**Letter to Prof. F. Omori, Imperial Earthquake Investigation Commission,
Tokyo, August 24, 1907**

Letter

August 24th (0) 7.
Professor F. Omori
Imperial Earthquake Investigation Commission
Tokyo, Japan.
My dear Professor Omori:

I have within the past few days returned to Berkeley and find your letter of March 4th among my mail. By mistake it had not been forwarded to me, so I must apologize for my seeming neglect in answering your letter. It was mistaken for second class mail and placed with other second class matter awaiting my return in Berkeley, though there was no excuse for the mistake.

I thank you very sincerely for your kind contribution to our report entitled "A note in comparison of the faults of the three earthquakes of Mino-Owari, Formosa, and San Francisco". The note is a most interesting one and I hope to be able to get it into the report, though that report is already in the printer's hands. You may be interested to know that the report of the Commission will be a rather considerable volume of between four and five hundred pages, accompanied by maps and illustrations, and that we expect to see it issued from the press before the close of the present year.

With kind regards and pleasant memories of your visit to California, I am

Yours sincerely
