1. Reference is made to the movement of Japanese evacuees from the Santa Anita Reception Center to the Relocation Centers at Parker and Sacaton, Arisons and the effect of such movement on the total production of garnished nets at these locations.
2. To date, in spite of every effort, the production of garnished nets has not yet reached the quote prescribed by initial directives to this office, and due to the movement of evacuees referred to above, some further lag in production is antieipated. It is believed that any possible drop in total production

may be held to a minimum and attainment of prescribed production quotas would be expedited considerably, if at least a representative percentage of the keymen and trained workers formerly employed on the net project at Santa Anita, could be transferred in approximately equal members to the net projects now being established at Parker and Sacaton.

3. It would be appreciated if every consideration would be given to the above suggestion.
