Letter to Dr. Arnold, U.S. Geological Survey January 28, 1907

Letter

January 28, 1907.
Dr. Arnold
U. S. Geological Survey
Washington, D. C.
My dear Arnold:

I am preparing a summary statement of the geology of the coast ranges for the report of the State Earthquake Investigation Commission. Could you oblige me with a very brief summary statement regarding the Oligocene, including a statement of the character of the beds, their volume, their known distribution, their subdivisions, their inconformity above and below in igneous admixtures. The briefest kind of a statement will serve my purpose. If you have in print any similar statement regarding the Purissima formation, I should be glad if you could refer me to it. I think you have published something on this but I do not have my papers with me and do not recall the reference.

Sincerely yours
