUS® & MasterCard® ATM Network and our 275 million cardholders can be yours.

More cardholders mean more income and more profits for you!

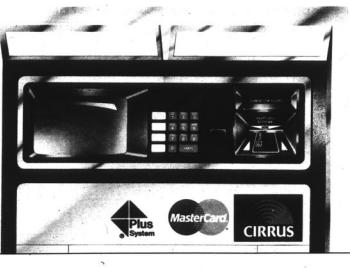
Soon, ATM duality will be ATM reality. And for ATM acquirers, that reality means greater profits than ever. Just by joining the CIRRUS and MasterCard ATM Network now.

Put the CIRRUS and MasterCard symbols on your ATMs, and our 275 million cash and credit cardholders can access your machines, instantly. That's nearly twice the number of PLUS® cardholders who can use your ATMs today! And dividing these millions of cardholders to your ATMs is the combined power of CIRRUS and MasterCard – the recognized leaders in international ATM marketing.

So, why wait? Claim your share of the profits by joining us now. It's a smart move for ATM acquirers, and hooking up is easy. You can use your existing PLUS or regional link to gateway to CIRRUS and MasterCard. Or, if you prefer, connect directly to the MasterCard Debit Switch.

Don't miss out on the single greatest ATM income opportunity ever. Call Art Kranzley, Senior Vice President, at 212-649-5178 today.

MasterCard. CIRRUS.



PRIVATE BANKING

When Clients Flee an Army, Identity Questions Arise

By MAUREEN NEVIN DUFFY
Special to the American Banker

Overseas private banks are scurrying to accommodate and authenticate requests from their Middle East clients.

The crisis in the region, provoked by Iraq's invasion of Kuwait, underscores the importance some clients place on privacy as well as some of the difficulties in adhering to such standards.

The legendary secrecy of private banks – especially the Swiss – has at times inspired accusations of criminality. But capital flight, which can carry the stigma of drug-money laundering and tax evasion, can also represent a defense against turmoil and even governmental collapse.

Lloyds Bank international private banking, in Geneva, and Union Bank of Switzerland and Credit Suisse, both in Zurich, are working to provide service to Kuwaiti and Iraqi private citizens who can properly identify themselves.

"Numbered accounts were created with the sole purpose of protecting clients from oppression and extortions of third parties," said Julio F. Rodriguez-Rolenson, director of marketing and communications for Lloyds Bank.

"In order to protect our clients, we have taken several measures," Mr. Rodriguez-Rolenson said. "We have closed all their previous accounts and opened new ones. We issued new credit cards and travelers checks. And we strictly follow client's wishes of not transferring funds or paying to third parties who are not known to us. Bizarre instructions must be brought to management's attention and verified."

> **"Numbered accounts were created with the sole purpose of protecting clients."**
>
> **J. F. Rodriguez-Rolenson**
> *Lloyds Bank*

Mr. Rodriguez-Rolenson said bankers have been warned about possible ruses. If fleeing Kuwaitis left behind documents and their homes were later pillaged, the conquering party could disguise himself and demand transfer of the funds.

"The client could call 10 days later asking for his money," he noted. "So even the central bank is warning us to exercise extreme caution. As always, rule No. 1 is know your client."

A spokesman for Credit Suisse, citing the importance of discretion in private banking, said only that the bank is coping with very complicated documentation to ensure the authenticity of clients making requests.

U.S. private banks in the region refused to comment even upon the nature of client requests from the Middle East.

But currency exchange desks are expected to remain busy with clients seeking to convert Kuwaiti or Iraqi currencies to Swiss francs and other monies. People fleeing Kuwait and Iraq also may be working to gain quick access to funds outside those countries.

Union Bank of Switzerland is reporting more deposits than usual from people in the area. "Funds from the Middle East as a whole are coming into Switzerland, as well as other stable countries, but this is usual in any crisis," said Gertrude Erismann, head of press information worldwide for Union Bank. "Nobody would take their money out of Swiss accounts now."

Mr. Rodriguez-Rolenson said Lloyds is also experiencing an influx of money, but he would not elaborate on the source of the deposits.

Most Private Banks in Bahrain

Most private banks with operations covering the Middle East are based on the 258-square-mile archipelago of Bahrain, an independent Arab emirate on the Persian Gulf.

In the emirate's capital of Manama, the Alubaf Arab International Bank, owned by a consortium of Arab banking and government institutions, reports that requests have been heavy for currency conversions. The bank, which acts as an agent for Royal Trust Bank's private bank products, also reports an outflow of funds.

Christopher Powell, assistant general manager for investment banking at the bank, said a great deal of money had already been transferred to large institutions in Switzerland, including Royal Trust. He declined to provide figures.

"My job is to convince [customers] that their capital could be looked after overseas," said Mr. Powell. "Royal Trust is triple-A rated."

Mr. Powell's bank, whose stock brokerage business has all but stopped, intends to stick out the crisis. But the local banks may find it difficult to stay in business, he said. "The longer this goes on, the less business is being done. A lot of expats are leaving, taking their cash flow with them."

Many U.S. banks have offshore operations, which are of primary importance to the private bank client, in the area. Some of Alubaf's peers on Bahrain are Manufacturers Hanover Corp., Citicorp, Bankers Trust New York Corp., Chase Manhattan Corp., and BankAmerica Corp.

Coast Savings to Sell 27 Branches

Analysts Say Deal Could Add $60 Million to Capital

By TERESA CARSON

LOS ANGELES — In another big thrift restructuring, Coast Savings and Loan Association said Tuesday it was putting 27 of its 120 branches on the block.

"This is a way for us to bolster our capital," said Ray Martin, chairman and chief executive officer of the Los Angeles-based thrift. "We don't have to do this; we are in compliance [with capital regulations]. But this could allow us to move forward faster."

Analysts expect a number of institutions to express interest in the branches, which they say could fetch a premium of about 5%. That would translate into a pretax gain of about $60 million. The shrinkage in the balance sheet plus the gain could increase Coast's tangible capital ratio from 1.62% to more than 2%.

> **"The logical buyers are other California banks that want a bigger piece of the San Diego market."**
>
> **Allen Bortel**
> *Sutro & Co.*

$1.2 Billion in Deposits

Sale of the 27 branches would lop off $1.2 billion of Coast's $10.9 billion in deposits. Nineteen of the branches, representing $940 million in deposits, are in the hot San Diego market. The remaining eight, with $280 million in deposits, are in California's Central Valley.

Coast, which has hired Goldman Sachs & Co. to assist with the sale, said the branches did not have to be sold in a single "The logical buyers are other California banks that want a bigger piece of the San Diego market," said Allen Bortel, an investment banker with Sutro & Co., San Francisco. Security Pacific Corp., Wells Fargo & Co., and BankAmerica Corp. are expected to look at the branches as well as larger thrifts such as Great Western Financial Corp.

If the branches do not bring a large-enough premium, the sale will be dropped, Mr. Martin said. But he declined to say what an acceptable premium would be or what other options Coast might consider.

Coast lost $28.7 million in the second quarter, compared with a profit of $5.8 million in the year-earlier period. The company set aside $48 million for loan losses.

Coast is now being examined by regulators, said Michael B. Abrahams of Bateman Eichler, Hill Richards Inc., Los Angeles. "It won't take a lot more of reserves or losses to push Coast below the capital requirements," he said. "It could be responding to regulatory pressure."

Analysts consider Coast in the middle group of thrifts – institutions that are not expected to fail but do not fit into the big powerful elite.

"These are the nonfailing but thinly capitalized thrifts," Mr. Bortel said. "They have enough flexibility to meet the capital requirements through these types of measures." □

Three Calif. Giants Vie to Buy Merabank

Continued from *page 1*

May acquired the failed Western Savings and Loan Association, Phoenix, for $81 million, representing a premium of 4.6% of core deposits. Western had $3.5 billion in core deposits and 61 branches.

The Resolution Trust Corp. held a bidding conference for Merabank Aug. 9 and bids are due in mid-September. Sources said 10 to 14 investors requested information on Merabank, and may also submit bids.

Merabank also has seven branches in Texas that are part of the bidding package. Another Texas unit, Merabank Texas, with three branches, is not included. The agency hopes to sell the thrift by Sept. 30.

Fits With Expansion Plans

Officials at Bank of America, Security Pacific, and Wells declined to comment. But the three banking companies have been on buying binges in recent months, and acquiring Merabank is consistent with their expansion plans.

For Bank of America, acquiring Merabank would give it a greater statewide presence and allow it to achieve economies of scale, analysts said. Most of the branches of its Arizona unit are located in the greater Phoenix area.

Merabank would also complement Security Pacific's Arizona unit, which has 93 branches and $3.7 billion in deposits. Security Pacific is reportedly still smarting after losing out to BankAmerica in a bidding war for Western.

"Security Pacific was crushed," that it did not win Western, said one Arizona banker.

Security and BankAmerica are also engaged in an aggressive bidding war for the failed $5 billion-asset Benj. Franklin Savings and Loan Association, Portland, Ore.

Wells does not yet have an operation in Arizona, but has publicly indicated it wants to expand in the Grand Canyon state.

Economic Outlook Cloudy

Arizona's short-term economic outlook is not rosy and the state's depressed real estate markets still show no signs of turning around.

"Foreclosures are still a growth industry," said Ralph Shattuck, publisher of the *Foreclosure Update Newsletter.* Total foreclosures were up 17% to $2.6 billion from $2.2 billion in the first six months in Phoenix's Maricopa County, he said.

Regulators seized Merabank in January 1990. The thrift reported $451 million loss in 1989 and had a tangible capital deficit of $534 million. □

An investor calls a bank to hear money talk, not sing.

Being put on hold for three minutes of Chopin's Waltz in A♭ is enough to make anyone see red. And a bank can't afford to make its customers angry. That's why Norstar Bank, N.A. invested in the new AT&T DEFINITY® Communications System. Now, by handling calls efficiently, they save time and frustration for their customers. And because the system helps them maximize their ETN network, the bank has also saved $300,000 this year alone. Not only is the system's modular architecture technically advanced to speed traffic handling, but it can grow with every advance. Plus, as a member of the System 75/85 Users Group, Norstar can share knowledge with other users that will not only enhance their voice network and simplify features, but also give them input into AT&T product development for the future. That makes the AT&T DEFINITY System worth banking on. And does wonders for their customers' listening pleasure. For details, call your AT&T Account Executive or 1 800 247-1212, Ext. 361. In Canada, call 1 800 387-6100.

AT&T
The right choice.

Despite Early Doubts, Banks Find Uses for Expert Systems

By RICHARD LAYNE
Last of a Series

NEW YORK — After a fitful start with an emerging technology called expert systems, many banks, mostly big ones, have realized that this much-hyped type of artificial intelligence can significantly improve performance in such areas as credit analysis and fraud control.

The annual *American Banker* technology survey found 8% of institutions had expert systems and 14% planned to install them by the end of 1991. But 21% of banks with $2 billion or more in deposits are using the systems, and 27% more are planning to install them by the end of next year.

Consistency Is Attractive

"Driving that growth is a recognition that AI might create more consistent quality, credit analysis, or service," said Robert E. Moll, a director at the consulting firm Arthur D. Little Inc., Cambridge, Mass., in an interview this year. "Among bankers, there is a strong desire for this consistency."

Expert systems, a branch of artificial intelligence sometimes called knowledge- or rule-based systems, are programmed to use the knowledge of an expert or group of experts to work through a problem by considering a long series of "if, then" propositions.

This kind of system, which costs from $1,000 to millions of dollars to develop, is one of the new technologies that banks will employ to create information from raw data, according to Charles W. McDonough of Andersen Consulting in Detroit.

Wide-Ranging Applications

The systems are often used in credit scoring and lending decisions that have well-defined analytical procedures. But the applications are wide-ranging, from sales programs for retail customers to fraud detection in credit cards or foreign exchange trading.

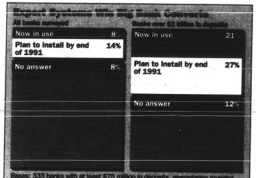
"If the application is chosen correctly, it can help the bank operate more efficiently or uncover new business opportunities," said Susan Garavaglia, vice president at Chase Manhattan Corp. and chairman of Smart FS, a New York-based group of financial service companies that exchange information on new and emerging technologies.

Chase has expert systems for trust and trade products. It also has an expert system that augments payroll processing.

Finding a Rationale

Banks have been tinkering with this technology since the mid-1980s.

The first such systems were built on expensive, specialized processors. Their software was incapable of sharing information with a data base on a run-of-the-mill computer, so the expert system had to do all the processing that an application needed, from storing and retrieving information to performing mathematical calculations.



Moreover, engineers, eager to explore this new processing capability, built systems that did not always address business problems.

"It was sort of, 'Expert systems are the answer,'" said Craig Atkinson, vice president in the strategic technology and research group at the banking unit of Manufacturers Hanover Corp. "But what was the question?"

Hanover Is a Leader

Hanover has emerged as a leader in creating systems that use rule-based programs. It is the only two-time winner of an award from the American Association for Artificial Intelligence. As part of its commitment to using this technology, Hanover built an expert system that finds whether a particular processing need is a candidate for an expert system, said Mr. Atkinson.

"AI can solve problems that are difficult to solve using conventional techniques," said Mr. Atkinson.

Hanover and other banks have adopted a new approach to creating expert systems, one that clothes existing data bases and processing capabilities in a veneer of artificial intelligence. "Expert systems are becoming integrated into traditional business processing," said Mr. McDonough of Andersen Consulting.

Exploiting Hybrid Systems

"The best leverage we get is to take existing technology and come up with a new application," said Elizabeth Byrnes, a doctor of psychology who joined Hanover four years ago to help design these new systems. "Systems that use AI are now hybrids."

One of Hanover's award-winning systems is Inspector, a foreign exchange auditing system. It sorts through information on foreign exchange deals gathered on existing data bases, mainframe computers, and a communications network. About 20% of inspector is an expert system — "the icing on the cake," said Ms. Byrnes.

Some bank companies have ambitious plans to use expert systems.

First Wachovia Corp. for example, is installing its first such system, which will help clerks handle student loan deferments. In two years, the bank will have a dozen expert systems, said Cecil O. Smith, senior vice president.

Part of what makes these systems popular is the decreasing cost of obtaining the software. Specialized computers have now been replaced by off-the-shelf personal computers, which can be used to develop expert systems to run on mainframes. The cost of the software to build an expert system, called a shell, has dropped to less than $1,000.

Because PCs have been substantially enhanced in the past few years, shells have become extremely powerful and flexible. Lower costs may take this technology out of the hands of big banks and make it available to smaller ones. □

New Software Helps Manage Risk In Trading Currencies for Clients

By JEANNE IIDA

A small start-up company is selling a software package to help banks analyze and manage risk in the currency trading services they offer to corporate customers.

Bankers Trust Co. is one of four companies testing the software, called IRC/Hedge, which will be offered commercially in several weeks by International Risk Control Inc., Redwood City, Calif. The other participants in the pilot are outside the banking industry and include Morgan Stanley & Co.

Most banks divide their cash flows into two risk categories, according to Joshua W. Sommer, IRC's president and chief executive officer.

Risk in Client Services

Speculative risk arises from traders' speculating on foreign currencies. Fundamental risk is incurred because of the types of business, such as over-the-counter options or forward contracts, that are provided to corporate customers.

The software product is designed to manage fundamental risk, Mr. Sommer said.

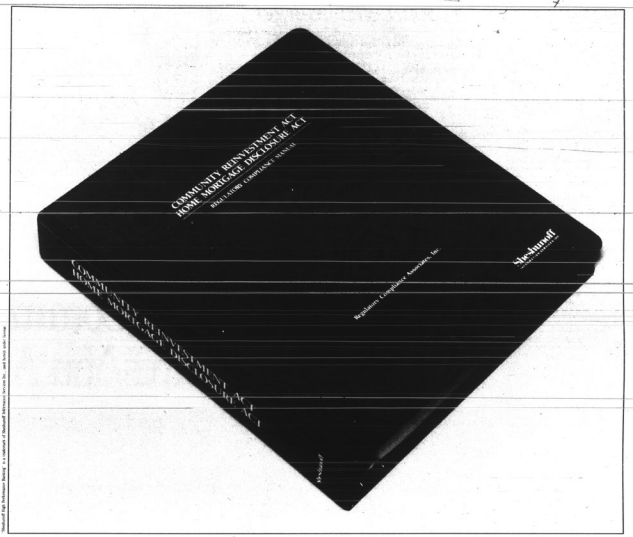
IRC/Hedge can analyze portfolios of 20 or more currencies. The software evaluates how risky each currency is and recommends the position the company should take in the futures or options markets. As part of its task, the software evaluates hedging instruments.

Mr. Sommer said most banks are probably not hedging for fundamental risk at all.

Banks that hedge against risk also may not realize that some of their positions are naturally hedged by the nature of the currencies they are holding. The software can help them eliminate unneccessary hedging, Mr. Sommer said.

"For us, risk management means you are able to get a 15% return on overseas assets" over and above the interest rates charged in that country, said Mr. Sommer.

Leases for the software start at $5,000 a month. The package runs on personal computers from International Business Machines Corp. and on workstations from Sun Microsystems Inc. □



What the regulators don't tell you.
1-800-456-2340.

Complying with CRA/HMDA is simple. You post your public notice, keep a public file, and file the required HMDA forms. And you act in the *spirit* of the law and actively support your community.

Now what exactly does that last part mean?

Turns out it's not as simple as it seems. The regulators will grade you on your efforts. And your grade will become available to the public in a few months. So anyone can find out how you're doing in this gray area. And use it to challenge your decisions to branch or enter new businesses.

The only way to prevent this threat is to be sure you have a CRA/HMDA program that complies in spirit, act, and deed with the regs. And while the regulators don't tell you how to do that, we do.

The **Community Reinvestment Act/Home Mortgage Disclosure Act Regulatory Compliance Manual** covers it all in one easy-to-read book.

We show you exactly how to structure a good CRA program, develop community outreach programs that meet community needs, document everything, train your people to comply, and audit your program to be sure it works.

There's also a summary of the regs in plain english, a reprint of the regs for your reference, and a review of an actual program in use now at successful banks.

You can be sure it meets the regulators' standards because it's written by a former OCC field officer. And it's published by Sheshunoff Information Services Inc., the leader in high performance banking information since 1971.

Get your copy and make sure you've got a CRA/HMDA program that no one can challenge. Call 1-800-456-2340 today.

Mixing Glue for Southeast Merger

Continued from page 6

work, Mr. Wilt said.

Mr. Bottorff is reportedly following a similar path in handling the C&S/Sovran transition team. He has encouraged lower-level officers to come up with plans for merging their departments.

Four Top Policymakers

A four-man office of the chairman will set major policy for the combined organization. The office will comprise the two top officers from each bank: Mr. Bottorff and Sovran chief executive Albert B. "Buck" Gornto Jr., 60, and Mr. Brown and C&S president Hugh Chapman, 57.

Mr. Brown and Mr. Gornto both favored the C&S/Sovran merger, Sovran board member Albert B. McKinnon said, and each knew that only one could be the merged companies' first chief executive. They compromised, with Mr. Gornto agreeing to step aside for Mr. Brown and getting an understanding that Mr. Bottorff would succeed Mr. Brown.

"To ensure Sovran's continuing equality in the situation, they needed to have somebody, and Denny was there," said Mr. McKinnon, president and chief executive of Norfolk Southern Corp.

'A Fair Arbitrator'

Mr. Bottorff's candidacy was helped by the fact that he had been with Sovran only 2½ years. "Denny is viewed as a fair arbitrator because he doesn't have strong Virginia ties," said Robinson-Humphrey's Mr. Burke, "and he obviously doesn't have strong Georgia ties."

Wall Street is generally enthusiastic about C&S/Sovran's prospects with Mr. Bottorff at the helm. "When Denny takes over C&S/Sovran, he's going to be very good at it," predicted Lacy Shockley, vice president and banking analyst at Smith Barney, Harris Upham & Co. in New York.

This confidence is based on the turnaround Mr. Bottorff engineered at Commerce Union between 1982 and 1987, when return on assets soared from 0.5% to 1.22%. In his subsequent two years as Sovran's president and chief operating officer, he helped revise the company's fundamental business strategy.

Trained as an Engineer

The son of a contractor, Mr. Bottorff earned an engineering degree from Vanderbilt University in Nashville. Perhaps because of his engineering background, he is unflappably methodical in his approach to problem-solving. Associates say he organizes his notes point by point, bulleting each item.

After earning a master's degree in business at Northwestern University, Mr. Bottorff joined Commerce Union in 1968 as a banking officer trainee. In the 1970s, he rose rapidly, gaining experience in commercial accounts, credit administration, branch supervision, international banking, and corporate planning.

Though Mr. Bottorff has limited experience running a super-regional bank, his supporters insist that his diverse experience more than qualifies him to run the $47 billion-asset C&S/Sovran.

Knowing the Basics

"He knows the basics of what happens with different functions inside the company. You can add zeros to it, but the basics are still happening," said Sovran chief financial officer Dale W. Polley, who followed Mr. Bottorff to Norfolk from Commerce Union.

In 1982, when Mr. Bottorff was appointed president and chief operating officer, Commerce Union was one of the worst-performing large banks in the South. Overly ambitious expansion, particularly in the international field (for example, the bank had made development loans to Zaire), left the company with sagging earnings and a shaky loan portfolio.

"That bank tried to be all things to all people," recalled Glenn W. "Buck" Jones Jr., partner and senior securities analyst at J.C. Bradford & Co. in Nashville.

Pruning and Cultivating

Mr. Bottorff initiated comprehensive planning at Commerce Union to identify businesses the bank should keep and those it should jettison. As part of the turnaround, he also moved to improve the bank's credit quality.

During this period, Mr. Bottorff evolved a theory about customer segmentation: A financial institution should focus on its customers rather than on lines of business or products dictated by regulatory structures.

By 1987, when Sovran came calling, Mr. Bottorff had strengthened Commerce Union

See **BOTTORFF** *next page*

GETTING A WORKOUT: Dennis C. Bottorff, designated to be chief operating officer of C&S/Sovran Corp., has been chairman of the team preparing for the merger this week of its two constituents.

Before You Commit Make Sure It Gives You An

To An Imaging System, Open View Of The Future

Your success in this decade could very well depend on your ability to adapt to the volatile change that is predicted. NCR's open systems approach to item and document imaging can help you manage that change... and use it to your advantage.

NCR's imaging technology will allow you to electronically capture, store, process, display and retrieve text, graphics and photographs on-line... resulting in significant benefits.

For example, NCR Check Processing Systems include regional and distributed processing strategies, and will help you deal with shrinking processing windows, check safekeeping, truncation and other changes more quickly and cost effectively. NCR Document Management Systems can help you shorten processing cycles and reduce filing costs, while providing higher levels of productivity for your employees and better service for your customers.

NCR Imaging Systems offer you key technology benefits, too. For example, they are designed to be scalable from entry level to an enterprise-wide system, giving you the power you need as you need it. More importantly, they are based on open systems and industry standards, which gives you complete system flexibility and allows seamless integration between your Imaging Systems and your other information systems. This not only protects your existing technology investment, but creates a powerful, competitive weapon to use in the changing banking environment of the 90s.

If your vision of success in the coming decade includes imaging, make sure it is an open vision. Take a closer look at the company that can help you use it as a strategy to manage change. Phone 1-800-CALL NCR for more information, including our white paper series, *Issues In Imaging*.

Bottorff, the Tie that Binds Sovran to Citizens and Southern

Continued from page 12

ecough to command the attractive price of $654 million, or 2.42 times book value.

Some question, however, whether Mr. Bottorff achieved the highest premium possible. It is well known that Charlotte, N.C.-based First Union Corp. expressed an interest in Commerce Union at the same time but that Mr. Bottorff preferred to close the deal with Sovran rather than allow First Union to bid.

Sovran Friendly to Newcomers

Sovran was then a young company, formed by the 1983 merger of two Virginia banks, with a reputation for retaining and promoting managers of acquired institutions. First Union, on the other hand, has always been dominated by chairman and chief executive Edward E. Crutchfield Jr.

"It's not an auction process," Mr. Bottorff said, explaining that acquired companies have the right and obligation to consider the needs of employees and customers as well as shareholders. "The interests of employees are very much intertwined with maximizing shareholder value."

J.C. Bradford's Mr. Jones said Commerce Union got a "fair" price from Sovran.

"In the sometimes less-than-virginal environment of mergers and acquisitions, where personal considerations and nonprice or nonshareholder considerations come in, I suspect the deal with Sovran will stand as much scrutiny as any deal you want to look at," Mr. Jones said.

Whether Mr. Bottorff is allowed to carry out his ideas at C&S/Sovran depends on his success in merging the two companies.

Winning Over the Board

Mr. Bottorff has fared quite well at Sovran.

The deal allowed him to seat six Commerce Union directors on a 32-member Sovran board, and he was named vice chairman. By April 1988, when the Sovran board met to choose a new president and chief operating officer, Mr. Bottorff had won the allegiance of enough Sovran directors to capture the post.

"It certainly wasn't handed to him," said Mr. Gornto, who became Mr. Bottorff's boss. "Although Denny may have been from top to bottom, weeding out inefficiencies and consolidating strengths.

After a year of study, the board adopted a relationship-management strategy last October. Like Commerce Union's customer-segmentation strategy, it focused on customer categories and increasing the number of services used by existing customers.

The C&S/Sovran merger was originally scheduled to close in the first quarter but was delayed by community reinvestment challenges and the scrutiny of southeastern real estate loan portfolios by the Office of the Comptroller of the Currency. C&S/Sovran officials now expect to close the deal this week.

Whether Mr. Bottorff is allowed to carry out his ideas at C&S/Sovran depends on his success in merging the two companies, whose traditions and policies are distinctly different. Sovran is characterized by openness and flexibility, but C&S is dominated by a tightly knit board and management group.

This article originally appeared in *Southern Banker*.

Mr. McKinnon was one of the Sovran board members Mr. Bottorff had to win over. "The thing that impressed me, and obviously impressed other Sovran board members, was his willingness to face problems and try to deal with them directly and very incisively," Mr. McKinnon said.

Using Proven Planning

Mr. Bottorff moved quickly at Sovran to institute corporate planning modeled on the process he used at Commerce Union. He stressed the need to examine the organization from top to bottom, weeding out inefficiencies and consolidating strengths.

After a year of study, the board adopted a relationship-management strategy last October. Like Commerce Union's customer-segmentation strategy, it focused on customer categories and increasing the number of services used by existing customers.

Whether Mr. Bottorff is allowed to carry out his ideas at C&S/Sovran depends on his success in merging the two companies, whose traditions and policies are distinctly different. Sovran is characterized by openness and flexibility, but C&S is dominated by a tightly knit board and management group.

Jarrett Resigns From Ameritrust

Continued from page 2

ties on an interim basis. Mr. Smith, 65, has been a director of the bank since 1980. The company said he has been active in Ameritrust operations for several months as chairman of a special board committee focusing on credit quality concerns.

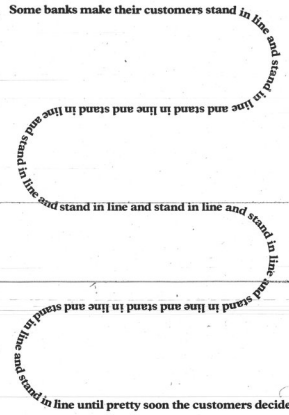
Mr. Smith previously was chairman and chief executive of Ransburg Corp., an Indianapolis-based industrial equipment company.

In late afternoon trading, Ameritrust stock was trading at $14.125 a share, up 50 cents from Monday's close.

Mr. Jarrett, who had been chief executive since 1982, joined Ameritrust in 1974 as a vice president in corporate banking.

This month, the $11 billion-asset bank holding company announced it would take as much as an $18 million charge against third-quarter earnings and cut its work force by 11.5%, or 780 employees.

Mr. Smith announced that, at his suggestion, Ameritrust had hired Thomas R. Williams, retired chairman of First Wachovia Corp., as a consultant. It also appointed James D. Rode, 42, as chief operating officer of the holding company and chairman and chief executive of its main banking subsidiary. □



a bank that handles customers the Intelligent way.

Japan Puts Money Policy On Hold over Arab Crisis

By KUNIO INOUE
Reuters

TOKYO — The Bank of Japan finds it inappropriate to alter its monetary policy significantly while the situation in the Middle East and its impact on the Japanese economy are still unclear, government and central bank officials sa...

"Our policy remains the same. That is, we are continuing to to check excessive rises in short-term interest rates, and nothing more than that," a senior Bank of Japan official said.

A senior government official also said, "Now is not the best time to consider a discount rate rise as we're still assessing the exact impact of the Mideast crisis on our economy."

Injection of Funds

The government official, who is familiar with the central bank's monetary policy, said an early discount rate rise also was undesirable because it could slow Japan's capital investment and reduce the U.S. Federal Reserve's leeway to adjust monetary policy.

"In fact, I haven't seen any clear evidence that the Bank of Japan is actually moving to raise the discount rate now," he said.

The senior monetary official also said the bank needed to get further information about the Mideast crisis before altering its present policy. He said the central bank would continue to inject sufficient funds into the banking system whenever necessary to counter speculative upward pressure on money market rates.

"We will keep providing funds because we don't want financial markets to have the false idea that we would tolerate higher rates and eventually move to raise the discount rate," he said.

Second Rise Was Expected

The central bank last raised the discount rate on March 20 to 5.25% from 4.25%. Speculation of another rate rise intensified, especially after oil prices shot up in the wake of the Aug. 2 Iraqi invasionf.

Another Bank of Japan official said although potential inflationary pressures are growing due to rising oil prices, the yen's recent strength should take some of that pressure away from domestic prices. "The rising yen is obviously a favorable factor when we talk about prices," he said.

... by country

UNITED KINGDOM

The Bank of England said it was banning any payments to Kuwait and Iraq on contract and performance bonds, in line with its emergency banking and finance freeze on those two Arab states.

Such bonds are usually extended by banks to Western companies needing them to comply with contracts overseas.

The British central bank explained that, in the present Gulf emergency, a "significant number" of British export contracts to Iraq and Kuwait have been halted. — **Reuters**

Continental Banking Corp. has terminated specialized trading activities at its Frankfurt and Paris branches and is instead concentrating these operations in London and New York, the company said in London.

Roy Degenhardt, Continental's senior vice president for Europe, said the bank made the decision in order to reduce its operating costs, but stressed the action did not reflect a withdrawal from European markets.

"In line with the bank's overall policy, we will continue to offer corporate finance, including raising equity and acquisition finance, as well as risk management services in Paris and Frankfurt, staying in those centers because there's where our customers are," he said.

"We're trying to anticipate the benefits of 1992 developments in Europe and operate a much more rational cost-base."

About 15 to 25 staffers in Paris and Frankfurt will lose their jobs. — **John Evans**

SINGAPORE

Kuwait's Gulf Bank expects to continue its only overseas operation, based in Singapore, and thinks countries that froze its assets will release them, a senior bank official said.

"The bank's assets have been frozen in a number of countries, but over a period of time we would expect them to be unfrozen," the Gulf Bank's acting chief general manager, Stuart Webster, said in an interview.

Singapore last week prohibited banks and financial institutions from transferring government and private Kuwaiti and Iraqi assets without the prior approval of the Monetary Authority of Singapore. — **Reuters**

VENEZUELA

The World Bank has approved a $300 million loan for Venezuela's Environment Ministry to improve waterways in Caracas and clean up polluted lakes and rivers, a ministry official said.

The ministry's planning director, Cilino Gonzalez, said the project to improve the water system – which left the entire city virtually without water for two weeks following a fire at a pumping station – is stipulated in the letter of intent signed with the World Bank last year. — **Reuters**

Money Flowing Out of Gulf's Banks . . .

Reuters

DUBAI — Banks in the Persian Gulf area are being virtually locked out of international money markets by foreign banks that are keeping their trading doors shut to the Gulf institutions.

Regional bankers and brokers said that though the large Saudi domestic money market was showing signs of life, Gulf banks' credit lines abroad had been severely curtailed. They said they saw no sign that overseas banks would relent soon.

Business in Bahrain's offshore banking center, the only such facility in the Gulf, has been devastated by the loss of confidence since Iraq's invasion, bankers said.

Others Also Troubled

Banks in the United Arab Emirates, Qatar, and Oman are also having varying degrees of difficulty.

"What is killing the market is that Japanese banks will not only not lend money into the Gulf, they will also not take money from the region," said one Gulf money broker.

The Japanese appear to have decided to avoid the Gulf, bankers said, and many European and U.S. banks have also kept their credit lines closed.

Gulf banks' credit lines abroad had been severely curtailed, and there was no sign that overseas banks would relent soon.

"Even some Gulf banks have cut lines to [other] Gulf banks," said one banker.

The situation has effectively removed Eurodollar dealings, all off-balance-sheet trading, and even dollar-sterling, and mark-yen trading for some Gulf banks, money brokers said.

Brokers estimated Bahrain money market business was at a fifth of its pre-invasion level.

Faced with panic withdrawals after the invasion, most Gulf banks pulled in their positions and tried to preserve their liquidity, not knowing what would happen next.

Arab banks on a U.S. Treasury list of banks under review because of their exposure problems and large Kuwaiti or Iraqi holdings have been particularly badly affected.

Although the U.S. Treasury subsequently removed some of them from the worst-affected category, which classified them as blocked entities, they still live under a shadow, bankers said.

Bankers said the line has so far been largely held by the Gulf's central banks, which have always been highly secretive institutions, shunning publicity even when some Gulf bankers would have preferred more public support from them.

With the exception of the Bahrain Monetary Authority (BMA), all the Gulf central banks have advised their banks to meet all cash demands and have supported them with liquidity. □

. . . but Few Deposits Coming to U.S.

By JAMES R. KRAUS

NEW YORK — As billions of dollars flee banks in troubled Persian Gulf states and oil producing countries' revenues rise sharply, banks worldwide are bracing for a new flow of funds.

But unlike the 1970s, when the rise in oil prices sent billions into U.S. financial institutions, only a handful of U.S. banks stand to profit, said bankers and analysts.

This time around, they said, the dollar's low value against other currencies, poor investment opportunities in the United States because of the economic slowdown, and U.S. banks' lack of the broad international networks needed to recycle funds are sending the money into big European and Japanese banks instead.

Little Appeal Seen

"U.S. banks are not attractive depositary institutions. The petrodollar recycling won't be replicated," said Paul M. Sacks, president of Multinational Strategies Inc., a New York-based international adviser.

Mr. Sacks added that most of the deposits are going to Europe and Japan because investment opportunities are better there and in Southeast Asia and because U.S. banks lack international investment relationships.

Data on the flow of money out of banks in the Gulf states are not available, but some estimates put the outflow at 10% to 40% of the deposits in places such as Saudi Arabia, Bahrain, and the United Arab Emirates.

Moves Could Be Temporary

"The view at the moment is that you get it out to places where it's safest, even if it may not be placed there permanently," said Stephen Timewell, editor of *Arab Banker* in London.

Mr. Timewell added that Switzerland has proved particularly attractive for tax reasons.

Bankers and analysts said that one of the clearest indications that money was not flowing into U.S. banks has been the steady fall in the dollar.

The corresponding rise in such currencies as the Swiss franc, German mark, and Japanese yen tells where the money is going, they added.

Spokesmen at large U.S. banks either declined to comment on how developments in the Middle East have affected their institutions or said that they have have not noticed any unusual increase in deposits.

But banking sources said that Citicorp, the only U.S. bank with a significant presence in the region, has been hit by the same withdrawals and slowdown in business that has affected other banks, and that large deposits have also been moved to Citibank accounts elsewhere.

Citicorp owns a 40% stake in the $6.8 billion Saudi American Bank and has a branch in Bahrain.

Other banks with offices or links to the region are J.P. Morgan & Co., Chase Manhattan Corp. Manufacturers Hanover Corp., Bank of New York, and UBAF Arab American Bank, a consortium bank in which Bankers Trust New York Corp., First Chicago Corp., Security Pacific Corp., and Texas Commerce Bancshares Inc. all hold small minority stakes. □

COMMENT/MERGERS
Deals Collapse as Buyers Rethink Risk

By REID NAGLE
President
SNL Securities

Falling stock prices and recessionary fears have resulted in a rash of deal cancellations as wary buyers re-evaluate transactions negotiated in headier times. In just eight weeks since the start of the second quarter, seven bank and thrift mergers and acquisitions have been terminated, mostly at the behest of buyers concerned about either paying too much or taking on shaky assets.

At the beginning of the second quarter, there were 36 pending mergers or acquisitions involving publicly traded banks and thrifts as targets. The subsequent cancellation of 20% of these deals represents an unprecedented fallout rate, and one which stems from mounting fears of a recession coupled with plummeting bank stock prices.

Fed Blocks Bank of New York

The most notable of the deal terminations involved Bank of New York Co.'s proposed acquisition of Northeast Bancorp. Pursuant to an agreement signed in 1983 and subsequently revised, Bank of New York was slated to acquire Northeast Bancorp for 2.5 times book value, an indicated deal value of $545 million based upon June 30 financials.

Bank of New York, saddled with a weak capital position as a result of its protracted acquisition of Irving Bank Corp., rising levels of nonperforming assets, and a depressed stock price, indicated early in the year its desire to abandon a transaction negotiated at a time when the New England economy and bank stock prices were more robust. Northeast Bancorp, not surprisingly, wanted to consummate a transaction that would unquestionably deliver the highest possible value to its shareholders.

Enter the Federal Reserve. The regulatory agency, charted with approving mergers of bank holding companies, denied the acquisition on the grounds that "the tangible capital ratios for the combined organization would not be substantially above the Board's minimum capital levels and would be less than the current average levels of BONY's peer group of the nation's largest regional banking organizations."

Northeast's president, George Kabureck, places the blame for the Fed's decision squarely on Bank of New York. BONY "basically failed the tangible net worth test as a result of its acquisition of Irving and the subsequent acquisition of several credit card portfolios." Mr. Kabureck claims that Bank of New York made acquisitions after its 1983 agreement with Northeast that prevented the deal from coming to fruition and further that, when confronted with the Fed's rejection of the acquisition agreement, failed to amend the agreement in a way that would have insured its approval. Specifically, Northeast believes that if the deal had been amended to provide for payment exclusively in common stock, the deal would have received Fed approval.

With Bank of New York unlikely to appeal the decision, the acquisition agreement now moves to court where Northeast is seeking damages for Bank of New York's alleged breach of contract. The stakes are high. Under the terms of the agreement, BONY would have paid Northeast shareholders $75 per share. Today, Northeast shares trade at $13.

Thrift Transactions Unglued

Of six other deals terminated since the beginning of the third quarter, all involve thrifts — five as the target and one as the acquirer. The largest of these transactions, a $400 million purchase and recapitalization of Talman Home Savings, was aborted by the lead investor, Harrison Stearns, during a due diligence review of the trans-

COMMENT/MERGERS
Wary Buyers Reevaluate Deals

Continued from *page* **18**

action.

In the one instance of a terminated acquisition that involved a savings bank as the acquirer, Home Port Bancorp canceled its plans to acquire Martha's Vineyard National Bank. The cancellation came despite Home Port's defeat of earlier proxy initiatives by dissident shareholders seeking termination of the transaction.

The remaining three transactions canceled since the beginning of July all involve proposed acquisitions of small Pennsylvania thrifts by Pennsylvania banks. In deals ranging in value from $10 million to $23 million, F.N.B. Corp. is in court attempting to vacate its acquisition of Dollar Savings; Susquehanna Bankshares and Elmwood Federal mutually terminated their proposed combination; and CCNB Corp. and Homestead Holdings jointly agreed to terminate their pending transaction.

While reasons given vary from deal to deal, most terminations result from the buyer's realization that the negotiated purchase price was too high and would cause shareholder dilution. In many instances initial buyer optimism reflects reliance on accounting measures of performance and value that don't adequately reflect economic and financial reality.

Chris Quackenbush, managing director of the investment banking boutique Sandler O'Neill, thinks buyers have learned an important lesson in the past year about assessing the value of depository franchises, and that sellers' expectations will soon begin to decline as well. "You have to live in this [depressed] market for a year or so before people begin to accept realistic pricing. [buyers] should virtually ignore book value and pay attention to the fundamentals" of the franchises for sale.

Deals in Peril

In addition to the seven transactions terminated in recent weeks, several other pending acquisitions appear to be on the ropes and unlikely to be consummated in their current form. The proposed acquisition of BankWorcester by Royal Bank of Scotland appears certain to be either terminated or substantially revised. The original agreement called for Royal Bank's Rhode Island subsidiary to pay $22.50 in cash for each BankWorcester share. The stock now trades at less than $13 a share, reflecting investors' belief that Royal Bank will exercise its option to abandon or renegotiate the transaction if nonperforming loans reach an unacceptable level.

Another transaction that appears questionable is BMR Financial Group Inc.'s proposed acquisition of First Chattanooga Financial Corp., an institution more than twice as large as its bank acquirer.

First Chattanooga spokesman Bert Hicks said he knows of no reason why the transaction would not be consummated, and expects regulatory approval of the transaction from the Office of Thrift Supervision. "It's a sweet deal for our shareholders," said Mr. Hicks. Nonetheless, the marketplace seems concerned that the deal may not go through as currently structured. First Chattanooga currently sells at a 59 discount to a deal value of approximately $24 per share.

On Tuesday, Spencer H. Wright, chairman and chief executive officer of First Chattanooga, and James. L. Greene, chairman and chief executive officer of BMR, announced jointly that an agreement in principle has been reached to terminate the agreement and plan of reorganization.

The two executives noted that current uncertainty and instability in financial markets have made prospects for the acquisition less promising.

Share Price Instrumental

Two other large transactions appear sound for the moment, but are subject to termination by one or both parties if the acquirer's share price falls outside a specified range. Currently, it appears that Home Savings Bank could vacate its acquisition by Ahmanson if the latter's price were to continue to decline. Except in dire circumstances that option seems un-

HLT Loans Soar At First Chicago, Slide Generally

Continued from page 1

said. "Banks are carefully managing their exposure."

At the end of the second quarter, the top 25 leveraged lenders had $68.948 billion in HLT loans outstanding, down from $70.174 billion in the first quarter. SNL did not provide data on the percentage of HLT loans that were nonperforming.

Citicorp Is No. 1

Citicorp held the largest HLT portfolio in the second quarter, $8.82 billion, although the size to assets was below the industry average.

Clearly, the growth of HLT portfolios slowed dramatically as the banks began to reclassify loans in February. Though federal regulators did not put limits on HLT lending, they made the range of definitions banks used persuaded regulators to define the term and number of loans to classify separately all leveraged loans.

But this vague had already been tightened by market forces, as the Campeau bankruptcy and the failed UAL buyout in October scared lenders and knocked the wind out of the market for subordinated high-yield debt.

Nevertheless, the reclassification has given bank analysts an occasion to scrutinize banks' assets more closely. Many analysts still fear that underperforming loans could continue to rise in the banks' HLT portfolios.

And despite the increases in loan-loss provisions this year, some analysts say that HLT portfolios are not quite out of the woods yet.

Even the number of deals in trouble or in need of restructuring, S&P expects a rough year ahead," Standard & Poor's Corp. analyst Tanya Azarchs wrote recently. "Nonperformers will rise beyond current levels, though perhaps in a bumpy fashion."

Banks are clearly in a bind

Data Sources: All HLT data provided by SNL Securities, Charlottesville, Va., from its rate base of 400 publicly traded commercial banking companies. HLTs are highly leveraged transaction loans. A "purpose test" has been developed by the federal bank regulators to define an HLT transaction. A bank holding company is considered to be in noncompliance of the guidelines if it has HLTs in addition to its core capital that exceed 75% of its core capital. In addition to the purpose test, there is a definitional test that is used to determine whether the financing of a particular transaction is an HLT. The definitional test mandates that for the transaction to be considered an HLT: (1) the transaction at least doubles the subject company's liabilities and results in a leverage ratio (total liabilities/total assets) higher than 50%; (2) the transaction results in a leverage ratio higher than 75%; or (3) the transaction is designated by the lead bank as an HLT by a syndication agent. To qualify under the transaction rules in the credit an HLT, when the credit meets the purpose test but is not covered by any of the three criteria above. The new rules will not affect the status of outstanding HLT borrowers, regardless of whether they meet the definition of HLT. Banks with significant HLT data for March 31, 1990, were required to report HLT data for June 30, 1990, even if they had fallen below the 25 as of March 31 were not available. The ranks shown for March 31 were generated by American Banker using the March data for the top 25 banks on the June 30 list. Securities Data Publishing tracks publicly traded companies. Thus, the number ranges from 400 to 1,000 for major foreign-owned U.S. holding companies — Deutsche Bank Capital Corp., Dresdner Bank Holding Corp., Inc., Dresdner Securities, Inc., Buffalo, N.Y.; National Westminster Bancorp., Inc., New York; Barclays Bank, Inc., Chicago, and First American Bankshares, Inc., Washington, D.C. — are not included. Also, banks that have been acquired or merged with companies from which the top 25 banks were drawn.

DEALS: HLT Portfolio for the Top 25 Lenders Shows a Slight Decline

Continued from page 21

with regard to their HLT lending. On the one hand, bank management is feeling pressure from shareholders and regulators to reduce the riskier HLT lending. On the other, the need to deploy high-yielding assets is crucial for banks now, because of the pressure on earnings and the slow growth in the economy.

"There's a big tug of war between reducing exposure and booking loans," said a longtime lender to leveraged companies. "You're not going to make it up with lines to IBM."

Also contributing to the slow but steady pace of HLT lending is that new loans appear to be of better quality -- and often include higher fees -- than deals originated a year or two ago. RJR Nabisco Inc., for instance, is expected to help banks' bottom lines because of the high fees and interest rates of 3.5% over the London interbank offered rate.

> **"The few deals being done now appear to be structured more conservatively."**
>
> **Tanya Azarchs**
> *Standard & Poor's Corp.*

"The few deals being done now appear to be structured more conservatively, with larger equity cushions," Ms. Azarchs noted. She saw such prudence as "holding out the possibility that credit quality may return to normal when the 1988-1989 bulge works its way through the system."

Officials at First Chicago were not available for comment about the huge increase in its HLT portfolio. But a spokeswoman said that $2 billion of the $3.6 billion of HLTs is in communications loans, up from $1.2 billion in the first quarter. Most of the nonmedia new HLT loans came from reclassifying loans already on the bank's books.

Cable and communications loans have been deemed HLTs because of the industry's high leverage, even though most of the loans were not used for buyouts or recapitalizations.

Other banks that have increased their HLT portfolios include Manufacturers Hanover Trust Co., which increased its portfolio by around $200 million, and Bank of New York Corp., which added $200 million in leveraged loans. Hanover has been involved in the year's largest deals, and Bank of New York continued to be a major lender to communications companies.

Cutting Exposure

Banks that have significantly reduced their HLT exposure include Bank of Boston Corp., whose portfolio fell from $4.8 billion to $4.2 billion; Security Pacific Corp., which saw its exposure plunge from $4.8 billion to $4.4 billion in the second quarter; Wells Fargo & Co., which shaved its portfolio from $4 billion to $3.6 billion, and Continental Bank, which went from $3 billion to $2.7 billion.

Bank of Boston has been selling loans in the secondary market to boost capital. Also, its 12.93% HLT-to-asset ratio was an industry high in the first quarter.

A spokeswoman for Security Pacific said its figure fluctuates by a few hundred million each quarter. She noted that the fourth quarter of 1989 showed a $4.1 billion HLT figure.

A Wells Fargo spokeswoman said the bank had a sizeable amount of debt that was paid off in the second quarter. Continental Bank had the second-highest ratio of HLTs as a percentage of assets in the first quarter after it was moved to reduce the figure, bankers said.

At least some banks are actually keeping two sets of HLT numbers, because of the feeling that the definition used by the three banking regulators -- the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corp., and the Federal Reserve Board -- is too onerous, especially with regard to communications lending.

Mellon Bank Corp., for instance, says in its 10-Q that it has $729 million in HLT loans by its own definition but $1.614 billion as defined by the regulators. The bank's definition "specifically considers industry leverage norms so that the definition of HLTs does not become so broad so as to render the definition a less relevant measure of risk." □

Deals Collapse as Buyers Rethink Risk

Continued from page 19

likely to be exercised. Home Savings spokesman Ron Wong reports that so far the company has "not received any instruction from shareholders not to complete the transaction."

Similarly, U.S. Bancorp's proposed acquisition of Heart Federal in California depends on the acquirers' stock price at the time the deal is completed, probably next spring. While U.S. Bancorp's stock declined along with the market to a level below the specified deal range, the remaining time frame for completion of the deal and the likelihood of a rebound in the prices of healthy banks like U.S. Bancorp probably will leave this transaction intact. □

Through the eye of the fiduciary.

When it comes to trust investments, it's Federated's only line of sight.

Your ability to execute your fiduciary responsibility in an ever-changing financial marketplace and complex regulatory climate requires a special vision—and an investment approach aligned with that vision.

That's how we see it.

Many mutual fund companies offer trust departments the same generic funds that they distribute to the general public. Not Federated. Our *MultiTrust*® system of investment products and services are designed to meet the focused investment needs of the fiduciary...so you can allocate assets efficiently, and concentrate on new business development.

Spanning market sectors and maturity ranges, MultiTrust portfolios are managed by teams of experts who apply investment philosophies, highly disciplined methodologies to every decision.

We back these investments with value-added services that can make the critical difference in your success.

We'll keep you up to date on regulatory issues.

Provide practical marketing support.

Connect you to user-friendly technology for up-to-the-minute trading, information, and recordkeeping.

And, for the highest level of personal attention, we'll service your account with a regional team of dedicated specialists.

To learn more about how Federated investment products line up with your department's vision, call a Federated representative toll-free 1-800-245-5040.

Through the eye of the fiduciary. It's our only perspective.

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as of August 28. The market value of all common shares outstanding (As of June 30) is used to rank the banks and thrifts. Banks with $500.11 mil. and for thrifts $100.41 mil.) to $2.5 bil. for the nearest 52-week high and low closing prices for the stocks. The banks' earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. NM, is listed, the ratio of the current stock closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. The date of which the stock last traded. If no trades for the day, the latest bid. **All Bank and Thrift Indexes:** A weighted average of the top 200 banks in market value and the top 50 thrifts in market value, respectively. Components are the largest percentage of the index and two volume indicators most shares traded and today's volume as a percentage of average shares traded over the past year.

Data sources: SNL Securities, Charlottesville, VA, 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides DNL with the daily prices.

STOCKS
Northern Trust Weak Despite Its Performance

By GORDON MATTHEWS

NEW YORK – Shares of Chicago's Northern Trust Corp., which runs one of the country's largest trust banking operations, have been hit hard in the most recent period of weakness in bank stock prices despite its steady fee revenues and low level of nonperforming assets.

Analysts are scratching their heads to figure out why.

Summer Slippage For Northern's Shares

Percentage change

*Weighted average of 225 largest publicly traded banking companies ranked by market capitalization.
Figures for Wednesday as of 3 p.m.
Source: DB Technology Inc., BNL Securities, Standard & Poor's Corp.

Its 25% fall since June 1 has been part of the trend by investors to take profits in better-quality banks whose stocks until this summer had declined much less than others in the long slide of bank equities since last October.

Weaker than Its Peers

While the decline is in line with bank stocks generally – the *American Banker* index of the 225 largest publicly traded banks is off 26% – Northern's shares have eroded noticeably more than those of its peers among the nation's leading trust-oriented banks.

In contrast, State Street Boston Corp. has fallen 14.5% since June 1, while Wilmington Trust Co. has slipped 12.6% and United States Trust Corp. is off 11.1%.

"This seems an aberration to me. Maybe it's a case of the marketplace not being as efficient as usual," noted Kenneth F. Puglisi, senior vice president of Keefe, Bruyette & Woods Inc.

On Tuesday afternoon, Northern's shares were up 37.5 cents, to $24.875, in afternoon trading on moderate volume as the stock market generally treaded water while awaiting further news from the volatile Persian Gulf region.

Mr. Puglisi, who tracks the performance of major Midwestern banks, said the summer weakness in the stock was odd since Northern can be viewed as "the kind of banking company that is best equipped to deal with today's uncertain economic environment."

Analysts at Goldman, Sachs & Co. noted that noninterest revenues amounted to 58% of total revenues at midyear, with trust fees rising 10% in the second quarter. They recently said they expect double-digit growth from trust fees through next year.

Northern has the second largest master trust and custody business in the country, behind State Street, with $200 billion of assets under administration. It also manages $18 billion in pension fund assets and $17 billion in personal trust assets.

TUESDAY'S MARKET

Major bank and thrift stocks were mixed in moderate trading on Tuesday as the stock market was in a mode of watchful waiting for further news from the Middle East. Late in the day, the Dow Jones industrial average was down two points, to 2,609.

Late summer doldrums also helped keep volume at a moderate pace in the bank issues. Citicorp, the nation's largest banking company and usually the leader in volume among bank stocks, had traded only 660,000 shares by late afternoon. It was unchanged at $18.375.

NCNB Rises 50 Cents

NCNB Corp., often the volume leader among supperregional banks, had traded only 84,800 shares by the same time. It rose 50 cents, to $33.375.

Selling pressure was apparently in the shares of several major banks. Banc One Corp., Columbus, Ohio, slipped $1, to $25.125; J.P. Morgan & Co., New York, was off 50 cents to $32.75; and Wells Fargo & Co., San Francisco, fell 75 cents, to $53.625.

Showing the most forward progress were Security Pacific Corp., Los Angeles, up $1.125, to $28.25; PNC Financial Corp., Pittsburgh, up 87.5 cents to $25.25; and BankAmerica Corp., San Francisco, up 75 cents, to $22.125. □

CAPITAL
Is Wall Street Mispricing Bank Bonds?

Continued from *page 1*

tion that's somewhat problematic, it's very hard to price," said Andrew J. Cooley, a managing director at Merrill Lynch Capital Markets.

Second, banks themselves are not blameless when it comes to pricing debt offerings. Those with limited capital needs can easily decide to focus on keeping capital costs low, rather than on building investor confidence.

The temptation is clear to issue bonds at the lowest interest rate possible, leaving underwriters to deal with unsold inventory and other banks to contend with a more hostile market.

If banks "have a lot of paper to do, they can't push the market too hard," said Matthew J. Grayson, a vice president at Salomon Brothers Inc. "But some people let the investment banks bid themselves down to loss levels."

Third, the market for bank bonds has already become so illiquid that secondary market performance of any offering is difficult to predict, even when a bank's credit quality is not materially changing.

With little trading activity and wide bid-ask spreads, bond yields relative to Treasuries can jump on a heavy sell order, according to John C. Morris, an executive vice president at Smith Barney, Harris Upham & Co.

"There is not enough liquidity in the market to say it is really efficient," he said. "If anyone wanted to do anything in size, it would move the market."

To be sure, investment banks are the parties most vulnerable if a deal is priced too aggressively. Underwriters run the risk of getting left with an inventory of bonds investors do not want at the initial price.

Widening Yield Spreads on Bank Bonds

Selected issues in 1990

Date	Issuer	Size (dollars in millions)	Initial spread	5/30 spread	Lead manager
5/22	Great Western Bank	130	187.5	208	Merrill Lynch
6/7	Bankers Trust New York	200	115	205	Shearson Lehman Hutton
6/8	Great Western Bank	150	180	195	Shearson Lehman Hutton
6/26	BankAmerica	100	130	145	Merrill Lynch
7/26	BankAmerica	125	130	145	Shearson Lehman Hutton
7/27	First Chicago	100	165	195	Salomon Brothers

Source: Ameritrade Banker

"If you keep mispricing that capital management process, you're going to find a lack of support from Wall Street and investors," said one investment banker.

Not all bankers agree that mispricing is the cause of the wider spreads on bank bonds. Robert Rosholt, senior vice president and treasurer of First Chicago, believes investors' concerns about credit quality are causing spreads to widen on bank bonds, regardless of the credit quality of a particular bank.

"There is an industry factor that goes into spreads," he said, noting that the spread relative to Treasuries on his own bank's bond issue has widened about 30 basis points. "The various concerns that may be out there for industry credit quality is affecting spreads as well as stock prices."

But mispricing hurts the market as well, because investors who do buy bonds on an initial offering are often left with securities whose yield spread widens once the offering syndicate breaks. If more investors are becoming wary of bank bonds, the market for bank securities will shrink further, making future offerings even more difficult.

Investment banks charge fees equal to about 0.65% of the principal amount of an offering for subordinated debt, according to one investment banker. For a 10-year debt offering, that works out to about 10 basis points per year.

That means an investment bank has roughly 10 basis points' margin between the price at which it buys a deal from the issuer and the price at which the deal is sold before the transaction becomes a money losing prospect.

MARKET MONITOR

Security Pacific Corp. has filed a shelf registration for up to $300 million and two million shares of preferred stock. Proceeds will be used for general corporate purposes.

Citicorp is redeeming a $150 million subordinated note issue due in 1995 at par. The notes carry a hefty 11% coupon. □

FINANCIAL TECHNOLOGY UPDATE

The NCR Financial Tower Thrift System with Starcom interface automates a range of teller and platform services to improve handling of deposits, window posting, new account processing and loan processing.

The Financial Plus® teller platform from Systems Concepts, Inc. and the Cross Sell Manager™ platform application are combined with the NCR 5067/5267 Financial Workstations and interfaced via a Local Branch Network (LBN) through an NCR TMX Tower branch processor to the NCR data center. This combination delivers the versatility and flexibility to speed transaction processing and reduce long service lines . . . which allows for more concentration on customer satisfaction.

You can save valuable branch space by integrating NCR's 5085 and 5084 through the wall ATMs and the 5285 Business Night Depository. The result is one footprint rather than two. Commercial cardholders can deposit bags and receive a receipt that verifies the location, date, time, and amount deposited . . . a valuable service to help you increase your commercial account base.

The NCR 5682 is the next step in self-service. Account service transactions are integrated to the platform via the NCR 5682. Your customers can perform a wide range of financial transactions without the assistance of a customer service representative. Plus, unequaled custom graphics and VGA videodisc capabilities attract customers and promote services.

On the platform side, valuable information is gathered increasing your ability to track account needs. Cost and time is saved for both customers and branch personnel. As competition increases, financial institutions are turning to integration technology for solutions to improving and expanding their levels of customer services.

STRATEGIC BANK COST MANAGEMENT

New Approaches To Reducing Costs In An Era Of Uncertainty

FOUR TARGETED SECTIONS

SECTION I: Examining Superior Cost Performers

SECTION II: Alternative Strategies to Cost Management

SECTION III: Using Technology to Help Your Bank Cut Costs While Improving Performance

SECTION IV: Cutting Costs During the Merger Process

OUR DISTINGUISHED SPEAKER PANEL INCLUDES:

J. Carter Bacot
Chairman
Bank of New York Co.

Richard L. Huber
Vice Chairman
Continental Bank

James M. McCormick
President
First Manhattan Consulting Group

Charles H. Nobs
Senior Vice President of Corporate Operating Services
Bankers Trust Company

Michael Zucchini
EVP & COO
Fleet/Norstar Financial Group, Inc.

Walter E. Leonard, Jr.
Executive Vice President
First Wachovia Corp.

William T. Gregor
Senior Vice President
The MAC Group

Keith P. Russell
President & COO
Chelsea Federal Bank

William L. Chenevich
President & COO

October 15 & 16, 1990
The Vista Hotel
New York, NY

DAY ONE:

8:45 **CHAIRMAN'S OPENING REMARKS:**
Sanford Rose, *Senior Columnist*, American Banker (NY)
John S. Poelker, *President*, Poelker & Associates (LA)
Clayton G. Deutsch, *Principal*, McKinsey & Co. (BOCA)

SECTION I
EXAMINING SUPERIOR COST PERFORMERS

9:00 **WINNING THE PRODUCTIVITY RACE THROUGH STRATEGIC COST MANAGEMENT (NY, LA, BOCA)**
- Which banks are the superior cost performers and how did they raise productivity through cost management?
- How good is a bank and where are the areas of potential improvement?
- What kind of programs can bring expenses under control?

James M. McCormick, *President*
First Manhattan Consulting Group (NY, LA, BOCA)
Rodgers L. Harper, *Managing Vice President*
First Manhattan Consulting Group (NY, LA, BOCA)

9:45 **BANK OF NEW YORK - A CASE STUDY (NY, LA, BOCA)**
- As selected from First Manhattan Consulting Group's Expense Productivity Analysis

J. Carter Bacot, *Chairman*, Bank of New York (NY)
Speaker to be announced, Bank of New York (LA, BOCA)

10:30 **CONTINENTAL BANK - A CASE STUDY (NY)**
Richard L. Huber, *Vice Chairman*
Continental Bank (NY)

AMSOUTH - A CASE STUDY (BOCA)
- As selected from First Manhattan Consulting Group's Expense Productivity Analysis

John W. Woods, *CEO*, or **C. Stanley Bailey**, *Senior Executive Vice President & CFO*
Amsouth Bancorporation (BOCA)

COST CUTTING IN COMMERCIAL LENDING (LA)
Nicholas L. Hayes, *Senior Vice President & Manager*
Bank of California (LA)

11:15 **COFFEE/TEA**

11:30 **THE ANALYST'S REPORT CARD (NY, LA, BOCA)**
- How analysts measure a bank's cost effectiveness and how it affects stock prices
- Why cost efficiency will become an increasingly important driver of bank profitability

James J. McDermott, Jr., *EVP & Director of Research*
Keefe, Bruyette & Woods, Inc. (NY)
Richard A. Mueller, *Financial Group Head*
Duff & Phelps (LA)
Anthony R. Davis, *Senior Vice President*
Wheat First Securities (BOCA)

12:15 **LUNCHEON FOR ATTENDEES AND SPEAKERS:**

COST RE-ENGINEERING IS NOT A ROCKET SCIENCE! . . . AN OVERVIEW (NY, LA, BOCA)
Robert M. Fletcher, *Sector Executive-Finance & Chief Financial Officer*, Marine Midland Bank (NY)
James Benowski, *Principal*, McKinsey & Co. (LA)
Douglas E. Ebert, *President & COO*
Southeast Bank (BOCA)

SECTION II
ALTERNATIVE STRATEGIES FOR SUCCESSFUL COST MANAGEMENT

1:45 **ALTERNATIVE STRATEGIES FOR SUCCESSFUL COST MANAGEMENT (NY, LA, BOCA)**
- An outline of four different approaches that work
  - — Process Analysis
  - — Economies of Scale
  - — Resource Allocation
  - — Budget Discipline

William T. Gregor, *Senior Vice President*
The MAC Group (NY, LA, BOCA)
Robert B. Hedges, Jr., *Vice President*
The MAC Group (NY, LA, BOCA)

2:30 **COST RESTRUCTURING THROUGH PROCESS ANALYSIS (NY, LA, BOCA)**
- Increasing efficiency by eliminating archaic processes and functions
- Achieving real, lasting unit-cost reductions; looking beyond belt-tightening
- Dealing with staff and customers during cost restructuring
- Analyzing each individual business on its own and in your bank's matrix

Janet S. Hartung, *Senior Vice President*
Mellon Bank (NY, LA, BOCA)

3:10 **THE BENEFITS OF ECONOMIES OF SCALE (NY)**
- Why using economies of scale to drive down unit costs will grow increasingly important
- Which businesses are most appropriate for this strategy

Robert L. Nelson, *Director Strategic Planning & Development*, Fleet/Norstar Financial Group, Inc. (NY)

The Only Industry Directory That Matters . . .

BANKING ON TOP BANKERS

WHAT is **Banking On Top Bankers?** It's more than a directory...it's a well-organized sourcebook...a locator of financial services decision-makers and the reference tool that you won't be able to do without!

HOW . . . is **Banking On Top Bankers** different? You get the top 1000 banking professionals at your fingertips. Features include: A separate listing for financial services professionals in 18 different banking areas from Asset Securitization to Banking Technology and a separate listing for professionals by area of profession. This sections presents the "tops" in each field. Professional areas include "The Banking Elite," "Top Investment Bankers," "Top Federal Regulators" and more. Also include are five separate listing of top institutions. Lists include: The top 300 commercial banks, the top 100 thrifts, the top 50 international banks and more.

WHY should you order your copy today? Because we've already done your research for you...and as a conference attendee, we'll give you a 20% discount off the price of the directory.

WHERE can you order your copy today or find out more information? Call (212) 943-2221 or mail a check for $195 to: American Banker Conferences, 1 State Street Plaza, 31st floor, New York, NY 10004, Attn: Director of Conferences.

YOU CAN'T BE ALL THINGS TO ALL PEOPLE... A NEW LOOK AT MARKET SEGMENTATION (LA, BOCA)

- Why reorganizing your business mix to segment profitable businesses is essential in today's market:
  - — To reduce the costs of cross selling
  - — To know your client base better
  - — To allow directed growth in desirable niches
- Three ways of looking at market segmentation:
  - — By product
  - — By customer
  - — By organization

Speaker to be announced, Royal Bank of Canada (BOCA)

12:40 LUNCHEON FOR ATTENDEES AND SPEAKERS:

COST CUTTING IN RETAIL BANKING (NY, LA, BOCA)

- Why banks lose money on 30-50% of their retail consumers
- The difference between efficient and effective marketing
- The need to alter pricing structures

Peter Carroll, *Partner*
Oliver, Wyman & Co. (NY, LA, BOCA)

10 STRATEGIC ADVANTAGES OF OUTSOURCING - A CASE STUDY (NY, LA, BOCA)

- How outsourcing can provide strategic advantage
- Factors leading to outsourcing at First Fidelity
- How First Fidelity evaluated the outsourcing option and its experience to date

Ladd Willis, *Managing Vice President*
First Manhattan Consulting Group (NY, LA, BOCA)
Don Parcells, *Senior Vice President*
First Fidelity Bancorp (NY, LA, BOCA)

SECTION IV

EFFECTIVE COST MANAGEMENT IN THE MERGER PROCESS

3:10 COST RATIONALIZATION IN INTERSTATE MERGERS (NY, LA, BOCA)

- What benefits should be anticipated from consolidation
- The difference between intrastate and interstate
- The difference between small and large institutions
- What are the implications to the industry...are mergers inevitable?

Harry H. Totonis, *Principal*
Booz-Allen & Hamilton (NY, LA, BOCA)

3:55 ECONOMIES IN MERGERS AND MULTIBANK SYSTEMS: THE EXPERIENCE AND THE POTENTIAL (NY, BOCA)

- What merger economies should banks seek and when?
- What common mistakes are made and how can they be avoided?
- How should a bank holding company balance the advantages of a multibank system and the potential economies from merging banks?
- How can a multibank system survive the trend toward mergers?

Peter Merrill, *President,* BEI Golembe (NY, BOCA)

THE INTEGRATION PROCESS: HOW TO MANAGE THIS COSTLY PROCESS EFFECTIVELY (LA)

- Sizing the integration effort
- Selecting the appropriate integration approach
- Organizing and managing the process to facilitate centralized planning and decentralized decision making

Carole Kay Lynn, *Partner*
Edgar, Dunn & Conover, Inc. (LA)

4:40 END OF CONFERENCE

AMERICAN BANKER IS NOW ACCEPTING APPLICATIONS FROM VENDORS FOR THE FOLLOWING OPPORTUNITIES:

(1) BOOTH SPACE (2) SPECIAL SUPPLEMENT AND (3) CONFERENCE WORKBOOK

Conference Display: Through a booth demonstration, attendees will have the opportunity to familiarize themselves with various systems to improve productivity and reduce bank costs.

Special Supplement: There will be a special supplement in **American Banker** on Monday, December 17th. This supplement will include articles and advertisements dedicated to cost management.

Conference Workbook: This publication will contain excerpts of the speeches from the conference, in addition to reference information, advertisements and articles.

AMERICAN BANKER

VOL. CLV NO. 170 — Thursday, August 30, 1990 — 155th year

The Rot Spreads To Northeastern Business Loans

By TOM LEANDER

Northeastern banks recorded the worst performance in the nation during the second quarter amid signs that the cancer plaguing real estate portfolios had spread into commercial and industrial lending.

Earnings at superregional and regional institutions in the Northeast fell an average of 30% during the period, according to Keefe Bruyette & Woods Inc. By comparison, bank profits fell 1% in the Southeast, were flat in the Midwest, and rose 7.5% in the West.

Analysts said they expected real estate problems would continue to batter Northeastern banks. But many said they were surprised at the rise in nonperforming commercial and industrial loans, which they called an ominous sign of impending recession.

"It's a serious trend," said Gerard Cassidy, an analyst for Tucker, Anthony & R.L. Day Inc. in Portland, Maine.

Further balance-sheet deterioration is expected in the third quarter. Higher oil prices resulting from Iraq's invasion of Kuwait are expected to hit the Northeast particularly hard because the region is heavily dependent on oil for heating and electricity generation.

Focusing on Problem Assets

This troubled economic climate has prompted northeastern bankers to toss aside earnings performance as a goal and set their sights on clearing problem assets off their books. Many institutions simultaneously posted nonrecurring gains to soften the blows to earnings.

"Many banks have taken the stance that it's best to bite the bullet this year and focus on 1991," said Richard S. Golenkewski, an analyst for Goldman, Sachs & Co., New York. "They're concentrating on how to tighten their belts."

Shawmut National Corp., headquartered in Hartford, Conn., and Boston, also showed signs of weakening asset quality in the second quarter. Its nonperforming commercial and industrial loans rose 10%, to $348 million, and its nonperforming construction loans also were up 10%, to $448 million.

Weak Residential Mortgages

Shawmut's residential mortgage portfolio also began showing cracks; nonperformers in this category rose 14%, to $105 million. The bank reported a

C&S/Sovran: Shaping Up As Balanced

By KENNETH CLINE

ATLANTA — Reflecting a merger of equals, C&S/Sovran Corp. unveiled Wednesday an organizational and command structure that strikes an apparent balance between C&S and Sovran.

C&S/Sovran executives remained tight-lipped about layoffs and other cost savings that may be imposed after the biggest merger in U.S. banking is completed tomorrow.

Some Attrition Expected

C&S/Sovran Corp.'s chairman, Bennett A. Brown, said the new organizational structure, which groups operations along functional rather than geographic lines, will produce some attrition. But, but added, there will be no "sizable" layoffs.

"When there are functions being brought together where there is duplication, we will then attempt to relocate those individuals," Mr. Brown said. "If not, they will be treated extremely

Crisis Hurts Demand For Consumer Loans

By PHIL ROOSEVELT

NEW YORK — The Persian Gulf crisis, now entering its second month, has started to dampen demand in the United States for consumer loans, particularly mortgages.

A number of lending executives say people appear to be holding back from borrowing because of an increased risk of recession, volatile financial markets, and the threat of war.

Applications Down 25%

Demand for home mortgages has been hurt by a surge in long-term market yields, which are used for setting rates on many mortgages. Some banks say their volume of mortgage applications has dropped by 25% since Iraq invaded Kuwait on Aug. 2.

(Separately, the Mortgage Bankers Association of America reported Wednesday that delinquencies on home mortgages rose modestly to 4.52% in the second quarter. See story on page 2.)

Rates on home equity loans, auto loans, and other types of consumer loans – which all reflect shorter-term market yields – have changed little. But consumers are still showing renewed caution because of general fears about the economy, several lenders and analysts said.

Mortgage Rates Rise Since Iraqi Invasion

Confidence Index Plummets

Underscoring such concerns, the Conference Board in New

SURVIVOR: James D. Rode, left, is being talked of as a permanent successor to Jerry V. Jarrett, right, at Ameritrust.

Did Ameritrust's Jarrett Jump, Or Did Comptroller Push Him?

By NANINE ALEXANDER

Jerry V. Jarrett, who announced his resignation this week as chairman and chief executive officer of Ameritrust Corp., may have gotten a push from the Office of the Comptroller of the Currency, industry sources speculated Wednesday.

Neither the company nor the Comptroller's office would comment on the rumors or on a memorandum of understanding that was the result of the agency's examination of Ameritrust Co. earlier this year.

The memo, a relatively light regulatory sanction, required improvements in Ameritrust operations, analysts said.

Mr. Jarrett, who no longer works at the Cleveland-based banking company, could not be reached for comment.

Successor Not Named

Analysts, who viewed Mr. Jarrett as a hands-off chief executive, raised questions about whether James D. Rode would be named as his successor. Mr. Rode, 42, was seen as the principal architect of the strategy that led Ameritrust into its current fix, but he was elevated Tuesday to chief operating officer of the

Data Network Takes Shape at Bank of America

By RICHARD LAYNE

BankAmerica Corp. is within two weeks of completing the most extensive network for data communications at a U.S. banking company.

The network, which will link its 850 California branches and service centers, will reduce costs and help the San Francisco-based company bring products to market faster. The data freeway will initially form the backbone of BankAmerica's new branch automation system and will eventually compass all California wholesale banking applications.

Linking 13,000 PCs

By mid-September, 13,000 personal computers and 5,000 "dumb" terminals will be linked to the network. That total will rise to 20,000 when the bank finishes installing hardware for its vast branch automation project, begun in the mid-1980s.

While comparisons are difficult, the consolidated data network is considered the largest at a U.S. bank. Security Pacific Corp. and Banc One Corp. are among other big banking companies working to install extensive networks for domestic com-

PEOPLE *in the news*

Michael Zapf of Chemical Stresses War on Illiteracy

By FRANKLIN SMITH

Illiteracy, a problem hindering bankers' recruitment efforts, is the No. 1 issue for Michael J. Zapf as the newly elected president of the American Institute of Banking.

A division of the American Bankers Association, with more than 550 chapters and study groups nationwide, the institute plays a key role in the training and education of bankers on every level and in developing ABA policies to assess bankers' personnel needs. More than 300,000 bank employees attend its courses and programs each year.

An Emphasis on Basic Skills

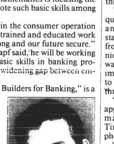
A labor pool deficient in reading and mathematics is focusing the institute's attention on programs to promote such basic skills among lower-level workers.

Mr. Zapf, a 49-year-old vice president in the consumer operation at Chemical Bank, New York, said a well-trained and educated work force is needed "to keep our industry strong and our future secure."

In his year as institute president, Mr. Zapf said, he will be working to help implement the institute's new basic skills in banking program, a move designed to help bridge the widening gap between employer skills and job requirements.

The program, known as "Strategic Skill Builders for Banking," is a cooperative effort of the institute and Simon & Schuster Workplace Resources. It addresses specialized reading, math, communications, and learning problems exhibited by entry-level bank employees.

A 1989 ABA survey found skills deficiencies to be most prevalent among tellers and other key positions, according to Mr. Zapf.



Michael J. Zapf

Another program with a similar aim is "Job Power," which is one of two government-funded efforts of the institute's New York chapters. Participating banks guarantee jobs to people who complete the training.

Other areas of concentration at the institute, Mr. Zapf said, will be to "increase and recognize all the volunteers of AIB and to continue and build the strength of relationships between AIB and the state bankers associations across the country.

"We must continue to provide the highest quality of education to the member banks," Mr. Zapf said.

25 Years at Chemical

He said effective education programs foster a closer relationship between bank executives and employees and help managements better understand and serve customers. "We must manage business education with the goal of developing better consumer services and products," he said.

A 25-year veteran of Chemical New York Corp.'s lead bank, he previously served as the institute's regional vice president and has also been New York state chairman and a member of the institute's national board of trustees.

Mr. Zapf managed the staff development and employment mobility groups at Chemical from 1970 to 1981, was branch and district manager in the metropolitan division from 1981 to 1986, and regional sales manager for consumer banking in 1986 and 1987. He then was director of human resources in the national division until 1989, when he was named director of employee relations for the consumer banking group. □

Arkansas Group to Seek Review of Branch Ruling

WASHINGTON — The Arkansas Independent Bankers Association and the Arkansas bank commissioner said they will ask the 8th U.S. Circuit Court of Appeals to reconsider its ruling this week allowing the Resolution Trust Corp. to override state branching laws when selling failed thrifts.

Overturning a lower court's decision, a divided appeals panel said the RTC could let Worthen Bank & Trust Co., Little Rock, acquire Independence Federal Savings Bank and operate its 20 offices as branches, though that would not have been permitted under the state's branch banking law.

The Arkansas groups that lost the case are opposing an RTC motion to expedite Worthen's purchase.

Northeast Bancorp Adopts A Shareholder Rights Plan

STAMFORD, Conn. — Northeast Bancorp Inc., which recently saw its plan to merge with Bank of New York Co. rejected by the Federal Reserve Board, adopted a shareholder rights plan and declared a dividend of one right for each outstanding share of common stock and nonvoting convertibk common.

Northeast said it wants to deter abusive takeover tactics and is not responding to any specific bid for control. — Reuters

FDIC Postpones a Decision On Thrifts Exiting System

By DEBRA COPE

WASHINGTON — Sidestepping a prickly debate over thrifts' requests to leave the Federal Home Loan Bank System, the Federal Deposit Insurance Corp. has postponed for 18 months a decision on whether a Wisconsin institution can maintain its insurance coverage if it withdraws from the Chicago home loan bank.

The FDIC's move buys time for the Office of Thrift Supervision to draft home loan bank system membership rules for thrifts it oversees.

The postponement, on a request by Wauwatosa Savings and Loan Association, also staves off an exodus of thrifts from the 12 district banks. Senior Treasury officials have warned that departures could impair the bank system's ability to contribute to costs of the thrift bailout.

"I think Wauwatosa could reapply once we finish the rulemaking," OTS Director Timothy Ryan Jr. said in a telephone interview.

"It is possible we would decide whether we have some flexibility [to grant exits], or whether we need to propose some legislation," he said.

"That doesn't satisfy me at all," said Raymond J. Perry, president of the $352 million-asset Wauwatosa, "They're saying, put this thing on hold for 18 months and we'll make some rules that say you can leave."

"It was a gutless nondecision. Legally, they can't say no. Politically, they can't say yes. So we get a nonanswer."

Others File Exit Applications

Wauwatosa, which has strong earnings and an 11% capital-to-assets ratio, wants to redeem its $3 million stock investment in the Federal Home Loan Bank of Chicago, and seek higher returns elsewhere. Since its petition was made public last March, several other exit applications followed in the Chicago, Des Moines, and San Francisco home loan bank districts from state-chartered thrifts.

But the OTS ruled that Wauwatosa has a legal obligation to remain in the system, and that the thrift's safety and soundness could be jeopardized if it quits the Chicago bank. OTS's views sustained an earlier opinion presented to the FDIC by the Federal Housing Finance Board.

Thrifts that quit the Federal Home Loan Bank System may not rejoin for 10 years, and Wauwatosa has not demonstrated that it can maintain safe and sound operations during that period if it lacks access to the liquidity facility, the OTS said.

Ruling Puts Damper on Plans

The FDIC ruling puts a damper on efforts by roughly a dozen more thrifts to quit the Federal Home Loan Bank System.

"Our board is of the opinion that we want out of there, but not if we have to sacrifice our insurance of accounts," said J.R. Moody, president and chief executive of the $147 million-asset First Savings and Loan Association, Mount Vernon, Wis., which sought to redeem its $800,000 investment in the Des Moines home loan bank.

"I guess there would be some avenues through the federal court system, but I'm not sure an institution our size will want to bear the expense" of litigation. □

Delinquencies In Home Loans Increase Slightly

By ROBERT TRIGAUX

WASHINGTON — A nationwide survey found the delinquency rate on home mortgages rose only slightly in the second quarter, to 4.52%, as against 4.41% in the first quarter.

Experts warned, however, that the percentage of overdue loans might continue to increase well into 1991 as the U.S. economy weakens and unemployment grows.

Economists said the increase was not substantial, with the rate still considered low by 1980s standards and well below the 6.07% record set in the first quarter of 1985. The quarterly survey of 400 mortgage lenders, released Wednesday, was conducted by the Mortgage Bankers Association of America.

No Reason to Increase

Delinquencies rose for conventional, FHA, and VA mortgages, but much of the increase was confined to loans overdue by only 30 days – considered the least severe category of problem loans. The rate of overdue loans of 60 days or 90 days or more remained largely unchanged since the first quarter.

At least for commercial banks in a fast-growing sector of the mortgage origination market – mortgages appear to remain a

Corrections

A chart accompanying an article Wednesday ("Is Wall Street Overaggressive in Bond Pricing?" page 1) misstated the current yield spread of Bankers Trust New York Corp.'s new debt offering. The spread was 150 basis points over Treasury securities on Aug. 28, up from 115 basis points when offered.

■

A chart on Cullen/Frost Bankers Inc., on page 18 Tuesday, omitted the time periods of the depicted performance.

The return on average assets ratios were for 1987, 1988, 1989, and the first quarter of 1990. The loan delinquency ratios were for the four quarters that ended March 31, 1990.

TECHNOLOGY/OPERATIONS NEWS

Data Network Nearly Complete

Bank of America Expects to Gain Competitive Edge

Continued from *page 1*

munications, but they are years away from completing their projects.

The BankAmerica network will give branch employees access to a variety of information on products and customers and allow them to bring products and services to market quickly.

The technology to support a new service need be installed only once – at the bank's telecommunication center – rather than hundreds of times in branches on numerous networks.

Beating Out Competitors

"The network provides a way to beat competitors in bringing more products to the marketplace," said George Cheng, vice president, who has been involved in the project since its inception in 1985. "It cuts the time from months to weeks," he said. "The network goes hand-in-hand with the projects under way at the branches and the service centers."

By mid-September, 13,000 personal computers and 5,000 "dumb" terminals will be linked to the network.

Previously, the company had 10 to 15 networks running into each California branch, supporting single or multiple products.

With completion of the California network, the bank will reduce its worldwide total of networks from 66 to about 50. It said the savings from consolidation will be substantial, though it refused to give an estimate. BankAmerica also declined to comment on the automation project's cost, although industry observers said it exceeds $100 million.

825 Branches On-Line

About 825 branches in California are already sending and receiving information via the new network. Mr. Cheng said about 17 branches remain to be plugged in.

The retail applications – checking, savings, and time deposit – are now running on the network's freeway at those 825 branches. The network will accommodate consumer loan and commercial loan systems by the end of October. A consumer loan servicing system will be added next year, along with a system for real estate loans.

Outdistancing Its Rivals

"I don't think any other major bank has gone as far as we have – no bank has completed a network of intelligent workstations for all the branches," said Mr. Cheng.

BankAmerica's old networks were installed piecemeal over the years to handle the increasing amount of information transmitted to and from branches and service centers. One network may have handled personnel information; another, deposit information; and a third, loan information.

Cumbersome Old System

No desk-top computer was linked to all three networks. To gain access to transactions systems running on different networks, branch officers often had

"The network provides a way to beat competitors in bringing new products to the marketplace. It cuts the time from months to weeks."

George Cheng *BankAmerica Corp.*

two or more computer terminals on their desks or simply borrowed a colleague's computer.

With the new network, a product can be introduced simultaneously across the state of days rather than months because the network support is installed. No communications lines need be added at branches. □

Mellon May Sell A Trust Unit

NEW YORK — As part of a continuing evaluation of its trust business, Mellon Bank Corp. is considering the sale of the corporate account segment of its corporate trust group.

The Pittsburgh-based banking company said it had a number of prospective buyers and intended to reach a sales pact in the fourth quarter.

In the corporate trust group, Mellon serves as trustee for both corporate and municipal debt issues. The corporate account segment, which includes nearly 1,500 issues for which Mellon currently serves as trustee, has annual revenue of $5 million. Mellon intends to remain in the municipal part of the business. □

Executive Systems Gain Middle Managers' Favor

By JEANNE IIDA

NEW YORK — Middle managers in banking and other industries are now using software as an integral part of the day-to-day decision-making process, according to a study by Input, a research firm in Mountain View, Calif.

Only a few years ago, the use of such software, known as executive information systems, was restricted to upper management, the firm said.

Uniting Many Sources

Executive information systems are designed for executives who are not adept at using computers. The systems can help these managers make complex decisions more rapidly by gathering information from a wide variety of sources.

Typically, they pull together information from such corporate areas as finance, accounting, sales and marketing, operations, and personnel.

Input said managers are using the systems less as a monitoring tool, in which top executives gain an overview of company performance, and more as an operating tool, in which lower-level managers get the data to big picture before they make decisions in their areas.

Helpful at Lower Levels

"Their use is spreading well beyond the corporate office," said Douglas Tayler, director of research at Input. "They're more valuable at those lower levels, because that's where operating decisions are made."

Input's report, called "Developments in Executive Information Systems," was based on a survey of 126 companies in manufacturing, insurance, banking, telecommunications, and utilities. About 5% of respondents came from banking and finance, making it the third-largest industry group surveyed.

More than half the companies surveyed had an executive information system in use or in development.

Of the companies with systems in place, 60% said corporate executives used them, 40% said financial personnel also used the systems, and about 30% said both marketing and accounting personnel used the systems.

Software Costly

The systems can be pricey, with the average software package ranging from $50,000 to $100,000. Major vendors include Comshare, Pilot Executive Software, Execucom, and International Business Machines Corp.

Many of the systems run on personal computers from IBM or Apple Computers Inc.

More than 58% of the companies said their executives can access monthly information using the systems, and 35% said they can access daily information. By 1991, 90% of the respondents expect to provide access to monthly figures, and 72% expect to provide daily updates.

"If you're moving to [providing] daily information, you're talking about it becoming the heartbeat of the company, not just a monitoring tool for upper management," said Mr. Tayler.

The number of users is also a good indication of how system use has spread, Mr. Tayler said. About 49% of those with systems said that at least 25 people in their organization used them. About 17% said their company had more than 100 users.

Among the respondents, 34% had executive information systems installed, 10% were testing systems, 10% were developing systems, and 4% planned to do something this year. □

WHO'S WHO IN CREDIT BUREAU SCORING...

AND WHO GIVES YOU MORE THAN JUST A SCORE?

There's a fine line that separates bad credit risks from good risks. Now, thanks EMPIRICA, the full-service point scoring system that doesn't stop at the line. Developed by Trans Union and Fair, Isaac, the world leader in point scoring, mode development EMPIRICA delivers more than just a score. It includes monthly score distribution reports and an annual retrospective validation. Even these unique benefits EMPIRICA also carefully considers. Which helps you pay no pays and bankruptcies with greater accuracy for safer, more profitable credit decisions. Contact your local Trans Union Bureau or call (800) 421-6122.

Thomas A. O'Brien, President, First Western Bancorp

"Citicorp's Comprehensive Banking System" helped us grow from $200 million to $600 million. Now we're counting on it for the next leap forward."

"We selected the Comprehensive Banking System software because we expected it to help our operations," recalls Thomas A. O'Brien, president of First Western Bancorp of New Castle, Pennsylvania. "It has."

"With CBS we can originate or enhance new products quickly, keeping us ahead of our competition. With the stability, flexibility and upward growth of CBS, our founding bank, First National Bank of Western Pennsylvania, has grown from $200 million in assets to $360 million."

"Beyond that, the Comprehensive Banking System software easily absorbed the additional load experienced with our acquisition of Beaver Trust Company. That acquisition nearly doubled our assets to $600 million."

"We are currently negotiating another acquisition which will bring us to over $1 billion in assets. We anticipate that the IBM AS/400® hardware and Comprehensive Banking System software will take the merger in stride."

If you would like to know more about the Comprehensive Banking System software or to talk with other bankers using the system, contact Joel Simmons, Citicorp Information Resources, Five Concourse Parkway, Suite 2500, Atlanta, GA 30328. (800) 241-2200. (800) 331-9000.

COMMENT/ *By William M. Isaac*

Rx for the Banking System: Less Rhetoric, More Action

The House Banking Committee's Financial Institutions Subcommittee, chaired by Frank Annunzio, has hired Stanford economist Dan Brumbaugh to study the condition of the banking system and the adequacy of the FDIC insurance fund. The recent performances by these gentlemen on ABC News' "Nightline" should leave no doubt about the outcome of the study.

Mr. Brumbaugh after claiming six of the nation's largest banks were "very close to true insolvency," pronounced: "I believe we are in the midst of the largest government cover-up of a financial scandal ever in the country's history."

Rep. Annunzio was no less vitriolic when he added: "The FDIC is not only in bad shape, it is in horrible shape. And without a massive transfusion of money, it will die very shortly and the taxpayers will have to pay for the funeral, and it will be the most expensive funeral in the history of any country in the world."

Questionable Judgments

Now those are pretty amazing statements, coming as they do on the heels of the $200 billion S&L debacle. One might wonder what qualifies these gentlemen to render these judgments and on what facts they base them.

Rep. Annunzio is a longtime member of the House Banking Committee. Over the years, he has been one of the S&L industry's staunchest supporters and has been anything but a constructive force in efforts to reform the financial system.

Mr. Brumbaugh's main claim to fame is that "when I was deputy chief economist at the Federal Home Loan Bank Board . . . I first estimated in 1985 that the FSLIC was insolvent." Readers will be forgiven if they find this feat underwhelming. The FDIC's staff (and, I am informed, at least some members of the Bank Board's supervisory staff) had reached the same conclusion several years earlier.

Few Facts Offered

Turning to their factual bases, Rep. Annunzio offered none to back up his statement. Mr. Brumbaugh provided no facts to support his conclusion that the six large banks he named were "very close to true insolvency." The only facts he offered to support his contention that the FDIC fund is broke are that "there are 460 banks with $42 billion [in assets] that have had losses in each year since 1986."

If Mr. Brumbaugh's figures were correct and if all of those banks were to fail next year (two very big ifs), the FDIC's cost of resolving them would likely be in the range of the FDIC's income during the year. Mr. Brumbaugh's figures have usually been distorted by his penchant for including banks already resolved by the FDIC and banks that are members of holding companies not in danger of failing.

> **"The government has consistently turned a deaf ear — and that, folks, is scandalous."**

My purpose is not to suggest there are not problems in the banking system or that the FDIC is not under pressure. The FDIC was buffeted by one problem after another during the 1980s: the savings bank crisis, the failure of Continental Illinois, the widespread failures of farm banks, and the banking collapse in the Southwest. The insurance fund has declined to an unacceptable level, particularly when it will likely continue to be called upon to resolve failures of some magnitude. In recognition of this reality, the FDIC board recently proposed a substantial hike in insurance premiums.

No one with even passing knowledge of the supervisory process would contend the banking regulators are covering up problems or are failing to deal with insolvencies. Indeed, the regulators are being so stringent these days that many thoughtful people are concerned that the regulators are helping to create a scarcity of credit that threatens the economy.

There is a scandal in Washington, but not the one identified by Rep. Annunzio and Mr. Brumbaugh. The scandal is the failure of the federal government to face up to the problems and implement the structural reforms so clearly needed to revitalize our nation's financial institutions.

Experts have for years been urging reform of the deposit insurance system, elimination of the restraints on geographic and product diversification by banks, and a substantial reduction in the budget deficits. The government has consistently turned a deaf ear to these entreaties - and that, folks, is scandalous.

The banking system needs to be able to attract more capital. It won't be able to do that to any great degree until we put in place the reforms necessary to convince the capital markets that our nation's banks can be operated profitably without undue risk.

Performances of the sort logged by Rep. Annunzio and Mr. Brumbaugh on "Nightline" do nothing to advance efforts to strengthen the banking system. To the extent their claims of a cover-up are given credence, they serve only to undermine confidence and further restrict access by banks to the capital markets.

It's time for a lot less rhetoric and considerably more attention to the absolute necessity of major structural reforms. □

Mr. Isaac was chairman of the Federal Deposit Insurance Corp. from 1981 to 1985. He now heads the Secura Group; a Washington-based consulting firm.

Allow Deduction of Rental Losses To Revitalize Realty Developers

To the Editor:

Paul Nadler's Aug. 20 column ["Plenty of Blame to Go Around for the Real Estate Losses that Took Place," page 4] correctly points to governmental policies that contributed to the current dramatic decline in real estate prices. However, it fails to highlight the single policy that has, in several regions, had the most dramatic negative effect: the about-face on rental real estate losses that took place between the 1981 and 1986 tax laws.

Money Flowed In

The real estate incentives in the 1981 tax act greatly magnified the desirability of owning, and consequently building, rental real estate. Under the law, owners could subtract both operating losses (such as renting a property for less than the cost of the mortgage) and noncash expenses (such as depreciation) from other, nonrelated income.

This incentive produced the desired result: a massive infusion of money into the rental real estate market at a time when the baby boom generation was seen to be in need of such housing.

> **"The '81 incentives may have gone too far. But two wrongs do not make a right."**
>
> **Janet M. Pavlska**

But when the bill came due, it wasn't paid. Instead, the 1986 Tax Reform Act swept away the ability to deduct real estate losses from income related to anything other than passive gains.

The short three-year phase-in of this provision and the exception for moderate-income owners did almost nothing to help. Developers, investors, and financial institutions could not undo prior contracts that made sense under the 1981 public policy.

And because many owners tried to unload their rental property onto the owner-occupied market, the fall in rental real estate spilled over, significantly increasing the drop in single-family and other owner-occupied real estate.

The '81 incentives may have gone too far. But two wrongs do not make a right. Deals consummated before the 1986 law should have been grandfathered. And the ability to subtract at a minimum rental property operating losses from other income would cushion the blow while putting rental real estate on a more equal footing with other businesses.

Taxpayer Is Penalized

Difficult as this situation has been for the real estate and financial industries, the chief victim is now the taxpayer, for two reasons:

Declines in the value of real estate caused or contributed to bank and thrift insolvencies, for which the taxpayer will ultimately pick up the tab.

As a result of these insolvencies, the government, in the form of the Resolution Trust Corp., is rapidly becoming the largest property owner in the country. Because of the decline in real estate prices, the majority of these properties are valued well below book. And the RTC must now sell them into the depressed real estate market.

Thus, the revenue Congress hoped it could raise by eliminating real estate tax incentives will be more than offset by the need-lessly increased costs of resolving failed financial institutions.

Fortunately, a bill now in Congress will generate discussion and, we hope, some rectification of this situation. The Andrews/Thomas bill (H.R. 3732, introduced in the Senate by Boren and Heinz, S. 2384) proposes, at a minimum, to permit real estate entrepreneurs to deduct rental losses from other real estate-related income. The bill is cosponsored by 302 representatives and 18 senators.

The bill would not resolve most of the problems caused by the '86 Tax Reform Act. But it would be a first step, allowing the stronger players in the real estate business to get back on their feet while providing the opportunity for further discussion of this crucial issue.

MARKETING/ADVERTISING

Key to ATM Promotions: Ads and Motivated Staff

By LAURYN FRANZONI
Special to the American Banker

Community bankers say the best way to market self-service banking machines is through snappy advertising and a motivated, informed staff.

Warren Bank and Trust Co., Warren, Ark., combined those elements in an award-winning campaign called "Bank by night or by day." Earlier this year, the Bank Marketing Association named the advertising effort Best of Print among institutions with less than $250 million in assets.

The first step of the campaign was to educate the bank's southeast Arkansas customers about the new technology. "There wasn't an ATM in a 100- to 200-mile radius" when the campaign was launched, said Greg Harton, director of marketing for the $83 million-asset bank. "People in Bradley County just didn't know what they were."

Along with an educational battle, the bank faced stiff competition from First State Bank of Warren in the form of Saturday hours. The bank used that prospect to motivate bank staff to market ATM accounts. "No one here wanted to work on Saturday, so we set a goal for new [ATM] accounts and scrambled to meet it," Mr. Harton said.

The bank's staff sold ATM accounts aggressively to avoid having to work Saturdays.

The ad campaign, which is still running, focuses on the machines' convenience. Using two-page newspaper ads, Warren Bank entices customers with lines such as "In a dash for cash?" and "No time for lines?" as well as "In a crunch for lunch?"

After the initial effort, 45% of retail customers received an ATM card and began to use it.

But this spring, one year after the ads began, the bank found that the majority of customers was ignoring the machines. The institution responded with an incentive campaign among employees and a promotional campaign developed by the Cirrus network. In the Money Game promotion, customers won cash prizes by using their ATM cards. During the promotion, which ended in June, transactions rose to a record.

Since then, Warren Bank has continued its print advertising campaign, and Mr. Harton reports transaction levels are still climbing. Transaction volume is almost double the level before the game, and cash distributed through the machines each month has risen 30%.

Bank management says it will not need to open on Saturdays as long as transaction levels remain steady.

Promoting Deposits at ATMs

"As a banker, the biggest expense problem is having staff on hand to cash paychecks," said Jim Neill, vice president of United Savings Bank, a Greenfield, Mass., institution with $192 million in assets.

To ease the problem, the bank decided to encourage customers to use its six ATM locations for deposits. Even though ATM transaction volume was growing at an acceptable rate, "we felt we were lacking on the deposit side," Mr. Neill said.

So the bank ran a six-week campaign this spring called Deposit Mania. During the promotion, customers used their ATM deposit receipts as entry tickets for prize drawings.

Large goldfish bowls full of silver dollars were placed at each teller window with a sign instructing customers to take one if the teller did not mention Deposit Mania.

United used advertising to promote both the prizes and the benefits of self-service banking.

Along with the central promotion, Mr. Neill began training programs for all the customer service staff. Even though many were familiar with ATMs, he soon found gaps in their knowledge.

"The [transaction] increases during the promotion were astronomical," Mr. Neill said. Overall, he credits the promotion with an average increase of 35%. In April, transaction volume jumped nearly 60% in both withdrawals and deposits, which Mr. Neill partly attributed to an increase in vacation usage.

The results, he noted, were achieved on a very limited advertising and marketing budget. "Looking back, if someone had told me that this is what I could achieve at that cost, I'd have thrown them out the door," Mr. Neill said.

Technique Challenged

After reviewing a number of campaigns, ATM marketing consultant Catherine Bond of Hartford, Conn., has concluded that ATM ads focusing on the technology or a prize for customers consistently generate mediocre responses.

"Effective advertising is customer focused, will stimulate interest in the service rather than bribing the customer, talks about the ATM's benefits, and deals directly with potential objections," Ms. Bond said.

"It's important to remember why we are advertising," she said. "We need to educate, create awareness, and generate ATM-related action. The customer shouldn't come in just to get a present."

Gulf Crisis Dampens Loan Demand

Continued from page 1

York reported earlier this week that its consumer confidence index plunged 18 points in August to 83.8% – a seven-year low.

Demand for home equity loans usually gets an autumn lift, starting in the last two weeks of August, because of back-to-school expenses and sales on home improvement supplies and services. But such a rise has yet to materialize this year, said Jan Goodman Bechtel, a vice president at Huntington National Bank, Columbus, Ohio.

She and others said it is still too early to precisely gauge the impact of the crisis. Indeed,

"The real story will be told in September."

Karl Mendenhall
First Union Corp.

some consumer bankers maintain that the Gulf crisis has had virtually no impact on loan volume so far.

September Is Test

Still, the prospect of a sustained slowdown has many bankers viewing September as an important test for the market.

Reduced demand for consumer loans, which was evident even before the crisis erupted, has broad ramifications for the banking industry. Because of problems with loans for commercial real estate and highly leveraged transactions, consumer loans have emerged as a vital part of many bank's balance sheets.

"To the extent that you see consumer loan demand slowing down, it will reflect in the earnings of some big banks," said Raimundo C. Archibold Jr., a bank analyst at Fox-Pitt Kelton Inc.

Home Mortgages Hit Hard

The home mortgage arena, which has attracted scores of commercial banks during the past year, has clearly been the hardest hit in recent weeks. That is because mortgage rates, though still lower than levels seen earlier this year, have been rising rapidly on fears of inflation.

According to one closely followed measure, rates on 30-year fixed-rate mortgages have climbed by more than 50 basis points since Aug. 1.

The measure – the yield required by Federal Home Loan Mortgage Corp. when purchasing loans at par — rose from 9.7% on Aug. 1 to 10.3% last Friday; it dropped back to 10.24% on Tuesday. Lenders often charge borrowers the required yield plus 25 basis points.

Several major lenders reported a surge in loan applications just as the rate rise began, as borrowers scrambled to avoid further increases. Because of that brief bonanza, some big mortgage lenders, such as First Union Corp. and Norwest Corp., say their total volume for August to be very strong.

But in the past week or so, volume at First Union has been off about 25% from normal, said Karl Mendenhall, a vice president at First Union's mortgage unit.

"The real story will be told in September," he said. "If people take the application volume of last week and multiply it by four, and if September comes in at that level, then I'm going to start worrying."

Adjustables Gain Favor

At Great Western Bank, the nation's second-largest thrift, application volume has fallen "measurably" this month, said E.S. Lyons, a senior vice president and manager of mortgage banking.

But the Beverly Hills, Calif., thrift, which specializes in adjustable-rate mortgages, expects those loans to gain popularity relative to fixed-rate models, because the initial rates on adjustables have risen less rapidly. As a result, Great Western expects to start gaining market share and has not lowered its projections for annual volume, Mr. Lyons said.

Great Western is now offering its main adjustable at 7.95% – unchanged for the past several months.

The monthly index used for setting adjustables at Great Western and other big thrifts – an average of Southern thrifts costs of funds – should actually show a slight decline when it is published late Friday, according to Merrill Lynch Mortgage Capital Inc.

Realtors Not Optimistic

All the same, residential real estate brokers do not offer much encouragement about home sales. "There's a lot of hesitation going on out there," said Daniel Youngblood, president of the South Carolina Association of Realtors.

"There's a lot of hesitation going on out there."

Daniel Youngblood
South Carolina Assn. of Realtors

He noted that the market for second homes in such resort areas as Hilton Head, S.C., has been crimped by stock market declines, which have eroded the net worth of wealthy individuals. The Dow Jones industrial average has fallen by about 10% since Iraq invaded Kuwait.

Meanwhile, some bankers in executive search firms maintain that the crisis has yet to cut demand for other types of consumer loans.

"I see it as too early to call," said Walter R. Day 3d, senior vice president of consumer lending at Mellon Bank, Pittsburgh. Mellon's consumer loan volume has not been hurt yet, he said.

Rates Little Changed

Rates on most consumer loans have changed little. Last week, unsecured personal loans were offered at an average of 17.34%, versus 17.33% in early August, according to *Bank Rate Monitor*. Auto loans were 17.34%, versus 17.33% early in the month. Credit card rates were unchanged at 18.64%.

For home equity loans, which are pegged to the prime rate, HSH Associates, Butler, N.J., expects to see little change when it calculates the average rate among lenders for August. The average rate for July was 11.60%.

"Without prime actually doing something, there won't be much change" in home equity rates, said HSH spokesman Keith Gumbinger. Prime last changed in January, falling to 10%. □

EXECUTIVE *changes*

LoBello Named To Bank of New England Post

Bank of New England Corp., Boston, said **Joseph D. LoBello**, a 27-year veteran of Bank of New England-West, will be named western regional president of BNE-West and Bank of New England, which was announced earlier this month. The merger is subject to normal regulatory approvals.

Joseph LoBello

As regional president, Mr. LoBello will oversee the four western Massachusetts counties for customers and markets in Bank of New England's five lines of business – retail banking, commercial banking, corporate banking, real estate banking, and trust and private banking – and will personally head the corporate and commercial banking activities.

Mr. LoBello will also organize and direct a regional advisory board of community and business leaders. BNE-West president C.D. **"Buzz" Harrington**, who earlier this summer announced his intention to retire, will chair the advisory board.

"I'm looking forward to taking on this terrific banking opportunity . . . and to be a part of Bank of New England's recovery," Mr. LoBello said.

MIDDLE ATLANTIC

CIT Group, New York, has appointed **Lawrence A. Marsiello** as president of its factoring unit.

Mr. Marsiello had been executive vice president of CIT's business credit unit, offering acquisition and debt restructuring financing.

CIT's factoring unit is a leader in the industry serving the retail, apparel, textile, and furniture industries.

First Federal Savings Bank, San Juan, P.R., said two highranking officers at the thrift have resigned their posts as part of a bank reorganization.

Arturo J. Somohano, senior executive vice president and chief operating officer, and **Fernando Calderon** vice president for investments, have resigned their respective positions.

Mr. Somohano's resignation will be effective Sept. 21 while Mr. Ochoa's will take effect Aug. 31.

Mariano J. Mier, chairman of the board, said that **Angel Alvarez,** now executive vice president and general counsel, will take over Mr. Somohano's duties as chief of operations.

Mr. Ochoa's post will be filled on an interim basis by **Jorge R. Rodriguez,** now vice president for investment manager, who will report to **Annie Astor de Carbonell,** executive vice president and chief financial officer.

According to Mr. Mier, the reorganization is aimed at strengthening the institution and correcting some administrative faults that had been pointed out in the recent audit by the Office of Thrift Supervision.

SOUTHWEST

Temple-Inland Inc., Diboll, Tex., has named **M. Richard Warner** vice chairman of the board of its Guaranty Federal Savings Bank subsidiary, a new position, and **H. J. Shands 3d** to treasurer of Temple-Inland, succeeding Mr. Warner.

Mr. Warner will be based at Guaranty's home office in Dallas and will assist **Richard M. Jones,** chairman and chief executive officer in oversight of the bank's operations.

Mr. Shands has been senior vice president and treasurer of Lumbermen's Investment Corp., Temple-Inland's mortgage banking company based in Austin, and will continue to reside there.

First Trust Corp., Denver, a subsidiary of **Fiserv Inc.,** has named **Debbie Bergen** as vice president of client services, **Brad Newman** as controller, and **Ward A. Anderson** as vice president of marketing.

WEST

Corporate Capital West, San Francisco, has named **Russell J. Notides** as managing director of its new San Francisco office.

Corporate Capital, a division of **Westinghouse** Credit Corp., Pittsburgh, provides corporate finance and merchant banking services to businesses throughout the western United States.

Mr. Notides will be responsible for marketing and business development activities in Northern California and the Northwest.

He previously was director of investment and merchant banking for Prudential-Bache Capital Funding in San Francisco.

Standard Chartered Bank, Los Angeles, has named **Terry Dowrick** as regional manager for its Los Angeles operation.

He succeeds **Douglas Beckett,** who launched the new office last Agusut and is leaving to assume a new post at Standard Chartered's London headquarters.

Mr. Dowrick has held a variety of management positions in bank operations, lending, and business development that span the globe, primarily with Standard Chartered's Middle East and Asian branches. In addition, he worked in the bank's New York, Chicago, and Houston offices from 1979 to 1988.

Bank of California, Los Angeles, said **John Balcon** has joined its Long Beach regional office as vice president and commercial lending officer. He formerly was a commercial lender at the Los Angeles regional office of Security Pacific National Bank.

First Interstate Bank of California, Los Angeles, has appointed **Wayne A. Mekjian** as senior vice president in its information services division.

AN INTERVIEW WITH LOWELL L. BRYAN

Being Competitive May Mean Sticking to What You Know

Lowell L. Bryan, a director with Washington-based consultant McKinsey & Co., recently spoke with a group of American Banker editors about management issues facing the industry. In a wide-ranging discussion, Mr. Bryan touched on the need to restructure the traditional hierarchical management system; fallout from the thrift crisis; cost-cutting strategies, and ways to maintain employee productivity amid continuing consolidation.

Q.: What's the toughest issue facing bank managers today?

BRYAN: Managers are worried about coping. So much of what affects whether or not they make money is beyond their control. The structure of the industry, the deposit insurance system, many things. There's also fallout from a decade of neglect in Washington. That has made it hard even for highly skilled players to make money in banking.

An added frustration is that we've never had a better set of bank managers than we have at this moment. Over the last ten years, there have been dramatic increases in the skill, competence, and motivation of bankers throughout the country. And yet, in terms of profits, things have gone the other way.

Q.: What can the industry do to climb out of the hole?

BRYAN: That would involve significant restructuring. And banks getting out of activities in which they have no competitive advantage. Not every bank should be offering every kind of product.

Q.: Will further consolidation help to shore up the situation, at least in terms of aiding expense reduction?

BRYAN: Consolidation is an important part of the answer, yes. Whether you do it with whole institutions or you do it with a line of business, the net effect is that you would wind up with two or three really strong companies in any particular area.

Ideally, one or two banks should be concentrating on the retail business in a given area, while others concentrate on the operations side. Banks ought to become more different, as opposed to becoming more the same.

Q.: In terms of management style, what is the first thing banks should consider changing?

BRYAN: Banks should ask themselves, what kind of management style can I afford? The classic bank bureaucracy is much harder to afford today. You really have to move to much more task-driven organizations.

Q.: What is a task-driven organization?

BRYAN: A task-oriented system uses a project-based approach. For example, say you want to install a new computer system. Rather than assigning that to the systems department in general, you would put specific line managers together with operations people, give them a two-year assignment, and hold them accountable for the task.

Also under this kind of system, an employee's performance appraisal would come from the manager of a given project, not necessarily their actual boss.

This is much different from the traditional way a commercial bank operates. Actually, this is more the way law firms, consulting firms, and investment banks operate.

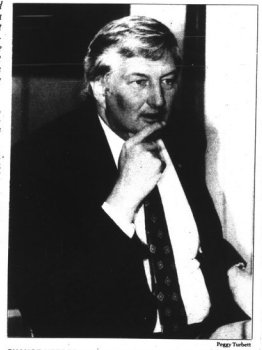
Q.: What kinds of personal attributes would managers need to operate under this kind of a system?

BRYAN: First of all, they would need to be much less concerned with hierarchy, which of course is uncomfortable if you're the one who's running the show. On a day-to-day basis, they would also need to have much more hands-on contact with the rank-and-file or the line manager.

Managers need to spend a lot more time communicating with their people, getting closer to the troops. They need to spend time after hours with the people who work the night shift, acting as visible cheerleaders.

In short, they need to do a lot of the things that managers in excellent, nonbank companies always have done.

Q.: What can banks learn from companies outside the industry?



Peggy Turbert

CHANGE NEEDED: Lowell Bryan says banks need to restructure and to quit activities in which they have no competitive advantage.

BRYAN: In the branch system, for example, you can apply techniques used by McDonald's Corp. and other retailers: how to use people, how to move them around, how to get the right information or service to the right customer.

Q.: What are some things that banks can do to cut costs?

BRYAN: One of the biggest levers is eliminating mistakes. That may sound trivial, but if banks work hard at truncating mistakes at the front end, then they won't have to spend money to fix things later.

Q.: What can banks do on the revenue side?

BRYAN: There's a lot of creative things you can do with the pricing of individual products.

A lot of banks think all customers think alike on pricing. They don't really do a hard analysis of what different subsegments of the market are buying.

Q.: You've followed the thrift crisis closely. Are there any lessons that managers of commercial banks can learn from the episode?

BRYAN: Yes. The biggest lesson is that you can never justify taking excessive credit risk, no matter what the short-term earnings pressures.

Keeping your earnings going by being a little more aggressive on terms and conditions is just not healthy. It's much more appropriate to address your economic problems directly than to mask them by taking more risk.

Of course, these are lessons that would have been better learned five years ago.

Q.: The work force – both inside and outside the industry – will change drastically over the next decade. Women and ethnic minorities will comprise a greater share of the whole, while overall, the level of education seems likely to decline. Are banks doing enough to prepare themselves for what's ahead?

BRYAN: The industry likely won't employ as many clerks and tellers. By contrast the need for skilled people – in the technology area, among others – will increase at a time when, demographically speaking, the work force likely will be little prepared to fill that need.

The upshot is that banks may have to be quite creative in their search for talent; they may have to look beyond the obvious sources. They may have to educate the people they take on and become more flexible in terms of hours and schedules. □

C&S/Sovran Structure Balances the Partners

Continued from page 1

well."

First announced last September, the merger of Atlanta-based Citizens and Southern Corp. and Sovran Financial Corp., Norfolk, Va., has received all the required regulatory approvals. The merger will produce the nation's 13th-largest bank holding company, with $50.3 billion in assets and more than 1,000 offices in seven states.

Plan Is Confirmed

Officials of the combined organization have been saying for months that they intended to form one unified operating company rather than leave the Georgia- and Virginia-headquartered banks as separate entities. The organization structure announced Wednesday is the first confirmation that they followed through on that plan.

Under the new structure, C&S/Sovran will be organized along product or functional rather than geographic lines. Eight new divisions will operate companywide as opposed to being confining to one state or region.

Participants on both sides insisted there had been no horse trading of positions.

The new units include credit policy and administration, headed by C&S's chief credit officer, Willard A. Alexander; legal and regulatory, headed by Sovran's corporate general counsel, Page D. Cranford; consumer banking in the seven states, reporting to Sovran's chief executive officer, Albert B. Gornto Jr.; real estate and consumer nonbank, headed by Sovran's vice chairman, Doyle E. Hull; corporate banking and trust services, both reporting to C&S's president, Hugh M. Chapman.

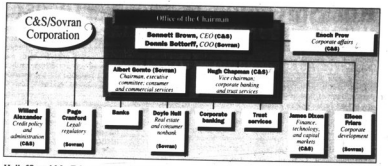
Also, finance, technology, and capital markets, headed by C&S's chief financial officer, James D. Dixon; and corporate development, managed by Eileen Friars, a former consultant with the MAC Group who has been working with Sovran for the past three years.

Transition Team Active

The creation of the organizational structure was overseen by Sovran's chief operating officer, Dennis C. Bottorff, who headed a nine-person transition that has been planning the merger for the past 11 months. Mr. Bottorff had initiated a similar reorganization at Sovran several years ago.

Although the new structure appears, on the surface, well balanced between Sovran and C&S executives, analysts have noted that ultimate control of the new company will pass to Mr. Bottorff when Mr. Brown retires, probably within the next year or so. In addition, the consumer banking operations in the seven states – the heart of the new company – will report to Mr. Gornto, leaving Mr. Chapman with the more specialized corporate banking and trust services.

Finally, except for Mr. Dixon, who is 47, and Mr. Alexander, who is 59, the younger executives in the lineup are associated with Sovran, including Mr. Bottorff, 46; Mr. Cranford, 55; Mr. Hull, 57; and Ms. Friars, 40.



Participants on both sides insisted there had been no horse trading of positions. Study teams equally weighted between C&S and Sovran officers had, instead, focused on picking the right individual for the right job, they said.

This careful division of responsibilities is reinforced by C&S/Sovran's continuing insistence on maintaining a dual headquarters in Atlanta and Norfolk. Mr. Brown said this was based on the need for the company to preserve its dominant market share in both Georgia and Virginia.

"What is more important than some expense dollars is, we continue to be the two dominant institutions in our market areas," Mr. Brown said. □

As a trust officer, you do a lot more than manage investment portfolios for your customers.

You're busy making asset allocation decisions. Handling the operations. Packaging and marketing your services. And continually providing all the investment options your customers are demanding.

The Trust Business. It's a Service Business.

Well, Fidelity can give you a hand. Consider Fidelity Trust Portfolios. The funds people know, from a name that's respected, and a program that makes sense.

Finally, really understands the trust business!

As a leading provider of mutual funds to trust departments across the country, Fidelity offers a wide array of funds, including money market, bond, and equity funds.* Allowing instant diversification of product, Fidelity funds may be used as a convenient, inexpensive complement to any common trust funds.

We can help you provide the diversity that many of your trust customers are demanding these days, without adding expensive staff or systems. And spend more of your time and resources on the intangible, yet invaluable, part of your business...

Service.

COST CONTROL
For Banks, Office Supply Services Offer Headache Relief and Savings

By JEFFREY MARSHALL

Commercial Bank of Georgia, an Atlanta-based community bank, routinely saves 15% to 30% on the cost of office forms by using a supply service. Sugar River Savings Bank in New Hampshire uses the same approach to save about 37% on its office supplies.

While the office supply business includes divisions of major manufacturing companies, such as Xerox Corp. and Boise Cascade Corp., local vendors dominate the marketplace.

These vendors sell relief for the office manager's biggest headache: keeping adequate inventories of office supplies and business forms. Most individual bank departments do their own buying from a scattered network of vendors, and virtually all business is repeat ordering.

Supply service says that banks are inefficient buyers of office supplies, since office managers focus more on vendor relationships than on cost-cutting strategies. They say centralized bulk purchasing can save time and money.

Inventory control is another benefit of using a purchasing service. Keeping close track of inventory reduces the need for storage space in bank branches.

Cutting office supply costs can yield significant savings – 5% to 10% of noninterest expense, judging from a sampling of bank balance sheets.

"I don't see us as just selling ink on paper," said Raymond Brewer, who manages a franchise for one such service vendor, Proforma Business Products Inc., Cleveland. "When we go in, rather than taking and reproducing a form, we ask if we can walk though the department. Many times, we can bring a form back and reduce its size and cost."

As a result, some banks are saving 20% or more on supplies like forms encoded for magnetic ink character recognition (MICR), correction tapes, driver-in teller envelopes, business cards, and checkbook covers, according to purchasing experts.

Bankers who have used such services are sold on the idea.

Mike Johnson, manager of data processing at Commercial Bank, cited the inventory reports he gets monthly, quarterly, and yearly as being especially helpful.

Other vendors said that by simply ordering envelopes in bulk, banks could save 10% to 15%. Here are two other examples of potential cost savings:

- Most banks have difficulty controlling business card expenses because logos are expensive to recreate for each short print run. An office supply service, however, can do a master run of 10,000 to 50,000 cards with the logos, and add names and titles later. This could save banks 50% of the cards' cost.
- By pre-encoding cash-in and cash-out tickets for tellers, an office supply service can reduce MICR encoding errors, saving time and effort. Large-volume orders also can save an institution up to 24% of the standard cost of $6.50 per thousand. □

For Bankers Who Mean Business
Commercial Real Estate
Every Tuesday in AMERICAN BANKER

Rot Spreading in the Northeast

Continued from *page 1*

$30 million profit for the period, including a special gain of $5 million.

In a sign that it is gaining tighter control of its real estate losses, Bank of Boston Corp. reported a 12% decline in nonperforming commercial real estate loans for the second quarter. At the same time, the company's nonperforming loans in the commercial and industrial portfolio increased 17%, to $487 million.

Of these, $281 million worth were highly leveraged transactions, which, as a separate category, had risen 19% since March 31. Commercial and industrial loans that were not HLTs were up 15%.

The company earned $3.5 million for the period, down 96% from the 1989 second quarter. A $200 million loan chargeoff was a sign, analysts said, that the company had decided to take its dose of bitter medicine this quarter in an effort to alleviate lending woes.

Subsidiaries Bolster Fleet

Fleet/Norstar Financial Group, which earned $60 million in the second quarter, remained buoyed by strong profits from its nonbank subsidiaries and healthy earnings in subsidiaries outside New England. Combined gains from the company's Financial Services Group, Fleet Finance consumer banking subsidiary, and Fleet Mortgage Group were $53 million.

Fleet's bad loans increased 15%, to $756 million, from the first-quarter level. And 55% of Fleet's $691 million in nonperforming real estate assets were in New England. Fleet's commercial banking subsidiaries in Rhode Island, Connecticut, and New Hampshire posted losses for the year's first half. Only Fleet-Maine was profitable.

In common with its New England peer group, Fleet is experiencing commercial and industrial loan problems, analysts said.

Buffalo Unit Profitable

Fleet's Norstar-Buffalo subsidiary returned to profitability, earning $15 million in the second quarter, compared to a $24 million loss in the first quarter. It also saw a 7% decline in nonperforming loans, to $124 million.

But analysts said that this still-heavy load of nonperformers in the Buffalo area – a region that has largely escaped the real estate bust of New England, New York, and New Jersey – was significant because a large share of the problem loans were commercial and industrial.

Despite strong efforts by new management to reverse its woes, Bank of New England Corp. posted a $33 million quarterly loss. That loss actually signaled a slightly less dramatic hemorrhaging of asset quality than in the first quarter, when the company posted a $48 million loss.

Bank of New England's Options

Many analysts said the company's options are running out as it searches for new ways to keep its $2.2 billion in nonperforming loans from dragging it down.

The company has already sold about $6 billion in assets to raise capital, and only its Rhode Island unit remains on the block. Officials repeatedly say that Bank of New England's survival depends on improvement in the region's economy.

Meanwhile, the by now familiar New England pattern of losses and tighter regulatory controls was duplicated in New Jersey, New York, and eastern Pennsylvania in the second quarter.

"The wave of losses that began hitting New England last fall has now reached New York and New Jersey," said Carole Berger, an analyst with C.J. Lawrence, Morgan Grenfell in New York.

Examiners from the Office of the Comptroller of the Currency are poring over Midlantic Corp.'s balance sheet. The regulatory exam, analysts said, was reflected in the $24.8 million loss it reported for the quarter, largely due to real estate losses.

Although the company is well-reserved – with $550 million socked away to cover losses, or 75% of the value of its nonperforming loans – analysts said Midlantic's exposure, with about 30% of its total loans in real estate, is greater than at other large banks in the area. They said they expect losses to continue in the third quarter.

First Fidelity Bancorp. posted a $150.4 million loss after taking a $300 million provision for possible credit losses. □

Jarrett's Resignation: Did He Jump, or Was He Pushed?

Continued from *page 1*

company.

The $11 billion-asset Ameritrust reported a $33.2 million loss for the first six months of 1990 and announced a major restructuring several weeks ago. This month, Ameritrust said it would take as much as an $18 million charge against third-quarter earnings and reduce its work force by 11.5%, or 780 people.

At a news conference Tuesday, Craig R. Smith, a director of the bank who was elected acting chairman and chief executive of the holding company, was asked about likely permanent candidates. "The next CEO may very well be standing next to me," he said, indicating Mr. Rode.

Observers, who include former regulators, employees, consultants, and analysts, spoke only on the condition of anonymity. All said Mr. Jarrett ceded much management control to Mr. Rode, who has been president of both the holding company and the main bank and a director of both since 1983.

"Craig Smith talked to the OCC, and they made it clear that management was weak," said one source.

Nevertheless, sources said they believe the board was hesitant to force out Mr. Jarrett, who had been CEO since 1982, and that the decision to leave was his own.

A Cleveland-area bank consultant had not heard the rumor about the Comptroller's role in Mr. Jarrett's departure, but said the bank's problems were attributable to a poor strategy over many years.

This month, Ameritrust said it would take as much as an $18 million charge against third-quarter earnings and reduce its work force by 11.5%, or 780 people.

Shunned Consolidation

Ameritrust, long one of the most profitable banks in its peer group, did not follow the consolidation strategy of other Ohio banks. When they began consolidating, Ameritrust entered Cincinnati and Toledo with de novo facilities, with little impact.

In the mid-1980s it acquired troubled Central Bank of Denver by swapping commercial paper it held of Baldwin United Corp. when it went bankrupt. Because of interstate banking laws, Ameritrust never was able to exercise effective control, and it sold the Colorado bank in late 1988.

Analysts said Ameritrust also was preoccupied by unfriendly advances from the investor Alfred Lerner, now the largest stockholder of MNC Financial Inc., Baltimore. Those moves diverted attention from possible acquisitions. "They managed with no financial loss, but they lost a lot of credibility," a banking consultant said. □

Judge Names Executive for Keating's Firm

Reuters

PHOENIX — A federal judge said he has named Thomas Arnold, a Phoenix real estate developer, as "temporary responsible party" for American Continental Corp., parent of the failed Lincoln Savings and Loan.

No other appointments were announced at a hearing Tuesday, which was called to designate a supervisor for the bankrupt company after its chairman, Charles H. Keating Jr., and five top officials resigned.

Resignation After Ruling

Mr. Keating resigned last week after a federal court in Washington upheld the government's April 1989 takeover of Irvine, Calif.-based Lincoln, which is expected to require one of the costliest S&L bailouts.

Donald Gaffney, an attorney for American Continental's creditors committee, said the committee had drawn up a proposal requesting that American Continental be transferred from Mr. Keating to Mr. Arnold.

U.S. Bankruptcy Judge Richard Bilby said Mr. Arnold will hold the temporary post until Sept. 7. On that date, the committee will petition the court to name Mr. Arnold the "permanent responsible party," Mr. Gaffney said.

Lincoln Lawsuit Dismissed

Mr. Keating had been actively involved in Lincoln; its failure is expected to cost taxpayers more than $2 billion. He sued the Office of Thrift Supervision to recover Lincoln, but U.S. District Judge Stanley Sporkin dismissed the suit, alleging that Mr. Keating and others had looted the thrift.

A plan of reorganization has been filed with American Continental's creditor committee, and the company's lawyer has said he believes it eventually will be liquidated.

The others who resigned from American Continental were Judy Wischer, president; Robert Kielty and Robert Wurzelbacher Jr., who is Mr. Keating's son-in-law, both senior vice presidents; Andrew Liggett, chief financial officer; and Bradley Boland, company spokesman and another Keating son-in-law. □

Moody's Sees Risk in East For West Germany's Banks

By JAMES R. KRAUS

NEW YORK — West German banks rushing to do business in East Germany risk undermining their asset quality, increasing their operational costs, diverting management, and using up scarce capital for investments without any return, Moody's Investors Service has warned in a report.

The rating agency added that although most German banks should be able to adjust sufficiently to economic conditions in East Germany, overly aggressive banks may pick up poor assets that could reduce their ratings in the future.

More than 30 West German banks have set up operations in East Germany, which is due to unite politically with West Germany before the end of this year.

However, Moody's noted that West German banks are setting up a new banking infrastructure virtually from scratch as East Germany's uncompetitive, state-run banking system is phased out.

The rating agency added that East Germany faces considerable economic uncertainty and will have to replace an obsolete and decaying industrial infrastructure, cope with rising unemployment, and increase consumer purchasing power.

More than 8,000 East German companies will have to be kept afloat until they can be restructured, made competitive, and sold off or liquidated, the report stated.

"The overriding factor . . . will be whether the transition to a market economy in today's East Germany can be done in an orderly manner under manageable cost, in the process of creating a competitive economy," Moody's said.

U.S. Loss Trims Hongkong's Net

LONDON — **Hongkong and Shanghai** Banking Corp., dragged down by poor results in the United States and Australia, reported a 21% drop in earnings for the first half of 1990.

The bank, Hong Kong's largest financial institution, said earnings after tax fell to $196 million, against $247 million a year earlier.

The bank made significantly higher provisions against losses by two major subsidiaries, Marine Midland Banks in the United States and Hongkong Bank of Australia Ltd. Marine Midland reported a net loss of $19.8 million in the first-half versus net income of $81.6 million a year earlier.

In common with other U.S. banks, the American unit's results were adversely affected by the continued weakness of the real estate market, Hongkong Bank said. — **John Evans**

Management Development for Bankers

September 30–October 5, 1990

A unique five day seminar for experienced bankers with management responsibilities. It is designed by the Banking Research Center and led by faculty of the Kellogg School.

The objective of the program is to broaden bankers' knowledge and understanding of contemporary banking issues and to hone their managerial and analytical skills. Topics stressed include strategic planning, managing change, decision-making strategies, effective communication, market segmentation, and contemporary banking issues. The latter will include asset securitization, LBO financing, risk-based capital, and the quality of bank earnings.

Bankers Trust Wins Czech Account

Will Help Privatize Sklo Union, a Major Glass Maker

By JOHN EVANS

LONDON — In what Bankers Trust New York Corp. calls the first deal of its kind for a U.S. bank in Eastern Europe, the New York banking company has won the assignment to help privatize Czechoslovakia's major state glass producer, Sklo Union.

The Prague company, with annual sales of more than $500 million and 10,000 employees, is searching for a foreign partner to take a major stake and help it become a private company along Western lines.

Alasdair Dundas, an executive in Bankers Trust International, the New York money center's London-based investment banking arm, said: "It wants a major shareholder to help fund future development and to benefit from Western marketing experience."

No Capital Required

Bankers Trust is the latest of a number of Western banks to garner advisory fees for organizing privatizations as a low-risk way to move into Eastern Europe in the search for business opportunities, say bankers and analysts.

Most banks regard large-scale commercial lending to the East as undesirable, reflecting the huge financing requirement needed to bail out these nations' stumbling economies.

On the other hand, helping to advise and organize the privatization process can generate fee income for banks without their having to use their precious capital.

Assets to Be Large

New stockholder-owned corporations with assets worth many billions of dollars are expected to emerge in Eastern Europe over the next five years, according to Tony Porter, a senior partner of international accountancy firm Price Waterhouse & Co.

"Poland and Hungary have both put formal legislation in place allowing for privatization," Mr. Porter, an executive

U.S. banks are looking to earn advisory fees in East Europe instead of making loans.

in the firm's privatization department added. "Poland has indicated that up to 80% of state industry will be turned over to private hands. Hungary hasn't given a percentage like Poland, but has forecast asset sales could be valued at $32 billion over the next five years."

East Germany has produced a list of 5,000 companies for which it wants assistance from West Germany and other Western partners.

Price Waterhouse itself is acting as an adviser in Poland and Hungary and has taken a role similar to Bankers Trust in Czechoslovakia, where it is seeking Western partners to help modernize Skoda, the main auto manufacturer, Mr. Porter said.

Competition Expected

But there are warnings that, attracted by this new business honey pot, the Western companies flocking to Warsaw, Budapest, and Prague will find the expected new earnings bonanza illusory as competition drives down advisory fees.

Mr. Porter estimated that at least 50 or 60 foreign companies, including major commercial and investment banks, accounting firms, and management consultants, are working in the East.

Bankers Trust's Mr. Dundas, a vice president who is in charge of the Sklo transaction, predicted gloomily that "like privatizations in the West, banks will see declining fee income from this type of business."

He added: "There are no set fees for Eastern European privatizations and sometimes a bank will do the business for the publicity and prestige attached to a deal."

Price Waterhouse's Mr. Porter argues Western companies will be realistic over business opportunities.

"I think that most advisers are taking that view. This is really an opportunity to forge long-term business relationships in a completely new area." □

Kuwait's Central Bank Operating in Exile

Reuters

LONDON — The Kuwait central bank is still operating and prepared to ensure that Kuwaiti debts to foreign banks are paid, its governor said in a *Financial Times* interview.

"It is very important that our banks meet their obligations in their interbank and foreign exchange markets," Sheik Salem Abdul-Aziz al-Sabah told the newspaper. "But we need time and information to work this out."

The *Financial Times* said Sheik Salem gave the interview Tuesday and asked that for security reasons his whereabouts not be disclosed.

Vaults Said to Be Looted

Sheik Salem said that Iraqi occupation forces had looted the central bank's vaults in Kuwait and removed $1.6 billion in gold and bank notes.

Asked what resources the central bank now has at its disposal to act as a lender of last resort, he said: "We will find the means. That is no problem."

The newspaper quoted him as saying he had been working closely with the monetary authorities of foreign countries, mainly in the Gulf and Europe along with the United States, in reconstructing Kuwaiti finances and recovering records.

Sheik Salem said it was unlikely Kuwaiti banks would be stretched by the Gulf crisis because the Kuwait banking system as a whole was a net creditor of the rest of the world to the sum of $4.9 billion at the end of May and a net creditor of the international interbank market of $600 million.

"But some banks may have a mismatch problem," he said, referring to a situation when a bank funds a loan with short-term deposits that have to be renewed. □

Tourism and Ties to Japan Help Hawaii, Its Largest Banks

By LESLIE ADLER
Reuters

HONOLULU — Hawaii's two largest banks, which rank among the best-performing U.S. banks in both earnings and returns on assets, said they expect the state's strong tourist trade and its appeal to Japanese investors to produce continued, though slower, earnings growth.

Top executives of Bancorp Hawaii and First Hawaiian Inc., in separate interviews, pointed to the same factors as boosting their performance, beginning with growth in the Hawaiian economy. The Mideast crisis and higher oil prices are, however, tempering the short-term outlook.

Strong Economic Supports

"The basic economic segments that support our economy have been very, very strong," said Howard Stephenson, chairman of Bancorp Hawaii, parent of Bank of Hawaii. Tourism, the construction industry, and the nondefense government sector have all contributed to growth, he said.

"That is certainly the underpinning of our success," Mr. Stephenson said.

And Walter Dods, chairman of First Hawaiian Inc. and First Hawaiian Bank, said: "The best thing we have going for ourselves is that we really have two economies to work off of, the U.S. and Japan."

"Japan has given us a new, double base for our tourist business," said Mr. Stephenson. "That has been very, very significant in strengthening the long-term prognosis of how this business is going to develop."

Tourism Is Fundamental

Tourism is Hawaii's principal industry, accounting for 40% to 45% of the gross state product.

In addition, Hawaii's increasing appeal to Japanese investors shows no sign of abating. Although the favorable yen-dollar exchange rate has played a part in Japanese investment in Hawaii, a change in rates would be unlikely to stem the investment flow, Mr. Dods said.

"You'd have to have a pretty drastic change [in exchange rates] to make it unattractive to the Japanese," he said. "It wasn't that long ago that it was 360 yen to the dollar; now, it's 150 or so. By Japanese real estate standards and prices, Hawaii real estate looks like a pret-

> **"We really have two economies to work off of, the U.S. and Japan."**
>
> **Walter Dods**
> *First Hawaiian Inc.*

ty decent buy."

Even if the exchange rate went into sharp reverse, the Japanese would be unlikely to pull out of Hawaiian investments, Mr. Dods said. "There's very little incentive for Japanese investors to sell these properties and take the profits back to Japan because of the very high tax rates in Japan," he said.

Bank to Stay Conservative

First Hawaiian, which has a history of conservative lending practices, plans no deviation from that strategy.

"We have the lowest loan writeoffs of any bank in the United States," Mr. Dods said. "It's 0.09%, and sensing that we see some softening in the national and other economies, we're more careful about our loans."

First Hawaiian, on loans of $2.81 billion at Dec. 31, had average net chargeoffs for 1989 of 0.10%.

Although he expects First Hawaiian to post record earnings in 1990, Mr. Dods said the uncertain international situation makes him reluctant to forecast beyond that. "If we didn't have the oil shock, I'd be very comfortable" projecting continued record earnings, he said.

First Hawaiian earned $57.4 million, or $2.14 a share, on assets of $5.08 billion in 1989.

Mr. Stephenson, meanwhile, said he expects Bancorp Hawaii's asset growth to slow from the 20%-plus rate of the last several years. "Our expectations for growth over the near term would be somewhere in the range of 12% to 14%," he said.

Bancorp Hawaii earned $79.9 million, or $5.41 a share, on assets of $8.32 billion in 1989. Projections for asset growth include both its current businesses and its newly acquired thrift, FirstFed America, Mr. Stephenson said.

Richard Dahl, chief financial officer of Bancorp Hawaii, said the company expects FirstFed to continue to earn a 1% return on assets, with asset growth of 12% to 14%.

"It earns about $10 million [a year] now," Mr. Dahl said of FirstFed. "We feel it will continue to earn that plus, with its asset growth of 12% to 14%, earnings should grow somewhere in that same magnitude." □

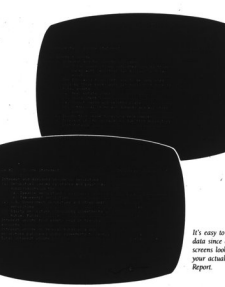
CALL REPORT SOFTWARE SO EASY TO USE, YOU MAY NEVER NEED ALL OUR SUPPORT.

Now it's easier than ever to accurately prepare your Call Report. With the Call Report Software Service from Sheshunoff Information Services Inc. All the screens look like an actual Call Report. So it's really easy to enter your data. And the easy-to-read User Guide gets you started right away. Even if you've never used a PC before.

Over 200 edit checks keep you from making any mistakes. So you know your final Call Report is virtually error-free. And you can do the whole job in less than 30 minutes.



It's easy to enter data since all the screens look like your actual Call Report.

It even prints your final Report for you to sign and mail.

Once you've correctly entered all your data, just hit a key to tell the program to print your Call Report. Sign it, and send it to your regulators.

Or, you can electronically transmit your Call Report with the built-in transmission feature. And when you're done, the program will even print a special management report with key financial ratios.

The software prints your final Call Report at the touch of a key. You just sign it and send it to the regulators.

We're here with help and a FREE Sheshunoff Bank Report.

The easy-to-read User Guide gets you going. But if you do have questions, just call us. Our staff of banking and microcomputer software specialists is happy to help you solve any problem. No matter how big or how small.

And once you've sent your Call Report to your regulators, you can get a free 25-page Bank Report on your bank from us.

Try it with our 30-Day Guarantee.

Try the Sheshunoff Call Report Service for your next Call Report. Just call 1-800-456-2340 to get yours.

Your cost is just $425 for four quarters. And if you're not completely satisfied, you can return your software and User Guide and owe nothing.

That's the Sheshunoff 30-Day Guarantee. A risk-free way to do your next Call Report faster, easier, and more accurately.

Call for yours today.

Tracor Offers Securities in Swap for $272 Million of Bank Loans

By STEPHEN KLEGE

Troubled Tracor Holdings Inc. is asking its banks to exchange about $272 million of bad loans for a similar face value of securities in its businesses.

Westmark Systems, holding company for the Austin, Texas-based company, proposed a restructuring of $730 million of debt, including the bank debt on which it is in default. The company acknowledged that it may file for bankruptcy protection if creditors don't approve the plan.

Tracor, a defense electronics company, traces its problems to both an overleveraged balance sheet and improved relations between the superpowers that reduced demand for its products, according to analysts.

The proposal appears to favor the banks over the current bondholders and shareholders, said David Sotnick, analyst for Standard & Poor's Corp. He noted the proposal would give the banks $175 million of senior secured debt in newly formed Westmark, including Littelfuse, "the most profitable" part of the operation.

The proposal appears to favor the banks over the bondholders and shareholders.

Toronto Dominion Bank was agent for the bank facility, and Bank One Texas, BankAmerica International and Barclays Bank were members of the group that financed Tracor. None would comment for this article.

The plan requires the approval of 95% of bondholders, said James B. Skaggs, chairman of Tracor. But he added that "the companies are alternatively seeking approval of the plan through a 'prepackaged' Chapter 11 (bankruptcy reorganization) filing if less than 95% but more than two-thirds in principal amount and a majority in number of the Tracor bondholders approve the recapitalization plan."

Under the proposal, the banks would also receive $75 million of a senior secured revolving credit facility to Tracor's troubled defense-related business – "which could be worth something down the road if business improves," Mr. Sotnick said. Also, they'd receive a $22.7 million of zero-coupon senior secured notes of Tracor Aviation, which the company is expected to try to sell.

Unit Sold to Reduce Debt

In May and June of this year, Tracor used the proceeds from the sale of its instruments division to reduce its bank debt by $100 million and raise $15.4 million of working capital, the company said.

Tracor said it has defaulted on its bank debt and the banks have issued a notice blocking payments to bondholders, including a $16 million interest payment due Friday.

Mr. Sotnick said failure to make that payment would result in a "D" rating on the 14% senior subordinated debentures due 1998, signifying a default.

Growth Never Materialized

Tracor was bought by Westmark Systems, a company controlled by Dallas merchant banker Mason Best Co., for $714 million, or 23 times earnings, in 1987. Mason Best recruited Navy Adm. and former deputy CIA director Bobby R. Inman to head the company. But after the expected growth of the company failed to materialize as relations improved between the superpowers, Adm. Inman, left the company late last year, making public warnings on the dangers of LBO financing.

Tracor's public bondholders are being asked to exchange $458 million of debt for all of Westmark's common stock; $48 million face amount of zero coupon convertible subordinated notes of Westmark, due 1998; and all of Tracor Aviation common stock.

Westmark shareholders would get the common stock of the defense business.

Manda Klein, who follows the bonds for Donaldson, Lufkin & Jenrette, said she has not completed her analysis of the proposal, but added: "I don't see why any equity should go to the existing equity holders, given the situation." □

Plus System

ADD PLUS® TO YOUR CIRRUS® ATMs AND GET AN EXTRA 150 MILLION

Soon Cirrus® members will be able to cash in on Plus System® customers. Adding the revenue potential of over 150 million Plus® cardholders.

So, by adding the Plus logo to your ATMs, you will start attracting customers who used to pass you by!

For information, please contact Ron Reed, vice president and general manager, at 303-620-7318. And make the most of your ATMs.

Riggs to Return Most Of FDIC-Deal Loans

WASHINGTON — Riggs National Corp. said that by Sept. 9 it will have exercised its option to sell back $655 million to $680 million of the roughly $750 million in loans it bought from the Federal Deposit Insurance Corp. as receiver for the failed National Bank of Washington.

Riggs will retain about $20 million in overdraft lines of credit related to demand deposit accounts and will determine within weeks whether to retain another $50 million to $75 million of loans covered by the agreement. — **Reuters**

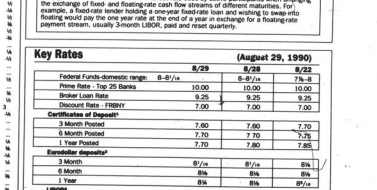
Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding as of the end of June. In 1990, the largest market value cutoff for banks was $56.71 mil. and for thrifts $107.8 mil.) $2 Wk Hi Lo: the moving 52-week high and low closing prices for the stock. PE: the price earnings ratio. It is the current stock price divided by the trailing four-quarter earnings, as reported or as adjusted for latest announced earnings. Mkt. to book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Ctg.: The price as of the previous day, added if it relates to the day the table was published. Yld.: Annual dividend. Indicated: A weighted average of the top 250 banks in each of the 50 states and the top 50 thrifts in market value, respectively, highlights the largest percent gainer/losses in price; and two volume indicators most shares traded and traded volume as a percentage of average shares traded daily over the past year.

Data source: SNL Securities, Charlottesville, VA, 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides SNL with the daily prices.

Libor Swap Yield Curve

Wednesday, August 29, 1990



Data source: Manufacturers Hanover Trust Co., New York

Description of table: For lenders and borrowers in the interest rate swap market, the LIBOR swap yield curve is the benchmark interest rate used by active participants when arranging the exchange of fixed- and floating-rate cash flow streams of different maturities. For example, a fixed-rate lender holding a one-year fixed-rate loan and wishing to swap into floating would pay the one year rate at the end of a year in exchange for a floating-rate payment stream, usually 3-month LIBOR, paid and reset quarterly.

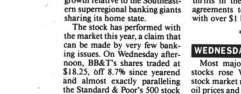
Strong Earnings And Low Profile Bolster BB&T

By GORDON MATTHEWS

NEW YORK — Shares of BB&T Financial Corp., Wilson, N.C., have managed to weather the storm that has battered bank stocks this year, helped by its low profile and strong earnings growth relative to the Southeastern supergional banking giants sharing its home state.

The stock has performed with the market this year, a claim that can be made by very few banking issues. On Wednesday afternoon, BB&T's shares traded at $18.25, off 8.7% since yearend and almost exactly paralleling the Standard & Poor's 500 stock index.

BB&T Stock Has Fared Better than Most Banks'
Percentage change



In comparison, the *American Banker* index of the 225 largest publicly traded banks is off 23%.

Others Are Weaker

As for its better-known neighbors, highly regarded First Wachovia Corp. Winston-Salem, N.C., is off 9% while First Union Corp., Charlotte, N.C., is off 26%, and NCNB Corp., also based in Charlotte, is off 27.3%.

"You've got three dominant banks in North Carolina and then a smaller and less known regional bank group with BB&T at the top of that list," noted Kathryn Hart Bissette, a banking analyst in Atlanta for Interstate/Johnson Lane.

Quality Has Lasted

Avoiding the limelight, of course, is not the whole story. BB&T has kept up the pace of earnings growth. Net earnings per share for the first half of this year were up 19% over the level a year earlier. Most of all, it has avoided problem loans.

"BB&T's asset quality today is essentially the same as it was in 1985," noted Andrew R. Davis, the banking industry analyst for Wheat First Securities Inc., Richmond, Va.

Operates Statewide

The company has no foreign loans and has financed no high-leverage transactions. Real estate construction loans are a sizable 12% of its loan portfolio – but growth of this lending has been small – up only 8% in two years, Mr. Davis noted, and does not involve financial of speculative projects.

BB&T is a $5 billion-asset company whose chief subsidiary is Branch Banking and Trust Co., North Carolina's smallest bank operating statewide. It also has a subsidiary bank in Greenville, S.C.

Since enactment of the thrift industry bailout law a year ago, BB&T has become one of the leading acquirers of healthy thrifts in the Southeast. It has agreements to buy five thrifts with over $1 billion in assets.

WEDNESDAY'S MARKET

Most major bank and thrift stocks rose Wednesday as the stock market rallied on a drop in oil prices and the absence of bad news from the Persian Gulf region.

The major California banks all registered gains, regaining a bit of the substantial ground they have lost since mid-July. But analysts said they regarded the shift as more technical than fundamental.

Shares of Rivals

Wells Fargo & Co., San Francisco, rose $1.30, to $55.375, while its local rival, BankAmerica Corp., climbed 50 cents, to $22.625. In Los Angeles, First Interstate Bancorp. was up 62.5 cents, to $29.25 in afternoon trading.

On the East Coast, First Fidelity Bancorp., Newark, N.J., rose 12.5 cents, to $14.625, on news that it will sell its Philadelphia mortgage banking company, Latimer & Buck, to Legg Mason Inc., Baltimore.

Meanwhile, Northeast Bancorp, Stamford, Conn., declined $1.25, to $12. on the announcement that it adopted a shareholders rights plan "to deter abusive takeover tactics." □

CAPITAL

Banks Take a Cue from High-Yield Bonds

By FRED VOGELSTEIN

In their continuing effort to find alternative ways into the capital markets, banks are looking at a technique used in the high-yield bond market that lets them sell stock and debt privately and file later to make them public securities.

The use of private placements with registration rights enables banks to raise capital faster but often without the premiums associated with private placements, experts say.

Until recently, time was not a major factor for banks issuing securities publicly. However, regulators have begun scrutinizing bank filings more closely and taking longer with them.

"In the old days, banks' balance sheets and income statements were boring. Now they're extremely controversial," said Michael L. Ryan, a partner at Cleary, Gottlieb, Steen & Hamilton. Bankers "are starting to use techniques historically reserved for issuers with controversial balance sheets."

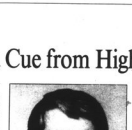
In the past six months Cleary, Gottlieb has seen a sharp increase" in discussions with banks and investment bankers about private placements with registration rights, Mr. Ryan said.

Hanover Among Leaders

Manufacturers Hanover Corp. is one of the only banks to have used the technique. It did so mainly for price, not speed.

However, four other banks are thinking about taking similar steps, said Dirk Stirrup, a managing director for financial institutions at Merrill Lynch & Co.

"The SEC review procedure has basically gotten extended," Mr. Stirrup said. In some cases now the review takes as long as six weeks, he said. "It used to



Michael L. Ryan
Cleary, Gottlieb

take only about a week."

The private-placement technique is hardly a cure-all, as the deals require banks to be in registration much longer than in traditional methods for raising capital. Also, with stock issues, the deals don't reduce the downward pressure on prices that occurs during any new offering.

"To say [to the market] that a whole block of stock is free to trade in four or six months" is like having to wait the extra time for the registration statement to clear, said George Miling, treasurer at Banc One Corp.

He agreed that for a bank in urgent need of capital, the private-public hybrid could be a viable alternative. But Banc One did not consider the option when it recently issued stock, he said; because it didn't urgently need the capital, it decided to issue the stock the traditional way.

Banc One sold 11.5 million shares but had to wait 110 days for SEC approval, about twice as long as in the past.

In the Hanover deal, the bank issued $85 million in mandatory convertible preferred stock. A group of about 20 investors bought the issue with the stipulation that the participants could sell it in the secondary market within six months or receive a higher coupon for their shares.

Hanover plans a similar issue of $50 million in the fall.

MARKET MONITOR

National Westminster Bank PLC on Wednesday became the latest foreign bank to lose its AAA rating, when Standard & Poor's Corp. downgraded the London-based bank's senior debt to AA-plus.

Two weeks ago Moody's Investors Service downgraded long-term debt of Japan's Dai-Ichi Kangyo Bank Ltd. and Fuji Bank Ltd. to Aa1 from Aaa.

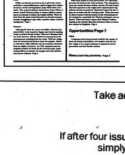
The NatWest downgrade affects $7.5 billion in debt and includes subordinated debt and junior subordinated perpetual debt in addition to senior debt. The subordinated debt was downgraded to AA from AA-plus, the junior subordinated to AA-minus from AA.

S&P said the downgrade reflects "a marked deterioration in the bank's profitability and asset quality."

California Federal Bank's debt and that of its parent, Calfed Inc., were downgraded Wednesday by Moody's Investors Service, which cited California Federal's weakened capital position and increased uncertainty about commercial real estate in the state. California Federal's senior debt and long-term deposits, which were lowered to Ba2 from Baa3, are now speculative grade. About $875 million in debt is affected.

Moody's also lowered California Federal's ratings on commercial paper and short-term deposits to Not Prime from Prime-3. It also downgraded the subordinated debt ratings for Calfed to B2 from Ba3. □

MIDEAST MARKETS



CRISIS MANAGEMENT.

As the crisis in Kuwait continues to unfold, its effect on your business can be potentially devastating — *or present great opportunities.*

Oil prices are skyrocketing, and a defense buildup is underway. As a result, the need for timely and precise information about the volatile business and political climate in the Middle East becomes more crucial.

That's why **MidEast Markets** is must reading. This unique weekly, backed by the resources of American Banker • Bond Buyer, brings the key business issues unfolding in the Middle East into focus. With each issue, we analyze the key developments on trade relations, finance, and defense that can help guide you through the world's most complex region.

Now, more than ever, you can't afford to be without MidEast Markets.

Take advantage of our "no-risk" trial offer by dialing toll-free:

Profit Potential Of Robert Bid-Called Dubious

By BARBARA A. REHM

WASHINGTON — With the Resolution Trust Corp. awarding its first major asset-management contract this week, sources close to the spirited bidding wonder whether winner J.E. Robert Co. can hope to make any money.

That was the speculation in the asset-management industry Thursday as the RTC was expected to sign a contract with Joseph E. Robert, chief executive of the Alexandria, Va., company. Robert won the bidding to manage $2.38 billion of assets taken over from the failed University Savings Association of Houston.

Sources close to the deal were interviewed Thursday afternoon in advance of a possible announcement of the contract signing by the RTC.

"I will be very surprised if at some future date we don't learn that the J.E Robert Co. has achieved a level of profitability," said one losing bidder.

Income Estimated

Other sources said Mr. Robert's company is expected to make $41.4 million over the life of the three-year contract. This consists of $21 million to manage the assets and $20 million in disposition fees.

Those figures are misleading, J.E. Robert could earn less if disposition of the assets takes longer than expected or if assets are sold for less than the RTC-established "estimated recovery value."

Most of the assets are nonperforming multifamily residential loans, many of them carrying land loans, or real estate owned, consisting mainly of apartment properties, according to a source close to the deal. "A lot of it was pretty nice stuff," he said, "with ready and willing buyers."

Contract Signing Imminent

While the company and the RTC declined to comment Thursday, a contract was expected to be signed that afternoon in Houston.

The RTC also was expected to award a contract Thursday to Northcorp Realty Advisors. The Dallas-based concern is to be paid about $4 million to manage and sell 1,215 single-family properties and 431 single-family nonperforming loans.

Regardless of the final details, the RTC is turning a critical corner: from seizing failed thrifts, which requires spending money,

OTS Says Healthy Thrifts Led Decline in 2d Quarter

By DEBRA COPE

WASHINGTON — The health of savings and loans continued to falter during the second quarter, with the greatest declines appearing among thrifts previously in the highest category of strength, the Office of Thrift Supervision said Thursday.

Of the 2,453 thrifts that had survived as of June 30, the total in Group 1, those deemed healthy and profitable by the OTS, fell to 1,175, down from 1,264 based on a review earlier last spring.

Weakest Group Is Trimmed

At the same time, the OTS shaved its estimate of thrifts that are expected to be transferred soon to government hands – Group 4 – by 64 institutions, to 246, mostly because 52 institutions already had been shifted to the Resolution Trust Corp.

OTS Director T. Timothy Ryan Jr. said he was not surprised at the changes in the upper levels of the industry, given deepening troubles nationally in the real estate sector and weakness in the economy generally.

"If current economic conditions continue, it is very possible we will see additional deterioration," he said, when the agency assesses the thrifts' health again in three months.

In response to a question, the

OTS acknowledged it had downgraded its prognosis for 181 thrifts, while noting that another 73 had improved their chances of surviving and prospering.

Overall, the assessments of the 2,453 surviving thrifts were based on OTS evaluations of thrifts' March 31 financial reports, plus the results of examinations, supervisory decisions,

Comptroller Denies BNE Seizure Is Imminent

Bank Seeking to Raise $150 Million Privately

By FRED VOGELSTEIN and TOM LEANDER

NEW YORK — Federal regulators late Thursday afternoon denied that the seizure of Bank of New England Corp.'s lead bank was imminent after rumors of a takeover swept financial markets.

Meanwhile, in a last-ditch effort to raise capital, the Boston-based company has hired two investment banks to try to privately place $150 million in equity, the *American Banker* has learned.

The news of the effort by Lazard Freres & Co. and Goldman Sachs & Co. came as Bank of New England's stock was being battered by persistent talk that the deeply troubled bank's seizure could come as soon as this weekend.

The Office of the Comptroller of the Currency, which regulates the Bank of New England, told the *American Banker* that the bank would not be seized over

Retail Deposits Showing Gains From Gulf Fears

By YVETTE D. KANTROW

The Persian Gulf crisis and resulting drop in stock prices are touching off a strong flight to safety, providing a boost to retail deposits, bankers report.

While it is too early to quantify, the increase in deposits has been noticeable since Iraq's invasion of Kuwait earlier this month, bankers said in interviews.

Some Expansion Seen

"We have seen an uptick in some deposit products," said William J. Laraia, an executive vice president in charge of community banking at National Westminster Bank in New York.

Because banks will not calculate August deposit increases for a few weeks, they cannot yet pinpoint how much of a windfall they are receiving. And so far, the increases do not seem to be as sharp as those that followed the stock market crash in 1987.

But the current uptick could

Banks Float Above the Wreckage In Massive Southland Workout

By STEVEN LIPIN

If troubled Southland Corp.'s financial restructuring is any indication of how lenders fare in workouts, bankers and bank watchers can breathe a small sigh of relief.

While subordinated creditors are poised to take a massive cut in principal in exchange for 25% of the company's equity, senior lenders have their investments virtually intact and are receiving interest and amortization payments.

Banks Unscathed

The Citicorp-led bank group did grant certain waivers in the bank covenants, but otherwise banks have avoided damage. Not only are the company's loans current, but banks are cushioned by Southland's $661 million sale of its share of Citgo, which will help ensure that Southland makes its tough amortization schedule.

The proposed recapitalization of Southland suggests that banks that lent to highly leveraged transactions can recoup their full investment in some of the financial restructurings under

Southland's Massive Debt Load

	$ in millions
Senior term loans	$887
Senior working capital facility	$350
Senior payment-in-kind debentures	$497
Senior subordinated notes	$350
Senior subordinated discount notes	$402

PEOPLE *in the news*

Investment Group Head Sets Sights on the Midwest

By STEVEN KLEGE

While other New York-based investment funds, set up in expection of opportunities in the thrift bailout, have stalled amid concern about the future of the industry, Keith Stock is looking homeward to find potential winners.

A native of Decatur, Ill., Mr. Stock left a position in the financial institutions group of McKinsey & Co., New York, to head First Financial Investors. The group has been focusing on the Midwest in its search for underachieving institutions. It has made several investments and recently took control of its first company, St. Louis Bank for Savings, Duluth, Minn., teaming up with some local investors to recapitalize the thrift.

Focusing on Smaller Companies

"I'm working with much smaller institutions than at McKinsey, and I'm having a very immediate impact," he said, expressing satisfaction with his new role.

Mr. Stock said in an interview at his Park Avenue office that his group does not rule out investing in other parts of the country, But

Keith Stock

because interstate banking has been slower to blossom in the Midwest, he argued some small and medium-sized locally based institutions stand a better chance of dominating such cities as Duluth.

"Price expectations are more reasonable because growth has not been as dynamic," he said, adding that the collateral value of real-estate and other assets in markets that have avoided the boom that took place on the coasts tends to be "sounder" as well.

First Financial is a qualified bidder for companies being sold by the Resolution Trust Corp., but has yet to make any acquisitions from the agency. The thrifts under RTC control tend to feature a high level of short-term certificates of deposit and to have sold off their most valuable assets, Mr. Stock said.

St. Louis Bank, formerly St. Louis Federal Savings and Loan Association, "rose to the top" among more than 100 institutions reviewed by First Financial because of its potential to be a dominant, diversified financial services company within its market, he said.

Also Serving as Chairman

Its $210 million in assets already makes it the largest financial institution in the Duluth area. "It has a uniquely loyal and valuable customer base, a high quality, experienced staff, the leading home mortgage market share and attractive savings products," Mr. Stock said.

The bank consultant, who has taken over as chairman of the board and has been shuttling back and forth between New York and Duluth, said he expects to make some modest operational improvements, to reprice some deposit products, and to introduce "some new products on the consumer side."

The transaction, a voluntary supervisory conversion from mutual to stock form, was greeted with a wave of favorable publicity in Duluth.

818 Million of New Money

Local television reporters interviewed a bank customer who said he was pleased by the new strength behind the bank. And president Peter Pichetti, who will step down once a replacement is found, was shown pointing out that the infusion of capital came without taxpayer assistance.

The amount of new capital raised in the transaction, was not disclosed locally. According to the Office of Thrift Supervision in Washington, the deal brought $18 million of new money into the industry. □

Fed Plans to Ease Brokerage Rule

WASHINGTON — The Federal Reserve Board proposed on Thursday to let bank holding companies act as full-service securities brokers and perform certain financial advisory activities for institutional investors without getting specific permission from the central bank.

Already Allowed Case by Case

The Fed said the proposed amendment to its regulations would not expand the companies' authority beyond what is already permitted on a case-by-case basis.

The Fed sought comments from interested parties on whether it should be appropriate to let the companies provide such discretionary investment services to retail clients as well as institutional investors.

Previous Restrictions

In its past actions approving the combination of investment advice with brokerage services, the Fed has limited director, officer, and employee connections between a bank and a securities brokerage affiliate.

It said Thursday that it is not proposing to retain those restrictions.

Divided Fed Backs Norwest On Bid to Buy Weak Thrift

By LINDA CORMAN

WASHINGTON — Despite antitrust concerns, the Federal Reserve Board has narrowly approved the application of Norwest Corp. to acquire First Minnesota Savings Bank, a Minneapolis thrift, and merge it into Norwest Bank Minnesota.

The deal, which means Norwest, whose $7.8 billion in deposits ranks it second among commercial banking organizations in Minnesota, will gain $2.3 billion in deposits. Its share of Minnesota commercial bank deposits will go from 19.7% to about 25.9%. Norwest will remain second-ranked in the state.

The board's 3-2 decision, announced Wednesday, included a lengthy assessment of the deal's implications for competition and a joint dissent by Governors John P. LaWare and Wayne D. Angell.

A Warning Shot

The unusual split decision is a warning shot to financial institutions, indicating the central bank is stepping up its vigilance in potential antitrust situations, according to a lawyer and Fed-watcher. "The dissent sends the message to Norwest that the Fed may not approve more acquisitions," said Melanie L. Fein, a partner in the Washington firm of Arnold & Porter.

"I think Norwest is significant for the future consolidation of the banking industry," Ms. Fein said. "The board is sending a signal it will closely scrutinize mergers in markets where there are only a few dominant competitors."

The Fed's analysis said the acquisition would increase Norwest's share in certain Minnesota markets would exceed the "highly concentrated" level in the Minneapolis market, the board's majority said it was approving the application because First Minnesota, which has negative net worth, would get a capital in-

Wayne D. Angell
Dissenter in Norwest decision

Louise Kraft

fusion from Norwest.

"Thus, the proposal has the significant public benefit of resolving the capital deficiency of an impaired institution in a private transaction without cost to the federal deposit insurance funds," the board wrote in its approval.

In their dissent, Governors Angell and LaWare said competition issues were overriding. Other institutions bid for First Minnesota, they noted, adding that Norwest and one other banking organization control more than 56% of deposits in the Minneapolis-St. Paul market.

"The acquisition proposed here does not bear close scrutiny and would have a direct and adverse effect on competition in the Minneapolis-St. Paul banking market," they wrote.

Approval was based on the year-old Oakar amendment to the Financial Institutions Reform, Recovery, and Enforcement Act, which allowed bank holding companies the first time to acquire thrifts and merge them with banking units. Since that amendment was passed, about 13 holding companies have gained such approvals.

Besides the acquisition of First Minnesota, the board allowed acquisition of several of its subsidiaries, including those involved in the sale of variable- and fixed-rate annuities. It was the first time the board has allowed a bank holding company to sell annuities. □

From Nantucket, The Mini-Saga of A Scuttled Deal

By TOM LEANDER

NANTUCKET, Mass. — As buyout dramas go, it may not match Bank of New York Corp.'s hostile bid for Irving Trust Co. But for this picturesque island get a taste of a Wall Street-style financial flap this summer when a group of investors tried to block a local thrift's bid to buy a bank on nearby Martha's Vineyard.

The saga began in December, when Homeport Bancorp. Inc. made a $15 million cash offer for Martha's Vineyard National Bank. The deal seemed sensible enough: $112 million-asset Homeport and $115 million-asset Vineyard National would merge and use their combined know-how to expand in their respective island markets. The marriage was to be consummated this month.

The Challenger

Enter Alex Porter, whose New York investment banking firm, Porter, Felleman Inc., held a 10% interest in Homeport. Mr. Porter charged that privately held Vineyard National was a deeply troubled bank, and that Homeport's stock would be irreparably damaged if it completed the acquisition.

The banking company, parent of Nantucket Bank, reported that its nonperforming loans more than doubled during the fourth quarter, to 5.2% of its $87.7 million loan portfolio.

Mr. Porter and two investing groups – Centennial Associates and the Sabre Fund – tried to head off at the annual meeting it May but were defeated by Homeport's other shareholders, most of whom live on Nantucket.

Deal Died Anyway

As it turned out, Homeport's acquisition plans, including, ironically canceled by "mutual consent," according to Robert G. Stover, chairman and chief executive of-

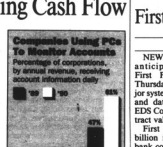
Middle Market Companies Are Automating Cash Flow

By RICHARD LAYNE

NEW YORK — Middle-market companies are increasing the use of automation in cash management, according to a study by Trans Data Corp., Wayne, Pa.

By automating, companies are increasing efficiency and creating electronic bonds that will lead to closer ties with their financial institutions, bankers say.

Trans Data, an affiliate of the *American Banker*, found that corporate treasurers are increasingly using personal computers to tie into bank's mainframe computers. With those links, companies can initiate funds transfers and check their account balances.



523 Companies Surveyed

For the study, middle market was defined as companies with annual sales of $5 million to $250 million. Trans Data surveyed a total of 523 companies.

Sixty-one percent of companies with $50 million to $250 million in annual sales said they used a PC to monitor their account balances, up from 47% the previous year, according to the study. Automated clearing use rose among companies with $5 million to $19.9 million in annual sales.

Among the larger companies, 40% use PCs to initiate funds transfers through the automated clearing house system, up from 30% in 1989.

Automation Low in Some Areas

Still, the level of automation remains low in certain areas. Almost three-quarters of the companies surveyed still use the telephone to initiate wire transfers, the same as last year.

Among middle-market companies that do not use a PC for transfers, 24% say they are interested, according to the survey.

Overall, 32% of the treasurers surveyed are interested in an an electronic link to their bank, creating an electronic window to receive a number of services. That is a slight increase from the previous year, according to Trans Data.

"Everyone is becoming more sophisticated about the electronic communications side of the business, and that applies to middle-market as well as large corporations," said James S. Wolf, national sales and marketing director for global cash management at Mellon Bank Corp.

"I like people to book to me electronically," said Mr. Wolf. It allows companies and banks to share information, "and it shows a high level of trust," Mr. Wolf said. The electronic ties can lead to a stronger relationships with customers and a more stable customer base, he added.

"There is a nationwide push among corporate treasurers to

EDS Lands $450 Million Contract

First Fidelity Makes Outsourcing Agreement Official

By KAREN GULLO

NEW YORK — In a much anticipated announcement, First Fidelity Bancorp. said Thursday it will turn over a major systems development project and data center operations to EDS Corp. under a 10-year contract valued at $450 million.

First Fidelity, which has $30 billion in assets, is the largest bank company to hand over its technology operations to a third party. As expected, its outsourcing contract is one of the biggest in the banking industry.

The pact is also a boon to Dallas-based EDS, whose roster includes many bank and nonbank companies but only a few contracts of comparable size.

Under terms of the contract, EDS is charged with converting First Fidelity's software systems into a common suite of 60 systems that will support core operations at the Lawrenceville, N.J., banking company. The project is slated for completion in 18 months.

Merging Data Centers

EDS also will merge the bank's data centers in New Brunswick, N.J., and Philadelphia into a single location, which has yet be determined. The consolidation is expected to be completed within six months. EDS, which is a unit of General Motors Corp., will then manage the operation and put the data center staff on its payroll.

The move to an outside vendor is widely seen as a cost-cutting move, but bank officials downplayed cost considerations.

"We have set an ambitious timetable in which to achieve total integration and consolidation of all of the company's products and services," said chairman Anthony P. Terracciano.

"EDS's extensive experience in managing data processing conversions and the availability of its very large pool of talented and seasoned computer and systems professionals provide us a critical edge in achieving that objective in far less time than would have been possible by ourselves."

Decision to Retain Some Staff

EDS will manage the common systems project but will work with First Fidelity's applications

EDS is charged with consolidating some 250 software systems into a common set of 60 systems that will support core bank operations.

development staff on it. The bank will retain the development staff, which will maintain the system and develop future enhancements, an EDS spokesperson said it was too soon to determine how many of its own personnel would be deployed for the project.

At the data centers, EDS will offer jobs to about 300 First Fidelity employees, who work at the two main data centers and at smaller facilities in Wilkes-Barre, Pa., and Morristown, N.J. Paul Levine, bank spokesman, said employees would be offered the same compensation and a comparable benefits package.

EDS Will Offer Jobs

The merging of the two data centers will result in staff reductions, but Mr. Terracciano refused to speculate on how many employees will be affected. As part of the contract, EDS "is committed to offering extra people employment opportunities elsewhere in the EDS system," Mr. Levine said.

Unlike some outsourcing agreements between EDS and its bank clients, First Fidelity will retain ownership of its computer systems. On at least one occasion, EDS has even purchased stock in a bank that was an outsourcing customer. Federal regulators have warned banks to avoid such arrangements.

Mr. Levine said EDS has not purchased stock or other assets from First Fidelity.

Rigorous Cost-Cutting Plan

The banking company has been on a cost-cutting campaign since spring, when it set out to reduce operating expenses $115 million annually. The company expects to save an additional $50 million through the consolidation of software systems over the next 18 months.

"Without common systems, we could have met the target for savings, but we would still have faced constraints on our ability to fully realize the power of our large distribution network," said Don Parcells, senior vice president and manager of corporate operations and systems.

Mr. Parcells will oversee the conversion to common systems and will serve as liaison between EDS managers at the data center and the bank.

Bank officials say it would have taken First Fidelity's in-house technology staff much longer than EDS to complete the data center and common system projects.

"EDS' experience in conversions of this type also will minimize the inherent risks of such a consolidation and conversion process," Mr. Terracciano said. □

Regulatory Reform a Must As World Market Develops

The world's financial marketplace is changing. Many countries are preparing for the emerging global market by transforming their regulatory structures so that these structures are more efficient and responsive to investor and borrower needs. The countries aim to be ready for the increased worldwide competition.

For the United States to compete in this new global environment, Congress must consider changes to the structure of the U.S. financial regulatory system. Congress needs to support more "omnipurpose" or "universal" systems, in which securities and banking activities are considered to be part of one financial market served by many of the same institutions.

For several years, Congress has been examining how to modify the U.S. financial services industry so it will be more competitive in the world market.

European Banks Forging Ahead

While Congress debates this major public policy issue, European banks forge ahead by forming alliances and, in some cases, merging to prepare for the single European market scheduled for 1992. By streamlining their banking, insurance, and securities industries, the Europeans are becoming stronger and more efficient.

Another major economic power, Japan, enjoys premier status in the world's banking market. At present most of the 10 largest banks in the world are Japanese.

To strengthen its position even further, Japan is now considering changing its securities law – patterned after the U.S. Glass-Steagall Act – to establish a less fragmented banking system.

This new system would allow Japanese banks to engage in the securities business. Amid these changes, the United States embraces a system that has long outlived its usefulness.

U.S. Banks at Disadvantage

Now, more than ever, U.S. banks and securities firms are playing catch up with those countries that can offer customers full service.

The current U.S. regulatory approach constrains U.S. banks and securities firms, so in many ways they are unable to improve market efficiency, increase their competitiveness, or improve service to customers.

A Changing Role

To understand the need to restructure the U.S. regulatory system, we should reflect on the changing role of U.S. financial institutions over the past several decades.

In the 1950s and 1960s, U.S. banks were catapulted to world leadership as a result of the dominance of the U.S. economy in world markets. But by the early 1980s, the United States had become a debtor nation in its trade relationships.

The primary flow of international investment funds no longer came from U.S. banks channeling abroad the capital of U.S. investors; rather, inflow of capital came from investors in Asia. As a result, institutions with the

> **"The current U.S. regulatory approach constrains U.S. banks and securities firms."**

closest relationships to the world's leading investors have shifted from the United States to Asia.

Shrinkage of Influence

This shift is significant. The U.S. position in today's world economy has dramatically changed – our share of the world economy has declined from 60% to only 26%. As a result, the United States still has the world's largest economy in size, a unified European Common Market by itself would surpass the United States.

The recent shift of Eastern Europe to more capitalistic open-market economies may boost Europe's combined economic strength even more.

In this new era of increased competition, the United States can no longer rely on economic dominance as its primary source of strength. Most of all, this country can ill afford to continue its regulatory practices – including complex organizational structures, firewalls, and some types of disclosures – without being certain of the potentially high cost of doing business versus the benefits.

U.S. banks believe they have been innovative in trying to overcome their disadvantages, and they have. But they haven't been fully competitive in responding to customer needs. The belief that U.S. innovation and leadership are unassailable may be the most significant threat the United States faces.

If the U.S. banking and securities industries remain segregated, other global institutions will be the dominant financial powers as they move more aggressively toward combining intermediation and securities capabilities.

Reliance on Foreign Banks

Ultimately, the United States will come to rely more on financial institutions of other nations, which will become competitively stronger – both nationally and globally – and control a greater share of the world's financial business.

If the United States wants to remain a leader in the global financial services marketplace, Congress must consider changing the regulatory structure of the financial services industry so U.S. institutions can offer customers full service at competitive prices. Only then will this country remain a strong, sound participant in the world economic and financial system. □

COMMENT/ *By Anat Bird*

Strategic Alliances May Help Banks Achieve Global Reach

U.S. banks have not met their own expectations in the global arena. Time and again, they try to sell a global product or enter a global market, only to pull out several years (and millions of dollars) later.

The most recent examples include Eurobonds and Euro commercial paper. As regional banks increase their involvement in global markets, following their customers' business, the need for international service capability appears greater than ever, and so do the perils.

But there are lessons to be learned from successful global players.

Not Being 'Everything'

Global giants such as Credit Suisse, Deutsche Bank, or Nomura Securities Co. are huge financial institutions, but even they do not try to be all things to all people, nor do they believe their way of doing business is the only right way.

Most successful international players build upon a strong domestic market share or a great corporate ability to innovate. These, coupled with a strong strategic focus, appear to offer a proven formula for success.

In each case, global winners have clearly identified core competencies and built upon them.

Explicit Strategic Focus

Successful global players, big or small, have explicit, well-articulated strategic direction. Even Nomura, the largest financial services company in the world, recognizes that it cannot compete effectively in certain business areas that require indigenous presence, such as retail brokerage or real estate.

The same strategic focus can be found in other major market participants. Examples include State Street Boston Corp. which is among the largest global custody vendors and essentially provides a single technological capability. Reuters Holdings, which had the vision to innovate by redefining how to exchange trading practices; and Morgan Stanley & Co., which has a strong market image of quality and know-how that it extended to seize new market opportunities.

The common theme across this diverse group is a well-defined road map and the commitment required to carry out the strategy over the long run.

Major players recognize that the global financial business is not unified. Each subset of the business, such as investment management, trade finance, securities underwriting, etc., entails its own factors that are essential to success.

For example, securities underwriting requires a massive distribution network (placement power) and local presence. Conversely, securities handling (including services such as global custody) requires a major, upto-date technological capability.

By the same token, several key success factors are common to all global businesses. They include elements such as strategic focus and direction, as well as the flexibility to deliver services according to local customs in different markets.

U.S. Banks Inflexible

A major problem in the U.S. approach to global financial services is a reluctance to recognize the latter critical success factor. It has often been said that their inability to adapt to local customs is a primary contributor to U.S. banks' failure to penetrate many international markets.

What can U.S. banks that are considering expansion of their global presence learn from these comments?

Certain conclusions are apparent:

- The strategic course should be plotted before a global expansion is embarked on.

The strategic direction should depend upon the attractiveness of each product or market; the bank's position, customer needs, and potential ability to compete; current competitive structure; and the position in the capital markets' evolutionary life cycle.

Once a strategy is determined, it should be given a chance to succeed through a predetermined grace period – long-term commitment is critical.

- Opportunities vary by market and by product.

Certain businesses require local presence and identification, such as securities distribution in Japan or branch banking in West Germany or the United Kingdom. Other business sectors are saturated with existing players, and the likelihood of success is very small. Examples include overcapacity in the markets for gilt-edged securities, Eurobonds, or Euro commercial paper.

U.S. banks in general provide value added when serving their

SMALL BUSINESS

Trying to Short-Circuit A Traditional Runaround

By LAURYN FRANZONI
Special to the American Banker

Bankers are devising some creative ways to manage the delivery of personal investment services to small-business owners.

These approaches are needed, some bankers and other observers say, because traditional turf battles between corporate and private banking units may alienate highly valued entrepreneurial clients

"The problems arise mostly with loans," said Marjorie Bloom, a former commercial lending and private banking officer who is now a managing director of David Ross Palmer & Associates, New York.

"If a small-business owner wants a $2 million real estate loan, his business banker might suggest a personal loan, his private banker would likely say he doesn't handle mortgages over $1 million, and the real estate department probably thinks the loan is too small," Ms. Bloom said.

It is up to senior management, she said, to establish a structure that encourages interaction between the units. "In most banks, that hasn't been done."

Peter Phelan, senior vice president of private banking for Manufacturers Hanover Trust Co., believes one solution is the creation of "referral managers" in all business units. These officers, selected from the ranks of senior line managers, could help departments communicate with each other and would sit on a corporate referral committee. The committee could set policies, develop incentives, and examine new product opportunities.

The individual officers could funnel product information back to the units and ensure that referrals between departments were handled efficiently and by the right person.

A Cautionary Tale

A banker at a money-center institution used the following incident to illustrate how difficulties can arise.

A private banking client touched off a controversial string of events when he used the bank's corporate lending unit to finance business expansion. He approached the business banking officer for added credit. The business banker insisted that the client pledge personal assets invested through the private bank. Such action would have had serious tax consequences for the client.

When he complained to his private banker, the private banker called in the bank's private placement specialist and accomplished the financing. The private placement specialist boosted his department's earnings, received an individual bonus, and reaped a great deal of criticism from the corporate lenders, who would have liked to have made the placement themselves.

The customer, who remains one of the largest clients of the private bank, was caught in the scuffle.

The banker familiar with the situation said, "There was a conflict. We should have had someone (or a policy) over us to settle it."

Splitting the Difference

"Bankers need to have a clear direction about how to manage the relationships," Ms. Bloom said. "They need to do what's right for the client and what's right for the bank overall without letting parochial interests intercede."

First Interstate Bank of California, Los Angeles, has a defined division of labor. The needs of customers who own businesses are handled by a private banker, who will lend to the business if the main source of repayment is listed as client wealth, not business cash flow. But if repayment will come from cash flow, the private banker will try to move that part of the relationship to the middle-market banking group.

"The client understands the need for specialists," said John Macon, senior vice president in private banking at the First Interstate Bancorp unit. "But we expect the private banker to make the introductions and to keep on the lending officer's case until the deal gets done."

A Team Approach

The Bank of San Francisco, founded in 1979 to serve small-business owners and wealthy people, considers it essential to have one person handling all of a business's business and personal needs.

"We feel private banking and small-business banking are one and the same," said executive vice president Jack Cortis. "We seek the individuals' corporate business, and we feel the relationship is more effective if one officer handles the business."

Individual business accounts are handled by teams of three to 12 bankers. The team leader determines specializations and work load. About 40% of the portfolio these teams handle represents services to individuals, 30% services to their companies. The remaining 30% is real estate lending; the real estate business is backed by a central team of credit administrators, who help when deals become complex.

"The client wants a strong relationship with a banker who will take care of them," Mr. Cortis said. "We handle it all – personal, business, and mortgages. The small-business owner likes that relationship even more than a typical private banking client."

Ms. Franzoni is a freelance banking reporter based in Springfield, Mo.

Retail Deposits Gain in Gulf Crisis

Continued from *page 1*

accelerate, bankers said. "If the stock market stays where it is, we will all see more deposits," said John Doyle, an executive vice president at Southern California Savings and Loan Association, Beverly Hills. The Dow Jones industrial average has fallen by about 10% since the invasion.

Trend Held Unclear

Some bankers said they have yet to see the impact of the Persian Gulf crisis on their deposit-taking activities. "Things are so unsettled that there doesn't seem to be any consistent trend at this point," said William McDonald, an executive vice president at National City Bank, Cleveland.

But others, sensing that consumer interest in bank certificates of deposit and money market accounts is on the rise, said they had already taken steps to attract new funds.

Mr. Doyle's thrift, for instance, began offering a seven-month CD product when the stock market took its first Persian Gulf-related hit. The CD allows consumers to keep adding funds to their initial investment.

"We thought it was a good time to do it," Mr. Doyle said. During the last two weeks, Southern California's deposit inflows grew at a slightly faster clip than expected, he said.

A Vote of Confidence?

Given that public concern over the strength of the banking system is growing, the current flight to safety seems especially significant. Industry observers said that despite media reports questioning the safety and soundness of the nation's banks, consumers still view their financial institutions as safe havens.

"I doubt whether there has been an adverse affect on banks," said Robert Litan, a senior fellow at the Brookings Institution in Washington, D.C., commenting on the recent rash of bad bank publicity. "But that would change if there were headlines that the FDIC confessed it was broke."

Mr. Litan and others said that as long as the Federal Deposit Insurance Corp. guarantees bank deposits, consumer confidence in banks will remain strong. And even if consumer faith in the system were to erode, banks by default would still be the primary beneficiaries of a flight to safety.

Only One Substitute

"The only viable substitute for banks would be a money market fund," Mr. Litan explained. The funds can yield higher returns than similar accounts at banks, but do not offer the government guarantee.

Because general economic conditions today are more unsettled than they were in late 1987, most bankers say the future of this deposit uptick is harder to predict.

"The impact of the crash was much more decided," Mr. Larsia said. "This has been a slower escalation. We see a combination of factors here," including the possibility of war and the expectation of a recession.

That could prove useful to retail bankers this fall, when a large number of CDs will mature. Faced with market uncertainty, consumers may be more likely to roll over CDs rather than turn elsewhere for investments.

The current flight to safety demonstrates that increases in deposit inflows differ among banks according to the customer bases they serve. At Ameritrust Corp. in Cleveland, for instance, the impact has been minimal, said Drexel Andrews, probably because most of its depositors are older and conservative.

"These people have most of their funds in deposits anyway," Ms. Andrews said. □

Aid for Mortgage Servicers in Gulf Crisis

By PHIL ROOSEVELT

NEW YORK — As the Persian Gulf crisis builds, Fannie Mae and Freddie Mac are rushing to the aid of mortgage servicers.

The two titans of the secondary market vowed Thursday to help servicers comply with a law requiring slashed interest rates for borrowers called to active military duty.

The law – the Soldiers' and Sailors' Civil Relief Act of 1940 – has been thrust into prominence by President Bush's decision to activate thousands of reservists for the Gulf crisis.

Some banks already have announced plans to comply with the law or even exceed its requirements. The law caps at 6% the interest rates that may be charged on loans incurred by people before they enter active military duty; current mortgage rates are above 10%.

Now, Fannie Mae, or the Federal National Mortgage Association, and Freddie Mac, or the Federal Home Loan Mortgage Corp, are adding their voices to the issue – and waiving the flag.

Basically, the agencies said that servicers – banks and other companies that funnel monthly mortgage payments from homeowners to holders of mortgage securities – can slash rates for eligible GIs without worrying about payments to investors.

That is because Fannie Mae and Freddie Mac will absorb such rate reductions on loans backing their securities, thus ensuring that payments to investors are not disrupted.

"We have a unique opportunity to show our commitment to investors by honoring all guarantees of pass-through of principal and interest while supporting servicemen and women who are called to serve their country," said Henry Cassidy, Freddie Mac's senior vice president of credit policy.

The agencies' action "is being received very positively by the industry," said James W. Nesbon, of the Mortgage Bankers Association of America. □

Profitability of J.E. Robert Bid for RTC Assets in Question

Continued from *page 1*

to selling their assets, which brings in money.

NCNB Texas National Bank, Dallas, an NCNB Corp. subsidiary, was thought to be the logical choice to get the RTC contract. NCNB bought University Savings last October. The bank took the thrift's deposits but turned back most of its assets to the RTC.

The RTC hired NCNB Texas to manage the assets until it had time to bid out the package. Because the bank is so familiar with the assets and already has the people in place to handle management and disposition, it was assumed that NCNB would win the bidding.

Confusion over Eligibility

Wednesday, the RTC cleared up some confusion about whether an interim manager such as NCNB may win a long-term contract. The agency announced that it would award final management contracts to companies doing the work on an interim basis. Because any information the interim manager gains from its work must be shared with companies bidding on the long-term contract, the RTC said, "there appears to be no chance of the interim manager gaining an undue advantage over its competitors."

Many asset managers objected to NCNB's being permitted to bid, claiming that the bank's interim management of the assets gave it a leg up in the bidding.

But many asset managers objected to NCNB's being permitted to bid, claiming that the bank's interim management of the assets gave it a leg up in the bidding.

Winning bidder J.E. Robert, however, apparently made the RTC an offer it could not refuse, sources said.

"NCNB is motivated by profit, and I think there are other motivations driving the J.E. Robert Co.," said a competitor. "He wanted to make a splash, get the first big deal."

Keeping NCNB on

Sources close to the deal said that J.E. Robert will pay NCNB $1.2 million a year to continue servicing loans in the portfolio.

Industry sources said the 1,008 properties that Robert is contracting to manage will take at least 50 professionals, raising questions of whether the company has the resources to handle the deal.

"Nobody can tell me that Joe Robert has the kind of people sitting around ready to do the job. He has got to rely on subcontracting and hiring," one source said.

"I think the RTC is saying one thing and doing another," said a competitor who claims the RTC told him that he would need all the people in place before bidding.

Mr. Robert may not have to go far to find the employees he needs. NCNB has said it would lay off 250 to 300 people if it did not get the contract. □

VA Sets Issue Of Securities At $293 Million

Reuters

NEW YORK — The U.S. Department of Veterans Affairs said it has planned an innovative $293 million offering of mortgage-backed securities via First Boston Corp.

American Housing Trust VII will be the issuer. The securities will be backed by vendee loans, which the agency uses to finance purchases of VA-foreclosed property.

The issue is unusual in that it will combine $97.6 million of pass-through certificates and $195.4 million of multiclass securities. Such issues are usually made separately. Actual amounts of the two parts will be decided only when the offering is priced.

Structure Aids Flexibility

The so-called proportional coupon allocation structure was designed to provide flexibility in marketing the offering, said Frederick Tersol, director of the investment banking group at First Boston.

"As investor demand increases or decreases for the pass-through or multiclass portion, we will shift the par amount" between the two parts, he said.

Mr. Terrell said he expects the pass-throughs to trade at a tight spread to Government National Mortgage Association securities because they also will be backed by the full faith and credit of the U.S. government.

This is the second VA issue with full government backing.

Yields to Top Ginnie Maes'

The pass-throughs will have a coupon of 9.3% and a 12.7-year average life. They will have higher yields than Ginnie Maes only because they are less liquid, Mr. Terrell said.

The remainder of the offering will consist of four tranches with maturities of three, seven, 10, and 20 years. Their average lives will be 3.4, 7.6, 11, and 20.5 years, respectively. All the classes have a 9.125% coupon.

The mortgage loans underlying the offering have coupons of 7.5%, 9.5%, and 10%, Mr. Terrell said. Those will be combined to produce a synthetic coupon of 9.25%. □

When you're being watched this closely...

one wrong move can spell disaster.

When it comes to complying with all the federal laws governing commercial and retail banking today, one wrong move can end up costing a fortune–in penalties, fines, even your bank's reputation.

That's why you need a guide you can trust–*Federal Banking Laws*.

Federal Banking Laws examines all the important statutory and regulatory issues you must be aware of–in one comprehensive volume! So you can determine what phases of your operations are affected and how...what the various provisions mean... and, most important, what you can do to plan for the future.

It turns confusion into comprehension.

Quickly. Easily. With practical emphasis on how to ensure compliance and avoid costly penalties.

So you can concentrate on your business–instead of worrying about getting pounced on for non-compliance.

Now you can examine *Federal Banking Laws* FREE for 30 days. Call today for your copy and see for how it quickly answers your banking law questions.

Lenders Seen Facing Surge in Loan Discrimination Claims

By LOUIS GERHARDSTEIN

WASHINGTON — Consumer groups and some bankers are expecting a surge in allegations of loan discrimination against home mortgage lenders because of rigorous new reporting requirements.

As part of the thrift-bailout law last year, the Home Mortgage Disclosure Act was amended to require home lenders to provide detailed information about applicants. The intent is to expose any patterns of redlining.

Home mortgage lenders must record the disposition of mortgage applications made after Jan. 1, 1990, as well as the race, sex, and income level of all applicants. The lenders will compile the data into a registry of loan information at yearend and send it to their primary regulator.

First Reports in March

The first round of expanded reports, covering the 1990 calendar year, is due by March 1, 1991.

"We now have the lull before the storm," said Allen Fishbein, general counsel for the Center for Community Change, a not-for-profit legal assistance group that advises community groups on fair housing issues. The amendment is "a significant tool for civil rights enforcement," he said.

The reports will be filed with the Federal Deposit Insurance Corp., the Office of the Comptroller of the Currency, the Federal Reserve Board, and the Office of Thrift Supervision. Those regulatory agencies will turn the books over to the Federal Reserve Board, which will process the numbers, compile aggregates of the information, and release its report by yearend.

Data Will Pile High

Federal Reserve Board Governor John P. LaWare said the Fed estimates the new mortgage reporting requirements will produce 1.7 million sheets of data – a stack 30 feet higher than the Washington Monument.

"It sounds awful and probably is in some sense, but we will be able to extract data to help us better see discrimination against minorities or lower-income groups," Mr. LaWare said.

Before the amendment, loans were reported by Census tract data, which provided only general information about applicants and where loans were made.

Fears of Harassment

Some bankers worry that the form in which the information is published may lead to harassment of lenders. Without other relevant statistics, such as an applicant's credit history and debt-to-income ratio, the added personal information "might look worse than it is," said Fritz Elmendorf, spokesman for the Consumer Bankers Association.

But even appearances can trigger an investigation of an institution's lending practices. "We still anticipate a lot of trouble with charges of discrimination," Mr. Elmendorf said.

In recent testimony before Congress, Mr. LaWare of the Fed faced the wrath of Senators who wanted to know why the Fed was not more aggressive in pinpointing redlining practices. The Fed governor conceded the central bank lacked the proper data.

"It sounds awful . . . but we will be able to extract data to help us better see discrimination."

John P. LaWare
Federal Reserve Boara

Answers Expected

The new disclosure "will let us answer critics with real statistics," he said.

"The HMDA [amendment] will give you more information about what is being turned down, what's not, and why," said Peggy Miller, legislative representative for the Consumer Federation of America, a consumer interest group."

Mortgage lenders are included under the law if they write more than 10% of their loans for home mortgages, have assets of more than $10 million, and do business in a metropolitan area.

Requirement Is Expanded

The reporting requirement also extends to mortgage companies not affiliated with financial institutions, which did not have to report loan information under the original disclosure act.

Some of the nation's top providers of home mortgages fall into this category, including the Fireman's Fund Mortgage Corp., which services a $33.8 billion loan portfolio and originated $1.6 billion in home mortgages in the first six months of 1990, and GMAC Mortgage Co., with a portfolio of just under $30 billion.

The Home Mortgage Disclosure Act "is not going to lead to any more audits than we already have," said Fireman's Fund audit department manager Arlene K. Spencer. The disclosure amendment is "almost overkill," she said, because existing laws in states where Fireman's has offices already require the company to report on the loans it services, she said.

Annual Audit by HUD

The Department of Housing and Urban Development also conducts a yearly audit of the loans that Fireman's services and can audit the loans it originates whenever necessary, Ms. Spencer said.

FDIC and Fed officials, as well as consumer groups, said the reports themselves were not evidence of a pattern of discrimination.

"In and of itself, it's not the end of the story, . . . it's not an end-all data set," said Glenn B. Canner, senior economist with the Fed who had extensive involvement in formulating the new regulations.

The true value of the data, Mr. Canner said, is as "a tool to set up hypotheses which can be tested" to determine if a particular institution is discriminating.

Mr. Gerhardstein writes for the Medill News Service.

Young Unit of Japanese Bank Makes $1 Billion Deal with Fannie Mae

By PHIL ROOSEVELT

NEW YORK — As mortgage bankers gathered for a convention here this spring, Greenwich Capital Financial Inc. stole the show in the exhibit hall. Its booth featured flashing lights, pulsating rock music, and a Cher lookalike.

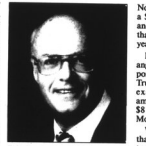
Last week, the racy, three-year-old mortgage company made another big splash. It announced a deal to funnel $1 billion of new mortgages through the Federal National Mortgage Association over the next 16 months.

Under the binding agreement, the Irving, Tex.-based Greenwich will exchange most of the loans for Fannie Mae mortgage securities and sell the rest to the agency for cash. Ultimately, Greenwich will sell the securities.

A Major Participant

With this deal, Greenwich has "entered the ranks of the major mortgage banking companies," declared Judith Dedmon, senior vice president for Fannie Mae's southwestern region.

A unit of Greenwich Capital Markets Inc., which in turn is owned by Long-Term Credit Bank of Japan, the mortgage company has no plans to stop now.



B.L. Terrell
Greenwich Capital Financial

Led by B.L. "Bud" Terrell – a well-regarded veteran of Security Pacific National Bank's mortgage operations – the unit is taking bold strides in both originations and servicing.

Primarily a player in the wholesale business, Greenwich plans to produce about $2 billion of new mortgages this year through purchases from more than 200 banks, thrifts, and other lenders across the country, Mr. Terrell said. Next year, he added, that volume should jump to $3 billion.

Servicing Rights Grow

In the past, Greenwich sold not only the loans it produced but the related servicing rights. Now, however, it has assembled a $1 billion servicing portfolio and Mr. Terrell plans to pump that up to at least $2 billion by yearend.

In fact, Greenwich has been angling for some of the biggest portfolios on the Resolution Trust Corp.'s auction block. For example, the company was among the final bidders for the $8 billion portfolio of Foster Mortgage Co., Fort Worth.

While Greenwich did not win that portfolio, "we're still going to be active in bidding for other," Mr. Terrell vowed. Acquiring a portfolio of Foster's size probably would place Greenwich among the top 25 mortgage companies in servicing, up from the middle ranks of the top 300.

Capabilities Noted

Not surprisingly, this bluster of activity has attracted considerable attention in mortgage circles.

"They're a little showy, a little flashy, a little aggressive," said one Texas banker. "But I think they're competent and capable of carrying out what they're trying to do."

The mortgage company's immediate parent, which is based in Greenwich, Conn., is a well-known player in mortgage-backed securities; some of its staffers made their names at Salomon Brothers under market pioneer Lewis S. Ranieri.

Earlier this year, Greenwich Capital Markets was tapped to advise the Resolution Trust Corp. on securitization. A Greenwich lawyer said the advisory work does not pose any conflicts for the mortgage company when it bids for servicing, because the portfolios on which it has been bidding are not held by any of the thrifts involved in the securitization work.

Koji Hirao, a general manager of the bank, recently traveled to Irving to dine with the unit's executives and see its facilities

"He kept looking at our management philosophy – the openness of our approach – and saying it was a lot like a Japanese company," Mr. Terrell recalled. "I really think that was a compliment."

And what do officials at Long Term-Credit think of Greenwich Financial's razzle-dazzle approach to trade shows?

"That's one thing they haven't seen yet," Mr. Terrell said. □

Key Interest Rates

	Week ended 8/24/90	Week ended 8/17/90	Year ended 8/25/89
30-year fixed-rate mortgage	10.20	10.19	10.14
1-year adjustable-rate mortgage	8.20	8.19	8.69

Rates are based on a weekly survey of 2,000 lending institutions nationwide. The averages reflect rates for a range of loan terms.

ATTENTION! BANKERS & REGULATORS

You are all painfully aware, of the need to identify professionally qualified appraisers since the emergence of the great Thrift debacle. As you know, beginning July 1, 1991, appraisers will have to be either licensed or certified by the state. More than ever, regulators and lenders must rely on designated members of recognized organizations such as The Society of Real Estate Appraisers. The above listings are being published to serve as a handy reference for you when in need of qualified appraisers. This list will appear in American Banker every four weeks, so keep it close at hand until the next one arrives. We are confident that this list will expand so as to be more useful to you. For a complete list of Society of Real Estate Appraisers designated members, call (800) 331-7732.

COMMENT

Strategic Alliance For Global Reach

Continued from *page 4*

own customers' needs abroad. They can also position themselves to provide cross-border linkage services for their own or others' underserved customers.

Examples of linkage services include global risk diversification (derivatives, etc.), global investment management (including basket funds and index or currency funds), and global custody and payment systems.

• Marketing and service delivery must be consistent with each country's business customs. Knowing the language, customs, collateral expectations, etc. is necessary to gain local acceptance and develop a local client base.

The growing globalization of financial and trade markets does present exciting opportunities for banks. The key question is: What is the most effective way to enter these new markets and capitalize upon these opportunities?

Strategic Alliances' Rightness

An alternative that has not been in vogue in recent years is strategic alliances. However, we believe these alliances can be the

> **"The right strategic alliance can bring acceptance of an otherwise unacceptable outsider."**

very vehicle for successful entry of foreign banks into indigenous markets.

This is particularly true today, as we see the emergence of regional economies and regional financial institutions that have global links. In the real world, globalization is neither simple nor integrated. Rather, it is like putting together a jigsaw puzzle, where investment in and collaboration with local top-tier boutiques may be the only viable strategy for global coverage.

The right strategic alliance can bring acceptance of an otherwise unacceptable outsider and, with it, an instantaneous distribution network for many services. Strategic alliances may be the only feasible vehicle for foreign banks, particularly smaller, regional banks, that want to enter new geographic markets and fully serve their customers.

Paths to Market Entry

The benefits of strategic alliances should be evaluated not only in the context of feasibility but also through cost-benefit analysis. In general, market entry can be gained by one of the following paths:

• De novo (build from scratch).

• Acquisition (buy for a premium).

• Strategic investment (alliance).

De novo entry not only is difficult but also has a very long payback period. Such ventures often fail and are also extremely expensive. These factors may make this path prohibitive, particularly for banks with shallow pockets.

Acquisition may be an effective entry mode in some cases. It entails paying a premium in most cases and also has the potential shortcoming of changing the acquired entity from a perceived local player to a foreign one, whereupon local acceptance may decline.

Combining Strengths

Strategic alliances appear to combine the best of both worlds: minimal cash (or stock) outlay and no harm to domestic perception of the institution. Many globally successful companies have used strategic alliances as an expansion tool.

A notable example is Credit Suisse-First Boston, which created a complex ownership structure giving 20 foreign financial institutions from 1% to 3% of the company. This loose relationship encourages cooperation and enhances the strategic benefits of the alliance, yet it does not give any single investor major control over CSFB. Nor does it require a significant cash outlay from any investor.

Similar alliances, such as Sumitomo Bank's 12.5% stake in Goldman, Sachs & Co. or Daiichi Kangyo Bank's 5% in Manufacturers Hanover Corp., may signal the start of a trend. Such alliances are Nomura's stated global strategy.

Longer-term experiences, such as Security Pacific Corp.'s 20-year alliance with Mitsui Bank Ltd., have proven very effective, bringing about mutual leverage. The Japanese bank gained technical support and technological expertise, and the California bank got a large distribution network for its products.

A similar relationship has recently been forged between Hongkong and Shanghai Banking Corp. and Wells Fargo & Co.

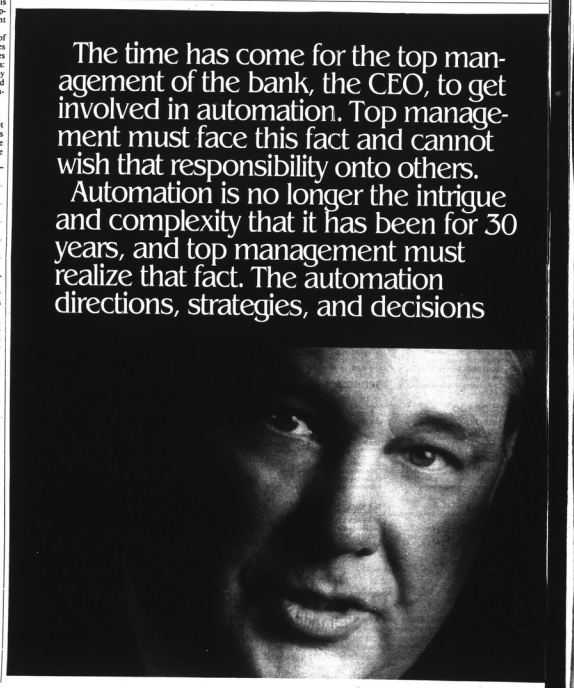
Strategic alliances with non-Japanese companies have been successful as well.

Europeans Participate, Too

Spain's Banco Santander has a 10% stake in Royal Bank of Scotland, a 30% stake in Istituto Bancario Italiano, and a 10% stake in Portugal's Banco de Comercio e Industria. Dresdner Bank and Banque Nationale de Paris have swapped board members; and both Midland Bank and Hongkong and Shanghai Bank and Paribas and Banca Commerciale Italiana have swapped equity.

The underlying theme is the formation of alliances – cooperative ventures – at minimal cost and for maximum benefits.

As U.S. banks see their way through the maze of global expansion, they may reverse their reluctance to invest strategic stakes in institutions around the world. Doing so can allow them to gain inexpensive entrance to new distribution markets and local presence and service breadth that will ultimately allow a strengthening of their positions with clients while increasing profitability. □



OTS Says Healthy Thrifts Slipped

Continued from *page 1*

and earnings and capital trends through June 30.

Outlook Found Gloomier

"Upon a closer look, they don't look as good as their financial report numbers indicate," said Bert Ely, an Alexandria, Va., analyst. "The qualitative analysis comes up with an overall gloomier outlook."

Among thrifts formerly classified among the nation's strongest and most profitable, 106 turned in poorer earnings, consumed capital, or were forced to provide for potential losses uncovered by examiners and supervisors.

Another 55 thrifts were downgraded from the OTS's second rank of thrifts, those that meet minimum capital requirements.

The number of troubled thrifts already slated to be shifted to the RTC for liquidation or sale declined to 246 from 310 earlier this spring. From that same grouping, 34 institutions were upgraded as a result of improved capital or supervisory opinions.

Middle Categories Cloudy

Of four categories of thrifts cited by the OTS, the number of institutions in the two middle groups increased, evidence that there are no clear-cut signs of how these institutions will ultimately fare, Mr. Ryan said.

"Until now, the decisions have been like [identifying] pornography – you know it when you see it," Mr. Ryan said. That will become more difficult as the OTS tries to decide how to treat institutions "on the fringe," he said.

OTS's Group 3, consisting of institutions with poor earnings and low capital, grew from 311 to 352 thrifts.

Group 2 institutions, those with nearly-adequate capital and mediocre earnings, swelled from 620 to 680 thrifts. "They are the regulatory survivors, but they are not making it in the marketplace," Mr. Ely said of these institutions. □

T. Timothy Ryan Wide World
Office of Thrift Supervision

must come from bankers, not data processing people. For those CEOs who realize this, the bank can move ahead now. If they won't take the responsibility, then the bank will have to wait until the CEO is willing to become involved.

Automation is no longer decisions in hardware and software, but decisions in the art and science of banking.

Securities Staff At Hanover Cut In Layoff Plan

By JOHN J. DORAN
The Bond Buyer

Manufacturers Hanover Corp. dismissed seven professionals from its securities subsidiary, Manufacturers Hanover Securities Corp., last week as part of a plan to lay off about 1,400 employees company-wide, a spokesman for the banking company said.

In addition, Margaret A. Curvin, a managing director in charge of fixed-income sales and a former member of the bank's municipal bond department, "voluntarily resigned" on Tuesday, the spokesman said, adding that Ms. Curvin's move was not related to the cutbacks.

"This is part of the 1,400" planned layoffs, the spokesman said, adding that the bank is doing "selective pruning" of staff. The cuts were made across the board in the securities subsidiary, he noted, and at least one from the municipal department.

All domestic securities sales, trading, and underwriting are included in the section 20 subsidiary, he said. Officials in the municipal department could not be reached for comment.

In its quarterly filing with the Securities and Exchange Commission, the bank holding company says that "a subsequent reduction of approximately 1,400 will be achieved primarily through a selective sharpening of focus in domestic and overseas markets and a downsizing of various functions. Approximately $40 million of the $100 million pre-tax restructuring expense relates to the staff reductions."

The corporation reported income of $33 million in the second quarter of 1990, reflecting a special one-time restructuring expense of $100 million. Excluding this charge, net income for the second quarter of 1990 was $93 million, compared to $106 million in the second quarter of 1989, the bank holding company's filing says.

Ms. Curvin, who could not be reached for comment, joined the bank's municipal bond department in October 1984. She was appointed a vice president shortly thereafter and then promoted to managing director in 1986.

In the first half of 1990, Manufacturers Hanover Securities ranked 39th among senior managers, underwriting seven issues totaling $259 million. For all of 1989, Manufacturers Hanover ranked 27th, acting as lead manager on 16 issues totaling $619 million.

GLOBAL *dispatches...*

J.P. Morgan Is Expanding Latin Investment Banking

By JAMES R. KRAUS

NEW YORK — J.P. Morgan & Co. has landed two more deals in its drive to become an investment banking force in Latin America.

Morgan and Holland's NMB Postbank are coagents for a $165 million facility to Mexicana de Cobre SA to help finance an all-cash $475 million acquisition of Compania Minera Cananea SA from Nacional Financiera, a Mexican government agency.

Plan Termed Ambitious

Terms of the loan have not been disclosed.

The deal, in which Morgan is acting as both a lender and an adviser to Mexicana de Cobre, highlights Morgan's ambitious plan to operate in both the commercial and investment banking arenas.

Belgium's Generale du Banque is agenting a $115 million advance payment facility to the reconstituted Cananea.

Equity from Others as Well

The $195 balance will be provided in the form of equity from other sources, including Belgium's Societe Generale de Belgique.

Union Miniere, a unit of Societe Generale, is taking a 21% stake in Cananea.

Cananea is Mexico's oldest copper mining company and holds 5% of the country's copper reserves.

On Aug. 20, Mexicana de Cobre won out against a competing $468 million bid for Cananea by West Germany's Metallgesellschaft and Ingenerios Civiles Asociados, a Mexican construction company.

The sale of Cananea is the second-largest privatization in Mexico to date and is due to close Sept. 27.

Buildup in Assignments

Morgan has been steadily building up its corporate advisory, mergers and acquisitions, and underwriting activities in Latin America.

In November, the bank acted as an adviser on a private debt restructuring by Mexican steelmaker Hylsa SA.

In a separate deal last week, Morgan advised Instituto de Fomento Industria, the Colombian industrial development bank, on a $330 million privatization, financial restructuring, and merger of Papeleria Colombiana, a pulp and paper mill in southern Columbia.

JAPAN

Recent declines on the Tokyo stock market and in real estate prices in Japan are not expected to significantly reduce the high credit quality of Japan's major banks, according to Fitch Investors Service Inc.

The New York-based rating agency said that it expected Japanese banks to maintain their strong credit profiles, attain new international capital guidelines set by the Bank for International Settlements, and keep close scrutiny over real estate collateral and the strength of borrowers.

Fay Wong, vice president for international and money-center banks, said she expected Japanese banks to shrink assets to comply with capital requirements.

Fitch added that although Japanese banks will be hard pressed to maintain net interest margins as a result of deregulation and higher interest rates, Japanese regulators will play an important role in safeguarding the system's stability.

In its first rating of letters of credit issued by Japanese banks, Fitch assigned only one bank, **Industrial Bank of Japan**, a triple A rating.

— James R. Kraus

SWITZERLAND

Increased economic uncertainty and rising inflation will keep interest rates in Switzerland at their present high levels, the **Swiss Bankers Association** has said.

The association added that Swiss National Bank's decision to increase short-term interest rates to 8.5%, from 3% at the end of 1988, and long-term interest rates to 6.5%, from 4%, has driven some $24 billion out of savings accounts and into higher-interest money market accounts.

Withdrawals from savings accounts have increased the shortfall in mortgage funding to $118 billion and forced banks to fund their lending with more-expensive certificates of deposit and long-term deposit programs.

— James R. Kraus

ARGENTINA

Argentina's government is close to securing the assent of creditor banks to complete its first major privatization, the sale of the ailing Entel telephone company.

"Some small banks have yet to grant the waiver, as well as large ones like Midland Bank and Lloyds Bank," said an Argentine economic team official who asked not to be named.

"But I am sure of those two accept, we'd have 70% of the banks and we could press ahead," he added.

— Reuters

CANADA

The **Bank of Montreal** said it cut its prime rate to 14% from 14.25%, effective Aug. 30.

The bank is the first major Canadian bank to cut its prime from 14.25%.

Japan May Raise Rates Again in '90

Central Bank Leaves Door Open After Discount Hike

By KUNIO INOUE
Reuters

TOKYO — The Bank of Japan's increase in the discount rate Thursday may be only the first salvo in Japan's battle against inflation. The markets appear to be expecting another rise this year if the Middle East crisis worsens and oil prices jump, economists said.

While local financial markets generally reacted calmly to the increase to 6% from 5.25%, uncertainty over the Middle East would keep them uneasy about a further rise in the discount rate, they said.

Door Is Left Open

"Today's discount rate rise didn't assure us that the BOJ will not raise it again later," said Sachio Nakagawa, manager at securities houses' research division at Mitsubishi Trust and Banking Corp.

"Another rate rise is possible if oil prices rise further in coming months."

Comments made by the Bank of Japan's governor, Yasuhi Mieno, at a news conference after the announcement of the discount rate rise intensified such speculation.

Mr. Mieno said that while the bank had no plans for another discount rate hike now, it will manage monetary policy flexibly, taking into account changes in various economic factors.

"Our battle against inflation has entered into extra innings," he said, adding that today's discount rate increase was aimed at making the bank's anti-inflationary stance clearer.

The markets generally interpreted his comments as an indi-

Economists believe a worsening of the Middle East crisis could trigger a further rate rise.

cation that the central bank would be ready to raise the discount rate again if needed.

Economists noted that the statement issued by the Bank of Japan explaining reasons for the rate increase made no reference to rising oil prices.

The statement said the bank raised the rate while taking into account several economic factors, such as a tightening labor market, higher domestic prices, steady growth in the money supply, and rising rates in the local money market.

"The lack of reference to oil prices meant that the BOJ raised the discount rate due primarily to domestic reasons and not due to Mideast reasons," said one economist.

"The implication of this is that the BOJ may act again if the Mideast crisis gets worse and oil prices shoot up," the economist said.

Mr. Mieno said at the news conference that the Mideast crisis and higher oil prices were only an additional factor this time, and that the central bank raised the discount rate mainly taking into account the domestic economic conditions of the past few months.

Some economists said time was ripe for a rate rise.

Move Called Appropriate

"From the macroeconomic point of view, the discount rate hike was appropriate now and helpful in alleviating any potential inflationary threat," said Keikichi Honda, director and head of economic research at Bank of Tokyo Ltd.

Economists said the scale of the rate rise was also appropriate.

"The 75-basis-point rise was appropriate because a 100-point rise could have deprived the BOJ of its discretion to raise the rate if oil prices surge later this year," said Mr. Nakagawa of Mitsubishi Trust. But other analysts questioned the timing as it could accelerate expectations of higher interest rates. □

Japan Banks Resist New Eurotunnel Ante

By JOHN EVANS

LONDON — Japanese banks are proving slow in putting up their share of a further $3.75 billion being sought in financing for the 30-mile tunnel under the English channel.

European bankers are warning that the $15 billion construction project, Europe's biggest, may collapse as a result of the current drive by Japanese banks to reduce their overseas assets. The banks are under pressure because of the slump in the Tokyo stock market and pressure to meet capital rules.

Threat Is Evaluated

This Japanese holdout is described in London as the biggest threat to a major international loan syndication since Tokyo's big banks shunned the $6.5 billion UAL Corp. buyout financing in the United States in 1989.

The 40 Japanese banks participating in the tunnel project have been asked to contribute about one-quarter of the additional $3.75 billion.

As of mid-August, only about $2 billion had been committed by about half of the 210 banks that make up the banking syndicate, with virtually all Japanese banks failing to respond.

This syndicate originally raised $9.25 billion in funding for the project, but the additional bank loans are needed to help meet cost overruns as well as to go ahead with a $950 million public stock offering this fall.

Because of this major shortfall, U.S. banking companies such as Chase Manhattan Corp., Chemical Banking Corp., and Manufacturers Hanover Co. have been asked to contribute. Only Citicorp and Security Pacific Corp. participated in the original syndication.

Japanese bankers in London, requesting anonymity, said that after making a major commitment to the project, they are reluctant to increase their exposure. However, at least one, Fuji Bank Ltd., has said that it is now willing to contribute more.

Lead bankers to Eurotunnel PLC, the Anglo-French consortium building the tunnel, have meantime granted an extension until mid-September to arrange the extra funding. □

Nantucket Saga of a Scuttled Deal

Continued from page 2

ficer of Homeport.

But many say that the Federal Reserve Board of Boston "kabobbed the deal" — in the words of one analyst — after launching an investigation into complaints by the investors.

Bitterness Lingers

Meanwhile, the players on the gentle, breezy summer island of Nantucket — and in New York — are still nursing grudges.

"Stover is a little like Captain Ahab," Mr. Porter says of Homeport's chief executive, who was the architect of the deal.

Ahab, of course, was the Nantucket whaling captain in Herman Melville's "Moby-Dick" who sacrificed his crew, his ship, and himself to kill a white whale. Mr. Stover's comparable obsession, in Mr. Porter's view, was an ambition to expand its tiny bank as the New England real estate market began dragging down bank earnings.

Adding to these tensions was an element of social conflict, a note of small-town businessmen versus the big-city financiers.

Islanders and Others

Nantucket has long been overrun in the summer months with wealthy people from the Northeast and other regions who have

A shareholder asked, "What's your address?" "They all bristled when he said, 'Park Avenue,' " says one person who was present.

vacation homes on the island.

Though the moneyed elite is usually present only during the summer, its members exert an influence far beyond their numbers. And there is periodic friction with the natives, fishermen, and merchants who make up much of the island's permanent population.

Board Is Home-Grown

Homeport's directors represent the latter group. There isn't a financier among them. And the board does include a plumbing inspector, a self-employed electrical contractor, a clerk of a plumbing and heating company, and a funeral director.

At a highly contentious annual meeting in May, some of these contrasting social elements emerged.

Investor in Camouflage

Mr. Porter taxied from Nantucket's tiny airstrip to Homeport's annual meeting. He had chucked the Wall Street pinstripes and was decked out casually in slacks and a sports coat.

He was seeking a seat on the board to fight the deal, he said. His reason: The high cost of the deal would weaken the already depressed stock price, which throughout the summer has hovered at $4.88 or about 40% of the company's book value.

Also, he said, management needed a financial expert on the board to keep an eye on its balance sheet.

Loan-Loss Reserves

Mr. Porter said he was particularly incensed by Mr. Stover's decision to cut Homeport's loan-loss reserve at the end of the first quarter to $949 million, from $1.3 million in the fourth quarter, after taking a $1.3 million chargeoff. Mr. Porter charged that Homeport had reduced the provision to avoid reporting a loss.

He also charged that Vineyard National probably was chockfull of problem loans, given the region's deteriorating economy.

(Since Vineyard National is private, no one but management and regulators know its true financial condition. The bank is 87% owned by investor Edward Redstone of Lowell, Mass., brother of Sumner Redstone, who owns Viacom Inc.)

Robert Wheeler, president of Martha's Vineyard National, does not agree that with Mr. Porter's assessment. He says that the level of nonperforming loans at his bank is not a problem, and that the bank is healthy.

But some people on Martha's Vineyard said Mr. Porter was probably right.

Want-Ad Worries

"With the market going down 20% to 30%, there's probably mounting nonperforming loans on the books," said one local real estate agent. He noted that

Tom Leander

PLANS SCUTTLED: Nantucket Bank thought Martha's Vineyard National a likely acquisition target. A New Yorker had other ideas.

the back pages of the *Vineyard Gazette* are filled with foreclosure advertisements.

A fast-talking North Carolina native, Mr. Porter, 52, appears to be much younger than he is, save for a shock of white hair. He also is quite an athlete; at age

Situations Wanted

BOARD MEMBER AVAILABLE

CEO of healthy S&L with 18 yrs. mgmt and board experience is resigning to become available as an elite director for multiple financial institutions in noncompeting markets of his country. Expertise ranges in size from $17 billion public-held to de novo institution. Addition of Outside Director with current S&L ceo experience will enhance Board's oversight and should be favorably viewed by FDIC/OTS. Board exposure to other institutions will also serve as the basis for a continued fresh perspective at the Board level. Geographic location not important, as I will be traveling in your institutions. Approvable by FDIC/OTS. Excellent references. Reply with resume to:

Nantucket Saga of a Scuttled Deal

Continued from page 13

35, for example, he made it the final heats in the competition to select the U.S. Olympic wrestling team.

Park Avenue Problem

In a pitch to shareholders to help his candidacy, Mr. Porter told of his background in a small Southern town that he said was not very different from the villages on Nantucket.

A shareholder asked, "What's your address?"

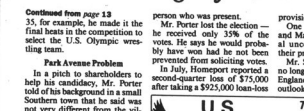
"They all bristled when he said, 'Park Avenue,'" says one person who was present.

Mr. Porter lost the election — he received only 35% of the votes. He says he would probably have won had he not been prevented from soliciting votes.

In July, Nantucket reported a second-quarter loss of $75,000 after taking a $925,000 loan-loss provision.

One week later, Homeport and Martha's Vineyard National Bank unceremoniously canceled their proposed merger.

Mr. Stover said the idea was no longer a viable option for New England's troubled economic outlook. □



Eastern Europe's Banking Challenge

JACKSON HOLE, Wyo. — Reforming banking and financial systems is one of the most difficult tasks facing Eastern Europe as it moves from centrally planned to market-oriented economies, said E. Gerald Corrigan, president of the New York Federal Reserve Bank.

"In part those difficulties are technical, in part they are economic, and in part they are political," he told banking officials from Eastern Europe.

But the biggest difficulty, he said, would be gaining public confidence in a system people are not accustomed to.

Mr. Corrigan spoke last weekend at the Federal Reserve Bank of Kansas City's annual economic symposium in Jackson Hole.

Officials at Conference

Banking officials from the Soviet Union, Poland, Czechoslovakia, Hungary, Bulgaria, Yugoslavia, and Romania attended the conference, whose theme was "Central Banking Issues in Emerging Market-Oriented Economies."

Automating the Flow of Cash

Continued from page 3

automate everything they are doing," said Beverly B. Wells, senior vice president at First Wachovia Corp., Winston-Salem, N.C. "Banks are telling them they should be concerned about cash management."

Bankers say that middle-market companies will at least keep pace with their larger brethren in automation. Part of the reason is because they will be forced to go electronic. A growing number of states are requiring corporations to file income tax forms electronically.

Ms. Wells estimates that 85% of corporate treasurers now have PCs in their offices, four times the number that did three years ago. Once the PC is in place, treasurers seek more ways to use it, leading to more automation of their cash management activities.

Some major cash management banks already sell software to allow wire transfer and other treasury functions from PCs. At least two major banks – First Wachovia and Mellon – plan to introduce more comprehensive software for cash management activities. □

Comfed Begins Equity Offering

LOWELL, Mass. — Comfed Bancorp Inc. said it began a private equity offering with Goldman, Sachs & Co. as underwriter in a plan to restructure its wholly owned Comfed Savings Bank unit.

The company, which retained Goldman Sachs to help it develop the restructuring plan, also said it signed a regulatory consent agreement limiting the company's operations and confirming the Office of Thrift Supervision's authority as a conservator or receiver if appropriate.

Comfed said the equity offering, the size of which it did not disclose, and receipt of regulators' preliminary response to its plan to apply for open thrift assistance through the Federal Deposit Insurance Corp. are significant steps in the restructuring.

The company also said the OTS agreement will allow it to continue banking and mortgage operations adopted under more conservative strategies in the bank's operations and confirming the Office of Thrift Supervision's authority as a conservator or receiver if appropriate.

Comfed said the equity offer-

BancFlorida to Buy Shares for Its ESOP

NAPLES, Fla. — BancFlorida Financial Corp. said it has directed the trustee of its employee stock ownership plan to purchase 600,000 of its shares for the benefit of ESOP participants.

The trustee will make the stock purchases in open market transactions with funds contributed by BancFlorida, the company said. BancFlorida has 3.41 million shares outstanding now and 1.14 million shares of cumulative convertible preferred stock outstanding. — Reuters

IN WITNESS WHEREOF, the undersigned have this 16th day of July, 1990 made and signed this Certificate.

Treasury Aide Asks Credit Reform for U.S.-Backed Lenders

By LYNN STEVENS
The Bond Buyer

NAPLES, Fla. — Michael E. Basham, a high-level Treasury Department official, said last week he hoped congressional negotiators would include credit reform in budget legislation next month to make sure government-sponsored enterprises never encounter the kind of crisis faced by the savings and loan industry.

Mr. Basham, acting assistant secretary for domestic finance, said a congressional task force on credit reform was "giving serious consideration" to Treasury proposals that government-sponsored enterprises be required to obtain a triple-A credit rating from at least two nationally recognized agencies.

Speaking at a meeting here of state treasurers, Mr. Basham said government-sponsored enterprises are organizations such as the Federal National Mortgage Association and Student Loan Marketing Association that facilitate the flow of credit to private borrowers in housing, post-secondary education, and agriculture.

They do this by raising funds in the capital markets to make or purchase loans, issuing pass-through securities, or guaranteeing the liabilities of others.

The enterprises were established and chartered by the federal government to perform specific credit functions but are almost all privately owned now. They have borrowed or guaranteed more than $900 billion.

Mr. Basham said that because the market perceives that the enterprises have government backing, they are able to borrow at rates only slightly higher than the Treasury but significantly lower than private corporations. In addition, they are able to employ much greater leverage in their activities than private corporations that do not have any special ties to the federal government.

This ability "results in significantly higher returns for shareholders when [an enterprise] is successful," but it can lead to "tremendous pressure for government assistance" if financial difficulties occur. Such pressures came about with the Farm Credit System a few years ago and are being felt now with the savings and loan crisis.

"It is imperative that we scrutinize closely the financial stability of the [government-sponsored enterprise] and the risks associated with their activities," he said.

The U.S. official fears a new financial crisis in operations such as Fannie Mae or Student Loan Marketing.

Under the Treasury proposal, any enterprises that could not qualify for a triple-A rating would have to develop a comprehensive business plan showing so within five years, Mr. Basham said. If the enterprise did not adhere to the business plan, sanctions would be imposed, he said, adding that these could include limits on new investments, financial leverage, or debt issuance.

"Because GSEs are, with one exception, privately owned corporations, we think it is appropriate to rely on the market mechanism to evaluate" each of them, Mr. Basham told the treasurers. The Treasury also has proposed that a "financial safety and soundness regulator" be established to monitor the enterprises. But this new position would be separate from a currently existing "program regulator."

Mr. Basham talked to the state treasurers about the savings and loan crisis. He stressed that the federal government attempts to help resolve its crisis was not a bailout for thrift and loan owners or shareholders, but rather a commitment to uphold the federal deposit insurance program. □

BancFlorida to Buy Shares for Its ESOP

NAPLES, Fla. — BancFlorida Financial Corp. said it has directed the trustee of its employee stock ownership plan to purchase 600,000 of its shares for the benefit of ESOP participants.

The trustee will make the stock purchases in open market transactions with funds contributed by BancFlorida, the company said. BancFlorida has 3.41 million shares outstanding now and 1.14 million shares of cumulative convertible preferred stock outstanding. — Reuters

Boston Bank Reacts to Law

BOSTON — Bank of Boston Corp. said its directors voted to opt out – until July 1, 1991 – of the provisions of a recently passed Massachusetts law on nationwide interstate banking.

The vote was not a response to any known bid to acquire the bank, Bank of Boston said, but was consistent with the company's intention to remain an independent institution and to build long-term stockholder value. — Reuters

DEALS: Southland Bank Group Emerges Unscathed from Workout

Continued from page 1

something not all HLTs include.

"In the long run, banks can come out unharmed," said Andrew Herenstein, an analyst at the bankruptcy firm Delaware Bay Co.

'The Naked and the Unnaked'

"All troubled HLTs aren't alike," said E. Theodore Stolberg, a partner at Weiss, Peck & Greer, a buyer of distressed companies. "There are the naked and the unnaked – those that have collateral and those that don't."

Nervous banks that sold Southland loans at a discount in the secondary market rather than risk a possible bankruptcy have found interest among the buyers of troubled loans such as the Foothill Group, which purchased an undisclosed amount of Southland debt at a discount.

There are clear reasons for optimism in the Southland case. Because the loans are secured by stores, inventory liens, and receivables, they're overcollateralized at least two times, said bond analyst who follow the company.

And lenders have already received more than half their investment back. Southland has $887 million outstanding on the $2 billion term loan arranged in late 1987 for its $4.9 billion leveraged buyout, a spokeswoman said. It has already paid off its $550 million divestiture term loan, she said.

"The banks are so far unscathed," said Andrew Leinoff, a McCarthy, Crisanti & Maffei analyst of high-yield bonds.

"Southland is adequately secured by all valuations," said John Nickoll, co-chief executive officer of the Foothill Group,

A Risky Assumption

Because they are senior creditors, bank lenders often assume that their senior creditor status will protect them in any distressed situation.

But in Interco Inc.'s restructuring, for example, bank creditors have deferred interest and principal payments on roughly $1 billion in loans, and asset coverage is tenuous at best because of poor operations and asset sales that fetched less than forecast – "overadvance on collateral" in banking parlance.

And in the American Healthcare Management bankruptcy, banks are accepting principal losses of 30 cents to 40 cents on the dollar because their security was stock in the company's subsidiaries, sources said.

The Southland deal has yet to receive the necessary consents from bondholders. Nor is it the first deal to remain current; Revco Inc., the first large buyout to fail, has been paying interest on its bank debt, said Mr. Herenstein of Delaware Bay Co.

Nevertheless, as fears of exploding HLT loans intensify, lenders – and equity analysts who follow the banking industry – can take some comfort from the knowledge that not every restructuring need devastate an income statement.

"It's the quality of HLTs that's important, not the amount," said Mr. Nickoll said of banks' exposure to leveraged deals.

Mr. Stolberg of Weiss Peck believes deals that had significant high-yield debt underneath and strong collateral in the loans have a strong chance of repaying their senior loans in a workout. Because equity and subordinated debt are, in essence the first line of defense, even when they are extinguished in a workout "banks have a cushion underneath."

'In General, Banks Do Better'

Craig Davis, director of research at R. D. Smith & Co., noted: "In general, banks do better than everyone else."

Southland Corp., which operates 6,700 7-Eleven stores in North America, needed consents from its Citicorp-led bank group waiving cross-default covenant in the bank loan agreement.

Because the company defaulted on some of its $1.8 billion in bonds, it was vulnerable had its loan covenants without a waiver. In addition, banks waived a covenant reduced the draw-down of a $350 million working-capital facility from $75 million to $50 million, and the life year the facility was reduced from $450 million.

Lead banks also include Manufacturers Hanover Trust Co., Security Pacific National Bank, Bankers Trust New York Corp., and Canadian Imperial Bank of Commerce.

Not surprisingly, the fact that senior lenders are current has not gone over well with subordinated creditors, analysts said. And it has made it more difficult, some say, to complete the exchange offer now under way.

"Banks have not let up on their fairly onerous [amortization] schedule," said Mr. Leinoff of McCarthy, Crisanti & Maffei. "Part of what's caused the the difficulty in the financial situation is the inflexibility about altering the schedule."

Payments to Rise

Southland has a $35 million amortization payment this year. Payments jump to $45 million next year, $105 million in 1992, $200 million in 1993, $300 million in 1994, and $200 million in 1995. Proceeds from the sale of the 50% stake in Citgo, which was purchased by the Venezuelan government, will be put to various principal payments, a Southland spokeswoman said.

Under the exchange offers, Southland bondholders and preferred stockholders are being offered new debt securities and about 25% of newly issued Southland common stock. □

Even the most complex bank regulation can have a clear explanation.

There's only one source to turn to for understandable translation of regulatory and banking jargon. Index...

The Bank Officer's Handbook of Government Regulation.

Now you can be confident that you're in complete compliance with all banking regulations. The Handbook takes you step-by-step through the most pressing regulatory issues facing bankers today, including:

- CRE/EA
- Capital adequacy requirements

Bank Stock Table Explained: The stock data in alphabetical order daily closing stock prices for the 225 largest banks and 25 largest thrift financial banking firms and the 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding (As of June 30, 1990), the same value used for the Aug. 31 issue of $586.71 mil. and for thrifts $107.8 mil.) $2.96 Wk Lo: the indexes 52-week high and low closing prices for the week. PE: the price-earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. Mkt. to book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Mkt. Chg.: the change adjusted for announced earnings and dividends. Chg.: the price at which the stock last traded. If no trades for the day, the latest bid. AB Bank and Thrift Indexes: A weighted average of the top 250 banks in market value and the top 50 thrifts in market value, respectively. Highlights show largest percent gainslosses in price; and two volume indicators show shares traded and today's volume as a percentage of average shares traded daily over the past year.

Data sources: SNL SECURITIES, Charlottesville, VA, 804-977-1600, produced the tables. Thomson News Network, Vienna, VA, provides SNL with the daily prices.

STOCKS

Despite the Slide, It's a Dry Season For Repurchases

By GORDON MATTHEWS

NEW YORK — The woeful share prices at many banks would seem a classic invitation to initiate stock repurchase programs, but few banks have done so. There are some important regulatory and capital reasons for reluctance in the industry:

• Many banks interested in expanding their franchises through deals with regulators for pieces of the disintegrating thrift industry want to preserve their capital for use in such transactions.

• In general, regulators tend not to encourage the employment of a bank's capital and liquidity for buying back stock, especially in period of economic uncertainty like the present.

Some Banks That Have Repurchased Shares This Year

- First Empire State Corp. Buffalo
- Michigan National Corp. Farmington Hills, Mich.
- CoreStates Financial Corp. Philadelphia
- First of America Bank Corp. Kalamazoo, Mich.
- MNC Financial Inc. Baltimore
- Puget Sound Bancorp Tacoma, Wash.

Source: American Banker

• A repurchase program could also narrow options for buying other banks in the future at a premium because of accounting difficulties, although a very big repurchase program would be necessary to cause significant problems.

• Finally, it is not clear that a repurchase effort effectively bolsters a bank's stock price when the general bank stock environment is as negative as it is now.

Nevertheless, some banks with a strong capital base have begun to enact programs. CoreStates Financial Corp. was the latest large bank to announce a stock repurchase program, initiating a program last week that would buy back up to 1.1 million shares of its stock.

A possible opportunity for increasing market share via the thrift route may be the reason First Empire State Corp., Buffalo, N.Y., among the most frequent repurchasers of its own shares, is not in buyback mode.

Some analysts have speculated that First Empire State may be interested in at least part of Empire of America Savings Bank, the large Buffalo institution in the possession of the Resolution Trust Corp.

First Empire's policy is to repurchase shares when possible rather than raise its dividend, which is among the banking industry's lowest. On Thursday, its shares traded at $53.75 but yielded only 2.2% on its $1.20 annual payout.

The company has mounted four buyback programs in the past two years, but a bank spokesman said Thursday there are no plans for another.

Acquiring another bank at a premium could present problems, since a large repurchase program could stop an acquiring bank from financing a deal with the pooling-method of accounting. The alternative is the purchase method, which can cause problems with goodwill and hurt future earnings.

Meanwhile, buyback programs cannot buck an overwhelming market trend. In February, Michigan National Corp., Farmington Hills, Mich., announced a major repurchase program, in an apparent effort to support its stock price, then $40.25.

Though the program caused a brief rise in share value, it did not keep Michigan National's stock from sliding. Thursday afternoon it traded at $27, up $1 on the day.

THURSDAY'S MARKET

Major bank and thrift stocks resumed their slide Thursday as the stock market plunged sharply in anticipation of the holiday weekend. Analysts said investors were selling equities because of the unsettled Persian Gulf situation. In late afternoon trading, the Dow Jones industrial average was down 40 points, to 2,593.

The biggest decliners were Manufacturers Hanover Corp., New York, off $1.125 to $24; First Interstate Bancorp, Los Angeles, off $1.125 to $27.75, and First Fidelity Corp., Newark, N.J., off $1 to $13.375.

CoreStates Financial Corp. also was hurt, falling $7.5 cents to $33.25 just before the close.

Citicorp and Bank of New York were the best performer of the money-center group. □

Fed Seen as Unswayed by Rate Rise in Japan

By KELLEY HOLLAND

The Bank of Japan's decision to raise its discount rate may delay any easing by the Federal Reserve Board. But the Fed appears to be leaning toward reducing interest rates, and the Japanese move will not change that, economists and bankers said.

Higher interest rates overseas could prompt the Fed to hold to its current interest rate management strategy in order to keep foreign investors attracted to the U.S. market. But with domestic indicators pointing to a weakening economy, the Fed is likely to push U.S. interest rates lower eventually, experts said.

"At the end of the day, the Fed will have to deal with the domestic situation here," said Neil M. Soss, chief economist at First Boston Corp. The Bank of Japan's action "is a small push in the direction away from easing," he said, "but if the probability was 99%, it is 98% now."

A Relative Increase

Interest rates overseas have risen relative to U.S. rates. Since Jan. 1, the yield on 10-year Japanese bonds has risen nearly 200 basis points, on 10-year British bonds, 121 basis points; and on Canadian and German bonds, 102 basis points.

But 10-year note yields in the United States have risen just 82 basis points for the period.

Higher relative interest rates overseas create the risk that global investors will be sold out of the U.S. market. The rate differential could also cause the dollar to weaken as investors shift their U.S. holdings into higher-yielding bonds denominated in foreign currencies.

But the dollar held its ground in the wake of the announcement after the Japanese discount rate increase, from 5.25% to 6%. The dollar was trading at about 144 yen Thursday, compared to 143.55 yen Wednesday.

Fed Focusing on Economy?

The press of domestic economic concerns could well induce the Fed to ease sometime this quarter, economists said. "There's no doubt the Fed has to be somewhat concerned about the domestic economy," said Richard S. Peterson, chief economist at Continental Bank Corp.

To be sure, no one is certain the Fed is readying a rate reduction. But economists agree that the Bank of Japan's move will not hinder the Fed's ability to ease if officials think that will be condition of the domestic economy.

"It really would take more weak economic numbers to induce the Fed to ease," said William C. Dudley, senior economist at Goldman, Sachs & Co.

The timing of any easing is uncertain.

False Rumor of an Easing

Reports circulated in the federal funds market Thursday that the Fed might signal an easing that morning by selling system repurchase agreements. The Fed refrained from open market operations, however, and economists now expect no easing before August job statistics are released next Friday.

An easing would likely come early in September, some economists said. Inflation indicators, such as the consumer and the producers price indexes for August, are likely to show a sharp rise in inflation stimulated by the surge in oil prices after Iraq's Aug. 2 invasion of Kuwait.

MARKET MONITOR

A downgrading of the Bank of New York Co. by Moody's Investors Service will probably not affect the bank's funding strategies significantly, a spokesman said.

Bank of New York's long-term debt ratings were cut one notch, a change that is unlikely to affect materially the interest rates it would have to pay on new debt.

And although the bank's commercial paper rating was cut to Prime-2, from Prime-1, and the commercial paper market is less and less liquid for second-tier credits, Bank of New York has only about $600 million in commercial paper outstanding.

CalFed Inc. reacted with disappointment to news that Moody's had reduced its ratings on the California thrift's debt. The downgrading "is part of a pattern of lowered ratings for California banks and thrift institutions generally," the company said in a prepared statement.

Moody's cut CalFed's convertible subordinated commercial paper ratings were reduced to Not Prime, from Prime-3, and its long-term senior and subordinate-term note ratings were cut to Ba2, from Baa3. □

Regulators Deny BNE Seizure Is Imminent

Continued from *page 1*

the Labor Day holiday.

The remarks by the Comptroller were unusual — banking agencies normally do not discuss the possibility of bank seizures — and were prompted by widespread speculation the bank's demise was imminent.

"It is not true — Bank of New England is not going under this weekend," said Ellen Stockdale, a spokeswoman for the Office of the Comptroller of the Currency.

The Comptroller's office said it had been inundated with calls this week seeking information about Bank of New England.

The volume of calls jumped Thursday after a Massachusetts candidate for Congress, Ted Dimauro, released a statement saying that the Federal Deposit Insurance Corp. had recommended the closing of the bank.

"This is a sad day for Massachusetts as the FDIC has recommended the liquidation of Bank of New England," Mr. Dimauro's press release stated. Mr. Dimauro is running for the seat now held by Rep. Richard E. Neal.

The Comptroller's spokeswoman was critical of the Dimauro statement, saying such unfounded remarks can undermine financial institutions. "Things like this can make things happen," she said.

The company's stock closed Thursday at $1.125, down 50 cents. Some 1.3 million shares traded hands, six times more than normal, making it the most active stock of the day. After hovering between $2 and $2.50 for six weeks, the stock began falling early this week as speculation of a seizure grew. Since Monday, the stock has lost 47% of its value.

The rumors drove up the price of U.S. Treasury bills on flight-to-quality buying, Reuters reported traders as saying.

The effort by Lazard Freres and Goldman to find equity investors began roughly three weeks ago when regulators told the bank that its announced plan to swap most of its debt for equity could not be done with the bank's own money, sources said.

The bank has been selling assets to boost its thin capital ratios and had hoped to use some of those proceeds, particularly the $60 million to $80 million from a planned sale of its Rhode Island unit, to fund the debt-equity swap.

The swap is considered crucial to the bank's survival. Without the swap, the bank is burdened with $60 million in annual interest payments that, given its financial condition, analysts say it may not be able to pay. Roughly $28 million is due Oct. 1.

R.T. McNamar, Bank of New England vice chairman, would not confirm the amount of the equity offering and would say only that the equity infusion was one of roughly 10 recapitalization options being considered by the bank.

He said, "It is not a selected option. . . It's a possibility." He would not elaborate on what the other options were.

Lazard Freres and Goldman Sachs declined to comment.

Regulators had ordered the company to boost its capital ratios to 3% by May 31. That still has not happened, although regulators have not penalized the bank for not meeting the deadline. The company's capital ratio at the end of the second quarter was 1.64%. The company has $23 billion in assets.

James Dorsey, a spokesman for Bank of New England Corp., dismissed the rumors as "destructive and outrageous." The talk is another example of the "holiday rumor syndrome," Mr. Dorsey said, referring to previous speculation that the bank would be seized over holiday weekends earlier this year.

Robert Trigaux in Washington contributed to this report.

AMERICAN BANKER *Proudly Announces*

THE ONLY INDUSTRY SOURCEBOOK THAT MATTERS...

Banking On Top Bankers-1990

THE INDEX FOR THE 90'S

WHAT EXACTLY IS BANKING ON TOP BANKERS?

IT IS A 6"BY 9" BOUND SOURCEBOOK THAT GIVES YOU THE TOP 1000 BANKING PROFESSIONALS AT YOUR FINGERTIPS. THE BOOK IS COMPRISED OF THESE INDUSTRY LEADERS' CAREER HIGHLIGHTS, BIOGRAPHICAL INFORMATION, PHOTOGRAPH, ADDRESS, PHONE NUMBER AND OTHER ESSENTIAL INFORMATION.

THE THREE "EASY TO USE" SECTIONS INCLUDE:

I. TOP BANKERS BY PROFESSION

• BANKING ELITE • TOP BANK ANALYSTS • TOP STATE REGULATORS • • BANKERS TO WATCH • TOP BANK LEGISLATORS • TOP BANK LAWYERS. • • TOP INVESTMENT BANKERS • TOP FEDERAL REGULATORS •
• TOP BANK CONSULTANTS •

II. TOP BANKERS BY AREA OF EXPERTISE

• ASSET SECURITIZATION • COMPLIANCE • FIRRE ACT • RETAIL BANKING •
• BALANCE SHEET MANAGEMENT • CORPORATE RESTRUCTURING •
• INTERNATIONAL BANKING • THRIFT SURVIVIAL • CAPITAL GUIDELINES •
• COST CUTTING • MORTGAGE-BACKED SECURITIES • TECHNOLOGY •
• COMMERCIAL LENDING • ESOP'S • BANK RESTRUCTURING •

III. LISTINGS

• TOP COMMERCIAL BANKS • TOP INTERNATIONAL BANKS •
• TOP THRIFTS • TOP COMMUNITY BANKS • STATE BANKING ASSOCIATIONS •

WHY SHOULD YOU ORDER A COPY?

BECAUSE WE HAVE DONE ALL OF YOUR RESEARCH FOR YOU SO NOW YOU DON'T HAVE TO SPEND COUNTLESS DOLLARS FINDING LEADING BANKING PROFESSIONALS TO ANSWER YOUR QUESTIONS. ALSO, NO OTHER SOURCEBOOK GIVES TO YOU THE TOP BANKING PROFESSIONALS IN EACH AREA OF EXPERTISE AND SUBJECT MATTER.

SO ORDER **BANKING ON TOP BANKERS** TODAY. THE SOURCEBOOK THAT IS "CHOCK FULL OF INFORMATION, NOT CHOCK FULL OF AD'S".

TO ORDER OR TO FIND OUT MORE INFORMATION: CALL US AT (212) 943-2221 OR MAIL IN THE BELOW ORDER FORM. PURCHASE MORE THAN 1 BOOK AND RECEIVE A 20% DISCOUNT.

IT'S MORE THAN A DIRECTORY

. . . IT'S A WELL-ORGANIZED SOURCEBOOK . . . A LOCATOR OF FINANCIAL SERVICES DECISION-MAKERS . . . AND THE REFERENCE TOOL THAT YOU WILL NOT BE ABLE TO DO WITHOUT.
